U. S. Congress

Appendix

Energy in an Expanding Economy

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1960

Mr. RANDOLPH. Mr. President, the United States will consume 25 billion tons of coal during the next four decades and will be using 75 percent more coal in 1975 than at present. That is an estimate made in Dr. Joseph L. Fisher's address to the national dinner meeting of the National Coal Policy Conference at the Statler-Hilton Hotel here Wednesday night, March 30, 1960. Dr. Fisher is president of Resources of the Future, Inc.

In stressing the importance of energy sources to the Nation's economy, he said that energy consumption expressed in B.t.u.'s is increasing at the rate of 88 percent for the 20-year period which will end in 1975, while the population of the United States will increase only an estimated 41 percent during the same period.

Dr. Fisher referred to new studies of the U.S. energy picture which have been made by his organization and which indicate that many new and exciting possibilities in research and development in the coal and related industries are now in the horizon.

Mr. President, the address by Dr. Fisher is an illuminating discussion of the energy commodities, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ENERGY IN AN EXPANDING ECONOMY

(By Joseph L. Fisher, president, Resources for the Future, Inc.)

The history of the energy commodities—coal, oil, natural gas, hydropower—in a real sense has been the history of the American economy. The passage from an agrarian, handicraft system of a century or more ago to the industrial colossus of today has been made possible by discovering and developing these energy commodities, by harnessing them to man's welfare. The achievements in steel, aluminum, cement, the automobile, the airplane, the tractor, and the electrically powered home may be measured by progress in coal, oil, gas, and hydropower—the giants who move our industry, without whom our material way of life would have remained primitive. Overwhelmingly we depend on these fossil fuels to heat our homes, cook our food, smelt our metals, transport our goods and ourselves, and furnish the raw material for a large number of manufactured items. Most of our electricity, also, is produced from fossil fuels, although here waterpower is of considerable importance in certain regions. Thus far we have even depended on a net input of energy from fossil fuels for our vast atomic energy program.

This evening I should like to trace rapidly the course of development of energy in the American economy chiefly through reference to selected statistics, and then to indicate the general directions of change for the future. Finally, I shall highlight a few of the more pressing and persisting problems I think the energy industries, coal especially, will have to deal with.

In this country we now consume more than 40,000 trillion B.t.u.'s of energy a year, more than five times the amount consumed in 1900. This amounts to some 250 million B.t.u.'s per capita. For those who still visualize these things in terms of the amount of work a strong horse can do in an hour, this amounts to nearly 100,000 horsepower hours per capita per year—or the equivalent of some 11 horses per person working round the clock every day of the year.

It is revealing to examine more closely the age of fossil fuels as it has unfolded in this country. In 1850 a little more than a 100 years ago, most of the inanimate energy supplied to the American economy came from wood as a fuel. Between 1850 and 1895 energy from coal increased from 9 to 65 percent of the total, while wood declined from 91 to 30 percent—a massive shift from wood to the first of the great fossil fuels to be exploited on a large scale. Between 1910 and 1955 oil and gas increased rom 9 to 65 percent; coal declined from 77 to 29 percent—a second massive shift within a century. The automobile, truck, bus, and airplane have come along rapidly as consumers of oil. The newspapers a few days ago carried a nostalgic story that the last two steam locomotives operating on a regular schedule had been retired from service in a small town in Michigan. A large part of the household heating job formerly done by coal is now done by oil and gas.

Coal has held on tenaciously and even gained in several important uses however. The use of coal for the production of electricity has increased nearly three times since 1940, not quite enough to offset the decline in use on railroads and for space heating since then, but nearly so. Coal maintains its unique advantage over the other fuels for the reduction of iron ore. Of the several modern energy giants coal came first, declined without in any sense disappearing, now more or less holds its own, and may in the future fight its way back to greater prominence.

Several other trends of importance may be noted. Energy consumption per unit of gross national product has been falling consistently since about 1920; it has dropped by more than a third during this 40-year span. This does not mean that the fuels are in any basic sense any less important than they were; it simply means that they support a much larger superstructure of manufacturing, transportation, and services than they used to.

In many respects the best indicator of increasing or decreasing scarcity of a fuel or other raw material is to be found in the behavior of its price over a period of years with allowance made for changes in prices generally. Since 1900 bituminous coal prices in constant dollars at the point of production have increased by around a half; crude oil prices have decreased by about a quarter and natural gas prices by about a half. Since 1947, however, the price trends have been quite different: by 1955 bituminous coal has dropped some 6 percent, crude oil has risen 25 percent, and natural gas about 50 percent. A long period of declining natural gas prices has come to an end and has been sharply reversed. Crude oil prices have behaved eratically in the postwar period. Bituminous coal prices have been steadier and have generally been increasingly favorable for consumers.

Having sketched very quickly the energy picture for this country as it is today, let me turn briefly to a consideration of what it may look like in the 1970's. In this, as well, as in what I have said already, I am drawing heavily on research either completed or underway in "Resources for the Future." The principal study, now in the hands of the Johns Hopkins Press, our publishers, is called "Energy In the American Economy 1850 to 1975." This study contains a careful historical and analytical account of the shifting role of the various energy commodities in American economic development to date and presents detailed estimates of the demand for the various energy commodities by principal categories of use for the year 1975. These estimates are related not only to what would appear to be in store for the several commodities and categories of use, but also to the overall size and shape of the American economy 15 years hence.

Between 1955 and 1975 energy consumption expressed in B.t.u.'s is estimated to increase some 88 percent. During the same span of years population is estimated to increase 41 percent, to 233 million persons, and gross national product by 119 percent. By simple division energy consumption per capita would increase by 33 percent, while energy consumption per unit of GNP would decrease by 15 percent. Thus, according to Sam Schurr and Bruce Netschert, the principal authors of the study, the increase in energy consumption to 1975 will fall somewhere between the increase in population and that of GNP.

The percentage in consumption of the several principal energy commodities between 1955 and 1975 is interesting. For bituminous coal the increase is estimated to be 75 percent; for anthracite, minus 30 percent; for oil and natural gas liquids taken together, 95 percent; for natural gas 107 percent, and for hydroelectric power 121 percent. Not counting anthracite which makes up only a little more than 1 percent of the total consumption at the present time, the other energy commodities all show substantial increases. Electricity which may be produced from coal, oil, gas, or hydro power is expected to increase during the 20-year period by 211 percent, far outstripping the increase in any of the basic commodities. This would augur well for those fuels which have relative advantage for production of electricity. Compared with past periods, the mix of energy commodities in the economy is expected to remain relatively stable during the next 15 years, although still slightly favoring gas, oil, and hydro power compared to coal.

The study I have mentioned turns from estimates of demand to a consideration of the likely availability of supply to meet the estimated demand. The general conclusion reached is that all conventional energy sources—coal, oil, gas, and hydropower should continue to be available at least through 1975 at no appreciably higher constant dollar cost. This is based on the finding that the natural stocks of these energy sources are higher than is generally estimated and that the significance of technology as a dynamic element of cost determination has been underrated. If these demand and supply estimates are correct, the

AUTHENTICATED
U.S. GOVERNMENT
INFORMATION
GPO

energy requirements of the economy could be met entirely from domestic sources at no significant increase in cost. It should be pointed out that these are not predictions; they merely state that under the economic and technologic trends and assumptions, this could be the result. It does not argue that energy might not be obtained more cheaply through more rapid technologic advance, a higher level of imports, or the substitution of some cheaper source of raw material.

Availability of oil under these estimates will rest increasingly upon large secondary recovery, but also upon continuation of vigorous exploration and discovery activities. The natural gas availability estimates are related to the oil estimates and turn out rather favorably partly because of the anticipation that the gas-oil ratio will be higher in the future than it has been in the past.

This conclusion regarding oil and gas may surprise many who have been told over and over again that proved reserves of oil are only 12 or so years and for natural gas only 20 or 25 years. The resources for the future estimates are based on new definitions of resource availabilities which are thought to be more suitable for the purpose of long-range estimating.

For coal it is widely known that this country has enormous stocks in the ground. The State by State compilation drawn together by the U.S. Geological Survey shows nearly 2 trillion tons of which about half is recoverable. Whatever the difficulties of concept and definition of coal reserves may be, there is obviously an enormous quantity available for exploitation. According to recent Bureau of Mines estimates, current recovery methods would allow some 240 billion tons to be mined at 1954 prices. This is far more than enough to meet projected accumulated demand not only to 1975, but to the end of the century and far beyond that. In another study now being prepared at Resources for the Future (a comprehensive appraisal of trends and prospects for all natural resources provisionally entitled "Resources in the American Future" it has tentatively been estimated that in the four decades from 1960 to 2000, something on the order of 25 billion tons of coal will be required. This is only about 10 percent of the reserves estimated to be minable without a price increase and on the basis of present recovery techniques.

The period beyond the 1970's to the end of the century can be seen only more dimly, but it may be interesting to try now to peer into that distance. That minable supplies of coal will be available in large amounts in this country is unquestionable; whether the same will hold true with oil and gas is open to some doubt. Should petroleum products increase sharply in price relative to coal during the last quarter of this century, and assuming the percentage of total U.S. consumption imported does not greatly increase, the prospect for coal regaining a larger share of the total market will brighten. This, one may speculate, will be particularly true in steampower generation, to a limited extent in industrial operations, and conceivably in some kinds of space heating. Since electric power consumption is expected to go on increasing rapidly through the remainder of the century, coal's present advantage in this use may be heightened. The prospects will be much better, of course, if further cost reductions are achieved in the mining, preparation, and transportation of coal.

The future for coal, as for the other energy commodities, is bound to be a competitive one no less than the past has been competitive. The shifting pattern of energy sources will continue to hinge upon relative prices among them, the quality and reliability of the services they give, and the unique advantages each possesses for particular uses. In a basic sense the ultimate consumers of energy don't greatly care which commodity they use. For example, the family wants a warm, pleasant home and within limits will be quite willing to heat with oil, gas, coal in a modern burner, or electric power which in turn can be produced by coal, oil, gas, hydropower, or nuclear power.

An important unknown for the period beyond 1975 is atomic power. If, as several competent analysts have thought, the cost of providing the heat for electric power production by means of nuclear reactors is greatly lowered to the point that it becomes competitive with presently used sources, then coal may not get any respite from severe competition. Oil and gas might then be replaced by atomic power as coal's chief competitor. In this case, the Indian summer for coal could be very short, indeed. In one sense the contest may come down to one between capital cost reduction for atomic power against transportation cost reductions for coal, although other elements of coal cost will also bear importantly on the matter. Since atomic power producing facilities can be placed anywhere in the country at about the same cost, while coal-produced power will still involve heavy transport charges on coal (or on electric power produced from coal and transmitted at high voltage), one would expect atomic power to find regional advantages in parts of the country where coal is costly long before it can compete in regions more accessible to coal supplies. Cost of hauling coal still runs some 70 percent of the value of the coal in the mine, and this percentage has been increasing during the last decade.

Overall adequacy of supply seems assured to 1975 at least, although the precise mix of coal, oil, gas, and hydropower is uncertain. This picture of middle range adequacy, if not longer, may be sharpened by noting again the substitutions that have been and undoubtedly will continue to characterize many parts of the energy field. Oil has displaced coal in locomotives. Gas is replacing coal and now oil for domestic heat. Many steam powerplants can turn from oil to coal almost at the flip of a switch. If the cost and price of any one energy commodity moves upward, even slightly, this commodity then runs the risk of losing some of its market to one of the others. So delicately balanced are the price and market forces that business and public policy in taxation, foreign trade, transportation, or research may tip the balance one way or the other.

The energy economy may be viewed as a big, expandable room with a whole series of ceilings. Thus, starting with underground liquid oil, if its cost and price rise, a ceiling is quickly reached above which its price cannot go. This ceiling is set by the cost of recovering oil from shale of which there are immense reserves in the Colorado plateau which could now be exploited and the product delivered to the west coast market at a cost only slightly above costs from present sources. Beyond this are the possibility of extracting oil from the Athabasca tar sands of Canada and the liquefaction of coal. Another ceiling is provided by imports from northern South America and the Middle East where reserves are enormous. Further in the distance are the possibilities for using grain alcohol as a motor fuel, the adaptation of the fuel cell based on hydrogen or natural gas for driving vehicles, and so on.

Coal, of course, is another ceiling against oil price increases in steam plants, for industrial process fuel, and in other uses.

The ceiling which covers all the conventional fuels, as we now see it, is nuclear power. As the cost of producing this kind of electric power and process heat is reduced, it is expected to cross, or at least approach, the cost from conventional sources.

If this is the broad picture of the future of the energy commodities in the American economy, what would appear to be the principal problem with which the energy industries and the Nation will have to deal? Particularly, what are the foreseeable problems for coal—the foreseeable problems and the foreseeable opportunities?

The first problem is not a new one: it is technological unemployment. This problem is not new to the coal industry in which employment has been decreasing for many years and now stands at less than half what it was before the Second World War. Technological advance in coal has been one of the thrilling stories of recent times. The tremendously greater productivity in strip mining as compared with underground mining is well known. Here productivity per man-day currently averages about 22 tons versus 9 tons in underground mining. Supergiant shovels and other machinery can now handle overburden up to 120 feet in thickness where only a few years ago 80 feet was thought to be the maximum, and the end is not in sight. Even more remarkable has been the development of the continuous miner which can be operated very efficiently, especially when accompanied by other types of equipment of related equipment, and now accounts for approximately 20 percent of total underground production. The extension of this kind of mining to another 20 or 40 or 60 percent of underground mining would work a veritable revolution in the industry and would leave in its wake further technological unemployment.

Related to this problem is the so-called depressed coal area problem. The combined effect of rapid technological improvement plus diminished total production as compared to years ago has left a number of coal-mining areas in very bad shape indeed. The anthracite area in eastern Pennsylvania, eastern Kentucky, southern Illinois, parts of West Virginia—these are among the chronically areas of the country. When the rest of the country is prosperous, these areas do only moderately well. When the rest of the country is in a recession, these areas are in deep depression. The problem in these areas is further compounded when other difficulties are overlaid that in coal mining. In eastern Kentucky, for example, where Resources for the Future has been sponsoring a series of studies, partially worked-out and high-cost coal mines are accompanied by a paucity of other economic resources to which to turn. Farmland here is not rich, forests, while adequate, are not the best and locational advantages for industry do not measure up to what can be found in other places.

Both technological unemployment and the chronically depressed areas in which it is found are human and social problems as well as economic. The solutions, which will not be achieved easily, will have to be sought along lines of stabilizing and then improving the coal industry itself, attracting other economic opportunities into the areas, reeducation and retraining of workers, quite probably some outmigration of people, and the creation of a total political, economic, social environment conducive to these lines of action.

Another problem, which also is not new to coal, is competition which it will continue to face from the competing fuels. In the final analysis competition is the means by which the overriding goal of meeting the Nation's energy needs at lowest cost is achieved. For coal to play its proper part in meeting these needs, it will be necessary to encourage further technological improvement, even though it may mean further unemployment for a temporary period at least. In this regard, both labor and the industry, have shown remarkable insight and courage in not choosing what at many times must have appeared to be the easier course for the

short run. Many new and exciting possibilities in research and development in the coal and related industries are now in the horizon. Further adaptation of continuous mining has been mentioned, product improvement through preparation of coal to reduce impurities, and further extension of strip mining are among the promising trends that may be mentioned. Immense reserves of lignite offer prospects for a future time in some parts of the country.

Production of electric power at mine heads with lower cost transmission of electric power over distances of 500 or more miles is a hopeful possibility now developing in a number of places. The location of coal and electric power-using industries near the mines is even better from the point of view of depressed coal areas since it provides added employment. Concerted efforts to reduce costs of transporting coal are to be encouraged. For example, in the future the coal carrying railroads should be able to achieve economies in handling and hauling coal in larger lots from larger mines to larger consumers. The 108 mile long coal pipeline in Ohio is being watched closely since it seems to promise considerable reduction of transport cost over routes where large amounts of coal can be transported.

Not all research and development related to coal will favor coal. For example, further reductions in the amount of coal required to produce a kilowatt-hour of electricity or a ton of steel may not immediately help coal, although in the longer run, by building markets for electric power and steel, may actually be more helpful.

These are some of the problems that appear in my horoscope for coal's future. But with each problem come opportunities and challenges. The coal industry knows what hard times are and knows that it will have to continue to fight for its place in the American economy. It is the most mature of the energy industries and has learned that it must temper its public policy demands to what is good for the Nation as well as for coal. Statesmanship will continue to require that the best efforts of the industry be devoted positively to research, development, vigorous competition, social welfare, and economic development in the coal areas, and not to policies which aim to beggar the competitors. The positive, constructive accent is called for now as always.

Civil Rights

SPEECH
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8601) to enforce constitutional rights, and for other purposes.

Mr. TRIMBLE. Mr. Chairman, I oppose H.R. 8601 because it is an intrusion into the responsibilities of the States in the field of elections. The reforms recommended, if they are needed, must come from the human heart and cannot be accomplished by the force of law against what I conceive to be a clear mandate of the Constitution to the States.

Our Constitution was born out of travail and compromise and out of the crucible of bitter experiences shared by the Founding Fathers. It is not perfect—no human document ever is—but it is the foundation of the greatest Government ever devised by freemen.

Free elections are essential to our integrity as a nation and to our survival as a free people, but the responsibilities for these things rest with the States. If the States fail to meet those responsibilities ably and well, then failure is theirs, and they will face the mandate of an aroused public opinion which is the heart of a democracy—the bane of suppression. In these days even a sparrow's fall is seen and heard instantly around the world.

This legislation will not lead to good will between the races. Again I say that the solution of these problems rests in the human heart. Each of us must remember that tomorrow or even today we may get the final call to come before the Supreme Judge of all of us. We must conduct ourselves the best we know how so that each of us will be able, we hope, to hear Him fondly say "Verily I say unto you, inasmuch as ye have done it unto one of the least of these my brethren, ye have done it to me." And then He will let us in. We will then know hate, sorrow, disappointment, and heartache no more.

Time for a New Initiative

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement of American policy in the Middle East, which was formulated at the national conference of the American Israel Public Affairs Committee, held in Washington on March 26–27, 1960. The committee is headed by Rabbi Philip S. Bernstein of Rochester, N.Y.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TIME FOR A NEW INITIATIVE
A STATEMENT OF POLICY

The time has come for a new and vigorous initiative to secure economic development, political stability, and peace in the Middle East. Growing international opinion summons all nations to seek understanding and cooperation.

Peoples everywhere pray that at the forthcoming summit conference the great powers will succeed in reducing tensions and achieving international cooperation everywhere.

THE BASIC PROBLEM

We favor the mutual security program as an indispensable condition to the security of America and the defense of freedom everywhere.

The major problem in most Middle East countries is poverty—the failure to put people, land, and water to work. Tensions arise from economic instability and political immaturity which make the region vulnerable to internal conflicts and subversion from without. To meet this threat this committee continues to favor both economic assistance to raise living standards and adherence to the U.S. position which regards "the preservation of the independence and integrity of the nations of the Middle East" as "vital to the national interest and world peace." (Resolution of Congress, Mar. 9, 1957.)

Thus, we favor economic aid to the Arab peoples; we stress economic assistance to raise living standards rather than arms for external adventure.

We favor continuing economic assistance to Israel. American economic aid to Israel has been used wisely and well. Israel has made dynamic progress and has become a showcase testifying to other new nations that a democracy which preserves free institutions does more than any other form of government to help its people. With American cooperation, Israel is strengthening the cause of freedom.

THE FACTORS FOR TENSION

Three factors aggravate tensions in the Middle East:

1. UAR President Nasser remains undeterred in his drive for power in the Middle East and Africa and persists in his seige of other nations in the region.

2. The Arab States are emboldened by lavish aid from the Soviet bloc. Approximately 40 percent of all Soviet aid to non-Communist countries has gone to the UAR, Iraq, and Yemen since 1955, and Soviet arms shipments to these states have totaled a published $580 million.

3. The Arab States have been encouraged by the failure of the U.N. and the United States to curb boycott and blockade.

AMERICAN POLICY

U.S. policy on these issues has often been stated. But a statement of policy is not self-executing. What is needed is the vigorous implementation of announced policies and a positive initiative to reverse the dangerous drift toward war.

1. Aggression

Our Government, in a joint statement with England and France, has declared "unalterable opposition to the use or threat of force between any of the states" in the Middle East and its undertaking to "take action both within and outside the United Nations" to prevent any attempt to violate frontiers or armistice line." (May 25, 1950.)

The United States, "in accordance with its responsibilities under the Charter of the United Nations, will observe its commitments within constitutional means to oppose any aggression in the area. * * * The United States is likewise determined to support and assist any nation which might be subjected to such aggression." (The White House, Apr. 9, 1956.)

Neither of these statements has been rescinded or set aside.

2. Soviet arms shipments

We fully share worldwide sentiment which favors disarmament, adequately enforced and supervised. Soviet protestations advocating disarmament cannot be reconciled with their massive export to the Middle East of weapons of great striking power. The time has come to call upon the Soviet Union to end this dangerous traffic with Arab States and enable the peoples of the region to concentrate their resources and energies in productive pursuits instead of wasteful preparations for war.

While we have always opposed an arms race, we recognize, as has our Government, that "widespread discrepancies in armed strength would be likely to create tension." (Secretary of State Dulles, May 8, 1956.) The West must take effective measures to prevent an arms imbalance in the region and to insure that the Arab States are not permitted to gain a disastrous military superiority which would tempt them to renew their aggression. The Arab States are not

likely to make peace with an Israel they believe they can destroy.

3. (a) Blockades

Egypt's discriminatory practice of impeding navigation through the Suez Canal is a glaring example of the failure of the United Nations to enforce its charter and its decisions.

Our Government has always opposed the Egyptian doctrine that it is entitled to blockade the Suez Canal on the alleged ground that it is at war with Israel. (U.N. Security Council Resolution, Sept. 1, 1951, and U.N. Security Council debate, Jan. 4, 1955.) This position was reaffirmed by President Eisenhower (Feb. 20, 1957) and by Secretary of State Herter (U.N. General Assembly debate, Sept. 17, 1959).

Moreover, the United States firmly upheld Israel's right to maintain freedom of shipping through the Straits of Tiran, and at the Geneva Conference on the Law of the Sea in April 1958, the U.S. delegation worked successfully to preserve the international character of that waterway which provides Israel with an outlet for its trade with Asia and Africa.

Our Government and the United Nations must intensify their efforts to open the Suez Canal to the shipping of all nations without discrimination.

(b) Boycott

Another factor for tension is the Arab boycott of Israel and those who trade with her. The Department of State has stated that: "We do not recognize or condone (the boycott) and have protested to the Arab Governments their discriminatory practices which affect U.S. firms and citizens. This Government and its representatives abroad will continue to emphasize to the Arab Governments, as occasion permits, that there should be no discrimination against American firms because they carry on business relations with Israel." (Assistant Secretary of State William B. Macomber, Jr., Jan. 9, 1959.)

Despite these declarations, the Arab boycott is pursued with even greater intensity. More and more American citizens and firms have been discriminated against and blacklisted. U.N. authority is flouted, and even the U.S. Navy regrettably took formal and official note of the Arab boycott in its invitations to bidders—a procedure which evoked wide protests and brought about governmental reconsideration.

We note with appreciation the strong stand taken by the Congress of the United States in the Mutual Security Appropriation Act in 1959, which declared congressional opposition to discrimination by recipients of American aid against Americans on grounds of race or religion.

We favor the amendment to the Mutual Security Act now pending before the Congress, reaffirming America's traditional support for freedom of the seas and its opposition to the extension of aid where such assistance is used by one country to boycott and blockade another recipient of our aid.

THE ARAB REFUGEES

By the end of World War II, the world was confronted with the staggering problem of mass homelessness. There were 40 million refugees. More than half have been integrated—in every case by resettlement, never by repatriation. But little progress has been made to solve the Arab refugee problem. It is a deplorable and tragic waste of human life. Proposals that Israel agree to the return of the refugees are unrealistic. Such proposals call upon Israel to adopt a suicidal gesture incompatible with her own security and survival. They postpone any constructive progress toward resettlement.

The Arab refugees remain prisoners of Arab leaders who exploit them as pawns both in their conflicts with Israel and with each other. The best hope for the Arab refugees is integration by resettlement in Arab lands where there is room and opportunity for them in their own culture and environment. Israel, which already has more than 220,000 Arabs within its borders, has offered to compensate the Arab refugees for their abandoned property, and our Government has offered to assist Israel to do so. (Secretary of State Dulles, Aug. 26, 1955.) Any such resettlement programs will depend largely on the economic development of the Middle East as a whole, as U.N. Secretary General Hammarskjold's report has stated. (June 15, 1959.)

THE ARAB-ISRAEL CONFLICT

The major obstacle to an Arab-Israel peace is the continuing refusal of the Arab States to recognize Israel and the reality of her existence. In contravention of the U.N. armistice and the U.N. Charter, they illegally proclaim themselves to be in a state of war with Israel. The expansionist United Arab Republic has sought domination over the Arab world by intensifying the war against Israel and by challenging other Arab governments to match its reckless adventure.

Our Government aided the 10 Arab States and the State of Israel to win and preserve their independence and sovereignty and has helped strengthen their economies. Our Government has also declared that "the preservation of the State of Israel is one of the essential goals of U.S. foreign policy." (Secretary of State Dulles, Feb. 25, 1956.)

The United States and other Western governments cannot tolerate postures of belligerence, contempt of the U.N. Charter and a continuing threat to the peace.

The objectives and policies of the United States qualify our Government to assume leadership in achieving an Arab-Israel peace. There is no alternative to direct face-to-face talks between the leaders of Israel and the leaders of the Arab governments.

We urge our Government to undertake a new initiative to bring Israel and the Arab States to the peace table.

IN SUMMARY

To achieve peace in the Middle East, we urge:

1. Continued U.S. economic assistance to Israel and the Arab peoples to raise living standards.

2. Full adherence to the U.S. policy to preserve "the independence and integrity of the nations of the Middle East."

3. Efforts to halt Soviet arms shipments to the Middle East and to prevent an arms imbalance in that region.

4. No compromise with boycott, blockade and other warlike acts.

5. Resettlement of the Arab refugees in Arab countries, with compensation from Israel for their abandoned property.

6. A U.S. initiative to promote direct negotiations between Israel and the Arab States.

Peace can be won in the Middle East when the Arabs finally recognize that the American people stand firmly against aggression and are committed to a program which stimulates economic and social development and which preserves individual liberty and national freedom. This will require a tenacious adherence to declared principle and its consistent and forceful implementation.

Rehearse the Articles of Thy Belief

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, April 1, 1960

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Rehearse the Articles of Thy Belief," written by James Reston, published in the New York Times of today, April 1, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REHEARSE THE ARTICLES OF THY BELIEF

(By James Reston)

WASHINGTON, March 31.—He probably didn't mean to do it, but the fact is that President Eisenhower has just shoved Vice President NIXON off the high dive into deep water.

He accomplished this simply be setting Mr. NIXON free yesterday to proclaim his own program for the future. He said the Vice President would be "stupid" merely to stand on the Eisenhower programs of the past. He added, in what was certainly not the most graceful definition of the presidency, that he (Mr. Eisenhower) was "fortunate" that he didn't have "to go any further with this thing." Whereupon, he cut Mr. NIXON loose in a wicked world.

The Vice President hasn't landed yet, but in due course this is bound to produce quite a splash, for, as every beauty queen knows, it is one thing to look good in a bathing suit, and something else again to swim the English Channel.

Prior to the President's act of liberation, Mr. NIXON had the perfect formula for painless campaigning. He could do it in Siberia. He could speak in generalities. It was wonderful. All credit and no responsibility.

THE PRIVILEGED SANCTUARY

When the Vice President was asked to discuss his activities in the field of policy, he was able to decline on the ground that it would not be courteous to the President. If the administration was making peace or proclaiming prosperity, he could stand prominently in the glow of the White House. If the administration was getting into political trouble over medical insurance for the aged, it was easy to get word around that the Vice President was really in favor of a different program.

Any politician in a similar situation would have exploited this advantage. While all other candidates for the Presidency had to vote or speak up and answer questions, Mr. NIXON enjoyed his own political privileged sanctuary, unopposed by Republicans, and unavailable to anybody he didn't want to see.

He can still go on as before, of course, but the President has now relieved him of his excuse. Mr. Eisenhower has in effect appointed him Vice President in charge of the future and this provides him with both an opportunity and a problem.

The opportunity is that he is now free to answer the incessant questions about what he really believes. Even his strongest supporters, who range from Senator GOLDWATER to Secretary Mitchell (which is quite a distance), cannot answer these questions with anything but a tangle of contradictory hunches.

This is a serious situation for the candidate of a minority regional party, which needs the support of independent voters. Everybody knows about the "Democrats for Eisenhower"—they elected him twice—but where are the "Democrats for NIXON"?

If the Vice President speaks out clearly on policies for the future, he may bring many of them over to his side, for the Democratic Party resembles nothing so much at the moment as a rabble of "Beatniksons," but he has done little more this year in public than talk tactics and hand out awards to all-Americans and Boy Scouts.

His problem is that if he talks out clearly on his programs for the future, he runs into precisely the dilemma all the Democrats have been grappling with for months—namely,

that any clear definition of policy tends to alienate some essential group of supporters.

"DAMNED IF HE DOES, ETC."

Eisenhower was nominated by the liberal wing of the GOP, but once elected, he chose to hand the primary positions of power not to the liberals who supported him in the 1952 convention but to the conservatives who opposed him: to the Tafts, and the Humphreys, whose economic theories dominated the policies of the liberals in the Cabinet.

He did not resolve the ideological conflict within his party, but compromised the conflict and passed it on.

So that while NIXON must speak out to get independent support, he must also hold together Wall Street and Main Street, Secretary Benson and Secretary Mitchell, the conservative Chicago Tribune and the liberal Chicago Sun Times, the conservative CHARLIE HALLECK and the liberal he needs most—Gov. Nelson Rockefeller.

It's no wonder the man took refuge in throwing out balls and handing out loving cups, but all good things come to an end, especially in politics.

Max Levand

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, April 1, 1960

Mr. CARLSON. Mr. President, in the death of Max Levand last week, Kansas lost one of its colorful newspaper editors. For over 32 years Mr. Levand was actively in charge of the publication of the Wichita Beacon. This newspaper has a very extensive circulation around Wichita and the southern and western part of our State.

Rolla Clymer, editor of the El Dorado Times has written a very interesting editorial on Max Levand, and I ask unanimous consent that it be made a part of these remarks and be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAX LEVAND

Max M. Levand died suddenly at Wichita Monday. He was the spearhead of the famous Levand brothers' trio which bought the Wichita Beacon from Henry J. Allen in 1928, and thereby introduced new methods of newspaper operation to the Kansas scene.

The three ruling spirits of the Beacon over the past 32 turbulent years were Max, Louis, and John. Of these, Max was always the chief; invariably he sat at the head of the table. Louis, who died in 1953, and John made sterling contributions to the paper's operation—but Max was the leader. He was vigorous; he was direct; he was alert; he never lost sight of the main chance. He was a driver who gained results for the Beacon and, in his forceful way, he left an indelible mark upon Wichita—one beneficial to its growth.

The journalistic school in which he had been reared was the hard one of Bonfils and Tammen in the heyday of the old Denver Post. Max learned his lessons well and this knowledge, coupled with his natural pushing instict, made him a formidable figure to all rivals. The kind of journalism which he and his colleagues brought to Kansas was decidedly not the kind to which Kansas had been accustomed. In fact, it was painfully jarring to some of those who clung to the status quo, and while it had its followers in the days of its noisiest hullabaloo it never caught on entirely. Still, it had the valuable effect of jolting other Kansas papers out of the staid ruts which they had been following—and thus served as an evangel for progress.

Max Levand—and the newspaper concept he typified—stood as a debatable figure over his more than three decades in Kansas. Some embraced him as a newspaper genius, others avoided personalities but decried his policies, while a third group hated him bitterly. There was hardly ever any middle ground in individual estimates of him; these were either at one extreme or the other.

But, whatever shade of opinion existed, none could deny that Max Levand was enterprising, diligent, and persistent. He worked tirelessly, efficiently, and fearlessly. While he and his paper had toned down considerably from its shades of the early thirties, Max, in his latter years, remained the same rugged person—practical, sure of himself, unbending in his beliefs and his judgments.

Kansas—a prime realm for the development of newspaper folk in all its 99 years—has never seen his like before, and may nevermore see it again.

Address Delivered by Alexander F. Jones at the Sixth Annual Career Service Awards Dinner

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. REES of Kansas. Mr. Speaker, under unanimous consent approved by the House, I am including an address delivered by Alexander F. Jones at the Sixth Annual Career Service Awards Dinner, National Civil Service League, at the Sheraton-Park Hotel on Tuesday evening, March 15, 1960. In order that readers of the RECORD may know more about this distinguished editor and writer, I am including the introductory statement of Mr. Edward F. Thomas, president, Edward Thomas Associates, Inc., New York City:

Every now and then a newspaper editor in Washington wins national distinction. And, once in awhile a newspaper editor around the country makes his impact on the national scene. Our guest speaker tonight is the only man I know who has achieved both of these honors.

Alexander F. "Casey" Jones is well known in Government and newspaper circles in Washington, across the United States, and abroad.

Casey Jones came on the Washinton scene in 1935.

Born in Wisconsin and graduated from the University of Wisconsin, he learned his business as a news reporter and editor in Milwaukee, New York, Chicago, and Minneapolis—with time out for military service in World War I.

Mr. Jones was 44 years old when he came here in 1935 to take over the editorial direction of the Washington Post as managing editor. The New Deal was only 3 years old and some of the Nation's most crucial years were about to explode. Through the next 15 years of national and world crisis Casey Jones was at the throttle of this great newspaper—first as managing editor, and later as assistant to the publisher.

During those turbulent years he won national attention as an outstanding newspaper editor. His fellow editors honored Casey Jones by electing him president of their American Society of Newspaper Editors.

In 1950 Mr. Jones headed north to become executive editor of the Syracuse (N.Y.) Herald-Journal and Herald-American—the position he holds today. During the past 10 years he has won new honors as a distinguished editor. His work has been honored by Syracuse University, the University of Missouri, and Colgate University—as well as by several national associations.

Jones is no desk-borne editor. Since he moved to Syracuse in 1950 he toured the NATO countries in 1951. He went around the world in 1955 to visit the key trouble spots. Last year he visited the 7th Army Installation in Europe and later covered the Khrushchev tour of the United States. Next summer he will go with Eisenhower to the Soviet Union.

These foreign trips are no sightseeing junkets for Jones. He seeks out the facts, and the reasons behind the facts. He and I were members of the group that made a strenuous 3-week swing through the NATO countries in 1951. Mr. Jones reflected credit on the United States whenever he interviewed the high officials of the various countries. He revealed a broad understanding of the issues and a keen insight into the local situations in the questions he put to the government, military, industrial and other leaders we met in these countries.

As we honor tonight the 10 who have distinguished themselves in their field, it is fitting that we hear from one who has achieved excellence in the field of American journalism—a force that is so important in promoting excellence in government.

It is a personal pleasure to present Alexander F. Jones.

ADDRESS BY ALEXANDER F. JONES

Ladies and gentlemen, I cannot say I am happy to be here tonight because I am never happy when I have to inflict myself on an audience. I am well aware of my limitations. For one thing I am the only illiterate member of the Cosmos Club.

I have so much admiration for our form of government on all levels, however, that I have the temerity to join discussions of it and plans to improve the already magnificent service it renders to the American people. Thus my shrinking presence here tonight.

In a way I suppose this is a case of the culprit returning to the scene of the crime for I spent many long years here—from early in the New Deal until Korea—perpetrating countless journalistic atrocities: It is a strange thing but when I leave a newspaper they tear the building down. I like to think this is a gesture of despair, that management knows the standards set could not be maintained. There is a considerable body of thought, however, that insists efforts to fumigate the place and restore a proper journalistic odor are futile and that strecklichkeit is the only alternative.

As a great part of this audience knows the years 1935–50 were among the most turbulent periods of American history. Living through them here I have a multitude of memories of men and events. I would not dare to start mentioning them. I would find myself talking to empty chairs along toward morning.

Suffice it to say we saw more changes in government, more social departures, a greater revolution in our military posture than any other comparable period.

New Deal and subsequent legislation have established one new department after another with thousands of additional employees and although the Supreme Court invalidated a few of them, the major part are operating today and performing invaluable service.

The declared purpose of the Civil Service League is to improve public service personnel and governmental administration.

I am sure that you are all aware that this vital end has been greatly accelerated in recent years by the social, scientific, educational, and technological developments in government itself.

There are so many hundreds of fascinating projects demanding superskills today that Government service is a tremendous challenge.

No young man or woman could ever feel bored, or in a rut, if he or she really meets the demands of government today, and tomorrow.

You can honestly say that a Government employee can be a minor clerk performing office drudgery if he chooses, but if his sights are on the moon and the stars he can jolly well actually get there in the not too distant future.

There never was a time in American history when its government could say to its most promising sons and daughters with as much truth that public service today offers as many lasting satisfactions of every nature as any career that could be chosen.

The hazard in talking to this audience about Federal Government here in Washington is that you are way ahead of me on anything I may say.

This is your home grounds and you know every turn in the road.

So I am going to take you, first, to my home grounds and make a few suggestions on how to obtain top personnel at the county level and, more particularly what could be done if the general public is to appreciate fully what the Federal Government is doing, and what it offers to career people.

There are something in excess of 400,000 people in Onondaga County, of which Syracuse is the county seat.

The Federal Government pours something in excess of $200 million into our county annually.

How many U.S. Government offices and bureaus do you suppose there are in Syracuse?

I did not know until we did a series on the subject some time ago.

There are 71 counting every single man office, and on up to the 26th Air Division at Hancock Field.

Every activity of the Agriculture Department is represented, every Veterans' Bureau facility including a big hospital, and every branch of the armed services.

You name it—we have got it.

I am not going to say the community is not conscious of the myriad of Government services it gets. The postman comes around, the internal revenue offices speak up quarterly, the U.S. district attorney gets his name in the paper now and then, and our big plants are busy with defense work.

But there is not one in a 1,000 in our county who is aware of the extent of Federal services.

This is due, to a degree, to the fact that most Federal workers go about their duties so quietly and seem so anxious to avoid public attention that too often they do not even know each other.

We had an internal revenue bureau chief named Alvin Meyer who formed a Federal Council in Syracuse. The members, all Federal employees, met at luncheon regularly and someone always discussed his work. They started to exchange office equipment as needed, and even office personnel. We became keenly aware of the existence of the Federal Council and its aims.

Unfortunately, Mr. Meyer was transferred to Philadelphia and I have not heard of his council since.

In the business of securing an ever better type of Federal employee, it seems to me, it is of equal importance to make a Government career attractive on the local level as it is to influence promising young men and women to come to Washington to prepare for service here or abroad.

There may be live wire Federal Councils in many cities. I just don't happen to know about them.

There may be civil-service information officers outside Washington. Again, I have never encountered them.

Nor do I know of Federal men whose job it is to go to universities and colleges, as the big corporations do, and compete for top students. I remember Dr. Davenport very well. He used to bring some wonderful groups to this city for exposure to Government service.

But there should be more of it.

It is my opinion that an information service on what the United States is doing and what it has to offer is as important and as badly needed in Syracuse, N.Y., as it is in Belgrade, Yugoslavia.

It may be argued that United States information in this country is a job for the newspapers and other communications media.

We do the best we can but I submit when a firm does a $200 million business with a customer it would seem worthwhile to explain what the money is being spent for and what the Federal Government is giving its citizens in services.

It would help in making boys and girls in schools and colleges conscious of what a variety of interests the Federal Government covers.

As it stands, covering the Federal run in an American city is a pretty routine job that the average newspaper city desk feels can be handled by a not too bright cub.

And may I digress for a moment to point out that the news coming out of Washington is not always of the character that endears even so sacrosanct an institution as Congress to the burgers, young and old, in the hinterlands.

One of our favorite indoor sports in these United States is self-examination with such emphasis on criticism that it sometimes approaches sadistic flagellation.

This phenomenon is most graphically illustrated by testimony of Americans of standing before a congressional committee.

A man may have a reputation of being a well-balanced leader in some important activity whose word has on all other occasions been accepted as being pretty close to gospel. He may even be known as being a lopsided optimist with a sense of humor.

But let him get before a microphone facing a congressional committee with the television cameras whirring and reporters with pencils poised and he is more likely than not moved to break down and have a good cry about the tragic decrepitude of this Republic of ours, starting with the President and progressing to its shoddy foreign and domestic policies, its fangless Army, Navy, and Air Force and on down to the profits on soothing sirup and the immoral viciousness of some disk jockey who got a free cup of coffee at a diner from a waitress for playing "Hang Down Tom Dooley."

If Nikita S. Khrushchev ever said one-tenth in speaking "poor mouth" about the United States that some of our own great patriots do, there would never be a summit conference and Ike would cancel his coming visit to Moscow in an indignant huff.

Congressional committee hearings have become the "national wailing wall."

There is a movement to acquaint businessmenn, young and old, with the mysteries of local and State government that is acquiring amazing momentum.

It has taken hold in remarkable fashion in Syracuse where banks, big and small industries, and retailers are holding regular courses in seminar groups to study the organization of local and State government from precinct committeeman up.

We have found corporation executives who did not know the identity of their own councilman, to say nothing of the county chairman.

The U.S. Chamber of Commerce has taken on this project as a major activity.

The newly announced president of the U.S. Chamber is Arthur H. Motley, publisher of Parade magazine, who has spearheaded the "know your government" movement in hundreds of cities.

Red Motley is a perpetual motion ball of fire and probably the best salesman in the country. If the Civil Service League ever got him to add a Federal Government course to the local and State government seminars and induced him to make speeches about it, more bright boys and girls would be knocking at your doors.

As an editor I am really a frustrated reporter. I love to go places and see things and to talk to people.

Sometimes I carry this urge too far.

A furious Farmer Garst, intent on explaining Iowa cornplanting to Nikita Khrushchev and resenting the intrusion of the press, aimed a boot at my shins and kicked Harrison Salisbury instead.

Come June, and with God and Jim Haggerty willing, I am going to Moscow with the President.

But last spring I spent May and June with the Seventh Army in Germany, Italy, and France.

I came home with the conviction that we have a powerful and extremely important weapon working for us which witnesses befor congressional committees, criticizing our defenses, never mention.

It is a weapon development of which has Communist nations backed off the map.

American civilians, and probably some members of this organization, are responsible along with the military for its smooth as grease operation.

I am referring to the way in which our forces, both military and civilian, have knit themselves into the life of the communities in which they are stationed.

Everywhere I went, from Berlin to the smallest villages, there is a joint committee composed of the U.S. commanding officer in the area, the burgomaster or mayor, the superintendent of schools, prominent women who are sometimes local, sometimes wives of officers, and usually the top civilians in the district.

They meet to discuss local matters like schools, traffic regulations, marriages of U.S. servicemen with local girls, rent charges, and the occasional police matter.

The result is friendly understanding of all problems and close attention to local customs.

The conduct of our servicemen has been magnificent in the overall picture and there is wide agreement that if trouble comes—if the balloon goes up as the GI's put it—there will be no fifth column behind our lines.

There is equal agreement on what would happen in Poland, Czechoslovakia, and other Communist satellites. Revolution would take place overnight.

I mention this because we are talking about high type of U.S. employees.

There are about a half million of the highest type American employees in our European services today that any generation ever saw.

The young officers, many of them the product of ROTC training, the noncoms and enlisted men, the mutual aid men and

women, the younger officials in our Embassies are uniformly representations of this country of which too much cannot be said.

To one who was part of the 1917–18 AEF, our Armed Forces today are a matter of such pride, on every score, that restraint is difficult.

One more point and I am done.

No one from Syracuse could possibly discuss Government employment as a career without calling attention to the splendid work that is being done at the Maxwell Graduate School of Citizenship and Public Affairs at our university in training young men and women for service overseas in both government and business.

I am sure many here tonight know Dean Harlan Cleveland.

I have been reading some of the galley proofs of his latest book "Americans At Work Abroad," which will be published in a few weeks.

An incredible amount of research has gone into this fascinating book and it is equally of interest to businessmen and government people involved in diplomacy and our political posture abroad.

If I was to express an opinion about it in capsule form, I would say it proves all Americans abroad are not ugly.

There are probably those who think the foregoing is a rather brazen plug for a school and for a book.

I agree, without the slightest embarrassment.

We are very proud of the Maxwell School, its dean, its faculty and the type of men and women who are trained there to come to you.

I went to a party in Athens a few years ago and six of the top men in our mutual aid program there had had their training at the Maxwell School.

In concluding may I add my congratulations to those that will be expressed to the winners of the awards tonight.

How much farther out on cloud nine can anyone get than to be named one of the top 10 in the best Government on earth?

And may I also congratulate the officers, the sponsors and the members of the National Civil Service League on the vigor with which it is pursuing its most vital purpose—the perpetuation of this great Republic of ours through ever more effective direction.

Civil service faces a tremendous task in planning for the transition to a new administration this fall, regardless of whom is elected.

I know planning for this job is well underway, for which we can all be thankful.

In this fast moving age not even the remnants of the spoils system can be tolerated.

It represents a luxury we cannot afford and I am confident there are men in this room who will see to its inconspicuous burial.

Thank you.

Departments of Labor and Health, Education, and Welfare, and Related Agencies Appropriation Bill, 1961

SPEECH

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 11390) making appropriations for the Departments of Labor and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1961, and for other purposes.

Mr. DONOHUE. Mr. Chairman, it was the unanimous judgment of our Original Thirteen States, as expressed in their Independence Declaration, that all men are endowed by their Creator with certain unalienable rights, among which are life, liberty, and the pursuit of happiness.

In my opinion there is no measure coming before this body, more fully designed to promote the enjoyment of these rights to American citizens than the appropriations bill, now under consideration, for the Departments of Labor and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1961. The basic units and activities of these executive departments are more closely connected with the lives of our citizens than any other agency of our Government "for the people."

That is why I would feel remiss in my duty if I did not urge you all to approve and accept the appropriation here unanimously reported and recommended to us by the distinguished Subcommittee on Appropriations directed by our esteemed colleague, the Honorable JOHN E. FOGARTY, of Rhode Island. The recommendations of the sucommittee are unanimous and represent the best compromise decision of reasonable and capable men.

There is no greater authority on this subject in this country than Representative FOGARTY. One of the greatest joys of my legislative experience here has been to listen to his clear, concise, and forthright explanation of the provisions of this bill which he has been presenting annually to this House for the past 10 years. It is an everlasting tribute to his acknowledged integrity, scholarship, and leadership that the recommendations of his conscientious subcommittee have been so overwhelmingly and regularly adopted without prolonged debate or technical quibbling on such a vitally important measure.

Mr. Chairman, to attempt to either regulate or improve the health and happiness of human beings in terms of dollars and cents is a most difficult, if not impossible, task. We are all, I am certain, agreed on the necessity for practicing economy in Government expenditures and to preserve our financial stability and world position. However, I think we are further agreed that gestures of doubtful economy at the expense of lowering national standards of working conditions, health protection, and educational advancement is most unwise and impractical, more especially in these days of communistic competition.

For that fundamental reason, I most earnestly hope that no crippling reductions will be attempted during our action on this bill; indeed, it is my deepest hope that the moderate increases recommended by the subcommittee and the chairman, principally in the fields of hospital construction, vocational education, assistance to the schools in federally impacted areas, grants to States to build waste-treatment plants, and research at the National Institutes of Health will be unanimously accepted.

I would like to emphasize that the subcommittee has not advocated general increases in all the areas covered by this bill. The subcommittee adopted the very sensible approach that there are certain selective and essential areas of public need that can and must be met in the national interest. It would be most difficult to justify any wide disagreement on these specific activities the subcommittee has chosen for their special attention.

The fundamental objective of the subcommittee, so obviously and patriotically revealed in their report, was to keep all of the many and varied activities of these two major public service Departments of Government in operation at their highest economically efficient level while encouraging a selected few activities to moderately advance their scope of service in response to particular and proven expanding public needs.

Mr. Chairman, the appropriations we grant under this measure are designed to continuously improve the Christian, civilized working conditions of our people and to protect and advance the health of all our citizens, particularly children, women, and the aged. It is obvious, therefore, that this appropriations bill is of the greatest importance to the progress of our national welfare and that is why each of us have the highest obligation to devote the most conscientious attention to it.

At a time when we are generously granting billions of dollars to aid our foreign allies, let us not be neglectful of our own citizens. At a time when we are telling the world of our better way of life, as opposed to Communist barbarism, let us not dangerously reduce any of these public services whose contributions to national progress have been universally acknowledged. At a time when we are engaged in a life-and-death struggle with the curse of communism, let us take no unwise chances of disrupting the high morale of our own good people. In conscience, let us vote in support of the continuing and full functioning of these units and agencies whose services are, indeed, in the national interest and emphatically good for all Americans.

Should the Family Doctor Be Outlawed?

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Friday, April 1, 1960

Mr. ENGLE. Mr. President, Gen. E. R. Quesada, Administrator of the Federal Aviation Agency, in one of his misguided efforts to improve air safety, has proposed to outlaw the family doctor. He wants to set up a list of selected doctors approved by the Federal Aviation Agency to give physical examinations to private pilots.

It would be assumed from this action that aviation medicine as it relates to pri-

vate pilots' physical examinations is a highly specialized field and that, therefore, only selected medical examiners specially trained are competent to give such examinations. The fact is that the physical examination required of private pilots is very easy to pass. I refer to the provisions of Civil Air Regulations Manual 29. A private pilot can pass the eye examination "if the vision in either or both eyes is poorer than 20/50 and is brought up to 20/30 or better in each such eye by glasses." He can qualify if he is able to "hear the whispered voice at 3 feet." These are two examples of the present requirements. Actually anyone in fairly good health can pass the physical examination, and there is no part of the examination that the family doctor cannot give without having any special training or equipment.

Since it is clear from a careful review of the regulations that no special competence in aviation medicine is required to give an applicant an examination for a private pilot's license, I see no reason for outlawing the family physician or any physician who is qualified to practice under the laws of the respective States. General Quesada's proposed plan will, of course, further build up the Federal bureaucracy and provide a special patronage system for the Federal Aviation Agency. The plan is a reflection on the competence of family doctors. Furthermore, it would put private pilots to unnecessary trouble and expense.

The resentment toward this kind of operation, in the name of safety, is very strong among the private pilots of the country. I commend to the attention of my colleagues a letter I have received on the subject under date of March 28, 1960, from Mr. James G. Morton, vice president of the American Weekly. Mr. Morton sent me also a copy of the letter he wrote under the same date to General Quesada. Mr. Morton, a newspaper executive as well as a business pilot of more than 20 years experience, makes a very clear presentation of the reasons the private pilots take exception to being burdened by the proposed action.

I ask unanimous consent to have the correspondence printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

NEW YORK, N.Y., *March 28, 1960.*

The Honorable CLAIR ENGLE,
Old Senate Office Building,
Washington, D.C.

DEAR SENATOR: I cannot think of a more flagrant example of bureaucracy for bureaucracy's sake than the senseless, high-handed action of the Federal Aviation Agency in their plan to outlaw the family doctor for physical examinations for a private pilot's license.

A copy of my correspondence to FAA Administrator Elwood R. Quesada on this matter is enclosed.

Will the encroachment of Government individuals continue unbridled? Is there no one to fight this growing intrusion into the privacy of the individual?

It is palpably demonstrable that a so-called aviation medicine specialist (in itself, largely a myth) cannot possibly on cursory examination gain comparable knowledge of an individual's physical condition and mental attitude as the family doctor who has treated him all his life.

There are two very obvious reasons for visiting this inconvenience and unnecessary expense on the thousands of pilots throughout the country—"empire-building" by the FAA and "pork barrel" by an organized group of doctors who have dabled in so-called aviation medicine.

The family doctor, who has the most thorough knowledge possible of the patient, is eminently qualified to examine for a private pilot's license. They have been doing it for years and no one can cite any good reason why they should not continue. Could an FAA designee, seeing a patient on a cursory physical, have any knowledge of a patient's underlying neurosis, for example? The family doctor would certainly know.

If this connivance between the bureaucrats and a medical lobby serve any useful purpose of air safety or progress, I would support it. But they are turning the clock back 20 years. Their contemplated action fizzled then, and it would serve no useful purpose now.

As a Member of Congress, I hope you will fight such efforts to burden us with still more inconvenience and expense for bureaucracy's sake.

Sincerely,

JAMES G. MORTON.

NEW YORK, N.Y., *March 28, 1960.*

Administrator ELWOOD R. QUESADA,
Federal Aviation Agency,
Washington, D.C.

DEAR GENERAL: Both as a newspaper executive and as a business pilot of more than 20 years' experience, I have wholeheartedly supported your objectives as chief of the Federal Aviation Agency.

In your policies and decisions I know you have the national interest at heart.

I am sure the overwhelming majority of responsible pilots—airline, business, private, and military—is devoted to the cause of air safety and progress.

And it is palpably true that the individual cooperation and support of the many thousands of pilots throughout the country will greatly expedite the function of the Federal Aviation Agency and the attainment of your objectives.

The various organizations which represent civil aviation have their place, of course. In various areas each has made important contributions to air safety and progress. But I think the support and cooperation of the thousands of pilots as individuals transcends that of the collective groups representing the segments of civil aviation.

On that account it becomes difficult to reconcile the arbitrary action of the FAA medical officials in wanting to turn back the clock 20 years and require private and business pilots to journey to certain self-ordained medical aviation experts for periodic examinations. We tried that in 1938 and it was a nuisance and served no useful purpose. It will serve no useful purpose now.

From the standpoint of full knowledge of a patient's health, who could be so thoroughly informed as a family doctor? Is the impersonal examiner, on a brief and cursory examination, able to know nearly as much about the physical condition of an individual as the family doctor who has treated him consistently over the years? Of course not.

Really, from the standpoint of the pilot, the issue, in the personal sense, becomes one of inconvenience and wasted time. For example, I have medical checkups regularly every year. For me, going to a designated expert will mean extra expense, wasted time, and travel.

This sort of inconveneince, when it is needless and serves no useful purpose—indeed, when it is a step backwards—has only one interpretation to the intelligent individual. It is evidence of bureaucracy for bureaucracy's sake. It makes suspect other rulings and decisions which have real importance. It alienates the rank and file of pilots. It fails to win the voluntary cooperation so essential to the attainment of major objectives.

If indeed the Airline Pilots Association, the AOPA, and other organized bodies of civil aviation are "pressure groups," is there a better way to drive more and more pilots to their door and solidify their ranks than the imposition of such useless nuisances as this medical thing?

As a pilot who once wasted a half a day or more going to a designated office, waiting the hours, and finally getting the most cursory physical I've ever had, then paying unnecessarily for it, I can't think of a more senseless reason for annoying and inconveniencing thousands of pilots—business executives, company presidents, articulate spokesmen in the community—and divorcing their good will, cooperation, and support.

I respectfully suggest this measure be tabled for the present, at least until it can be demonstrated that substantial benefits will accrue to air safety and progress.

Sincerely,

JAMES G. MORTON.

Ninetieth Anniversary of 15th Amendment to the Constitution

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1960

Mr. JAVITS. Mr. President, last Wednesday, March 30, 1960, was a particularly fitting day for the Senate to resume the consideration of the pending civil rights bill, of which such an important portion is devoted to the protection of voting rights protected by the 15th amendment to the Constitution For that day was the 90th anniversary of the ratification of the 15th amendment, with which we are concerned so deeply here, and under whose grant of power to the Congress we are legislating.

I think that it is appropriate to read to the Senate the complete text of this succinct and clear amendment; perhaps that should have been done every day since we took up the civil rights bill on February 15 so that no one would misinterpret why and under what authority we are legislating here. The amendment reads:

SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

SEC. 2. The Congress shall have the power to enforce this article by appropriate legislation.

I ask unanimous consent to have printed in the Appendix of the RECORD the lead editorial from the New York Times of March 30, which eloquently hails this anniversary.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NINETIETH CENTURY

Ninety years ago today the 15th amendment to the Constitution was declared to have been ratified in a proclamation issued by Secretary of State Hamilton Fish. The key words of this amendment are: "The right of the citizens of the United States to vote shall not be denied or abridged * * * on account of race, color, or previous condition of servitude." The amendment expressly gives to Congress the "power to enforce this article by apropriate legislation."

We have printed these words in this space before, and shall doubtless do so again until the day, perhaps not too far off, when all citizens of the United States actually enjoy the equality at the ballot box proclaimed by our democracy as a basic right. They do not all enjoy it now. Many hundreds of thousands—no one can say with precision how many—do not enjoy it in the South solely because of the color of their skins. That is a situation that must end. The legislation that comes before the Senate today will help to end it.

This 90th anniversary of the 15th amendment is a good day for the Senate to take up the House-approved civil rights bill of 1960 as it comes—by force majeure, as it were—from Senator EASTLAND'S Judiciary Committee, traditional stronghold of entrenched conservatism. The House bill is by no means the best civil rights bill that could be devised; but it does represent an important forward step to insure voting and some other rights for our Negro fellow citizens in the South.

If Majority Leader JOHNSON'S impressive strategy succeeds in the Senate, a bill will go to the President more or less as the House passed it. This will not be enough for many sincere liberals; but it will be a bill of substance and it will be a positive achievement. It will certainly be infinitely better than no bill at all, or a bill watered down for political reasons even further than this one has already been. We too would like to see some of the provisions that have been cut out of the House bill restored to life—but not at the expense of indefinitely tying up this measure once again.

Conflict-of-Interest Legislation

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1960

Mr. KEATING. Mr. President, as a long-time student of conflict-of-interest statutes, and consistent supporter of efforts to modernize and strengthen these laws, I have been gratified by the strong editorial support accorded the most recent congressional effort in this field. I refer to the bill introduced by my senior colleague from New York [Mr. JAVITS], myself, and other cosponsors to carry out recommendations of the special committee on Federal conflict-of-interest laws of the Association of the Bar of the City of New York.

This proposal, S. 3080, is an excellent effort to codify the scattered laws in this field and to make them apply more realistically to Federal employees. Unfortunately, it covers only the executive branch of the Government. However, the committee which drafted the bill suggested that a study be made of possible legislation to include the legislative branch.

I am firmly convinced that any kind of legislation which is enacted in this field must apply to Senators and Representatives, as well as their employees. The people expect the same high standards of ethics from their elected representatives in Congress as from Federal officers and employees in the executive branch.

Last year I introduced legislation which would include Congress and its employees under conflict-of-interest statutes. Among other things, these bills would make a matter of public record any written or oral communication between a Member of Congress or his staff on the one hand, and any regulatory agency of the Government. One would establish a code of ethics for Congress and the executive branch, setting forth the specific standards with regard to all aspects of the ethical conduct of these public servants. I am extremely hopeful the interest stirred up by the latest proposals in this field will prod congressional action on all these bills.

In this connection I was pleased to read an excellent editorial in the Jamestown Post-Journal which, after surveying the provisions of S. 3080, urged that study be devoted to including the legislative branch in any final conflict-of-interest statute. I am glad to have this strong support and I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Jamestown Post-Journal, Feb. 29, 1960]

CONFLICT OF INTEREST

Senators JACOB K. JAVITS and KENNETH B. KEATING have introduced bills designed to provide a complete overhaul of the conflict-of-interest laws enacted over a period of a century or more. These measures are based on recommendations of a special committee of the Association of the Bar of the City of New York after a 2-year study financed by a grant from the Ford Foundation. The committee reported that the present laws are inadequate and some are obsolete. It wants a single unified act that will fix responsibility on the President by giving him a conflict-of-interest administrator.

That there is a real need for stiffening of the laws against conflict of interest by Federal Government employees has been apparent for a long time. They have been exposed periodically in both Republican and Democratic administrations and in some cases have reached into the top echelons of government.

The Javits-Keating proposals would prohibit the acceptance of gifts, gratuities, or favors when offered to an employee because of his post with the Federal Government, or if the giver is one who does business with the employee's agency or is regulated by it. An employee could not accept pay from outside sources in return for personal services, unless the work is performed outside Government hours and is not otherwise prevented by regulations. Former workers would be barred from giving assistance to a private interest in transactions with an agency in which he was employed for a period of 2 years.

While the bar association's recommendations embraced in the Javits-Keating bills relate only to the executive branch of the Government, it urged a similar study of the legislative branch. That would be in order. But Congress has always been slow in doing anything about conflict of interest among Senators and Representatives.

Keeping the Pork Out of Pork Barrels

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1960

Mr. KERR. Mr. President, in the Armed Services Management magazine of February 1960, there was an article entitle "Keeping the Pork Out of Pork Barrels" by Col. Robert R. Robertson.

Colonel Robertson is one of our outstanding public servants and is Public Relations Officer for the Corps of Engineers.

The article contains information which I believe should be widely circulated. Therefore, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KEEPING THE PORK OUT OF PORK BARRELS

(By Col. Robert R. Robertson)

For the 135th straight year, Congress, before adjourning last year, voted appropriations for the Corps of Engineers civil works program.

This program develops our Nation's water resources and protects its citizens from floods. It is a program of critical projects undertaken because they are beyond the means of local areas concerned.

Also for the 135th straight year, various uninformed but vocal elements have raised the cry of "pork barrel." As one omniscient columnist given to something less than perceptive reporting put it, "a going-away present for Congressmen."

That there are those who make such statements, and worse still, many more who believe them, betrays an abysmal lack of information on the water problem in the United States. It is particularly distressing to find many well placed individuals in the Defense Establishment, both military and civilian, who have fallen prey to this "pork barrel" sophistry.

While it may be a sad commentary on our progress toward becoming civilized, it is a historical fact that the material advancement of our race has been paced, in the main, by requirements of the military. It was the critical need of nonavailable engineers to build fortifications 140 years ago which inspired Major Sylvanus Thayer, an Engineer officer, to develop the U.S. Military Academy into the only school in the young Nation qualified to train engineers and scientists.

A knowledgeable Government soon recognized that only at West Point was there the talent needed to meet the technological demands of our expanding country. In 1824 Congress gave the Corps of Engineers responsibility for developing a transport system of roads, canals, and waterways to weld the Nation together. It was Sylvanus Thayer's students who undertook the job.

In 1824, the big problem was transportation. And the Corps of Engineers concen-

trated on making our inland waterways and our inland and coastal harbors usable. Improved waterways attracted villages which grew to become towns and cities. Floods became of great concern as each year the cities suffered loss of lives and heavy property damage. At first, the local people cleared river channels and built levees themselves to escort floodwaters past their towns. Such local solutions merely aggravated the problem of a downstream community.

Dollars were wasted and enmity created before the need for a centralized coordinated effort became recognized. But the wheels of Government grind slowly.

In 1927 the most disastrous flood in the history of the lower Mississippi River occurred. Cities, towns and farms were flooded. Scores of lives were lost; property damage ran into the hundreds of millions of dollars and thousands were left homeless.

This great disaster awakened the Nation to the dire need for a comprehensive flood control program. Various legislation followed, culminating in the 1936 Flood Control Act, in which Congress added to the Corps of Engineers' navigation mission the related responsibility of nationally developing flood control works.

It takes large dams to control floods. Large dams can also be used to generate power and store water during periods of plenty for use during dry seasons. As our country's continued growth put increasing demands on our rivers, the Engineers were given the job of creating works ancillary to flood control dams necessary to meet these other demands.

Our Nation has grown up now, but harnessing the power of its mighty rivers is still far too big a job for local management. For example, the Mississippi River system is one of the world's greatest. Mark Twain had an idea of the size of the task when he said, "The military engineers have taken upon their shoulders the job of making the Mississippi over again—a job transcended in size only by the original job of creating it."

But even Sam Clemens would be amazed were he able to see "The River" today. The levee system on the main stem of the Mississippi alone consists of 1,565 miles of embankments containing enough yards of earth to fill a freight train reaching halfway to the moon. For every dollar invested in this effort by the Corps of Engineers, $6 in prevented flood damages have been returned to date. These are only dollars saved—who can put a value on the lives saved and the human misery prevented?

Perhaps at this point those who cry "pork barrel" will agree that it is proper for the Federal Government to be in the water resources business. Possibly then they do not agree with the way the program is conducted—the way politics enter into it.

A principal charge levied by critics of the public works program states, in essence, that unnecessary projects are built to benefit a chosen few or to create jobs in the districts of the various Congressmen. A picture is conjured up with each Congressman riotously voting funds for projects in the areas of interest of other Congressmen so that they, under previous secret cloak room agreements will vote for projects in his area.

Public works projects originate where they are needed by the initiative of the people concerned. A disastrous flood, an expanding economy needing improvements in navigation, or similar circumstances caused local people to unite toward a solution. When the problem goes beyond their capabilities, an appeal is made to Congress. If the request seems reasonable, Congress authorizes the Corps of Engineers to investigate and report. This first report is based on an inexpensive preliminary investigation. It is made by an engineer district, reviewed by a division, reviewed again by the Board of Engineers for Rivers and Harbors.

The Board, after studying the report, sends it to Chief of Engineers with its recommendation. The Chief of Engineers decides if a more comprehensive investigation should be made.

If further study is not justified, Congress is so informed and that is that. If it is, a more detailed survey is ordered, giving full consideration to engineering problems and probable economic benefits. (To speed the process, a recent procedural change eliminates the preliminary investigation. But it provides that the comprehensive investigation may be abandoned at any point that evidence warrants.)

CHECK AND DOUBLECHECK

Again the long check and doublecheck process through district, Division, Board, and Chief of Engineers. If the project will not return more than $1 in benefits for every dollar invested, it is automatically recommended against. If it appears economically and engineeringly sound, Congress is informed.

Here again, the project encounters a lengthy, laborious screening. It runs the gauntlet of the Bureau of the Budget and various congressional committees before Congress votes to put it on an approved legislative list. Subsequently, it must go through a similar process before funds are made available.

The preliminary studies are not prefunctory gestures. Over the years, the Corps of Engineers has recommended against 55 percent of the proposals investigated.

Commenting on this, General MacArthur said, "There is one attribute, perhaps it should be classified as an accomplishment, which has been overlooked. It is the unswerving capacity of the corps to say no—to resist all pressure from whatever source, high or low, to enter upon unwarranted projects involving great sums of money. Billions of dollars thereby have been saved to the Government * * *."

To those who are familiar with the procedures, the complaint is that the elaborate screening is delaying work on many needed projects. A rather different picture of the civil-works program from that painted by the purveyors of the pork barrel illusion.

A rosy picture, but to the skeptic's mind comes a question—the payoff question. What has the Corps of Engineers' civil works program created to date besides tradition and some stringent screening procedures?

In its 135 years of supervising the civil works program, the Corps of Engineers has received annual appropriations varying from $75,000 in 1824 to almost $900 million in 1959. During this 135 years, total expenditures for all facilities—dams, powerhouses, locks, levees, channels, harbors—have been less than $8 billion.

For the $8 billion invested to date, United States has 2,800 active Corps of Engineers' projects which include:

A navigation system second to none in the world—23,000 miles of improved waterways and 500 harbors. In 1957 over 230 billion ton-miles of traffic used this system.

The Great Lakes Navigation System, the St. Lawrence seaway, the Mississippi River, the Ohio River, to name a few, are all parts of this inland waterway system.

Flood-control works, though only partially complete, have prevented $9 billion in damage over the past 12 years. When the present system is completed, the taxpayer will receive some $3 in flood damages prevented for every dollar invested.

Just under 28 billion kilowatts of hydroelectric power are generated annually at Corps of Engineer dams. This represents over 20 percent of the total U.S. hydroelectric output.

Releases from reservoirs for power generation, navigation, and floodwater drawdown all supply water for domestic, agricultural, and industrial use. Also, where feasible, Corps of Engineers' reservoirs provide space specifically for water storage. Some 40 cities and towns throughout the United States derive their water supply directly from such facilities.

Over 4-million acre-feet of storage are provided for irrigation water. Further, releases from these reservoirs are becoming increasingly important in supplementing major rivers during low flow seasons.

Corps of Engineer reservoirs and waterway projects provide over 6 million acres of land and water surface for fish and upland game and the nesting, resting, and feeding area for millions of duck, geese, and other migratory waterfowl.

The pork barrel psychology is particularly dangerous today. It casts public doubt on a program critically important to the Nation's future. The need to maintain a military posture, the need to meet an economic challenge around the world, and the need to absorb an explosive population growth variously estimated as 40 million to 60 million in the United States in the next 15 years, will combine to demand an unprecedented expansion of industrial, commercial, and agricultural capacity.

Department of Commerce, in an official report, concluded the Federal Government alone must spend $28 billion on flood control, navigation, water supply, the hydroelectric power over the next 15 years if we are to keep up with the demands of our growth. For the same period, the total Federal and non-Federal expenditures needed to meet water use demands was set at $231 billion.

What many people, even those who understand the need for rapid development in this area, do not realize is that today we are irrevocably dictating the limits on our water supply 15 years from now. This is not an exaggeration. It is in fact most conservative. The lengthy process of investigations, surveys, authorizing legisaltion, appropiraitons, and finally design and construction, consume a minimum of 15 years.

Pork barrel? In this land of abundance in the last 5 years, over 1,000 communities housing over 15 percent of our citizens have had to ration water. Corps of Engineer flood control works now prevent $600 million in damages each year, but an equal amount of damage occurs in unprotected areas. Our waterways handle over 230 billion ton-miles of traffic each year, but newer, larger, and more efficient tankers and barges already have made obsolete many of our locks and river channels.

Pork barrel? Our problem is too little too late. History is replete with the chronicles of the civilizations that have risen and fallen as they succeeded or failed in their efforts to develop and maintain water resources. It is of more than academic interest that the advance of early western civilization followed the development by those surprisingly competent Roman engineers of water supply projects throughout Africa, Europe, and western Asia. Of even greater significance is the fact that destruction by the Goths and the subsequent neglect of these great water systems was a major contributing factor to the decline of the Roman Empire.

Such projects are a part of our overall defense effort just as surely as is the development of weapons. We must each consider it a duty to see that the pork-barrel myth does not do to our civilization what the barbarians did to the Roman Empire.

School of Education, University of Wisconsin

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, April 1, 1960

Mr. WILEY. Mr. President, as a Nation, we recognize that further improving our educational programs continues to be a major national objective.

As Congress considers legislation in this field, it is always extremely helpful to be better informed on the specific ways in which our outstanding educational institutions are now carrying on projects and programs, not only to meet the needs of today, but to further improve our system for the evergrowing challenges of the years ahead.

Recently I was gratified to receive from Lindley J. Stiles, dean of the school of education of the University of Wisconsin, an excellent report on the fine progrems of teacher training and education being carried on at the university.

For interested Members of Congress and the general public, I would wholeheartedly recommend reference to this splendid report for data and information on the constructive ways in which the school of education of the University of Wisconsin is meeting its challenges.

In addition, I ask unanimous consent to have brief excerpts from the report on the scope and progress of its efforts to further improve our teacher educational program printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SCHOOL OF EDUCATION, UNIVERSITY OF WISCONSIN, EMPHASES AND DEVELOPMENTS, 1955–60

The University of Wisconsin faces no greater responsibility than the one it bears for the preparation of teachers and other educational personnel as well as for research to improve education. How well it is discharging this obligation is properly the concern of faculty members, State officials, members of the teaching profession, as well as citizens in general. To assist with such an appraisal, a summary is presented of the major program developments, research emphases as well as service and professional contributions that have characterized the work of the school of education during the past 5 years.

Although the period covered represents the span of new leadership for the school of education, it will be appreciated that the general pattern of policies followed, as well as many of the specific projects, originated under former administrations. All, too, have been the product of faculty efforts and decisions. Specifically, credit for progress should properly go to:

1. The unique structure of the school of education which permits and encourages the interest and participation of faculty members throughout the university in the formulation of policies, planning, tnd development of programs for the education of teachers.

2. The quality of staff members and administrative officers in the various departments budgeted in the school itself, many of whom were assembled under the leadership of former Dean John Guy Fowlkes, who by both his contributions and counsel continues to add strength to the enterprise.

3. The support, assistance, and encouragement provided by the regents and board of visitors, the president, vice presidents, and other central administrative officers as well as deans of the university, the State superintendent of public instruction and his associates, the advisory council of the school of education which represents various professional and lay groups throughout the State that work in the interests of education, and the Wisconsin school systems and other organizations that have contributed to the support of educational research.

The faculty may justifiably take pride in the advances made in the program provided for prospective teachers, the expansions in, and the amount of support for, educational research and experimentation with new programs, as well as in the cooperative relationships maintained with Wisconsin's elementary and secondary schools. It must be recognized, however, that as satisfying as these gains may be, they represent only levels of productivity from which even greater efforts must come if the university is to do its part to strengthen itself as well as elementary and secondary schools.

I. PROGRAM DEVELOPMENTS

Program developments during the past 5 years reflect trends and emphases in the preparation of teachers at the University of Wisconsin. The major actions have aimed toward: (1) placing greater emphasis upon, and improving the nature of, the laboratory phases (student teaching, internship) of the work in pedagogy; (2) providing more flexibility to meet the individual differences in abilities, background, time of decision to prepare for teaching, and professional goals of students; (3) strengthening the quality of the total program of preparation for teaching, with particular emphasis on the work in both pedagogy and the teaching field; and (4) making available special avenues for preparation and entry into teaching that are uniquely adapted and challenging to the interests and capacities of academically talented students.

Established policies and procedures which point to the above objectives are outlined below. Graduate program developments in the departments budgeted in the school of education and others which are designed primarily for teaching education, are included inasmuch as they relate directly to the inservice preparation of educational personnel. Leadership for these developments has come from the various school of education departments involved, the graduate school, and a number of instances from other college or divisions of the university.

Undergraduate and preservice developments

General actions: Enactment of policies to establish the block plan of student teaching for prospective secondary schoolteachers.

Reorganization and improvement of counseling services.

Establishment of a postbaccalaureate program for liberal arts graduates preparing for high school teaching.

Cooperation within the university with other colleges and schools to develop an honors-type program for gifted students preparing to teach.

Cooperation with the State department of public instruction and with other colleges of the State to develop a plan to certify able college graduates for teaching on the basis of proven knowledge in the fields of liberal education, subject specialization and professional education as well as demonstrated ability to teach. A similar plan was adopted by the University of Wisconsin for undergraduates seeking to qualify for teaching.

Agreement to cooperate with the Madison public schools to develop the Washington Elementary School as a special research and demonstration school to serve both the city of Madison and the university.

Required professional sequence: Evaluation and improvement of education courses required for certification based on a comprehensive survey of the attitudes of prospective teachers and selected graduates.

Reapportionment of the 18 semesters of required work in education courses for prospective high school teachers by increasing the allocation to student teaching from 5 to 7 semester hours with a consequent decrease in credit hours allocated to foundation courses from 9 to 7.

Agreement to include in the block semester at the secondary level from 12 to 14 hours of the 18 hours in the professional sequence.

Provision of options in requirements in the professional sequence to permit choices from a number of undergraduate or advanced courses.

Reorganization and reduction from 2 to 1, of the introductory courses required for prospective elementary teachers.

Experimentation in the required professional sequence with varied sized classes.

Strengthening of the program of supervision of student teaching.

Reduction of the overload of student teachers in Wisconsin High School.

Experimentation with the internship as an ingredient of the instructional team.

Decision to develop a post-baccalaureate program to prepare liberal arts graduates for elementary school teaching.

Experimentation with the use of television to improve instruction in both academic and professional courses. Closed-circuit television of classes in Wisconsin High School has made group observations by prospective teachers possible.

Specialization in teaching fields: Adoption of policy to strengthen the subject preparation of high school teachers by: (1) reducing from three to two the number of fields in which certification may be sought; (2) recommending to students fields of specialization which support each other, e.g., mathematics and physics; (3) developing related second and/or distributed fields for those preparing to teach subjects such as English, history, and science.

Agreement to develop subject matter specializations for teachers in terms of knowledge required to teach, in particular assignments, instead of relying on the established major and minor requirements of the various departments of the university.

Approval of new specializations for teachers in: Hebrew, and Russian.

Development or reorganization of programs in: health, dance, art, physical education-men, agriculture education.

Graduate programs for teachers and other educational personnel

Art and art education: Establishment of a 2-year master of fine arts degree.

Education: Development of a doctoral program in school psychology offered jointly with the department of psychology.

Development of a master's degree program in rehabilitation counseling.

Planning of a joint program in special education with particular emphasis on mental retardation, emotional disturbance, and the physically handicapped, in cooperation with the Department of Exceptional Education, University of Wisconsin, Milwaukee.

Agreement to develop a program of research and graduate work in the field of general adult education in cooperation with the division of extension and other university agencies.

Cooperation with State department of public instruction on new certification program for specialized education personnel.

Physical education: Agreement between the departments of physical education for men and women to develop a joint graduate program at both the master's and Ph. D. levels.

Other projects: Development of an experimental interdepartmental master's degree program for teachers of science and mathematics. This was a pioneer project, with support from the National Science Foundation and leadership from both the graduate school and the college of letters and science.

Cooperation of all departments with the joint staff committee on graduate programs to work out with the State colleges a new type of master's degree program uniquely suited to the educational objectives of classroom teachers.

Development of special summer programs for teachers of science, mathematics, and foreign languages.

Study of 2-year and doctoral interdepartmental graduate programs for educational administration.

Coordination of fifth-year certification programs for liberal arts college graduates with study leading to the master's degree.

Preparations Underway for the 1964 American World's Fair

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1960

Mr. KEATING. Mr. President, a great deal of hard work has been done over the past several months in preparing for the American World's Fair in 1964 to be held in New York City. A number of interested citizens in New York have been instrumental in organizing the New York World's Fair Corp. and in getting the administration to select New York City as the site for an American fair in 1964.

These efforts have been highly successful. A great deal of work, of course, remains to be done in arranging with the Bureau of International Expositions in Paris and with foreign nations to finalize arrangements for the fair. Beyond that, plans must be made for Flushing Meadows, the site of the fair, and the construction of buildings, roads, and other facilities must be initiated.

One of the most gratifying aspects of the preparations for the 1964 fair thus far has been the active participation and assistance of the President and of the Department of State in working with foreign nations, which we hope will exhibit at the fair. I ask unanimous consent that the letter from President Eisenhower to Mr. Robert Kopple, executive vice president of the New York World's Fair 1964 Corp., expressing the hope that foreign nations will respond enthusiastically to the invitation of the New York World's Fair in 1964 be printed in the Appendix of the RECORD.

The permanent organization for the 1964 fair is now being set up. Several weeks ago Mr. Robert Moses was named to head this organization. Many of those who have worked long and hard on the fair up to this point are now stepping aside. I want to commend them for the fine work which they have done. Mr. Thomas Deegan, chairman of the fair corporation, and Mr. Robert Kopple, executive vice president, merit special praise for the efforts which they have devoted to this endeavor.

I ask unanimous consent that a letter which I wrote to Mr. Kopple praising him and the officers and members of the fair corporation for the energy which they have devoted to a 1964 American World's Fair in New York City also be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington.

Mr. ROBERT KOPPLE,
Executive Vice President, New York World's Fair 1964 Corp., New York, N.Y.

DEAR MR. KOPPLE: The World's Fair to be held in New York in 1964 can be a powerful instrument for peace and friendship in freedom.

There is no greater force for good will on this earth than for people of all lands to meet face to face and become better acquainted with each other. This simple but basic truth has been reinforced in my own mind by my travels around the world and my visits here at home with leaders from many nations.

Ignorance of one another can lead to misunderstanding and conflict. The only way to correct this unhappy state is through first-hand knowledge, personal contacts, and a fruitful exchange of ideas.

I hope that all nations will respond enthusiastically to the invitation of the New York World's Fair in 1964. This will be a fine opportunity for their peoples to grow in mutual respect and friendship.

Sincerely,

DWIGHT D. EISENHOWER.

U.S. SENATE,
March 24, 1960.

Mr. ROBERT KOPPLE,
Executive Vice President,
New York World's Fair 1964,
New York, N.Y.

DEAR BOB: The efforts which over the past few months have been devoted to a 1964 American World's Fair in New York City are now coming to fruition.

The job is by no means over. It is just beginning. The President's invitation to foreign countries to participate in a New York World's Fair in 1964 marks a beginning and a challenge—a challenge to fulfill all of our aims for a successful 1964 World's Fair promoting peace through understanding.

I commend all of the members of the New York 1964 World's Fair Corp. for the fine work which you have done. You may be assured of my continuing interest and cooperation in all of your future endeavors.

Very sincerely yours,

KENNETH B. KEATING.

Unification Is Still a "Must"

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1960

Mr. ENGLE. Mr. President, I call to the attention of my colleagues an editorial entitled "Unification Is Still a Must," in the March 31 issue of the Washington Daily News. The editorial describes a unification plan suggested by Mr. Thomas G. Lanphier, Jr., an "angry man who quit his post as vice president of the Convair Division of the General Dynamics Corp. because he thought the Government wasn't doing enough in the defense field."

I heartily support Mr. Lanphier's suggestions. I made recommendations for a similar functional reorganization on the floor of the Senate on August 28 of last year. Mr. Lanphier proposes that we unify the services and that we create an integrated retaliatory force, an integrated limited war deterrent force, an integrated home defense against submarine and air attack, and an integrated logistic force to support the foregoing.

These suggestions are not new. They have been made before Mr. Lanphier and I made them. Yet the administration has failed to implement this or any other plan to eliminate the duplication, the waste motion, the inefficiency in our defense organization.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNIFICATION IS STILL A "MUST"

In all the criticism of how the Defense Department has been run during Dwight Eisenhower's terms as President, one charge seems less challegneable than the rest:

Little headway has been made in furthering real unification of the armed services.

The discouraging record prompts the question: If a man of Dwight Eisenhower's military prestige and knowledge could accomplish so little toward a goal to which he was dedicated, can anyone get the job done?

The answer remains, as has been the case since need for unification became so apparent after World War II, it must be done.

With the Defense Department spending half of each Government dollar, it obviously is of utmost importance that its billions be spent with greatest possible efficiency to get the "most bang for the buck." And it also is obvious that this can't be done with overlapping of service functions and the continuing interservice rivalries.

An interesting new unification plan has been put forth by Thomas G. Lanphier, Jr., an angry man who quit his post as vice president of the Convair Division of the General Dynamics Corp. because he thought the Government wasn't doing enough in the defense field. (The Government was his company's biggest customer.)

Proposes Mr. Lanphier: Unify the services with one promotion list and create an integrated retaliatory force; an integrated limited war deterrent force; an integrated home defense against submarine and air attack; and an integrated logistic force to support the foregoing.

We don't know whether Mr. Lanphier's plan is the best that can be evolved, but we do agree with him when he says "unification of the services * * * is urgently required if time, money and perhaps, our way of life is to be saved."

We hope the 1960 presidential nominees will give Mr. Lanphier's plan study and, if they don't agree with it, come up with specific programs of their own.

Real unification of the armed services is still a must.

Truth About Finance Charges

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1960

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The States Shirk Another Duty." The editorial was published in the Denver Post of March 29, and supports my bill which calls for truth about finance charges.

I also submit, in the same connection, an article which was published in Newsweek for April 4.

There being no objection, the editorial and the article were ordered to be printed in the RECORD, as follows:

[From the Denver Post, Mar. 29, 1960]

THE STATES SHIRK ANOTHER DUTY

Strong support is developing in Washington for the bill sponsored by Senator PAUL DOUGLAS, Democrat, of Illinois, to require credit merchants, including automobile dealers, to tell their customers how much they are paying for merchandise and how much extra they are paying for interest, insurance, fees, etc.

"Dollar-down-and-dollar-forever" purchasers have long been victimized in many parts of the country by high interest charges and hidden supercharges for such things as insurance which will guarantee that the merchant gets his money even though the customer dies before completing the time payments.

All too often a buyer will sign a purchase contract and then learn, after he goes home and does some simple arithmetic, that he is being seriously penalized because he did not buy for cash.

Senator DOUGLAS would require installment merchants to furnish their customers readily understandable statements so they will know in advance how much they are paying for the credit they receive.

The Association of Better Business Bureaus, Inc., has endorsed this "truth about credit" bill. It also has the support of the Federal Reserve Board, although the Board would like to avoid the job, which Senator DOUGLAS would give it, of policing the bill.

The control of shady business in the installment credit field should be a State function, we believe, but when States fail in the job of rendering proper services to their people we must, inevitably, expect demands for Federal action.

Here is another example of the reason for the growing power and authority of the Federal Government. State governments constantly fall farther and farther behind in the matter of meeting modern problems.

Some States have tried to deal with installment credit rackets. A year ago a law similar to the bill Senator DOUGLAS has introduced in Congress was passed in Colorado. However, according to W. Dan Bell, head of the Denver Better Business Bureau, complaints regarding "hidden charges" still make up a high percentage of the cases reaching his agency.

A weakness of the Colorado law is its failure to provide for policing except through complaints made to local district attorneys, who are reluctant to prosecute except on a type of evidence which the ordinary installment buyer is unable to furnish.

Whether Senator DOUGLAS' bill is passed or not, he has succeeded in calling attention to a problem which must be solved. And he has served to remind those who harangue the loudest about States' rights that they could save themselves a lot of breath if States would take their duties as seriously as they take their rights.

[From Newsweek, Apr. 4, 1960]

BUSINESS—BORROWING MONEY IN THE DARK

If John pays $7.50 interest for a 1-year, $250 loan, what is the interest rate? Any fifth grader knows the answer is 3 percent. Yet interest, like so much else, seems vastly more complicated in real life than it does in the fifth grade. After a recent survey of installment credit, the Survey Research Center of the University of Michigan said credit was the first subject it studied on which college-educated people were as badly informed as the rest of the populace. Muddled by installment payments, "discounted" interest, and extra charges, 39 percent of the consumers polled had no idea how much it cost them to buy their cars on time—and the 61 percent who had an answer guessed anything from under 6 percent to more than 13 percent.

Last week, a Senate Banking Subcommittee began hearings on Senate bill 2755 that—hopefully—would protect the Nation's bumpkin borrowers from themselves by making credit costs as simple as ABC. Subcommittee Chairman Senator PAUL DOUGLAS, of Illinois, Democrat, who wrote the bill, described it as a truth-in-lending bill aimed at enlightening consumers who, he said, are "deceived or misled" about the high interest costs of bank or finance-company loans, time purchases of autos and appliances, or retailers' charge accounts. The facts themselves, DOUGLAS clearly implied, might discourage enough borrowers to put a healthy crimp in consumer credit, which has swollen from $5.7 billion to $52 billion in the last 15 years—not including home-mortgage debt, up from $18.6 billion to $131.2 billion.

FACTS AND FIGURES

To get at the facts, and to cut through the confusion of figures that disguises the true cost of borrowing, DOUGLAS' bill would: Require banks, loan companies, auto financers, and other purveyors of installment loans to compute interest rates on the unpaid balance, rather than on the principal. (A buyer paying off a "6-percent" loan in 12 monthly installments is actually paying close to 12 percent for his money. He only has full use of the loan for 1 month. Each month he reduces it by the amount of his installment. Yet the 6 percent is calculated on the full amount.)

It would also require lenders to compute service charges, insurance costs, and other extras as part of the interest figure. (By padding extras, some dealers easily bypass usury laws, which limit only pure interest rates.)

The subcommittee heard a dossier full of horrible examples to boster DOUGLAS' case. Among them:

A Maryland loan company quoted a 6-percent rate for a loan where the actual cost—after allowing for service charge, insurance fee, discounting of the interest from the amount loaned, and the usual installment payments—was 22½ percent.

An unfranchised used-car dealer charged $187.65 on a loan of $300—11 monthly payments of $15 each, plus a final payment of $322.65. Simple annual interest rate: 62½ percent.

A 67-year-old Floridian can't afford to retire because he is faced with 17 more years of payments to finance a home-improvement bill. Cost of the improvements: $2,650. Total cost, including financing: $5,482.50.

Much of this springs from bait advertising that trumpets "no money down," "no carrying charges," or "name your own terms," while concealing a mare's nest of costly gimmicks, according to witness William Hussong, general manager of the 27,000-member Navy Federal Credit Union. "The housewife shopping for a dress looks at labels and compares prices," said Hussong. "Isn't a person shopping for credit entitled to the same protection?" President Harold Rosner, of Robert Hall Clothes, suggested that all merchants be required to display separate cash and installment price tags on their goods. This would discourage unhealthy credit, help prevent another recession, said Rosner. (It would also, presumably, help Robert Hall, which sells only for cash.)

IN REBUTTAL

Speaking for the consumer-credit men—the commercial banks and finance companies who have yet to testify—Chairman Thomas Boushall, of the Bank of Virginia, made it plain that the charges hurt. How, he asked at an American Bankers Association meeting last week, could the credit industry attack a bill that calls for honest disclosure—that seems, in fact, to approve of motherhood and disapprove of sin?

Yet the industry had some solid arguments. Translating extras into a simple interest rate would be an immensely complex task that would raise the cost of making loans—and the industry insists that borrowers care only about dollar costs, not interest rates, in any case. The industry also argues that merchants required to label their true installment costs could lower these to make them look good, then make it up by simply boosting prices.

But even if consumer-credit men are, as they claim, being roasted for the sins of a few unscrupulous fringe operators, they aren't likely to get much support in Congress, for good and political reasons. The outlook for S. 2755: No action before Congress adjourns, but a good chance for passage at the next Congress.

Wisconsin Program of Delinquency Prevention

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1960

Mr. WILEY. Mr. President, yesterday, I had in my office a delightful group from Wisconsin—teachers, students, youth workers, and other participants in the White House Children and Youth Conference.

We have 62 million children in this great Nation today. I therefore believe that the White House conference is a constructive effort to promote opportunities for our children and youth to realize their full potential for a creative life in freedom and dignity. As stated by the President when calling the conference, the radically changing times in which we live makes it absolutely essential that we do everything we can to plan ahead in order to prepare today's children well for life in tomorrow's world. We must not be guilty of letting go to waste the talents of our greatest national asset—our children.

The visitors in my office yesterday were examples of the finest in Wisconsin citizenry. Oftentimes we become so concerned about our problem children and youthful offenders that we forget that

the great majority of our youth is devoted to the pursuit of positive values—to self-improvement the betterment of education, and the fuller exploitation of our human, material, and spiritual resources.

In this connection I should like to call attention and ask unanimous consent to have printed in the Appendix of the RECORD a recent report by the Wisconsin State Department of Public Welfare describing the extensive Wisconsin programs dealing with prevention and control of delinquency.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM A REPORT TO THE GOVERNOR ON THE STATE WELFARE PROGRAM

(By Director Wilbur J. Schmidt)

A. JUVENILE TRAINING SCHOOLS IN WISCONSIN

The program and philosophy of the training schools in Wisconsin is based on the premise that delinquent behavior and emotional conflicts in children are caused rather than inherited. The primary requisites in a positive program of rehabilitation for the delinquent child are sufficient skilled staff and a sound operational philosophy which may be summarized as follows: To provide a healthy environment in which antisocial, disturbed adolescents can grow in physical and emotional stature with the counsel of those who understand the fears and needs of youth and have the knowledge to help them work out a better way of facing life's problems. In order to achieve the objectives of training and treatment in a juvenile training school, we feel that it is essential that we have a trained dedicated staff, adequate physical facilities and create an institutional environment conducive to positive training and treatment of the individual child.

The three State training schools for juveniles or delinquent children are as follows: The Wisconsin School for Boys, Waukesha; the Wisconsin School for Boys, Wales; and the Wisconsin School for Girls, Oregon. These training schools are institutional units of the division of corrections of the State department of public welfare established for the purpose of providing residential care, treatment and training for boys and girls between 12 and 18 years of age who have been adjudged delinquent in one of the counties of the State.

One recent program innovation which is regarded as having considerable merit in improving the treatment program of a training school is the establishment of "cottage councils" at the Wisconsin School for Girls, Oregon.

In this organizational setup of cottage councils, the psychiatrist and psychologist act primarily as consultants to the social workers and the cottage staff. Problems of personality, functioning and intelligence might be referred to the psychologist by the social worker for selected testing of the youngster's concern. The psychiatrist is consulted to analyze the dynamics of certain behaivor patterns and to give advice as to the approaches of these difficulties. Depending on the time available, the psychologist also sees the youngsters for therapy individually and in groups. They aid staff training and development by participating in conferences at the request of the council concerned.

Numerous benefits have already been realized from this system of cottage councils as it has brought about a truly integrated treatment program for each girl.

In effect, the eventual goal at the Wisconsin School for Girls is not to have an institution in the traditional sense for about 200 girls, but rather 10 group homes run in accordance with the needs of the individual students housed therein and the ability and skill of the counselors involved. The economic advantages of having a relatively large institution with professional skills available can be preserved, but at the same time some of the disadvantages of regimentation, blanket rules and policies covering all contingencies can be eliminated. Although there must be some general policies as a framework in which to operate, each cottage will be operated on the basis of the needs of the group.

B. WISCONSIN DIAGNOSTIC CENTER

The Wisconsin Diagnostic Center concentrates a considerable amount of its efforts toward doing consultation work for the juvenile courts throughout the State. It is available for study of any child or adolescent referred by the juvenile court judges. The referrals from this source may be of a variety of types, ranging from the small child, age 5 and 6, who has shown up as grossly disorganized in kindergarten, to the teenager who has been involved in some type of well-organized acting out in the community. Even though these children are all referred by the juvenile court judge, they certainly cannot all be considered as delinquent. Therefore, the center plays a significant role in prevention of deliquency as well as in the evaluation and treatment of the delinquent.

In an effort to be more available to the community agencies, namely the juvenile court, an increasing amount of outpatient psychiatric consultation is being offered in order that the court can have at least the type of psychiatric study as additional information which can then be used in making the decision as to disposition of the child whom they are concerned with.

There are semantic difficulties in defining delinquency. Assuming that by delinquency is meant behavior by children which is against the laws or mores of a community, it is apparent that skillful diagnosis is the first essential in an effective program of services for delinquents. The overt and obvious cases of mental illness and mental retardation may be selected out and excluded from this group in a rather gross fashion on some occasions, and this is important. Ideally, a treatment program should be able to sort out these various factors involved and direct their treatment efforts in the direction which is appropriate for each of these boys.

C. COMMUNITY MENTAL HEALTH CLINIC SERVICES

Chapter 317, Laws of 1959, provides for the establishment of a program of community mental health clinic services in Wisconsin, with State subsidy and State assistance in development and operation of preventive and treatment services for mental health. The intent of this legislation is to meet not only the needs of children, but an ever-increasing coverage of the total mental health needs of the community which each clinic will serve. The part which these clinics will play in the prevention of delinquency is inherent to the movement of all child guidance clinics which focuses not only on the individual child, but also the counseling services rendered to parents in case situations. There are already some 17 child guidance clinics, developed over the years largely through local initiative, in operation throughout the State. Numerous other counties are intently studying the need for and possibility of developing such services.

D. COMMUNITY ACTIVITIES RELATING TO JUVENILE DELINQUENCY

The department has many responsibilities relating to community activities in the juvenile area. The Department of Public Welfare has the responsibility to provide certain community services focused on the prevention of delinquency. The responsibility is carried on by the Division for Children and Youth through community services staff specialists located in the central office and six field consultants located in various district offices. The specialists include consultants on juvenile courts, juvenile law enforcement, recreation, education, group work, youth participation, and research.

Delinquency prevention work requires some means of checking the "pulse" of the delinquency problem. Consequently, the Division for Children and Youth, in collaboration with several State organizations, has developed statewide statistical reporting systems on children processed by law enforcement agencies and by juvenile courts. Reporting is not universal and various other factors demand caution in the interpretation of the figures. However, with 60 juvenile courts reporting in both 1957 and 1958 there was a 3 percent increase in the number of delinquency referrals. With 75 law enforcement agencies reporting in both of these years there was a 4.5 percent increase in juvenile apprehensions. At the same time, the U.S. Census Bureau estimated that Wisconsin's child population increased approximately 4 percent, so the research staff concludes that "juvenile delinquency" apparently did not accelerate in Wisconsin between 1957 and 1958.

Turning to specific activities aimed at delinquency prevention, a major technique that has been developed is the community survey. These surveys help communities to make a self-appraisal of their own organization and services for the prevention and treatment of delinquency. Staff consultants are active in the factfinding stage, present these facts to citizen committees, and help the citizens to draw conclusions. The citizens, themselves, determine the recommendations to be made in the community. Following the survey itself a field consultant is active in the followup stage, helping the momentum to continue so recommendations can be put into action. Since 1948 a total of 21 community surveys have been completed.

Recently the community services staff have been engaged in two projects for the so-called hard-to-reach youth. These are youth who are not reached by the traditional group work, recreation, or casework programs. They are youth who worry a community and may be on the verge of delinquency or actually commit delinquency. They may or may not be "gangs" in the usual sense of the word. At the request of the Milwaukee Community Welfare Council and County Youth Commission the division for children and youth has been developing the design for a demonstration project for hard-to-reach youth. The design will shortly be submitted to the two organizations, and implementations will begin.

The many other prevention activities can best be summarized by the areas in which special consultants are working:

1. Consideration is being given to developing a statistical reporting system for juvenile detention to get more reliable, accurate information on detention in Wisconsin. Limited information suggests there is a wide variation in the adequacy of detention programs.

2. Juvenile law enforcement: In cooperation with the University of Wisconsin, training courses for juvenile officers have been conducted for a number of years. In the last 7 years approximately 900 officers have attended the 3-day institute. A 2-week course given annually since 1955 has given more extensive training to 96 juvenile officers. The majority of the latter officers after returning to their own communities acted as trainers for officers who could not attend.

3. Recreation: Most of the work outside of community surveys has consisted of consul-

tation to communities interested in evaluating their recreational needs or desiring help in developing recreation programs. The consultant has been used in the inservice training program for counselors at the training school for boys.

4. Education: Work has begun toward the development of school social worker programs in local schools, because schools are a key organization in the early identification and treatment of delinquency and emotional problems. The consultant is working with the department of public instruction and the schools of education and social work at the University of Wisconsin in reaching agreement on the graduate curriculum for social work students who, on graduation, can be certified as school social workers.

5. Group work: Help has been given the various group work agencies (Y's, Scouts, etc.), by assisting in the training courses necessary for volunteers. Major time is spent in providing staff service to the Wisconsin Committee on Children and Youth, a statewide committee with State, district, and county organizations. The committee is developed from the 1950 White House Conference on Children and Youth to implement the recommendations of that meeting and has remained active since that time. It conducts the biennial Governor's conferences on children and youth and is the group through which Wisconsin's participation in the 1960 White House Conference is being carried out.

6. Youth participation: Wisconsin's nationally known youth participation program is carried on through State, district, and local committees, all of which receive staff services from the Division for Children and Youth. The program aims at helping youth to become responsibly involved in community affairs and projects, with active support and encouragement from adults. At district conferences and biennial State conferences youth and adults are brought together to discuss mutual problems and make plans for solution.

7. Research: In addition to the statistical reporting systems and research projects already mentioned, various other research is occurring. Within the Madison community survey a special study was done of the dispositions made by police for all youngsters apprehended in a 6-months' period. The results, which will be published shortly, will give the citizens a picture of the gaps of service in Madison and the difficulties in coordinating efforts.

Eau Claire County is interested in doing a major study on the causes of delinquency. Staff help is being given in designing the project, and the county will be assised in finding resources to finance the project.

8. Other: Various miscellaneous services are given over the State. Currently Division for Children and Youth field staff is working with the Commission on Human Rights in the town of Oneida, where the tribal council is concerned with problems of drinking which are having serious effect on family life. Milwaukee County wanted to develop a demonstration program of protective services for families near to breakdown, but neither State nor Federal funds are available for this initial step toward the county's assuming financial responsibility.

In addition to the delinquency prevention efforts described above, we have a conviction that strong, basic across-the-board public welfare services are equally important in a prevention program, even if less dramatic and more indirect. For example, along with the community services staff the division for children and youth has programs and staff concentrating on strengthening services to families so breakdown will be prevented.

Fish Farming Begins in Oregon

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1960

Mr. MORSE. Mr. President, the problem of the passage of fish around the high dams of our Pacific Northwest rivers is an extremely complex matter.

As a step toward a solution of this problem, efforts are being made in the West to develop successful fish farming projects. An excellent article concerning one of these projects appears in the March 1960 issue of the Pacific Northwest Public Power Bulletin, under the authorship of Mr. Bill Cook.

I ask unanimous consent that this article, entitled "Fish Farming Begins in Oregon," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FISH FARMING BEGINS IN OREGON

(By Bill Cook)

Fish farming has arrived in Oregon with the help of the Coos-Curry Electric Cooperative and the interested citizens of Gold Beach.

A 14-acre pond on Libby Creek, 8 miles from the mouth of the Rogue River, lies waiting for the first planting of fall chinook salmon late in March.

The idea of introducing fish farming into Oregon came during the annual meeting of the Northwest Public Power Association in 1958. Milo Moore, Director of Fisheries for the State of Washington, addressed the group, telling about the success of fish farming, especially as practiced in Japan.

The directors and manager of Coos-Curry Electric Cooperative were impressed with the possibilities of the plan, particularly for their area which includes some 100 miles of the southern Oregon coast. They initiated a feasibility survey and information program to acquaint the people of the area with the possibilities.

CITIZENS ORGANIZE

The citizens organized a local chapter of the nonprofit organization, Salmon Unlimited, and carried through the project independent of State aid. Interest and enthusiasm was high, for fishing is close to the hearts of everyone in Gold Beach. For a community of less than 3,000 persons in a 2-year period to build a $22,000 fish farm with an actual cash outlay of approximately $9,000 speaks well for the continued citizen support.

As the group awaits the arrival of the first fingerlings, they have paid off most of the indebtedness and expect to meet the necessary expenses of the fish farm when it is in operation.

The decline of the spring chinook run in the Rogue River is a matter of deep concern for the people of Gold Beach. Sportsmen from all over the Nation journey to this Oregon community for the spring fishing. With a good and continuing spring run, the fishing season at Gold Beach extends almost the year around. It is a needed part of the economy of that area.

FISH FARMING

Fish farming in its simplest form is merely the raising of food fish in impounded waters. In relation to salmon it is the rearing of salmon fingerlings in a natural habitat for a certain period of time and their release into a natural salmon run stream.

This has two advantages over the hatchery method where the fingerlings are kept in concrete pools and are fed. First, the fingerlings when released into the stream are better oriented and able to fend for themselves. Second, the cost of rearing fingerlings in fish farms is but a fraction of that of the hatchery method.

The fish farm method takes advantage of the natural feed in lakes and ponds and the feed can be increased by certain types of fertilization. Since the highest mortality rate of salmon fingerlings is in fresh water as they are going to sea, the hardier the fingerlings, the higher the percent of return of the mature salmon at the end of the 4-year cycle.

The fish farming program has been sparked in both Oregon and Washington by the efforts of Milo Moore. When Moore assumed his duties with the State of Washington, he brought with him the results of 8 years of study and research on fish farming techniques which he had observed in various parts of the world and the United States. He carries belief and enthusiasm for fish farming as a step in the right direction to bring back the salmon runs to the coastal streams of the Pacific Northwest.

As the Oregon group goes into its third year of existence, the futuer looks good. Rollin Bowles, president of Salmon Unlimited, is also on the Oregon State Game Commission. He works closely with Albert Day, director of the Oregon Fish Commission, as well as with P. W. Schneider, director of the Oregon State Game Commission. They believe even closer cooperation can be achieved the coming year.

The people working for these projects, and particularly the interested citizens of Coos and Curry counties believe that salmon and civilization are not incompatible. They feel that through the cooperation of all interested parties a way can be found whereby dams, lumbermills and pulp plants can live side by side with salmon runs. These salmon runs will provide both commercial and sports fishermen with a good livelihood and ample recreation. Through the arrival of the fish farming program, they hope the generation to come can fish in waters where truly are salmon unlimited.

The Automobile in Modern America

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1960

Mr. WILEY. Mr. President, in the growth and development of America, a major vehicle of progress have been the automobile.

Over the years, the auto has become an integral part of family, business, commercial, and industrial life of our great country.

Over three-fourths of all auto trips are connected with people's jobs and business and professional work. At the same time, over 80 percent of vacationing Americans travel in the family car.

In addition to transportation for a wide variety of purposes, the auto industry—as we learned painfully during such events as strikes—is extremely important to our economy in terms of jobs,

markets for the wide variety of raw-and-finished products that go into automaking, the general business activity surrounding sales and service of the 70 million motor vehicles registered in the United States—and, not to be overlooked, the auto industry, and its workers, are substantial contributors to the coffers of Uncle Sam.

Recently, the Automobile Manufacturers Association, published an informative booklet entitled "Automobile Facts and Figures."

Reflecting the significance of this important industry to our country, I ask unanimous consent to have excerpts from the booklet—outlining the highlights of the industry—printed in the Appendix of the RECORD.

There being no objections, the excerpts were ordered to be printed in the RECORD, as follows:

AUTOMOBILE FACTS AND FIGURES—HIGHLIGHTS

Motor vehicle factory sales in 1959 totaled 6,728,644 units, including 5,591,243 passenger cars, 1,137,401 trucks and motor coaches. These automotive products had a combined wholesale value of $12,880 billion. Replacement parts sales totaled $2.2 billion.

More than 175 million motor vehicles have been produced in the United States since the industry's birth in 1896.

Ownership of motor vehicles is at an all-time high. U.S. vehicle registrations totaled 70.4 million in 1959, including 58.6 million passenger cars and 11.8 million trucks and buses.

Nearly three out of four families own automobiles.

Multicar households have increased 67 percent in 5 years. More than 18 percent of car-owning families or 13.5 percent of all families now own two or more automobiles.

Motor vehicle travel in the United States set a new record of nearly 700 billion miles during 1959.

The automobile is the leading passenger transporter in the United States, handling 89 percent of all intercity travel.

Of the 81.5 million drivers in the United States, 38.2 percent are women. A survey of car use by women drivers shows that nearly half use their car on a daily basis.

Taxes take 21 cents of the automotive retail sales dollar.

Special highway-user taxes in 1959 climbed to a record $9.3 billion. Trucks alone paid $2.7 billion.

One out of every six business firms in the United States is in the automotive field.

One out of every seven employed persons works in a highway transport industry—a total of 10.4 million automotive jobs.

U.S. automotive companies have a total of about 1.7 million stockholders.

Farmers operate more than 3 million trucks and 4.3 million passenger cars.

THE AUTOMOBILE IN MODERN AMERICA

A BIG COUNTRY ON WHEELS

America is a big country; and Americans are a people to spread out over the land, to go places and to see things. It is this combination of a big land and people on the go that has made the automobile such a vital part of 20th century American life.

Three-fourths of American families today own cars. The family car is woven into every pattern of living—filling daily transportation needs for work, play, and social activity.

EARNING A LIVING

The modern motor car is at the very economic base of life in America today. In cities, the family breadwinner usually gets to work or conducts his business by automobile.

Travel connected with a job, or with business and professional work, accounts for three-fourths of all auto trips in the United States. And the farmer depends on his car or truck to link him with markets and sources of supply.

BRINGING PEOPLE TOGETHER

It often is said that no other single thing has had a greater part in unifying the Nation and ending the dreariness of rural isolation than the automobile.

Even though friends and relatives live far apart or far off "beaten paths," frequent reunions, parties, and informal visits—with modern roads and cars—are taken for granted in today's America.

A SPORTS-LOVING PEOPLE

Americans are the greatest sports-loving people on earth and modern motor transportation furthers this natural inclination. The Nation's sports enthusiasts drive billions of miles a year.

Common sights in the United States: Cars loaded with skis or fishing gear, fresh-killed game or golf clubs; baseball parks and football stadiums amid fields of automobiles; bowling alley parking lots filled to capacity.

MAKING MORE OF LEISURE

Leisure-time acivity grows each year. Enjoyed to its fullest, it calls for travel—travel to places of interest and recreation.

In 1 year, more than a billion visits are made to U.S. city and county parks. Millions visit State and National parks—primarily by car.

VACATIONING ON THE ROAD

Vacationing is a national tradition shared by all.

More than 80 percent of vacationing Americans travel in the family car which can take them and their luggage from home doorstep to the most remote beach, lodge, or campsite. Many simply go touring, stopping each night at a new place along the ever-challenging road.

COMMUNITY LIFE ENRICHED

The ready mobility made possible by family car ownership has transformed American community life. People in cities have spread out into self-contained suburbs, providing their own transportation. The family automobile takes the children to school, library, or doctor's office; brings the whole family to religious services or community events. Last, but not least, it is often commissioned for the pleasant family chore of shopping.

AUTOMOBILE MANUFACTURERS ASSOCIATION

OFFICERS

President, L. L. Colbert.

Manager, statistical department: Stanley S. Roe.

Our Taxes Buy Civilization

EXTENSION OF REMARKS

OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, April 1, 1960

Mr. HART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Ralph McGill, entitled "Our Taxes Buy Civilization," and published in the Washington Evening Star of March 31, 1960.

Too many people think the cost of survival will be cheaper tomorrow than today, and that survival can, somehow or other, be bought in the bargain basement. Mr. McGill makes effective reply to that attitude.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR TAXES BUY CIVILIZATION—ACCEPTANCE OF TAXES AND ELECTIONS CALLED TWO OF AMERICA'S STRENGTHS

(By Ralph McGill)

Justice Oliver Wendell Holmes was making out his income tax. A secretary, assisting, commented it seemed unfair for a Justice of the Supreme Court of the United States to be so taxed.

"I like taxes," said the Justice. "With them a man buys civilization."

His conclusion is a true one.

And the fact very few persons think it out to the point where they like taxes because of what taxes buy doesn't alter that fact at all.

Taxes do, indeed, buy our civilization. And especially do they buy the peculiar American civilization which has seen the capitalist system flourish as it never did in the days of little taxes. It has flourished because of taxes which have provided the capitalist system with a social conscience.

There are always those persons who act as if, and seem really to believe, taxes are taken from them and spent somehow and somewhere without any return. "When," speakers and editorialists solemnly and unrealistically ask, "will politicians find a way to reduce taxes rather than increase them?"

The answer to that is obvious.

They never will find a way to decrease them. There may be reductions here and there, but there will, in time, be compensating increases for the reason there must be—we are buying our kind of civilization, and we are buying it for a steadily increasing population demanding more services.

It is a civilization which provides hospital and medical care for the indigent poor; and it is a civilization which looks after public health so that waves of plagues and epidemics of various kinds do not strike us, killing millions as they did in the old days of man's civilization. Taxes pay for that. It is a civilization which looks after the sewerage systems. It is one which produces pure water so that one does not have to boil it before drinking, as must be done in many nations of the world. It is a civilization which collects and disposes of garbage, instead of leaving it to be reduced by buzzards, rats, and hordes of dogs, as is done in many parts of the world.

It is a civilization which provides roads and highway systems at great cost because the people of our peculiar civilization like to be on the move, to possess great mo-

bility, to drive 500 or more miles to be on the coast or in the mountains for a weekend.

Ours is a civilization which pays taxes for public schools. There are enemies of our civilization who shrewdly seek to discredit those schools. They are always in our midst—slyly or openly opposing bond issues for the needed new schools—protesting we need only the little red schoolhouse idea; attacking teachers—anything to avoid paying taxes which will provide public education.

One of the great strengths of our civilization has been that we accept the results of elections. (We failed to do that just once and paid a staggering price in blood, wealth, and death. We are yet paying for it in wealth and social wounds. The cost of refusing to accept an election was the War Between the States.)

The second of our great strengths is that we have always accepted the fact that we must pay taxes. Many peoples do not. The French have resisted. Few of the Latin American countries, for example, believe in paying taxes. There is none with a truly equitable system. This is one of the basic reasons for their traditional unstability of government.

Here in our country there are increasing voices which seek to make Americans unwilling to pay taxes. They encourage Americans to want services—but paradoxically they raise their voices against taxes. Our population increases. There are more people for more services. Our birth rate is up. Our old people live longer. The very young and the old pay no taxes. We will pay more.

We can insist on honesty. The graft in all cities and in many State governments is shocking. It is abuse of tax money, not taxes, which weaken a nation's will. Public emphasis in the future must be increasingly directed against waste and graft. The tax structure must be remodeled but the need for taxes will continue.

There is no escape. If we want our kind of civilization we must pay taxes. They buy civilization.

Medical Statuary

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1960

Mr. MORSE. Mr. President, Oregon is justly proud of Dr. John McLoughlin, whose figure towers over early Oregon history. It is with particular pleasure that I note Dr. Winfred Overholser has referred to him in an article on medical statuary, which was printed in the January 1960 issue of the Medical Annals of the District of Columbia.

I ask unanimous consent that the article to which I have alluded be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON MEDICAL STATUARY

Among the many statues which adorn our fair city, statues of generals, statesmen, lawyers, orators, and others, at least six are those of physicians. Some of these are familiar to us, their colleagues; others are not. Our readers may therefore be interested in knowing something about brother practitioners who have been memorialized in bronze. Three of the statues are in the open, three in Statuary Hall of the Capitol. Rather than following this distribution, however, let us consider the subjects chronologically.

Benjamin Rush (1745–1813) was the foremost American physician of his day. Born in Philadelphia, he was educated under Cullen at the University of Edinburgh, graduating in 1768. He then entered practice in Philadelphia. He was Surgeon General in the Continental Army and was a signer of the Declaration of Independence. He was professor of the Institutes and Practice of Medicine at the University of Pennsylvania and wrote voluminously, among his works being "Medical Inquiries and Observations Upon the Diseases of the Mind" (1812), the first systematic treatise on the subject by an American. His statue, dedicated June 11, 1904, in the presence of President Theodore Roosevelt, Dr. William Osler, and other distinguished persons, stands on the grounds of the old Naval Hospital at Twenty-third and D Streets NW.

Christian Samuel Hahnemann (1755–1843) was born in Meissen, Saxony, and died in Paris, France. He was graduated in medicine at Erlangen in 1779 and was a successful practitioner. He was a linguist as well and translated many medical works. Rebelling at the polypharmacy and huge doses prevalent in his day, he developed the law of similars, advocating, too, the mimimal dose and the single remedy. These became the basis of the homeopathic school of medicine, the principles of which he set forth in the "Organon of the Rational Art of Healing." His monument, the most elaborate of all the medical statuary of Washington, stands in a conspicuous place in Scott Circle. The seated statue of Hahnemann is placed in the center of a large granite exedra, with four bronze entablatures. It was unveiled June 21, 1900, in the presence of President McKinley. As long ago as that, the cost was approximately $48,000.

Ephraim McDowell (1771–1830) was born in Rockbridge County, Va. He attended the University of Edinburgh for the session of 1793–94 (his only M.D. was honorary, conferred by the University of Maryland in 1832), and then went into practice in Danville, Ky. In 1809 he performed the first ovariotomy in history. The patient survived and lived to a ripe old age. A granite obelisk in his honor was unveiled in Danville in 1879, with Samuel D. Gross as orator. McDowell's statue stands in Statuary Hall. A commemorative stamp bearing his likeness was issued in December 1959.

John McLoughlin (1784–1857) was born in Quebec Province and learned medicine under his grandfather. Early in life he became associated with the Hudson Bay Co. in the Fort William District and later in the Oregon country as supervisor. He was apparently to all intents the Governor and protected the Americans against the Indians. He practiced medicine and surgery in addition to his administrative duties, and founded the first hospital of the great Northwest. He became an American citizen in 1849 and is often referred to as the father of Oregon. His statue stands in Statuary Hall.

Samuel D. Gross (1805–1884) was born near Easton, Pa., and graduated from Jefferson Medical College in 1828. He taught anatomy, pathology, and surgery and gave the first lectures on pathologic anatomy in the United States in 1835. From 1856 to 1882 he was professor of surgery at his alma mater. He wrote treatises on surgery and pathologic anatomy and many articles and translations. So wide was his fame that he received honorary degrees from Oxford, Cambridge, and Edinburgh. His statue, now to be seen to the north of the National Library of Medicine, Seventh Street and Independence Avenue SW., was unveiled May 5, 1897, W. W. Keen being the orator of the day. Gross' name is also to be found in the mosaics of the Library of Congress.

Crawford W. Long (1815–78) was born in Madison County, Ga. He attended Franklin College (now the University of Georgia), where he was the roommate of Alexander Stephens, later Vice President of the Confederacy. He graduated in medicine from the University of Pennsylvania in 1839 and returned to practice in his native State. In March, 1842 he used ether an as anesthetic when operating on a patient to excise a tumor of the neck. This was undoubtedly the first such use, but Dr. Long did not publicize his feat until 1849, when he wrote an account in the Southern Medical and Surgical Journal. Thus he did not receive the sort of attention that Morton (a dentist) did 4 years later at the Massachusetts General Hospital. Dr. Long's statue is in Statuary Hall. His face appeared on a U.S. commemorative postage stamp in 1940.

This is a distinguished group indeed of physicians who did much for mankind. It would be pleasant to record that our own fellow member, Dr. William Thornton (1761–1828), the Architect of the Capitol, had been similarly honored. However, his monument, in the words of Horace, is aere perennius, more enduring than bronze. Of him we can say, as in Sir Christopher Wren's epitaph, "Si monumentum exegis, circumspice."

Man of the Month

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, April 1, 1960

Mr. HARTKE. Mr. President, our distinguished colleague, the junior Senator from Oklahoma [Mr. MONRONEY] was recently honored by the National Aviation Club. This club has a membership of 2,000 representing all branches of aviation.

The Senator from Oklahoma is one of the leading authorities in the aviation field. His interest in this field dates back to the early days of aviation when he was a writer. As the chairman of the Senate Interstate and Foreign Commerce Committee's Subcommittee on Aviation we all look to him as our authority on aviation legislation.

The National Aviation Club recognized the great interest which Senator MONRONEY has had in this field and his leadership in Congress in fostering aviation when they awarded him their Man of the Month award. The Senator from Oklahoma is the first Member of Congress so honored.

Mr. Richard E. Fell, president of the National Aviation Club, made the Man of the Month presentation at the ceremony recently which I had the honor of attending. I ask unanimous consent that the tribute made by Mr. Fell at the presentation ceremony be printed in the Appendix of the RECORD.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

When it was first suggested that Senator MONRONEY be honored as man of the month, I recalled that this is a political year.

So I consulted several stanch Republicans to see whether our club might be accused of being partisan.

They were unanimous not only in saying that there would be no such feeling but in urging that the Senator be so honored.

Aviation over the years has been fortunate indeed with its champions in Congress. They have been men of imagination matching that of the builders of aviation.

When civil aviation has needed strong champions they were there. When it needed thoughtful champions, it has had them. In Senator MONRONEY it has had one who is both strong and thoughtful at a time when there has been great need for both qualities.

I am not going to dwell upon the Senator's many accomplishments in life or the fact that he is a Phi Beta Kappa, a former newspaperman and an aviation writer.

Some of you may raise eyebrows at that last differentiation but there is a subtle difference.

In the days of the 1920's when the Senator was writing aviation no newspaperman would be caught without a hat on, indoors or out. And no one who flew could be caught with one on.

Those were the days of "The front page," which type cast all newspapermen for the hat industry, and open cockpit, did not lend themselves tailored splendor.

Lest you think the Senator's contributions to aviation on the national scene are only recent or even rigidly partisan, he entered Congress in 1939 and was instrumental in the establishment of what is now Tinker Air Force Base in Oklahoma City, and the location of the Douglas plants in Tulsa and Oklahoma City.

He led the fight in the House against the Air Force cutbacks in 1949.

He was elected to the Senate in 1950 and in 1955 became the chairman of the Aviation Subcommittee of the Senate Committee on Interstate and Foreign Commerce.

Legislative results for which the Senator is responsible have been most impressive.

The current Federal Airport Act, permanent certification of local service airlines, the new Dulles International Airport, the act permitting reinvestment of capital gains by air carriers, the guaranteed loan act and the vital aviation legislation of recent years—the creation of the independent Federal Aviation Agency—all have seen the guiding hand of Senator MONRONEY.

I think it is safe to say that never before in the history of legislation on behalf of aviation have so many major bills been passed and signed into law in so brief a period.

(Presentation of award.)

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Minority Children and Youth

EXTENSION OF REMARKS
OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 4, 1960

Mr. CASE of South Dakota. Mr. President, one of the outstanding addresses given during the recent White House Conference on Children and Youth was given by an outstanding South Dakotan—Mr. Robert L. Bennett, acting area director of the Bureau of Indian Affairs at Aberdeen, S. Dak.

During one of the forums, Mr. Bennett discussed the many handicaps of American minority groups and the responsibilities of the dominant society toward those groups.

Although he is most familiar with the problems of our Indian people, Mr. Bennett by no means limited the scope of his very thoughtful remarks to them. I think it most appropriate that his remarks be called to the attention of the Senate during the civil rights debate in which we have been engaged these many weeks.

Mr. President, I ask unanimous consent that Mr. Bennett's speech, given at forum 18 of the White House Conference on Children and Youth on March 21, 1960, be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

MINORITY CHILDREN AND YOUTH

(By Robert Bennett, acting area director, Bureau of Indian Affairs, Aberdeen, S. Dak.)

I am happy to have the opportunity to present for your consideration some points of view developed in the course of almost 50 years of observation and experience as a member of various minority groups—as a member of a minority racial group, as a member of a minority religious group, and finally as a bureaucrat among many taxpayers.

The validity of the points of view expressed here should be measured by you as you evaluate them agninst what you already know—and what you may learn—in the discussions this week, as all of us seek to find out how to provide opportunities by which children and youth may realize their full potential for creative life in freedom and dignity.

If you do not subscribe to these views, then you must determine for yourselves to what views you will subscribe. If you do subscribe to these views, then you must determine what course of action you plan to take in carrying out these convictions.

The masses of people of the world are not as concerned with sputniks as they are with social problems of minority groups. This concern exists largely because social patterns prescribed in the past by dominant groups for natives of newly discovered areas, and later for minorities, were crystallized into legal systems from which subjected peoples throughout the world are now seeking freedom and independence.

There is one such group, well represented here for the first time, whose ancestors met the boat on which most of your ancestors arrived.

INDIAN TRANSACTIONS

The American Indian tribes, like other native peoples of the world, have been subject to legal systems involving treaty-making, ceding of land, and rights of occupancy. In the process of settling the land and bringing vast territories into a federated union of States, now known as the United States, a modicum of legality in land acquisition gave respectability to transactions with separate Indian tribes.

For individuals within the tribes these experiences held no dignity nor promise. From such experiences they found themselves forced into patterns of acceptance and accommodation where they were made prisoners of war, compelled under forced marches to leave localities familiar to them, and refused settlement along with other settlers. The reservation system, though quite legal and useful to territorial settlers, also proved effective in isolating individuals and families of Indians from the mainstream of social and economic development.

Over a long period of time Indian tribes came to look upon these reserves as places of refuge from the "civilization" which threatened to engulf them. Later there began to be a movement of Indians away from these reservations, largely in search of education and new experiences. Now, Indian youth and young adults of all tribes are moving into the dominant group and utilizing structures of that group to establish and maintain a new way of life.

COPING WITH FRUSTRATION

For those who are not able to cope with the frustrations which come about from failure to make an adequate adjustment, those things detrimental to their physical and social well-being become the pattern. This pattern is illustrated by the statistics of one State which reveal that although only 4 percent of the population is of Indian descent, 25 percent of those in the Boys' Training School are Indian, 50 percent of those in the Girls' Training School are Indian and 33⅓ percent of those in the State penitentiary are Indians with an average age of less tahn 25 years.

They are the products of a society that has oriented them for a different world and with their emergence they find themselves caught between two worlds.

In their old world they find there is very little concern for the future—that one lives in complete harmony with nature—that in return nature will provide for their consumption those things essential to life. This is contrasted with the other world where there exists a real concern for the future—where nature is to be exploited for the benefit of man—and where production is the basis of our economic survival.

LIMITED SOCIAL LIFE

For the most part, Indian young people grow up in rural areas far removed from industrial activity and those resources which can contribute to their social development. All the knowledge about the other world is obtained from between the covers of a textbook. Their limited socializing experiences leave them little equipped with the social skills necessary for their satisfactory and healthy personality adjustment.

With a concept of time based upon the present only, they lack orientation to a future-oriented society. They feel the enjoyment of the moment should not be marred by a concern for tomorrow. As products of a society without a concept for time, Indian young people find it difficult to understand or keep pace with their youthful counterparts of a time-oriented society in their frenzied search for security.

Living in the homes of their parents and grandparents does not give them the opportunity to observe as daily examples people who are well adjusted to the society around them. There have not emerged a sufficient number of cultural heroes from their social system to provide images for emulation.

They have a fear of the prejudices in the communities around them and those who obtain social acceptance in those communities do not champion the cause of those who are left behind.

Their educational opportunities have been limited so that only now can it be said that for the first time there is available educational opportunity for every Indian child of elementary school age.

LANGUAGE BARRIERS

Social exchange and communication among ancestors in their various tribal groups were limited by the 200 native languages spoken by the various Indian Tribes. The only common language was the English language of their conquerors.

They come from the most economically destitute minority group with a life expectancy of little more than one-half of the general population. Their instinct for preservation has promoted a very high birthrate and there has been a 50-percent increase in population over the last 25 years with 50 percent of the present population being under 19 years of age.

Their society demands that members share with each other for the benefit of the tribal group. This social obligation has forced parents to deny to their own children many economic and social advantages.

Due to mechanization of agriculture, job opportunity for the unskilled in proximity of their homes has been lost and their economy is based upon a relief program which over a sustained period is resulting in deteriorating personalities.

Finally, spiritual insecurity prevails as their native religious principles and teachings are lost with the death of their elders and the new Christianity is not so understood as to fill the spiritual gap caused by this loss.

SOME TRIUMPH

Out of this background are emerging some, of which there are several at this conference but far too few, outstanding Indian youth. The fact that these few personalities have survived social deterioration gives us hope as well as evidence that with sympathetic understanding and opportunity, this number can be greatly increased. They can become a part of the total community bringing with them the contributions of their heritage to enrich all of our lives.

Their struggle for a meaningful way of life in our society is that of all minority groups in the world who have joined issue with the dominant group to reach an understanding of the values of human life.

What is the challenge of our society in fostering this emergence of Indian children and youth with self-respectful images of themselves.

SUGGESTED GOALS

May I suggest some goals for action which would benefit Indian children and youth in the building of self-concepts of themselves and in leading more productive lives.

Movements to evaluate textbooks material and supplement it where desirable on the concepts of Indians taught to all children would be timely.

Special opportunities should be provided for children and youth on reservations to benefit from leadership training and group participation programs. These programs help children and youth to gain some insight into the attitudes which help them cope with life in the communities around them. This requires financing and this is not provided for in present Federal, State, local, or voluntary programs.

Because of the islands of poverty in which they live where the poverty of social experience is more acute, well-defined programs of summer visitation to families within communities where social experiences are richer would provide beneficial opportunities. This poverty suggests also the need for scholarship and aid programs for Indian students at the high school and junior high school level.

Mental hygiene services, already too limited for all children, are more and more necessary for Indian children and youth in conflict. Recognition and acceptance of responsibility by States is suggested not only for services but also for protection within the legal system used to safeguard all children. A study of reservation Indian children and youth in the American legal system is long overdue and would be most helpful to tribes, the States, and Federal Government.

To these suggestions could be added the relocation of families for educational reasons and other socializing experiences within the social setting of the community in which lies their hope for economic and social betterment.

ERASE MINORITY STATUS

The major courses of action of the next decade with respect to minorities should be directed toward diminishing minority status as a factor in the lives of individuals.

The existence of a minority depends upon the power of one group to dominate another socially, economically, and politically. When this domination restricts the freedom of the minority then conflicts arise between the groups, within the groups and finally within the individuals themselves.

What people will do who come under this kind of domination depends a great deal upon the bitterness quotient generated by the dominant group. This group which may feel a sense of responsibility, if at all responsive to the precepts of freedom and Christianity, nevertheless seeks to relieve itself of this responsibility by seeking refuge behind a self-serving set of values arrived at by rationalizing their position with tradition—if nothing else.

We must therefore set forth a premise that we can build a society in which we begin to diminish minorities and develop a total community identity. Only when this is done, can a capitalistic and democratic society develop to its fullest potential and provide that atmosphere essential for children and youth to have the opportunity to realize their capabilities for creative life in freedom and dignity.

MINORITIES ADJUST

Minorities learn through education, experience and within-group training to develop methods of coping with their minority status.

The Negroes who were immigrated here by compelling invitation accommodated themselves to the pattern set for them and by rationalization seemed almost to accept their secondary role. This role was created by the dominant group, who built an image for the Negro which was designed to be useful in maintaining the power structure of the dominant group. This accounted for the stereotypes ascribed to the Negro race. However, a different image of Negro personality developed by the Negro himself through education and experience is emerging and that image is based upon what the Negro believes himself to be—a human being.

People have in their minds an image of an Indian, a Negro, a Catholic, or a Jew and as this human being moves out from within his own group and emerges it is like immigrating into a foreign land because an image has been prescribed for him that he does not know nor identify as himself. This image bears no relationship to what he actually is nor to his potential as a human being.

It is the experience of minority groups that the dominant group attempts to tamper with their freedom of choice and decisionmaking. Individuals, therefore, develop patterns of making those kinds of decisions which are expected of them, rather than habits of exercising free choice.

They frequently find themselves in a position of acquiesing although they know that in the absence of freedom of choice and of opportunity they cannot achieve the results expected of them by the dominant group. Consequently, there is added the image of incompetence to the stereotype image.

This image of incompetence draws forth in the dominant group the mechanisms of paternalism, an approach which is neither desirable nor desired. However, it is another way of maintaining power under the guise of benevolence. Failure of the minority to have freedom of choice in decisionmaking can only add to the toll of disturbed personalities which are the consequences of a secondary role as a human being—limited by the fate but not the choice of being in a minority group.

PREMISE OF FREEDOM

If we accept the premise of freedom we would grant that every person growing up in this great land of ours would have the right and be given the freedom to discover himself and his potential to serve others not according to what someone else thinks he is nor any prescriptions written for his behavior as a member of a minority group.

He should have the freedom of coming into contact with fellow-citizens and of not having his development restricted by extraneous factors which seek to identify him with what somebody else thinks is his place. If opportunity for development in terms of God-given talents and potential are restricted, then by the same token, the freedom to which we all subscribe as being the natural heritage of all citizens is also restricted.

We may well ask, "Why do we have devices to measure capabilities and talents if the opportunity for development is going to be restricted or determined on a wholly different basis?"

THEY ARE ALL PEOPLE

The mere spatial adjacency of the majority with the minority group does not lessen the width of the chasm which separates them. There must be developed a social adjacency based upon a communication of spirit as well as words and on which depends the society of a free people. The dominant society cannot take action which leaves it socially removed from the very problems created by that society within the minority group.

We need to say, "All of my friends are human beings," and not "You know some of my best friends are Indians." This kind of communication at the feeling level should not be interrupted nor made impossible by compartmentalizing of human beings according to the race, religion, or some other criteria created by the dominant group, primarily as a defense of its own security. The minority assumes that there exists meaningful communication between the members of the dominant group. There is understanding as to their views toward the minority status they are seeking to maintain for others, but in relation to other things there exists a paucity of that kind of communication out of which can grow, among other things, their own security.

When the sophisticated minority finds that this communication does not exist within the dominant group, except as toward the minority, they begin to desintegrate this view about the minority and break up the units of the dominant group. As the views toward the minority are based upon invalid premises, this breakup becomes more evident and the sense of security of the dominant group is shaken and real difficulties appear on the horizon when it has to make the adjustment.

SUBSTITUTE VIEW

The problem now confronting both the dominant and minority groups in various sections of the country is what to substitute for the view that the dominant group had of the minority when that view is no longer tenable.

At this point, real leadership must accept its responsibility or the dominant group may well find itself on the wrong side of issues when its position is evaluated in the light of democratic, Christian, and other acceptable values. Real leadership must accept its responsibility or the minority group may well find itself on the wrong side of the issues as the dominant group seeks to break out of the pattern it has brought upon itself.

Communication can neither commence nor continue if the dominant group has fears that it is not going to be treated properly as it should by the minority as the increasingly favorable position of the minority is accelerated.

COMMON DENOMINATOR

The only common denominator is to recognize, accept, and defend the principle that man is a human being entitled to the respect he earns.

If we recognize this as a common denominator, then the challenge is to develop the means of a deep and abiding and understanding communication. When this is reached, we can out of the richness of all our different cultures, develop other common denominators in social, economic, and other fields.

We cannot use the experience of one to deny to the others of the minority group that opportunity to develop with the dominant group these common denominators which make for a better way of life. Persons, because of character disorders brought upon by the long and futile struggle, who deviate or show up as disorganized personalities present a problem which should not be used as a bar to opportunity for other members of the group.

How we handle ourselves in the dynamic situation of today will test the validity and permanence of our position in world leadership as the greatest Nation on earth. It will profit us little to have peace with other nations when we do not have peace ourselves.

This peace from within grows out of the destruction by both the dominant and minority groups of something within themselves before the new dynamics of thought and feeling unable use to undertake a more peaceful life in our own community. We must turn our back on all prejudice and separate ourselves from all prejudices and attitudes of the minority and dominant groups toward each other.

The attitudes within the minority group toward each other and within the dominant group toward each other likewise must be altered or completely destroyed. For those who have been raised in a tradition of nonassociation or noncommunication with your fellow human beings, who are members of minority groups, can you, after having accepted the fact that he is a human being, be at peace with yourself any longer as a member of a dominant program? Lacking the security of like-minded associates, can you develop the courage and strength to find that peace?

Knowledge, experience, and the hand of friendship can bridge the chasm and you can find a common ground of understanding in all those activities which make up the daily lives of all human beings.

CREATIVE FACTORS

I would say to the youth of this conference, that you are human beings—each with an individual personality. You are also citizens of the United States and finally, you are descendants of a distinguished heritage of which you can be proud. If you think of yourself in a different light, then you will have difficulty of carrying out your main business in life—which is to be a human being. You have all the factors out of which a creative personality can be made.

The elements which go into building that personality are—heredity, for which you are not responsible; an environment, which you cannot control; but for your personal response, you alone are responsible. It is not alone what happens to you but the way you take it that will determine your mastery of difficulties which is all a part of life's business. In distressing situations you must look inward to your own attitudes and resources. How you handle yourselves—not the situation—will make the difference.

CONFRONT YOURSELF

Confronting yourself with the making of your own personality is the beginning of worthwhile living. You must organize your life around some supreme values because the process by which real personality is attained is inward and spiritual. In order not to be torn to pieces inside you must accept heredity, cope with environment, and then say, "Now, I will see what I can do with me."

To pull a person together takes inner resources of power and of a power beyond one's self. This calls for faith—which is not something we get but something we have.

Religion is the basis for hope and a source of power in trying to make the most of what nature gave us and become what we ought to be. He who undertake's the task is on the main road of creation's meaning and is accepting the central trust of life. If nothing else, please remember:

The Lord will not ask thy race
Nor will He ask thy birth.
Alone, He will ask of you
What have you done on earth?

Visit Beyond Berlin—I

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA

Monday, April 4, 1960

IN THE HOUSE OF REPRESENTATIVES

Mr. COHELAN. Mr. Speaker, under permission to extend remarks, I submit three recent articles from the Washington Post, under three separate insertions.

These articles by Miss Flora Lewis have to do with East Germany, beyond Berlin, and deserve the full attention of all concerned with the future of Germany and the role of the Communist sector. We need to know much more about what is going on there and these articles give valuable insights into the realities of the current situation and their possible significance for the future.

The first of these articles follows:

EAST ZONE REDS' LONG-RANGE PLANS AIM AT UNIFICATION, RULE OF GERMANY

(By Flora Lewis)

BERLIN.—The outlines of a definite and concrete plan to bring all the strength of Germany to Communist power emerge clearly from conversations in the course of a tour of East Germany. It is apparently no secret, although the specific timetable is not laid down for the Western visitor and has to be pieced together.

Here, as East German Communists see it, is the program:

For the next 3 or 4 years, East Germany will continue to concentrate on speedy economic development. Consumer goods will not be neglected, for the political goal requires that the gap between living standards in East and West be practically eliminated. However, basic industrial expansion has also to be continued as the foundation of economic power.

At the end of that period, the East German regime should have achieved firm control at home. Then will come a new and intense campaign directed to West Germans, based on the argument that "we have each done pretty well by ourselves, but think how well off Germany would be if we work together."

If, as the Communists hope and expect, a recession develops in West Germany, the campaign would be timed and shaped to take advantage of it.

The appeal will be strongly nationalistic, offering reunification not just as a sterile buffer state in the center of Europe but as a revival of dynamic nationhood, drawing strength from an alliance with Russia just as Bismarck did. It is unlikely that real elections figure in the plan at any point, but more probable in this scheme would be the offer of a coalition, or national front, which could then be submitted as a single slate for popular endorsement.

Regardless of Nikita Khrushchev's stinging cracks, the East German Communists are not counting on perpetuation of two Germanys nor do they believe that is really Soviet policy. The success they have already achieved in economic development and in soothing away resentments inside East Germany has transformed the dream of taking over all Germany into a firm belief that victory is coming.

This assessment has imposed certain tactical policies on the East German Communist leadership which they do not much like but accept as the necessary means to the goal.

The essence of these tactics is to slow down the real communization of society wherever that is required; to foster illusions about the future; in short, temporary appeasement.

The policy decision to raise living standards rapidly has been the central measure.

Others include accepting what is a snail's pace, compared to the other Eastern European Communist states, on nationalization of shops, artisans, and small private industry. There are still private factories with as many as 200 to 300 workers in East Germany, unheard of in the other satellites.

If the testimony of ordinary workers is correct, a large and possible even predominant number of rank-and-file party members still consider themselves basically Social-Democrats rather than Communists. The East German Party, called the Socialist Unity party, was formed by a merger in which the Communists took over the Social-Democrats.

The leadership in East Berlin must certainly be aware of this sentiment, but has made no vigorous attempt to disabuse its followers. Privately, the higher-ups concede that th's illusion will have to be stamped out—but later.

Twinned to this policy of economic and sentimental concessions is a policy of absolute political toughness. Even those Communist dissidents who badly wanted liberal reforms have apparently accepted that they are not possible.

"Ulbricht," the vastly disliked leader of the East German Party, "has proved to be right," said one of them.

"We cannot allow one iota of state power to be chipped away under any circumstances. Economic concessions, yes. Power concessions, absolutely no," he said.

The timetable is also predicated on the expectation that tensions between Moscow and Washington will diminish considerably, and with them, American strength and fortitude in West Germany.

"Wait 3 or 4 years," East German Communists kept saying, "in 3 or 4 years, the situation can be very different."

Fifty-sixth Annual Health Conference To Be Held in New York City

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Monday, April 4, 1960

Mr. KEATING. Mr. President, Dr. Herman E. Hilleboe, New York State Commissioner of Health, last week announced that the 56th Annual Health Conference will be held in New York City from May 23 to 26. Some 2,000 physicians, nurses, health workers, and officials from New York State and surrounding States will attend this conference, sponsored annually by the New York Department of Health to enable participants to keep informed of new developments and advances in the health field.

A great many local and State health organizations in New York are to participate officially in this conference. I am confident that the result will be a sharing of ideas and techniques, as well as the advancement of the understanding on the part of all in attendance of new developments and research in the vital fields of medicine and public health.

Mr. President, I ask unanimous consent that a statement describing this conference and its very fine and worthwhile objectives be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NEW YORK STATE DEPARTMENT OF HEALTH, HERMAN E. HILLEBORE, M.D., COMMISSIONER

ALBANY, March 21.—The 56th annual health conference will be held May 23–26 at the Hotel New Yorker in New York City,

Dr. Herman E. Hilleboe, State health commissioner, announced today. Approximately 2,000 physicians, nurses, and other public health workers from communities throughout New York State and adjacent States are expected to attend the 4-day conference.

The meeting, called each year by the New York State Health Commissioner, is sponsored by Annual Health Conference, Inc., a nonprofit organization chartered by the secretary of state; the New York State Public Health Association; Association of School Physicians and School Nurse-Teachers, and the New York State Health Department.

The conference serves to provide postgraduate education for professional persons, and to keep them informed of the many new developments in the health field. In addition to two general sessions, a wide range of public health subjects will be discussed at the various conference meetings.

Among the organizations participating in this year's conference are the conference of county, city, and district health officers; county and city health department public health nurse administrators; Empire State Health Council, Harvard School of Public Health Alumni; New York State Association of School Physicians; New York State Health Officers Association; New York State Public Health Association; and the New York State School Nurse-Teachers Association.

One of the highlights of the conference will be the annual luncheon of the New York State Public Health Association, at which the name of the recipient of the Herman M. Biggs memorial award will be announced. The award, named for a pioneer in public health who was former State health commissioner, is presented annually for achievements in the field of public health in New York State.

Another will be the presentation of the first Empire State award for excellence in medical reporting. The annual award, which consists of a certificate and $500, has been established to promote the further development of sound reporting by daily newspapers of medical and health news in New York State.

Visit Beyond Berlin—2

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. COHELAN. Mr. Speaker, the following article is the second of three on East Germany which I am submitting for the RECORD today:

EAST GERMAN REGIME GOES ALL OUT TO WIN OVER YOUTH FOR COMMUNISM

(By Flora Lewis)

BERLIN.—The shy, rather wan high school girl in Rostock considered the question a moment and then said, "Yes, I suppose I will join the party when I'm old enough. The state is doing so much for me, it's the least I can do to pay back."

The parents of this 17-year-old East German girl were not Communists, she said, and she brushed aside with some embarrassment the question of whether they approved her views. Her father had been an independent miller in the nearby small town where they lived, but now he and his wife had jobs running a state-owned canteen.

The girl was visiting relatives in the city during the newly proclaimed winter school holiday, a substitute for the shortened Christmas, Easter, and other religious holidays which have been abandoned. She sat at the edge of the enormous swimming pool, part of the new sports center provided by the state for the amusement of young people in Rostock. The entrance fee was about a dime.

Had she chosen, she could have spent the 2-week holiday instead skiing in the mountains with a Communist youth group for a total cost of $7. When she finishes high school, her college tuition will be free, and she will be paid a monthly living allowance by the state until her education is finished. She wants to be a teacher, and she took it as perfectly reasonable that after training her the state will expect her to go to work wherever she is assigned.

TYPICAL OF THE YOUNG

This earnest girl seemed representative of the young people I met on a recent tour of Communist East Germany.

Refugees are still streaming to the West, through the numbers have dropped in the last year or two, and refugees under 25 are still a disproportionately large part of the flow. But the Government has begun to exert itself strenuously to win over the youth—who constitute its future—and with an apparent success that is impressive.

The flight of the discontented, of the unyielding individualists, has hurt, but it has helped the regime, too. The obverse of losing the skills and talents of the bitter critics has been an increase in the docility, even the enthusiasm, of those who stay behind.

The manpower shortage in East Germany is obviously severe, although these seems no way to get a revealing statistical measure. Nonetheless, everyone speaks of it, and the effects are evident.

One result is that there are more responsible jobs available to youth. The regime has gone out af its way to add to these openings by creating special youth enterprises—a new restaurant, or shop, or small factory—launched by the state with the proviso that all jobs, including the top ones, must be given to people under 25. Of course, the top jobs go to those recommended from other enterprises as most promising and, of course, the party cells have a lot to say in defining youthful promise.

TECHNICIANS NEEDED

Another effect of the manpower shortage has been to intensify the need of skilled technicians, because East Germany has to go in for automation wherever it possibly can. Foreign exchange budgets are carefully shaped to allow for maximum feasible purchase of laborsaving machinery from the West.

This has meant a tremendous expansion in education facilities. Dresden's Technical High School, for example, has 11,000 students on its campus and another 6,000 taking correspondence courses, compared with a student body of 5,000 a few years ago.

The students have to work hard, and they have to pass their Marxism-Leninism courses as well as their mathematics, but the state pays for it all. The rector estimated that some 25 percent of entrants failed to finish the 5- to 6-year courses, and he moaned, "that's still too high, we're trying to reduce that figure."

If students fail once, they are assigned free tutors, and can take exams again. If they fail twice, and have a reasonable excuse, they can try a third time. As in other satellite countries, applicants who favor the regime have an easier time, but political discrimination is far less exacting than in the rest of Eastern Europe because the regime needs skills so urgently.

PLENTY OF PROPAGANDA

The youngsters are treated to plenty of propaganda lectures, both inside and outside the school curriculum, but "harmless jazz," as the Dresden bulletin board put it, is provided along with enough other entertainment to keep youthful spirits from feeling too beaten down.

East Germany has its hooligan problem—like the rest of the world—and the Communist regime has found no effective answer.

But there does not seem to be much youthful rebellion, purposeful or otherwise. It is not unusual for 17- and 18-year-old workers, with shock-brigade premiums, to earn as much or more than their fathers.

Nor do many young East Germans show the signs of cynicism, the angry awareness of bleak prospects, that run through Polish and Hungarian, even Czech and Rumanian youth, and that erupted in the 1956 revolutions.

"Things have gotten a lot better already," said a young shop clerk in Leipzig. "I don't see why they shouldn't keep on getting better."

The superficial impression of a visit to East Germany is that the regime has learned a lot about indoctrinating youth from its own mistakes and the mistakes of others, and is applying its knowledge shrewdly.

Anderson Independent Praises Russell Speech

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, April 4, 1960

Mr. TALMADGE. Mr. President, in its issue of April 1, 1960, the Anderson (S.C.) Independent featured an editorial praising and endorsing the recent address before the Senate by my distinguished senior colleague [Mr. RUSSELL] in which he warned that continuation of attacks upon private property by organized pressure groups will result in national anarchy. I concur in the conclusions of this editorial which is entitled, "Senator RUSSELL Lays It on Line in Warning to All Americans," and I ask unanimous consent to have the text of it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR RUSSELL LAYS IT ON LINE IN WARNING TO ALL AMERICANS

Senator RICHARD B. RUSSELL of Georgia told his colleagues in no uncertain terms that the planned attacks upon private property rights by the NAACP and its allies will result in nationwide anarchy if upheld by the Ike-Warren Supreme Court.

The Senator's remarks will stand as a milestone in the continuing battle of reasonable Americans to safeguard the liberties of our people.

Thurgood Marshall, the chief of the NAACP's highly paid legal army, has announced that every fine levied against Negro demonstrators at lunch counters will be appealed on up to the U.S. Supreme Court.

Marshall said the NAACP lawyers "are in agreement that use of public force either in the form of arrest by the police or conviction by the courts is in truth State enforcement of private discrimination and is in violation of the 14th amendment."

Senator RUSSELL said that "in the simplest terms, it is claimed that if a person refuses to do business with a Negro, the Negro has the right under the 14th amendment to take possession of the business of such person and he has no legal remedy."

Further, the Georgian pointed out, that under this twisted NAACP interpretation, "if any person undertakes to assert the unchallenged right, long enjoyed under existing law, to do business with whomever he chooses to the exclusion of a Negro citizen, it is claimed that his property may now be taken away or withheld by a group of trespassers. Under this contention, the equal protection clause of the 14th amendment denies the property owner any police protection whatsoever."

He wonders eloquently just "how fantastic we can get in groveling before the ever-increasing demands for special privilege asserted by the National Association of Colored People and their lawyers?"

In the "climate of equality" rampant in Ike's Washington, and in view of the Supreme Court's sociological decisions so far removed from the true meaning of the Constitution, it could be that the NAACP view will be upheld.

If that happens, Senator RUSSELL warns, they will have succeeded in having the Court rewrite the 14th amendment so as to read:

" 'No State shall be permitted to protect the property or other rights of a white person contrary to the wishes of a Negro.' "

Further, the NAACP construction "can be used to deny the right of property to any white citizen of this country. Under this construction, no white person can claim equal protection of the laws if any Negro desires to invade his property. Marshall even contends that no policeman can intervene to protect private property rights in cases where they are challenged by a Negro."

If the owner of a property has no right to invoke the police power to protect his property, what are his rights?

"Must," inquires Senator RUSSELL, "the surrender his property to any casual trespassers who might claim discrimination?

"If he is to be denied the police protection that he is taxed to create, what will happen if he employs a guardian to protect his property?

"Under the common law, the owner of property is entitled to use such force as is necessary to repel unwanted trespassers from his property.

"Under the common law, the owner of a business establishment is entitled to do business or refuse to do business with any other person as he sees fit."

What happens if this right is denied?

"This," the Georgia leader declared, "will be a throwback to the Stone Age and the law of the jungle. This means the destruction of the police power of the State to protect citizens who have violated no law. This is what we are told that the Supreme Court should decide our sacred Constitution to mean.

"What a travesty. This is neither equality nor equal protection of the laws. This is special privilege. This is anarchy."

And anarchy it would be.

The 14th amendment—as the Senator reminded some of his colleagues who seem to have forgotten—does not deal exclusively with the rights of Negroes. The words "race" or "color" are not used.

"It may be surprising to some," he said, "to learn that this provision is supposed to protect the life, liberty, and property of white citizens equally with the Negro."

What does this mean? It means that if the NAACP view prevails, any group—white or Negro—would invade any place of business, any industrial plant, any home, or any private property whatsoever—and be immune from prosecution.

Let the citizens of all other States look to themselves at this grave hour. If it is "legal" for trespassers to take over private property in the South, they can do so anywhere in the United States.

"One of the outstanding differences between our system and the Communist is the right of property that free Americans enjoy," Senator RUSSELL pointed out, and he charged that Communists who would change our form of government have seized upon the present "hate-the-South" campaign as a wedge for knocking out all property rights.

Senator RUSSELL called upon all candidates for presidential nominations to take their stands, saying:

"If the people who own property are to be denied the protection of the police power of their States and communities are compelled to restort to the law of the jungle to protect their property, let them be told it now from the candidates for the presidency—one of whom will appoint future Justices of the Supreme Court."

This is a timely and proper demand. The answers will be of vital importance to all Americans. Senator RUSSELL has laid it on the line in no uncertain terms. Let us hear the answers from presidential aspirants.

Tennessee-Tombigbee Waterway Would Bring Industry

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. BOYKIN. Mr. Speaker, I ask unanimous consent to extend my own remarks and include therein a wonderful editorial by the Mobile Register of March 22, 1960. The Mobile Register is one of the oldest papers in our beloved Southland and one of the best, and I think this is really and trully a great editorial about one of this Nation's greatest men, our U.S. Senator, ROBERT S. KERR, of Oklahoma, who is chairman of a Select Committee on National Water Resources. What a great speech Senator KERR made in addressing the New York State Waterways Association. Some of his statements are included in this great editorial.

I had the pleasure of entertaining Senator BOB KERR in our marvelous Mobile and showed him there our great water development, our great State docks, our wonderful industries, the beautiful Azalea Trail, the Bellingrath Gardens, that look like heaven, or I imagine that is what it looks like, because heaven would have to really be beautiful, if it were any better than this.

I have known and worked with BOB KERR for many, many long years. He is a great man. I remember him at the Chicago Democratic Convention. I was a delegate, and I wish everybody could have heard this great BOB KERR when he made the nominating speech there, with the thousands of people from every State in this Union. Well, I have a picture of it, a photograph, but I do not need it, because I have a picture of BOB KERR and what he said in my heart and in my mind, and I have often wondered, when I hear of so many people being suggested as President of the United States, why they do not include this great Senator from the State of Oklahoma.

I have visited him out there, and he has been such a success—in business, in politics, in his church, and in all of his undertakings. Truly, I have never met a better or a greater man in the U.S. Senate or the Congress of the United States or anywhere else. He has brains and ability and experience and a wonderful understanding heart; and he has done and is doing so much for his State and his Nation.

I am so glad that my own hometown newspaper saw fit to print what BOB KERR said about one of the greatest undeveloped waterways on earth—the Tennessee-Tombigbee. It will be developed some day, and what a great day that will be. We will have a direct route from Sioux City, Iowa, clear down through all of those wonderful States—Cairo, Ill., and on down to my district at Demopolis, Ala., where it will come on down and meet the Warrior River, the Alabama, the Mobile River and on out to Mobile Bay and the Gulf of Mexico. That will really and truly be a great day, and they should sing then—not "A great day is coming," but "It is already here."

I wish everybody knew what that would mean to so many States, to so many counties, cities, and villages. This development of the Tennessee-Tombigbee, in my judgment, will be greater, so much greater than even the Panama Canal. It is the greatest undeveloped waterway in the world, and our great Representatives in the long years—over a hundred, so the record shows—have been working for the development of the Tennessee-Tombigbee, and we in Alabama, Mississippi, and Tennessee and everywhere appreciate what this great man, Senator BOB KERR, of Olkahoma, had to say in his great speech about the development of these great waterways—not only the Tennessee-Tombigbee, but all of the wonderful waterways all over this Nation.

Senator KERR spent many hours looking over the port of Mobile and the many rivers that run into this great city. He looked at our great Brookley Field there where we have over 15,000 men and women, where this great Brookley Air Force Base has deep water, with ships coming in from all over the earth; where we will have a waterway from the State docks to the gulf, about 30 miles, with a depth of 42 feet, that will take any ship from any part of this earth. Then, we are developing on up at Jackson, Ala., and Demopolis, which has been completed and is such a wonderful development—the Demopolis lock and dam; another great development in ARMISTEAD SELDEN'S district, the Eutaw lock and dam; and of course, you all know, gentlemen, of the great work that has been done on the Warrior, and the wonderful work that is being done in Congressman CARL ELLIOTT'S district and Congressmen ALBERT RAINS' and KENNETH ROBERTS' districts on that great Coosa River that runs down and empties into the Alabama River, and then on into the Tombigbee River.

Both of our Senators, Senator LISTER HILL and Senator JOHN SPARKMAN, and our entire delegation have worked and worked hard for the development of

these rivers, and we have made some success, but not nearly enough, and we are so glad to have these encouraging words from a great man, Senator BOB KERR, of Oklahoma.

The editorial follows:

[From the Mobile Register, Feb. 22, 1960]

WATERWAY WOULD BRING INDUSTRY

The important relation between navigable waterways and industrial development is a major argument for linking the Tennessee and Tombigbee Rivers by canal to serve barge traffic between a broad inland area of the Nation and the port of Mobile.

A noteworthy comment on the value of waterways has been made by U.S. Senator ROBERT S. KERR, of Oklahoma, chairman of a Select Committee on National Water Resources.

Senator KERR, addressing the New York State Waterways Association observed:

"A significant fact about the industrial development in the past 10 years has been growth of new industrial plants, facilities, and capacities along our navigable waterways.

"In 10 years we have seen a $15 billion expansion of industrial plants in the Ohio Valley.

At the same time we have seen tremendous developments along the Mississippi River and its navigable tributaries, as well as on the gulf coast.

"This expanded industry along our navigable waterways not only enables our country to grow more rapidly than would otherwise be possible, it feeds a constantly increasing volume of business to the entire Nation, including all other forms of transportation."

A navigation canal connecting the Tennessee and Tombigbee Rivers would form a steppingstone to much industrial and commercial growth in an extensive region by opening a new advantageous route in inland waterway transportation.

This long advocated needed improvement of the Nation's inland waterway system should be pushed energetically not only in Alabama, Mississippi, and Tennessee, the States currently associated in a joint movement to promote it, but in various other States in which the benefits of the improvement would also be felt.

Senator KERR's impressive remarks on the expansion of industry in territory where navigable waterways exist should help arouse increased activity for the Tennessee-Tombigbee Waterway.

Dollars and Sense Reasons for Final Passage of the Cold War Veterans' Educational Bill; Dallas Times Herald Discusses Issue

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, April 4, 1960

Mr. YARBOROUGH. Mr. President, a few weeks ago Mr. Herman P. Miller, an official of the Bureau of Census, released a set of statistics to show the lifetime earning power of college graduates as compared to the income of those who for one reason or another did not go to college.

Mr. Miller's study is of particular interest at this time as the House Veterans' Affairs Committee is holding hearings on the cold war veterans' educational bill, which the Senate passed last session. Under that bill, if enacted, it is a conservative estimate that over 1 million veterans will attend college, and perhaps 2 million take some kind of educational training. A great many of those 1 million veterans will never make it through college without aid from the cold war veterans' bill.

What will that education mean to them and to their families? According to Mr. Miller's study, the average lifetime income expectancy at 1958 rates of pay of males who finish college is $435,000 compared to $258,000 for those who only finished high school. That is a lifetime earning difference of $177,000 for each individual who finishes college. This proves that through higher productivity and income, each individual who attends college under the cold war veterans' educational bill would more than repay the costs of the program in a very few years.

Recently the Dallas Times Herald, one of Texas major daily newspapers and one which is consistently offering stronger leadership in the Dallas area, published an editorial on the cold war veterans' bill. I ask unanimous consent to have printed in the Appendix of the RECORD the editorial from the March 13, 1960, Dallas Times Herald entitled "Benefits for Cold War Veterans."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Dallas Times Herald, Mar. 13, 1960]

BENEFITS FOR "COLD WAR" VETERANS

Uncle Sam takes good care of this country's veterans. In fact, a congressional committee, after surveying veterans programs in 38 countries, found that none matches the United States. Our ex-GI's receive such benefits as pensions, medical aid, insurance, housing aid and college tuition.

But there is nothing illogical about the richest nation in the world offering the highest rewards to its citizens who have helped to protect it from foreign enemies. It is sometimes lamented that 7 cents of the Federal budget dollar is a "fixed charge" for financing veterans programs. Yet, who is to say how much the Nation owes to exservicemen who have submitted to varying degrees of physical and economic sacrifice in the Armed Forces?

This is a knotty question, one that has again become current because of a proposed measure that would extend GI educational benefits to post-Korean war veterans.

The best argument against any proposed extension of veterans' benefits is that the Government is hard-pressed for money. Opposed to this is the fact that thousands of men who served during World War II and the Korean war came no closer to actual combat and made no greater sacrifices than did veterans of the cold war era. If one category merits educational aid, so does the other.

It can be argued moreover that, in view of the heightened demand for more well-educated citizens, college tuition assists to the cream of American manhood are in order. It has been estimated that in Texas alone, some 200,000 veterans would be qualified for the proposed bill's benefits. Doubtless many of these would go to college with financial help, who otherwise would not.

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1960

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I include the following newsletter under date of April 4, 1960:

An unwieldy and unguided Congress is slowly lumbering through the 2d session of the 86th Congress with the spenders in complete control of both Houses. Strangely enough, however, the leadership is unable to muster sufficient strength to put its centralizing budget-busting plan through either House as an overall program.

The result of this inability has been that the leadership is moving like a shifty football quarterback, taking one bill for an end run, one through the line, one on a backfield lateral, and one on a long forward pass. All this maneuvering is being done while the cheerleaders on the sidelines carry on a propaganda barrage through the newspapers, radio, and television to condition the people of the Nation for the next spending play.

It should be pointed out again that it is the Congress, and not the administration, that is wholly responsible for the spending program of the Federal Government. Congress enacts the laws, the administration merely administers the laws Congress passes. It should also be pointed out again that since 1953 President Eisenhower has had only one Republican-controlled Congress, the 83d. The 84th, 85th, and 86th have been Democrat controlled, and in the present 86th Congress the Democrat majority is almost 2 to 1, with every committee in both Houses controlled by almost 2 to 1. All bills and all legislation are under the complete control of the Democratic Party.

The questionnaire I recently mailed out to each boxholder in western South Dakota indicates that a large majority of the people of our State favor less spending, less Government regulations and controls, balanced budgets and greater economy.

Various groups and organizations have tabulated the votes and records of all Members of Congress. In order that you may know how your Representatives in Congress have been voting on measures that vitally affect you as a citizen and a taxpayer, I am setting out the voting record as tabulated by three of such organizations.

CIVIC AFFAIRS ASSOCIATES, INC.

The first is the tabulation of an independent survey organization known as Civic Affairs Association, Inc., an organization staffed by men formerly associated with the U.S. Chamber of Commerce. They chose 11 votes out of 87 rollcalls cast in the House last year, which in their judgment were the 11 most basic votes insofar as maintaining the free-enterprise system is concerned.

These votes include: Vote No. 19, to reduce grants-in-aid to States for airport construction; No. 34, sustaining the Presidential veto of bill placing final REA loan authority in Administrator rather than Secretary of Agriculture; No. 39, to eliminate features lessening protection of taxpayers' investment in TVA; No. 49, to eliminate "backdoor spending" for housing subsidies; No. 50, to keep expenditures for public housing at budget levels; No. 69, increasing Federal grants for constructing municipal sewage disposal plants; No. 72, to reduce by 5 percent the public works appropriation bill; No. 102, to curtail Federal preemption of State author-

ity; No. 130, to substitute the Landrum-Griffin labor reform bill for the committee bill; No. 164, authorizing President to increase interest rates on long-term Government bonds when necessary to finance Federal debt; No. 174, motion to override President's veto on second public works bill.

In this analysis a "plus" represents the economy vote, a "minus" represents a free-spending vote.

House rollcalls—Key votes

	Airports	REA veto	TVA	Back-door spending (housing)	Housing	Sewer construction	Public works	Smith bill	Landrum-Griffin	Interest rates	Public works veto (2d)
Rollcall No.	19	34	39	49	50	69	72	102	130	164	174
South Dakota (by congressional district):											
1. McGovern (Democrat)	−	−	−	−	−	−	−	−	−	−	−
2. Berry (Republican)	+	−	+	+	+	+	+	+	+	+	+

CONGRESSIONAL QUARTERLY

The second is the tabulation compiled by the Congressional Quarterly, an independent publishing company of Washington, D.C., whose purpose is to report facts on Congress and to Congress. Since the publication is copyrighted, it cannot be duplicated in full text.

The Congressional Quarterly, however, took 29 rollcall votes cast in the 1959 sessions, the outcome of which would clearly mean an increase or decrease in Federal spending. On these votes in support of moves to limit spending, the percentage was: McGOVERN, 0 percent; BERRY, 83 percent. On the percentage of 29 economy-issue rollcalls in the 1959 session, which were in opposition to moves to limit Federal spending, the percentage was: McGOVERN, 90 percent, BERRY, 10 percent.

ADA COMPILATION

The Americans for Democratic Action, an ultraliberal organization supported in a large part by Walter Reuther, made a compilation of the voting record on issues supported by them. In making their report they point out: "The voting record is offered as a guide for liberals in judging the performance of their Congressman on issues of importance." Then they report votes on nine of the issues they supported.

Vote No. 1—Hawaiian statehood; No. 2—authorize TVA to issue bonds; No. 3—provide direct Treasury financing for public housing and urban renewal; No. 4 for public housing authorization and urban renewal; No. 5—Foreign Aid program; No. 6—reject States rights antipreemption bill; No. 7—reject move to upset Supreme Court Mallory decision; No. 8—against substitution of Landrum-Griffin labor reform bill; No. 9—to establish a food-stamp plan in United States.

Of this a plus vote is a vote which ADA believes to be in harmony with liberal policies, a minus vote is one which ADA believes to be contrary to liberal policies.

	1	2	3	4	5	6	7	8	9
South Dakota:									
1. McGovern	+	+	+	+	+	+	+	+	+
2. Berry	+	−	−	−	−	−	−	−	−

Several organizations such as the Committee on Political Education (COPE) of the AFL–CIO, for instance, prints a voting record in every election year showing whether the Member of Congress voted "right" or "wrong" on the basis of what top labor leaders lay down as policy.

SOUND PROGRESS

Sound progress should be the primary purpose of every man's life. Sound progress is a source of strength. But progress is not sound unless it is based on sound financing.

As I previously indicated, it is the Congress which controls the purse strings of the Nation. Congress determines all Federal income through the exclusive power to levy taxes and it controls all Federal spending through the exclusive right of appropriation.

On June 30, 1959, Representative CLARENCE CANNON, Democrat of Missouri, chairman of the House Appropriations Committee, placed in the CONGRESSIONAL RECORD on page 11205 a tabulation of the decline in the purchasing power of the dollar between 1939 and 1959. Of course, his purpose was not to demonstrate this point, but I would call your attention to the fact that in only 2 of the 20 years did the value of the dollar increase. Those 2 years were 1949 and 1955. These are the years following the only Republican-controlled Congresses since 1932. The 80th Congress in 1947 and 1948 balanced the budget and made substantial payments on the national debt. The dollar value increased. The 83d Congress in 1953 and 1954 again balanced the budget and reduced the national debt, again increasing the value of the dollar.

In 1939 the national debt was $40 billion. In 1959 it had climbed to $295 billion, the result of 24 deficits in 29 years. Half of these deficits were incurred during years when we were fighting neither war nor depression.

It may surprise you to know that the greatest increases in this period were not for military or foreign aid. They were in domestic-civilian programs which during the past three Congresses have increased nearly 83 percent.

Subsidies and inflation feed on each other and both of them feed paternalism and centralization of power in a strong Federal bureaucracy. This was the very thing our forefathers fought the Revolutionary War to free themselves from to establish a system of local and State control.

Federal control and spending are the foundation of most of our trouble. Easy money through Federal paternalism, and an economy which is continually doped up with inflation, created by living on borrowed money, will never produce national strength. These things are destructive of character and initiative, both for the individual and his government.

Truman Favors National Primary

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 4, 1960

Mr. PROXMIRE. Mr. President, last Monday I introduced a constitutional amendment calling for a national presidential primary. On Saturday, former President Truman said he favored a national primary, provided the Government paid for it. My own primary proposal is tied to a commitment to push hard for a strict election-spending law—governing such a primary, if the constitutional amendment were adopted.

Also, Mr. President, I want to go on record against President Truman's proposal and in favor of State presidential primaries—until they can be replaced with national primaries. The gradual disappearance of State presidential primaries in the name of party responsibility is killing the most vital and important duty and right of democratic citizenship—the right to determine who are going to be the only two men, the nominees of the two major parties, with any chance to become President of the United States. Mr. President, I ask unanimous consent that a New York Times article reporting President Truman's support of a national primary be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Apr. 3, 1960]

A NATIONAL PRIMARY FAVORED BY TRUMAN

WASHINGTON, April 2.—Former President Harry S. Truman said today that he would favor a national Presidential primary if the Government paid for it.

But as for the kind of primary election that will be held in Wisconsin on Tuesday, Mr. Truman said he still thinks, as he did in 1952, that the results are just "eyewash."

"They are no good," he said. "They're just a waste of time. And sometimes they put a fellow out of the running who should be put out. That's the only use they are now."

Senator ESTES KEFAUVER, Tennessee Democrat, disagreed with Mr. Truman. They appeared on a television program, taped by Senator PHILIP A. HART, Michigan Democrat, for his constituents.

Mr. KEFAUVER said that even though he could not win the party's Presidential nomination through his primary victories in 1952, he thought such expressions of the voters' opinions were worthwhile.

Mr. Truman said the primaries held in 15 States and the District of Columbia had "no effect on the conventions as they meet."

"Now if we had a national primary, the expense of which would be paid by the Government of the United States, then I'd be for it," he said.

Visit Beyond Berlin—3

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. COHELAN. Mr. Speaker, the following article is the third of three on East Germany which I am submitting for the RECORD today:

COMMUNIST GERMANY RAISES THE CURTAIN A LITTLE

(By Flora Lewis)

BERLIN.—As far as Americans are concerned, the touchiest Communist state in Europe is East Germany. Except for Albania, it is not too difficult to get permis-

sion to drive your own car into the other Communist countries and look around more or less unaccompanied. Even Russia permits it now, though routes are restricted.

The East Germans have not gone that far. But they have decided to risk a fair glimpse of their territory, now that they have pulled up their socks economically and have launched an intensive campaign for Western recognition.

My viewing was conducted from an officially provided, shiny black Tatra, complete with leather-coated driver and an amiable escort. The program was packed tightly and no request refused.

EAST BERLIN IS CAPITAL

The slice of land between the Elbe and Oder borders, assigned to Soviet occupation at the defeat of the Third Reich and now named on its own Government's maps as the German Democratic Republic (DDR), is not big—about the size of Tennessee.

East Berlin is the capital, but there are roadblocks and armed guards who demand to see your passport when you cross the city border into the rest of the country. Red army troops used to man the posts, but only green-uniformed Germans were there when we went through.

The way led through flat wooded country, not far from the border of isolated West Berlin, and in that frontier zone soldiers with guns at the ready strolled along the road. Some children were playing in a ravine, dressed up in red cowboy hats and glass-studded holsters—obviously they had relatives who sent gift parcels from the West, or who had made a discreet trip to West Berlin not long before.

Such things are not to be bought in East German shops, but no one seemed startled at the children, no more than at the occasional girl wearing slender, spike-heel shoes in the cities, although everyone knows that the shoes to be bought in East Germany are definitely on the squat and sturdy side.

Still, there are enough shoes to go around, enough perlon stockings, enough plain spring dresses.

There are not as many cafes, not as many movies, not as many tempting frivolities as in West Germany. Going into the one big cabaret in Dresden, the young party member who was with me apologized for the big red propaganda banner on the balcony.

STRANGERS JOIN GROUP

"It's not usually here," he said, "it really does spoil the place. Otherwise, it's very amusing here, don't you think?"

A stranger came up and took the empty seat at our table, just as I was chatting about a local official I'd seen earlier in the day. The people with me glared at the stranger and whispered, "Better not say any names. Just say Mr. R., and we'll know who you mean."

Asked later if he was worried that scraps of the conversation might be reported, the party member made elaborate denials that there was anything to be afraid of. "It's just that some people are ignorant," he said, "and might go around repeating what they hear without really having understood. There's no point saying things in front of people you don't know, they can get the sense all garbled."

But he was noticeably relieved when the stranger went off to ask a girl to dance.

To Western eyes, the only sign of a Soviet occupation in all of Dresden was the lettering, in Cyrillic, on the window of a second-hand piano shop in a back street. Apparently, one of the things Russian soldiers like to take home is a piano.

But the Dresden Communist laughed at the remark that the Russians kept out of sight. "Why you see them all over," he said and he pointed to a couple of broad, pink-cheeked young women who looked no different from the rest of the crowd.

According to Western estimates, there are some 250,000 Soviet troops in East Germany. Driving through the countryside, you pass a camp or a supply depot now and then, and the Red army guard at the gate stamps its nationality. At one point, the road ran on a little embankment so that you could see over a nearby enclosure. Under open sheds, there were long, neat rows of medium-sized field artillery.

The East Berlin guide followed my gaze, as we whizzed by, and said, "Ah yes, an agricultural machine station." I laughed. "Guns," I said, "shooting machine station." He shrugged, and said perhaps they were guns, the Russians were well equipped.

LITTLE FRATERNIZING

There seems to be almost no fraternizing. A uniformed Russian came in to drink at a state-owned roadside inn in Mecklenburg. The East German truck drivers made way for him silently. When he had gone, they mimicked the heavy-tongued pidgin German of the G. I. Ivan. One told a joke whose point was that Russian soldiers can drink more and stronger alcohol than anyone.

It was a shabby little inn, but the shelves behind the bar held scores of bottles, apparently a wide assortment. The waitress, a blowsy village girl, scowled a little when I asked for vodka. "Schnapps," she said, "have some good German schnapps. Why should we carry vodka? Schnapps is our drink."

The Primary Issue of 1960

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, April 4, 1960

Mr. COTTON. Mr. President, in my reading of the New Hampshire newspapers over the past weekend, I was impressed by an editorial entitled "The Primary Issue of 1960," which appeared in the Concord Daily Monitor, of Concord, N.H., on Wednesday, March 30.

The fact that the Monitor is not a narrowly partisan paper makes especially significant this editorial which defends the fiscal policies of the present administration. While I do not necessarily accept every statement which it contains, I believe it is a clear and well-reasoned statement which lays bare the naked issues of the coming political campaign. It merits the attention of the Congress and the people.

I ask that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PRIMARY ISSUE OF 1960

The efforts of the administration to stop inflation aren't based solely on innate conservatism in fiscal policies. They are also a recognition of economic pressures operative in the world at large.

If American price levels rise more the present advantage foreign goods have in the U.S. market will increase and foreign goods will become a flood of imports. Exports will decline correspondingly. The balance of trade will go against the United States and our gold will be drained away. It has been flowing out for many months now.

If these results of too much American inflation accelerate under continued wage increases not geared to an increase in per capita production the country will have some choices to make if it is to prevent depression.

It could impose wage controls which nobody wants. It could increase tariffs, but that would only further reduce our own exports. It could impose restrictions on travel abroad by Americans or the taking of dollars from this country by individuals. It could bring home its defense forces.

None of these possibilities is in the long-range national interest.

The best answer is an end to wage increases other than those justified by increased per capita production; in short, an end to inflation. Even if this is achieved at once the competition for markets by other nations would continue to be serious. Foreign producers can already undersell the United States in steel, in heavy machinery, in textiles, and a thousand other things, even in our own market.

Besides the unrealistic pressures of big labor unions for wage increases another continuing inflationary pressure is the demand for more Federal aid to the aged, for school, and for other luxuries.

These are particularly dangerous pressures at this time because 1960 is an election year and the temptation of officeseekers and the parties they represent is to buy votes with such promises, which then have to be kept, if the election year Congress does vote such new spendings before adjourning.

The brakes which can be put on inflation are equally repulsive to those seeking votes. Yet, the time for toying with inflation has already passed.

Of the two major parties the Republicans are the more realistic in relation to the dangers of inflation. The Democrats are the more inclined to try to spend the country out of any situation—and drive it into economic crisis.

Whether the American people will recognize this primary issue of 1960 we do not know. It is primary, because it can affect policy on almost all the other issues—our defense posture, our foreign relation, our economic world leadership, fiscal stability, employment, etc.

Minimum Wage Legislation

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. MADDEN. Mr. Speaker, John F. Milasich, secretary of the Lake County CIO has forwarded the following resolution which was unanimously passed at their meeting on March 22, 1960.

During these days of inflation and the almost monthly rise in the cost of living during the last 6 or 7 years, it is highly necessary that something be done to increase the minimum wage base during this session of Congress.

The resolution follows:

Whereas the present Federal minimum wage is inadequate to maintain a basic standard of living for the average family in Indiana,

Whereas the workers that are to be protected by a minimum wage law is smaller today than it was in 1938,

Whereas it its an injustice to workers to have no protection over the Fair Labor Standards Act,

Whereas it shows a grave weakness on the part of the national economy to allow workers to make less than the needs to maintain the necessities of life,

Whereas the American economy is known throughout the world as allowing workers to look forward to a better standard of living,

Whereas many through no fault of their own cannot look forward to bettering their standard of living, whereas the Kennedy-Morse-Roosevelt bill now before Congress could go far to aid these workers and families,

Whereas in the State of Indiana at least 105,000 low-paid workers would receive wage increases estimated at $38 million dollars a year upon passage of this measure,

Whereas the amount of money would further the growth of the State's economy by increasing the purchasing power of workers,

Whereas there is a moral, social, and economic need for this legislation: Therefore be it

Resolved, That the Lake County Industrial Union Council, CIO go on record supporting the Kennedy-Morse-Roosevelt bill, increasing the minimum wage to $1.25 an hour and extending the protection of the law to an additional 7½ million workers; be it further

Resolved, That copies of this resolution be sent to Senators HOMER CAPEHART and VANCE HARTKE, and Congressman RAY MADDEN; be it further

Resolved, That we call upon union members and interested citizens to write personally to their Senators and Congressmen pointing out the need of this bill for the many workers involved.

LAKE COUNTY CIO,
JOHN TRUCHAN,
President.
JOHN F. MILASICH,
Secretary.

The Farmer's Side of the Case

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, April 4, 1960

Mr. CARLSON. Mr. President, there is much discussion of the farm problem and I am pleased to invite the Senate's attention to an article entitled "The Farmer's Side of the Case," written by Mrs. Mary Conger of Iola, Kans., who is a farmer's wife. The article appeared in the Saturday Evening Post, issue of April 9.

The public often gets a distorted picture of the problems of agriculture from writers who have gotten their knowledge of the farm problem from reading books, and therefore, it is most wholesome to get a report from the farm.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FARMER'S SIDE OF THE CASE

(By Mary Conger)

My husband Carl and I firmly believe that our farm—a large, beautiful, family-type farm—makes a substantial contribution to the economy and health of our country. Every day of the year the dairy herd on our Triple C Farms produces enough milk to feed 1,000 children their daily quart of milk.

Our 720 acres of land are located in Allen County in southeastern Kansas, an area of diversified crops and livestock. Carl was born in this county, where he has a lifetime knowledge of the idiosyncrasies of weather and soil. To this understanding he has added a college degree in scientific agriculture and a number of years of professional experience as a county agricultural agent and soil conservationist.

Our herd of 200 registered Holsteins—100 cows and 100 heifers—are considerably above average in production. We market grade A milk, for which we receive premium prices. Our farm's gross income ranks in the upper 3 percent of farms in the United States. Our farm is adequately capitalized and highly mechanized for large-volume production.

Supposedly ours is a successful farm enterprise—and it has been. We bought our farm in 1939, making the downpayment with money we had saved for years from Carl's modest salary as a county agent. Since then much of our life, our thought, and our work has gone into building up our land and herd. The only trouble is that since 1952 our farm has made little, if any, profit in good years—and in bad years, such as 1955, we have lost as much as $4,058. By the end of 1958—a bumper crop year—we had accumulated $7,000 in unpaid bills for operating expenses. Last year we just about broke even, so we had to borrow $3,500 at the bank to pay off the most pressing part of that $7,000.

We now are caught in a merciless cost-price squeeze, and each year that economic turnbuckle tightens another notch. Back in 1952 all political parties were in favor of 100 percent of parity in purchasing power for the farmer; then there was no public hint of a national policy to drive down the prices of food. Then we were getting 11 cents a quart for our milk. Now we are getting 8.1 cents.

When that first slash in farm prices came 6 years ago, we doubled our milking herd in an effort to increase gross income so that, in turn, we could meet our fixed charges—such as interest and taxes—and the rising cost of things we must buy. We built a new labor-saving milking parlor—a sort of assembly-line milking system—equipped with a pipeline milker and a bulk refrigeration tank. No expensive labor is wasted carrying milk buckets on our farm. But then came years when our crops were cut by drought, hail, and wet weather, and we fell behind on the feed bill for the cattle. In good years we struggled to catch up. We tripled the milking herd. Milk prices declined further. Costs went on up. We were on a treadmill, always running faster just to keep in the same place.

While we were struggling to meet our expenses, we constantly were reassured by some of our spokesmen for agriculture that "efficient, commercial farmers" were doing just fine. Statistics showed the average per capita farm income to be just half of that for nonfarmers, but these figures didn't tell the true story, the spokesmen said, because they included 2 million small, inefficient subsistence farmers who produced only a minute part of the Nation's food supply. Also, so many people were leaving the farms that the income of agriculture, even though shrinking, was being divided among fewer and fewer farmers. And there were always success stories at the top. These were the farmers who most often were sought out for interviews and publicity.

So it appeared that there was nothing the matter with anyone but us. Still our neighbors kept complaining, asying such things as "If I count a fair return on my investment, I'm throwing in my labor free of charge." And at a recent meeting of the board of directors of the Kansas Dairy Association in Topeka, I stepped into a group of prominent farmers just as George Schumann, of Hiawatha, Kans., was saying, "The thing that has me worried is how we're going to stay out there on the farm with no profit."

T. Hobart McVay, of Nickerson, a nationally known Holstein breeder and president of the Kansas Dairy Association, added, "It just won't figure. I've been farming all my life, and I know it can't be done with the present cost-price situation." He shook his head. "I'm sure I don't know the answer."

This discussion reflects the farmer's feeling of futility. At all meetings of farm organizations I have attended recently there is an undercurrent of despair—and there is a belief that the general public, seeing news stories about the surpluses and the farm subsidies, is not aware of the true farm situation at all.

It was after this meeting that I began to wonder just what was happening to our kind of farmer—to the operator of the modern, bigger-than-average commercial farm. I sympathize with the too small, marginal, or subsistence farmers, but after all, the problem of fitting them into the industrial age, so that they contribute more to the economy and also can improve their own lot, is primarily a sociological challenge. But what is the size of the remaining problem after this particular portion has been set off to itself?

For some answers I turned to the records of members of our State's farm management association, made available to me by Kansas State University. The facts I found there proved I had not just been mumbling to myself as I scrubbed the dairy barn walls—and I do scrub them.

The farmers in this association are above average in their area by almost any yardstick. They own larger farms, have more livestock, keep accurate records under supervision of an association management specialist, and utilize the technical advice the State agricultural college has to offer.

What did I find?

Let me explain that the management association figures farm returns this way: First, operating expenses are deducted from gross receipts of the farm. From this profit is deducted a fair investment return of 6 percent on net working capital and 4 percent on net fixed capital. Then the value of any unpaid family labor—such as mine—is subtracted. What is left—if anything—is the farm operator's wages, his return for his own labor and management of his farm enterprise.

In our own southeastern Kansas, association farms had averaged only $805 per year in labor-and-management income during the past 6 years. Or put another way, the average farm earned a total of only $4,834 in wages for its operator for the whole 6 years. In fact, the farmers had received even less pay than their hired men—and hired farm labor is at the absolute bottom of the industrial wage scale.

However, our particular part of the State has poorer soil than many other areas. So I looked at the records for the State as a whole. I found that the 1958 returns for association farms had been the best in 11 years, owing to bumper crop weather that coincided with a peak in the price cycle of cattle and hogs. And that year the labor-and-management earnings per farmer in the association were $4,120—nothing more than any skilled laborer earns.

But 1958 was the only year in 11 which Kansas association members drew such fancy wages. In 1955, the poorest year, the net labor loss per farm for all association members in the State was $938. Everybody worked all year, received no pay, and went into debt besides. From these figures it was

easy to see that many other good farmers were in the same boat as the Congers.

The fact is that the farmer has been getting a shockingly low return for his labor and skill. Wages lost in industrial strikes are microscopic as compared to the loss which farmers have suffered in the last decade. And I mean the commercial farmer, such as those in our association—the man who runs an agricultural enterprise with a capital investment of $54,800 per worker, about three times as large as the average industrial investment per worker.

The usual farm-income figures, low as they are, don't accurately reflect the situation because they are computed as net income above production expenses and include the financial returns from investments in land and equipment that the farm family may have accumulated over a lifetime of frugality—or may even represent the saving of several generations. The net income per farm also includes the labor of the entire family in producing such income. To this is added the value of whatever food the family may have raised for its own use, the rental value of the farm home—often an old farmhouse that is far from being modern by urban standards of today. On top of this is put any off-the-farm income that some member of the family may have earned. All this is lumped into a thing called the real income of the farm family, a figure that is used to disguise the disgraceful disparity of the actual wages earned by farmers for producing the Nation's food.

The farm-income figures also include any Government subsidies the farmer may have received. I am quite aware that many city people believe that farmers are getting richly paid by the Government for not growing crops, or in artificially supported prices for their farm products. I'm not going to argue that price supports don't cost the Government a lot of money or that Government storage of surplus crops is not expensive—but I do know these things aren't making farmers prosperous. For the record, such Government programs have little effect on the income of our Triple C Farms. We have no land in the soil bank; we need it for our cows. Our milk price is not subsidized. During the war years, when wheat was greatly needed, we usually raised 150 acres of this crop; since then our allotted acreage of wheat has been cut to 61 acres. Wheat produced on that land is eligible for a Government loan—last year it ran $1.98 per bushel. In any case, income from wheat amounts to less than 9 percent of our gross receipts; our major enterprise is dairying.

We also received soil conservation payments last year amounting to $282.30 for the establishment of soil-saving crops, in this case a permanent pasture. Part of the payment, $143, went directly to a dealer in payment for the necessary fertilizer, and the balance, $139.30, came to us to help pay for preparing the land and seeding the pasture. These soil-conservation payments are supposed to encourage the conservation—in fact, the improvement—of the Nation's limited soil resources for the benefit of future generations when, say the population experts, we won't be troubled by surplus crops, but rather will need all the good land we can find.

That is the total of the Congers' subsidy.

The most gigantic subsidy in the United States is not the Federal agricultural price-support program, but the unpaid or underpaid labor that farmers and their families contribute to the production of cheap food for the American people. Even in 1955, that year of crop failure when members of the Kansas Farm Management Association earned less than nothing, the average member produced $9,000 worth of food, or so valued when sold at the farm price level. At the supermarket this per man output of meat, milk, eggs, and bread cost housewives around $24,300.

We farmers don't want sympathy, but we would like better understanding of what we are up against. We don't like to be accused of being greedy or of being tax-eating parasites. We don't like to have our real income misrepresented for political purposes. We know that an urban worker may also have income from investments, may enjoy certain fringe benefits, may live in his own home without paying rent, may raise food in his garden, and members of his family may have other jobs—all without being considered part of his wages. And then, if he is a steelworker, he also gets gross hourly earnings that are 85 percent higher than they were in 1950.

On the battleground of inflation farmers have been hit hard on all sides. The tractor we bought in 1950 for $2,200 must now be replaced at $3,800, but the milk that brings in our income has dropped 27 percent in price. Thus we are helping to pay the bill for the wage-price spiral on one front and are absorbing a part of the consumer's grocery bill on the other.

Now I know that groceries seem higher to the housewife, but that's because the housewife doesn't just buy flour and beans and potatoes these days; she buys more semi-processed foods, such as cake mixes and packaged frozen vegetables that are ready for the pot or oven. The manufacturer is doing more of the housewife's kitchen work for her, and he's charging her for that extra service. Also people are eating more of the expensive foods—more fresh fruits, more meats (and more expensive cuts) than ever before. The truth is that food was never cheaper. People in the United States buy their food with the fewest hours of labor ever required in the history of mankind. Month after month the financial pages report increases in the cost of housing, medical expenses, transportation, and all the goods and services—except food. Food prices hold steady or go lower.

It is impossible to figure exactly how much the Nation's farmers have sacrified to inflation. For example, I wonder what Triple C Farms milk would cost the consumer if it had increased in the same proportion as other living costs—40 cents a quart? Fifty cents? I do know that some economists have estimated that farmers have been shortchanged about $70 billion which they would have earned had their products risen in price at the same rate as other commodities. There is evidence that the farm family has been absorbing about 25 percent of the Nation's grocery bill.

Perhaps it is just our hard luck, and the hard luck of millions of other farmers, to be in this business during a time of inflation, and also in a time when a great technological revolution is sweeping many of those farmers from the land. There are some people who believe the solution is obvious. They say, "If the nincompoops can't make a go of farming, why don't they get a job in town like everybody else?" And thousands of farm families are solving their individual problem in just that way. They are leaving the land.

Carl and I don't see it that way. We can't. We've invested too much of our lives in this land of ours. Rather than let go, we've been trying to grow. Five years ago, when we needed additional space for our expanding herd, we bought a neighboring 80-acre farm. It had been the subsistence home of an old couple and came on the market when the husband, a carpenter and painter, passed away. The only crop on the wornout land was some drought-stunted sorghum.

Carl promptly applied a complete soil-conservation plan to our new land. He bulldozed out old hedges and brush, built terraces, and dug ponds. He spread lime and fertilizer. He plowed up the weedy pastures and seeded them to brome grass and alfalfa. Within 6 months that old farm was under a luxuriant cover of soil-building grasses and legumes.

Statistics recorded one less farm and farmer, but farm production didn't decline. It increased. An inefficient unit had been absorbed into a larger, more efficient one. And so, while people have been leaving agriculture at the rate of 1 million a year for the last 16 years, an exodus that is amazing by any standards, the productive capacity of our farms has been expanding rapidly.

But there is a tragic catch to this process. While we were expanding our dairy herd, improving the output per cow and building up our pastures, so were all our neighbors. Our concerted efforts flooded the local market with a record flow of milk last fall, and the price of milk slipped lower and lower. Collectively we destroy ourselves by individual actions we are forced to follow.

Carl and I will have to stay on our farm and ride out the storm. All our resources—education, experience, finances—have been committed to farming. We have had a busy, happy life on our farm. Our children grew up here and helped with the farmwork and were 4–H members.

Still with us is our daughter, Carleen, a 16-year-old. But gone from home are our two sons, as soon as they came of age, we encouraged them not to stay on the farm but to leave and make their start in the business world without losing time. This they have done. Our son Gordon, 25, is with a construction firm in Kansas City, and David, 21, is a distributor for a bread company. Practically all their classmates have left the country. Very few of the once hopeful veterans who took on-the-farm training after the war now remain in agriculture. They have been forced to find other ways of making a living after losing 10 youthful years in a lost cause. As in so many rural areas, our neighborhood rapidly is becoming a place of old and middle-aged people.

In any case, making a change is not easy. A neighbor of ours, Maurice Wray, 44 years old and farming 210 acres, says, "What would I do in the city? I'd just be unskilled labor." Yet as a farmer he utilizes a whole range of highly developed mechanical and scientific skills—in addition to duties of management and the responsibility of handling his investment in a high-risk enterprise.

As I write this I think back to a winter evening—everyone else in the family has gone to a meeting. I retire early to my favorite cold-weather pastime, reading in bed wth the heat pad turned on. My book is about the difficulties of flight into outer space, but I don't get farther than the first asteroid when there is a crunching of snow outside my window—a sound that may be made by a cow walking close to the house.

I get up and turn on the yard light. It's a cow, all right—the whole herd is out, all over the yard and scattering down the road. It's up to me and to old Queen, our dog, to round them up.

This calls for long underwear, jeans, overshoes, winter wraps. Outside, the crisp air is exhilarating as I set out with Queen trotting along beside me. The stars glittering coldly on the snow reflect enough light to pick out black-and-white cows wandering everywhere. Queen enters the game enthusiastically, barking around the pond, beyond the shelter belt, behind the granary. Rounding up the first few dozen cows is great sport, but finding and chasing all the stragglers begins to be hard work. Even Queen loses her enthusiasm.

My overshoes are beginning to feel heavy as I plod patiently on. There is time for thinking, and my mind is in a resentful turmoil over the latest city newspaper editorial which denounced the pampered farmers and

righteously demanded that agriculture return to a free economy where prices are determined only by supply and demand. Farmers should stand on their own feet and compete on an efficiency basis, the same as other industries.

Indeed, I think, why shouldn't farmers adopt the methods of other economic groups? Perhaps we should start with a 27½ percent soil-depletion allowance for income tax purposes, the same as the depletion allowance granted the oil industry. However, I must admit that income tax relief would be a hollow mockery to the millions of farmers who aren't making enough income to pay taxes.

How about enabling legislation that would extend to farmers the same rights of collective bargaining, without antitrust penalties, such as labor enjoys? Or, if we can't have monopoly, how about a fairly well developed oligopoly—a combination that might act to curtail production and maintain prices? This might even up the odds, as it is oligopoly with which farmers must bargain.

And then there's the strike weapon. How about a 116-day farm strike? Farmers make up 12 percent of the population and receive only 5 percent of the total gross national product, so a booming economy shouldn't suffer much from this little loss. In fact, the Nation could survive on all those surpluses we're always complaining about. Of course, a diet of bread and cornmeal mush might get tiresome—without even cheese or meat to make sandwiches after the first week. But look what we'd save on storage costs.

Of course, if farmers struck for a few months, about 40 percent of the Nation's labor force would have to be laid off—all those engaged in processing and marketing food and those who sell services and supplies to agriculture. Things might get slightly dull, too, for the steel, petroleum and transportation industries with one of their major customers out of business.

On the other hand, the wall-to-walll carpet industry and the central-heating and air-conditioning companies would scarcely feel the pinch at all—except indirectly—since they do only a trickle of farm business anyway.

If we get really hungry, we could appeal for foreign aid, or reverse lend-lease. Maybe some of our friends of the free and twilight world would send CARE packages. Even powdered milk would improve all this mush. But what would other nations have to spare? We could import plenty of wheat, which we already have—indeed we would be having it three times a day. Or there's coffee, although most people soon would be in a mood to drink something stronger. But meat, milk, eggs—the high-protein foods; the sinews of muscle, health and the very essence of the life cell itself—protein is a very scarce world commodity. We could import only the merest fraction of the amount needed to relieve our distress. There is no other land on the face of this earth or several other planets that can pour forth the wealth of food produced by our own midwestern farm States.

It's hard to imagine just what phrases the financial page would use to describe a farm strike after months of referring to steel as the most basic industry. Comfortably overfed as we now are, it's easy to forget that for countless eons of time mankind devoted his entire time and energy to the acquisition of just enough food for survival. Only recently has man been able to produce enough surplus food to enable him to develop his intellect and finally think of such things as steel.

But now the cows are relatively docile after their first wild ecstasy of running free. I round up the stragglers alone. Queen is tired and just politely refuses to help. The sharp air feels like pure oxygen, and my head spins.

How about the immutable old law of supply and demand? Has anyone ever considered whether or not the Nation would like to have its food supply reduced to the precarious scarcity that would be necessary to raise prices to a fair level in the marketplace? If the country wants a comfortable margin of food over and above our immediate daily needs, who should pay for this insurance? Should farmers be expected to carry the entire premium in the form of depressed prices?

While a farmer does not want to become a ward of the Government, there are some suggested remedies that give him the uncomfortable suspicion that he is being told, "This operation is going to be painful, and you may not survive. But it surely will cure what ails you."

Just exactly how "free" is the free economy to which agriculture is supposed to be returned? In a period of recession which is supposed to bring about adjustments, people refuse to buy, yet prices do not drop; there is unemployment, yet wages do not decline. Other parts of our economy seem to have developed some gimmicks that rather effectively prevent a "free" economy from adjusting itself at their expense.

Agriculture already is one of the most competitive of all enterprises. All different foods compete for the limited space in the human stomach. Geographical areas are pitted against one another for a share of the market. Efficiency of production is a relentless pressure within the industry, ruthlessly grinding the less fortunate into the necessity of accepting failure. And then the industry as a whole competes against all other economic groups for a fair share of the Nation's income.

Perhaps we should return the rest of the economy to the competitive status of agriculture.

The last cow walks into the lot at her own deliberate, dignified rate. I shut the gate. Back in the warm house, I am tired. The intoxicating spell of the night air fades, and fantasy is dispelled by glaring light. I return to the practical.

When the Nation's farmers totaled their records for 1959, they found that their income had declined 15 percent from the year before. All predictions now are for a further downhill slide in 1960. Not a single economist forecasts any significant improvement in the farm-income situation in the years ahead. There is every evidence that the farmer has the technical ability to expand production even faster than the population increases for quite a few years to come. The farm surpluses will be with us for a long time.

And there is no sound, unified program to meet this situation. The voice of the farmer is weak and faltering because the several national farm organizations which are supposed to speak for him are deadlocked in uncompromising disagreement on possible solutions. They have taken fixed positions and continue to defend them, come what may, while the situation steadily worsens.

How then, if we are losing money, do we—Carl and Mary Conger—manage to hang on? We have done it, thus far, by the very inflationary force which threatens to destroy us. Inflation operates in strange ways, and while it has put our income in a cost-price squeeze, it has caused a rise in land values. Also, the desperate need to grow larger, for efficiency's sake, has caused farmers themselves to bid up the price of land. Thus our farm, like most others, is worth more each year—on paper—and we borrow against that increased value to meet our losses. We know this is a dangerous process, one that is underway in much of agriculture, one that could engulf us all unless the decline in farm income can be halted.

Meanwhile we tighten our belts. We put off reshingling the roof yet another year. And we don't really need a new refrigerator—the old one has run for 17 years without stopping. We hang on, knowing that for farmers everywhere there will be more debts, a gradual loss of their equity in their land and a widespread fear that someday, unless something is done, the scales will tip too far, and family farms such as ours will be a thing of the past.

U.S. Prestige in Latin America Revived

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. FLOOD. Mr. Speaker, in many statements to the House I have stressed the vital importance of meeting forthrightly but firmly the issues raised by the persistent demands of Panama for the exercise of sovereign control over the Canal Zone including the formal display of the Panama flag.

The passage on February 2 of the Selden resolution, House Concurrent Resolution 459, by an overwhelming vote, 381 to 12, and the unanimous approval, February 9, of the Gross amendment to the Department of Commerce appropriation bill clearly reflects the disinclination of the people of the United States to approve the display of any flag over the Canal Zone except that of the United States.

Thus, I have read with keen interest in the Saturday Evening Post of April 2, 1960, an editorial commenting on the recent visit of the President in Latin America, which emphasizes the importance of the flag issue to continued U.S. control of the Canal Zone and Panama Canal.

The editorial follows:

IKE HAS REVIVED OUR FADING PRESTIGE IN LATIN AMERICA

In the nick of time President Eisenhower came to the rescue of the State Department, whose efforts to avoid acts or statements which stir up anti-U.S. demonstrations in Latin America had verged on the ridiculous. Although the President left a few loose ends dangling in his pronunciamento, it is now de rigueur to frown on Communist efforts to subvert countries in this hemisphere.

In our anxiety to avoid demonstrations and other troubles, we have made some egregious bobbles. Latin America can hardly have been favorably impressed by the action of the State Department in linking the impending execution of a rapist and kidnaper to possible riots in Uruguay, a Red hotspot in South America. The suggestion that the administration of justice in an American community is subject to veto by Communist mobs, whose members riot against the execution of one convicted criminal but accept the murder of millions by Red despots for no crime at all, doesn't improve the American image anywhere.

As to Cuba, our premature recognition of Castro has been followed by much wringing of the hands and doeful speculation as to whether Castro is a Communist or has a Communist brother or is surrounded by

Communists, when the easily demonstrable truth is that his regime is behaving as Communist regimes usually behave. The opposition is throttled; even former companions in arms are thrust into dungeons without trial. Constant harangues against foreign aggressors and local "traitors" fill the air. Property, including that of Americans, is confiscated; and to rub it in, Castro consummates a deal with the Soviet's trader Mikoyan by which the U.S.S.R. buys Cuban sugar at the world price and at almost half the price paid by the imperialist United States. What other arrangements the Soviet troublemaker may have made with Castro is not known.

A key objective in the Communist plan to move in on Latin America—or rather to consolidate the gains already made—is the Panama Canal. Agitators have demanded that the Panamanian flag be flown beside the U.S. flag in the Canal Zone, and official U.S. opinion, including that of President Eisenhower, appears to be that this sharing of flagpoles would do no harm. The President explained that, inasmuch as Panama appeared to have "titular sovereignty" over the zone, it was unrealistic to become too excited about demands to fly the Panama flag along with ours. "Titular sovereignty" is a phrase used by President Taft many years ago, with the explanation that it didn't alter the facts and might quiet the local politicos. The phrase hardly disposes of the fact that, under the treaty with Panama, this country enjoys all the rights of sovereignty, "to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power and authority."

The flag may be "just a symbol" to us, but we can be sure that to the Panamanians who are making this demand, the flag is a symbol of sovereign power. To them, and to all Latin America, the equal presence of Panama's flag in the Canal Zone would mean the first step toward the relinquishment of our position there. The Panamanian press is generally in agreement with an editorial in La Nacion, owned by the Vice President of Panama, in which the paper declared that last year's attack by students on the American zone will be followed by other episodes "until all the Yankees are driven out of the Canal Zone and the Canal is nationalized."

There is no sentiment in this country for depriving any Latin American nation of its rights. Propaganda to the contrary rests on policies long repudiated by the United States. But we, too, have rights in Latin America established by treaty or by contract among individuals, which we are bound to protect, not only in our own interest but in the interest of stability in this hemisphere. Our friends in Latin America, many of whom are under Communist-inspired siege, look to us for the word that our security and theirs is not to be frittered away. The President's assurance on this point ought to clear the air.

South Transforms Historic Filibuster

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, April 4, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able article written by the well known columnist Ray Tucker and appearing in the large list of newspapers he contributes to.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NATIONAL WHIRLIGIG—SOUTH TRANSFORMS HISTORIC FILIBUSTER

(By Ray Tucker)

WASHINGTON.—A scrappy band of 18 southern Senators has transformed an ancient stratagem—the filibuster—into a political and legislative weapon as modern and irresistible as an atom bomb.

As they have organized and utilized it, the blockade and forced retreat of a hostile bloc and an unpalatable bill—to them—amounts to an entirely new technique, even though it was first used in 1941 against financial measures sponsored by Henry Clary, born in Virginia and bred in Kentucky.

Its long-range effect on legislation before Congress and the State legislatures in incalculable, depending on the rules of procedure in the various legislative bodies throughout the country. It means that a small and determined minority can negate or partially frustrate the will of the majority.

MERE AMATEURISH AFFAIRS

In answer to criticism that they have undermined the purpose and principle of the democratic process, the anti-civil-rights strategists reply that the Founding Fathers and their illustrious successors "planned it that way."

Fearing mob rule—Washington, Jefferson, and Franklin had the bloody French revolution of 1789 in mind—they provided that the House should be chosen by popular vote, but that the Senate should be filled by the State legislatures. The upper chamber was designed deliberately to act as a check on a possibly unruly House.

The Constitution empowered each Chamber to make its own rules. With the idea of the Senate acting as a safety valve and safeguard in mind, the House adopted rules for unlimited debate, while the Senate permitted a talkathon that became known as a filibuster.

It remained for today's southerners to demonstrate that yesterday's filibusters, even when they were successful, were mere amateurish affairs.

Their strategy can operate in two directions, however. They have taught northern liberals how to block, defeat, or amend obnoxious measures, even when they are in a minority. The same lesson has been impressed on Democratic and Republican conservatives.

In resentment against Senate obstructionism—the defeat of the Supreme Court packing proposal is an excellent example—Franklin Delano Roosevelt persuaded loyal House leaders to liberalize that body's rules governing committee procedure and authority.

They provided that a majority of the Members—219 today—could force a bill from a committee pigeonhole for debate and a vote on the floor. Consisting of veteran legislators, the major committees are generally more conservative than the full membership. It is not too difficult to obtain 219 signatures for a discharge petition for a popular and vote-getting proposal, such as the Forand medical insurance bill.

OFFENDED RAYBURN

An ultraconservative Virginian on civil rights, social and economic schemes, Rules Chairman HOWARD W. SMITH has offended Speaker SAM RAYBURN on several occasions. The elderly and astute "JUDGE" SMITH has held up bills favored by the Democratic leadership, particularly civil rights.

As a result, there is talk of packing or enlarging the Rules Committee to outflank Representative SMITH and to make it more responsive to the will of the House. This action would remove another check, as has the discharge petition method, on legislation of an extreme character, whether ultraradical or downright reactionary.

Should that happen, the Senate's unlimited debate procedure, which furnishes the field for filibustering, would be the only safeguard against highsounding but ill-advised and dangerous legislation.

Recent political history proves that the American electorate is extremely mercurial and inclined to lean toward the left. In 1936, Franklin Delano Roosevelt carried all but Maine and Vermont on a welfare state platform. Twenty years later, Dwight D. Eisenhower won by a tremendous majority. Two years later, in 1958, they massacred Republican congressional candidates.

Thus, without regard to the merits of the cause for today's delaying operation, and in view of the Supreme Court's present trend, the filibuster still stands as a historic and honorable institution.

Divide and Conquer

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. COLMER. Mr. Speaker, the national chairman of the Democratic Party, Paul Butler, is at it again. He seems to be determined to alienate the only constant section of support for the Democratic Party dedicated to the true Jeffersonian principles of the party, the South. The party of our fathers has indeed fallen into alien hands.

The following editorial from the pen of Mr. J. W. West, publisher of the Leader-Call, an outstanding newspaper published at Laurel, Miss., we think, expresses the sentiment of a proud southern people. The editorial follows:

[From the Leader-Call, Laurel, Miss., Mar. 29, 1960]

DIVIDE AND CONQUER

Paul M. Butler, national chairman of the Democratic Party, has come up with a new tactic aimed at destroying the effectiveness of southern Democrats.

This new tactic is to divide and conquer.

Butler, attending the 14 State midwestern Democratic conference, is urging southern Democrats to send rival delegations into the national convention to challenge all southern delegates who will not back the party ticket.

The midwestern conference hopes to ram through the national convention a proposed civil rights plank which includes voting, education, housing, and service at lunchrooms.

The general attitude of southern Democrats was summed up by Allen Shivers, Governor of Texas, who said:

"In the dignity of our history and the majesty of our manhood we say to the national party: 'We must see the black and white of the platform and the color of the eyes of the nominees. We offer no blind, debasing, humiliating pledge in advance, to accept without murmur whatever may be handed in grudging charity after we have stupidly surrendered in advance and cravenly thrown ourselves at your mercy.' No, the Democratic Party of Texas, I hope, is to be dealt with in 1952 before, during, and if necessary, after the national convention in July. I scorn the suggestion that 'loyalty' demands an abject, contemptible, unconditional surrender in advance to the whims

or dictates of any absentee overlords of national party.

"The self-governing and self-respecting Democratic Party of Texas, which nurtured the still, small light of the party of Jefferson and Jackson for 50 years during which it was extinguished in darkness in the North and East, does not slink or cower, hat in hand, to anybody's back door to make a blind trade of our heritage for a small handout."

Butler is trying every way in the world to discredit the States' Rights Democrats. Another tactic was to invite the Democratic Governors to a meeting to see what he could work out.

Those Governors who are familiar with his strategy look at anything he does with an anxious eye. Some may even go so far as to stay away from the meeting since they know in advance exactly what Butler proposes to do.

Southerners intend to fight for their rights.

Mississippians, in particular, do not expect to be subservient to absentee overlords.

The Nezperce Railroad in Idaho

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, April 4, 1960

Mr. CHURCH. Mr. President, at a time when many of our railroads are losing revenue and struggling for existence against severe competition, I am happy to invite attention to an Idaho line which is operating on the profit side of the ledger.

This is the 15-mile Nezperce Railroad, located on Idaho's famous northern Camas Prairie. While the line may not compare in size with its more extensive and better known brothers, it makes up in quality and unique operation for any such lack.

The success of the Nezperce Railroad is due to its enterprising owner, Mr. Joe Lux, a well-known northern Idaho citizen.

I ask unanimous consent to have printed in the Appendix of the RECORD an article from the magazine News Front of March 1960 describing operations of this unusual and remarkable railroad.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOE IS WORKING ON THE RAILROAD—PRESIDENT OF 15-MILE NEZPERCE LINE SETS PROFIT PATTERN FOR AILING RAILS

The president (and principal stockholder) of the U.S. railroad expects his line to make a bigger profit this year than last—and has no featherbedding problems.

He is Joe Lux, successful Idaho farmer, who bought the single track, 15-mile Nezperce Railroad for $25,000 in 1944, at the very moment a salvage crew was standing by to pull up the rails for sale as scrap.

The 22 wooden bridges on the right-of-way were old and unsafe, and the only locomotive was a wheezing steam veteran which the Northern Pacific has since acquired for museum display. Says Joe:

"That first spring we had 13 derailments on one trip from Nezperce to Craigmont (the terminals)."

"It took us 3 or 4 days to make a round trip. There were practically to ties on the roadbed, and no tie plates. Unless the weather was dry or the ground frozen, mud piled onto the pistons of the locomotive.

"People came out from the big cities to learn about railroading because we had so many problems."

One of the most spectacular feats, he recalls, was the replacement of a derailed locomotive (the coal-burning relic had been retired in favor of an oil-burner) without the help of a crane. He states:

"The four of us did it in a day."

The "four of us," incidentally, were the line's entire operating staff: Lux, president; Lloyd Stevens, superintendent; Marvin O'Dell, engineer; and Sheldon Cash, brakeman.

Each can—and does—turn his hand to whatever railroading problem comes up, and that is why, Lux boasts, featherbedding is not one of his management worries.

Since Joe bought the line, all 22 of the wooden bridges have been replaced by steel culverts (he himself) bulldozed most of the old ones out of the way). Faulty rails have been straighten or replaced, and 30,000 cubic yards of ballast and 43,000 ties have been placed in the roadbed.

Today, the line's two diesels (the oil-burning steamer has been retired, too), haul some 1,000 carloads a year between Nezperce and Craigmont, where it connects with the Camas Prairie line, jointly owned by the Union and the Northern Pacific.

Last year, operations went into the black, and Joe began paying himself a salary. He is reluctant to reveal exact figures.

The line taps rich farming country (wheat yield is as high as 60 bushels per acre), and hauls farm products outbound and fuel and fertilizer back.

Joe Lux' revivified railroad has also stimulated local industry. The area's first lumber mill has begun operations.

He calls it the "home-owned line;" local wits add "home-made."

The "Right To Demonstrate"

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely editorial by Mr. David Lawrence, which will appear in the U.S. News & World Report in the April 11 issue.

There has been much discussion in recent weeks concerning the so-called "sit ins" in various cities in the South, and the legal and moral propriety of such "demonstration," and I believe Mr. Lawrence has gone far in his editorial to clarify the 'rights" involved.

The editorial follows:

THE "RIGHT TO DEMONSTRATE"

(By David Lawrence)

The difference between a "mobocracy" and a "democracy" is that in one there is no rule of law, while in the other there is respect for law and order—a willingness to submit to the wishes of the majority of the people as expressed in a system of representative government.

To determine what form of government shall prevail is the sovereign right of a community. Where self-government is denied, the right of revolt is recognized as the inalienable privilege of the people.

These are principles that we in America have espoused ever since the days when we rebelled against the tyranny of a king and established our own republic.

The whole world has accepted the doctrine of self-government and self-determination as a basic principle of human conduct, and, when we see it violated as it was in Hungary in 1956 and in Tibet in 1959, freemen everywhere express their disapproval and horror. By doing so, we hope to encourage the downtrodden and the oppressed, though we may not feel an obligation to render them assistance by military force.

For a long time, international law has recognized the right of an outside government to demand respect for the lives and property of its citizens and, if necessary, to take forceful measures by military intervention to protect its own citizens.

To what extent, however, may nations express themselves on what appear to be purely internal matters? The United Nations has been debating lately, through the Security Council, the tragic situation in South Africa. The Government of the Union of South Africa objects to such a discussion on the ground that the recent riots are purely an internal matter relating to the preservation of law and order against mobs.

Our own Government has taken the position that, where a controversy exists as to whether an external or internal situation is involved, there should be full debate on that very point. Great Britain, France, and Italy, while expressing regret over the developments in South Africa, appear to regard them as internal.

What is happening, of course, is that 29 Asian and African nations in the United Nations are expressing their "right to demonstrate." This is a proper expression of opinion and a rightful use of moral force. For, unless we are willing to debate in the court of public opinion any issue—including our won behavior—we cannot expect to make progress toward law and order and the establishment of human rights.

But what of the "right to demonstrate" when public officials are challenged? Did the mob of 20,000 which marched on the police station in South Africa—containing only 25 policemen—have the right to throw stones and taunt and threaten so that the police grew frightened and opened fire? This was an example not of a peaceful assembly but of a mobocracy.

The net result has been the taking of severe measures of repression and the declaration of a national emergency by the South African Government so as to prevent further tragedies. The acts of lawnessness which have taken the form of burning the identity papers required of all citizens, irrespective of race, are indefensible. They are not in accord with the doctrines of peaceful demonstration, but are a defiance of law.

In our own country, the right to demonstrate is likewise being abused. Negroes and whites have a right to gather in peaceful meetings to deplore the separation of the races at lunch counters, but they have no right to create disturbances inside stores which are private property.

Does the National Association for the Advancement of Colored People have the right to urge the public, by telephone calls or handbills, to refrain from patronizing certain stores? Secondary boycotts by persons who are not parties to a labor dispute are prohibited by Federal laws that have been upheld by the Supreme Court.

It may be questioned whether marching on a police station or State capitals in big numbers is a wise exercise of the right to demonstrate. Cannot the same points be made and the same publicity obtained by smaller, well-behaved groups? When a large group

is formed to march on a particular objective, the danger is that such a group can readily be converted into a mob by encouraging bystanders to join in demonstrations, which too often become lawless.

The Supreme Court of the United States has frequently upheld the right of free speech under our Constitution, but it has also ruled that it is not free speech to cry "Fire" in a crowded theater. It is the impact of free speech and the circumstances surrounding otherwise peaceful gatherings which must be carefully considered. Certainly there is no right to form groups that defy the police in their efforts to maintain order, nor any right to invade private property or to conspire to destroy anyone's business if he is obeying the laws of the land.

There is only the right to demonstrate peacefully and with proper respect for the lawful rights of others in the community.

Background of South Africa's Racial Troubles

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 4, 1960

Mr. KEATING. Mr. President, world attention over the past several weeks has been focused on the Union of South Africa, a land deeply troubled by violent and bloody demonstrations on the part of this Nation's downtrodden Negro majority. These disputes, going on at the same time that Congress is considering civil rights legislation, have served to focus attention on the universality of mankind's ever-constant battle for human justice.

Mr. President, Africa is a long way away. It is a land about which Americans know relatively little. At this time, when developments in Africa are of great international importance, it is worthwhile that we familiarize ourselves with the background and history of the Union of South Africa and of the widely criticized and unfortunate doctrine of apartheid.

Mr. President, I ask unanimous consent that an excellent review of the background of the current racial disputes in South Africa which appeared in Sunday's New York Times be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNION OF SOUTH AFRICA: LAND, PEOPLE, AND PROBLEM

LAND AND PEOPLE

The Union of South Africa lies in the South Temperate Zone. Most of its 473,000 square miles is plateau country with a climate similar to that of southern Europe. The plateau is fringed with mountains and tropical lowlands. The east, where most of the population lives, is well-watered farmland. The west is arid. South Africa is the world's largest producer of diamonds and gold; it also exports uranium and wool. Industry is developing and now produces one-fourth of the national income.

Of the population of 15 million, about 10 million are native Africans of Bantu stock. Half live in native reserves; the others live on white-owned farms and in urban native quarters, where they provide cheap labor. The European population of 3 million is divided into 1,700,000 Afrikaners and 1,300,000 who speak English. The Afrikaners are descended from Dutch, German, and Huguenot settlers; they speak Afrikaans, a derivative of Dutch, and live mostly in the rural areas. The English-speaking settlers predominate in the cities. The 1,400,000 Cape Coloreds—people of mixed bloods descended from the early colonists and their slaves—have a legal and social status above the Africans but below the whites. There are also 500,000 Indians, brought in as laborers and now important in trade.

HISTORY

Holland planted a settlement at Capetown in 1652, a century and a half after the Portuguese discovered the Cape of Good Hope. The Boer settlers (Boer is Dutch for farmer) grew food for ships trading with Holland's Far Eastern empire. The Cape was only lightly populated by nomadic Bushmen and Hottentots, but, as the settlers moved inland, they clashed with Bantu tribes migrating south. In 1806, during the Napoleonic wars, Britain seized the Cape. Angered by the British freeing of their slaves in 1833, the Boers moved north in the Great Trek of 1835–37. They set up independent republics, landlocked and isolated from Europe. A three-way struggle between British, Boers, and Bantus ended with the British victory in the Boer War of 1899–1902.

In 1910 Britain welded the area into the self-governing Union of South Africa. (It gained full independence with the Commonwealth in 1931.) Three territories—Bechuanaland, Basutoland and Swaziland—were set aside as native protectorates under British rule. From the beginning, the Union's ruling whites divided into two major political factions. One, the present United party, was pro-British and took the Union into both world wars; it draws most of the English-speaking vote. The anti-British faction, the present Nationalist Party, favored neutrality in the wars; it gets most of the Afrikaner vote. The Nationalists displaced the United party in power after winning the 1948 election. They won with increased majorities in 1953 and 1958. In the 163-seat House, the Nationalists in 1958 won 103 of the 156 seats elected by the white population. The United party won 53 seats. The remaining seven seats are held by four white elected by the Coloreds and three whites elected by the Africans.

CURRENT ISSUES

The Nationalists came to power with two basic objectives: to ensure white supremacy, and to make the Afrikaners dominant among the whites. Under their doctrine of apartheid (apartness), they have tightened segregation and job discrimination laws. Last year Parliament adopted a plan for the ultimate concentration of most of the Africans in Bantu reserves, including the British protectorates, to which the Nationalists lay claim. The Nationalists have restricted rights of the Coloreds and Indians. To ensure Afrikaner control, they have altered the electoral system in favor of the rural districts. They plan a referendum this year on making South Africa a republic, perhaps outside the Commonwealth, and they have spoken of eliminating English as one of the two official languages.

The United party also supports white supremacy, but in milder form, and is vigorously opposed to Afrikaner dominance. Until recently the Africans themselves offered no widespread resistance. Last year the more militant Africans left the old, moderate African National Congress to form the Pan-Africanist Congress. It was this group that staged the recent demonstrations.

Humphrey Called "Right Too Soon"

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. KARTH. Mr. Speaker, it is with a sense of great pride and high privilege that I commend to the attention of the Congress and the people of the United States another tribute to an outstandingly great American, the senior Senator from Minnesota, the Honorable HUBERT H. HUMPHREY.

In his effort to serve his constituents in the best possible manner, Senator HUMPHREY pioneered many legislative concepts which only recently have been adopted by the President, presidential candidates, the Congress, and legislative leaders. As the champion of civil rights, the longtime opposer of flexible farm supports, and the friend of labor and small business, we might all agree that Senator HUMPHREY was "right too soon."

Because it so clearly indicates the Senator's true character and the high ideals of which he is possessed, under the leave to extend my remarks in the RECORD, I include the following:

[From the Washington Post, Apr. 1, 1960]

HUMPHREY CALLED "RIGHT TOO SOON"

(By Drew Pearson)

HUBERT HORATIO HUMPHREY is the best living example of the sardonic fact that courage seldom pays off with people and politicians. History is littered with skeletons of dead heroes who stick their necks out for what was best for mankind and who are honored in death, not in life.

It is too early, of course, to judge the bestowed niche of HUBERT HUMPHREY, but certainly in this campaign to pick a President he is paying the penalty of being right too soon.

Four years ago he took a stand against nuclear bomb testing, and stuck to the position to which Eisenhower has come around today. Seven years ago he formed a State Department committee to explore ways of halting the arms race—with proper inspection—exactly the position pushed by Eisenhower at Geneva today.

Twelve years ago at the Democratic convention he stood up before bitter southern delegates and demanded that the Democratic Party "get out of the shadow of States rights and walk forthrightly in the bright sunshine of human rights." That battle for civil rights has cost HUMPHREY the undying opposition of the South today. Yet Congress and the Eisenhower administration this month will write his several ideas into law.

OTHER CRUSADING FIRSTS

For 7 years he has opposed Agriculture Secretary Benson's flexible price supports, a position to which his chief rival for the Democratic nomination, Senator JACK KENNEDY, has just come around in the last 2 years.

He proposed an International Health Year modeled after the International Geophysical Year and went to Moscow to get Khrushchev's support. He originated the idea of the Great White Fleet which was picked up by Life magazine and has resulted in a mercy ship now calling at southeast Asian ports with American doctors and nurses.

Finally, he has been the consistent champion of labor, a devoted friend of Israel, a

battler for religious tolerance and the most articulate Senate spokesman for small business.

Yet with the exception of the farmers, none of these groups is really in HUMPHREY's corner. Though he risked fanning the flames of southern ire only last year by delivering the main address before the National Association of Colored People, there is no great rush of the Negro vote in his direction.

Though he has gone down the line for labor more consistently than any other Senator save WAYNE MORSE, of Oregon, the attitude of labor is best described by the remark of Joe De Silva, potent head of the Los Angeles retail clerks: "This time we want a winner. HUMPHREY's all right, but he can't win."

SELDOM FIRES BLANK

Harry Truman and Adlai Stevenson reacted differently, but the net result was the same. When Senator HUMPHREY consulted them before he took the presidential plunge, Stevenson said he wouldn't seek the nomination, but wouldn't turn it down if offered. But he was not willing to release his longtime political supporters to work for HUMPHREY.

Truman told the Senator from Minnesota that he would support SYMINGTON as Missouri's favorite son, though he left open the possibility that he might change candidates in later balloting.

Only Mrs. Roosevelt, matriarch of the liberal Democrats, has been in HUMPHREY's corner. "HUMPHREY," she has said, "possesses the spark of greatness." However, with Franklin D. Roosevelt, Jr., now beating the Wisconsin bushes for KENNEDY on the reported promise that he will be Secretary of the Navy in the KENNEDY cabinet, even Mrs. Roosevelt recently has been silent.

Chief criticism of HUMPHREY is that he talks too much. This is true. And sometimes he gives the impression of shallowness because of his glibness. He talks in machinegun bursts, yet seldom fires blanks. Even his enemies admit that he thinks as fast as he talks.

His small, boyish face, likely to pucker into unpresidential expressions, adds to the impression he is not profound. Yet he has an ability to electrify those he meets.

HUMPHREY's mind drives his 170 pounds at such a frenetic pace that he gives the appearance of perpetual motion. He tries to cram more activity into each day than his time will permit. This is the man whose political fate will largely be decided in Wisconsin next week.

Frelsburg, Tex., Families Roll Logs for Magnificent New Rectory; Sigman Byrd Tells the Story

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, April 4, 1960

Mr. YARBOROUGH. Mr. President, all of us know that from the days of the earliest settlers, two of the major things that made our Nation great have been religious faith and a spirit of neighborly cooperation.

There is nothing more basically American than the community quilting bee, or the frontier logrolling to build a home for a new family in a settlement. This is a spirit which, although sometimes overlooked in the complexities of modern living, still prevails in many areas and along many streets of America, literally and figuratively.

One such place is Frelsburg, Colorado County, Tex. Frelsburg, founded in the 1830's, was one of Texas' first German settlements and here is situated the oldest Catholic parish in my State.

Today the 120 families of this parish are constructing a magnificent new rectory. All of the planning and all of the work and all of the materials is being furnished by the parish families. The structure is being built from native stone and virgin cedar all taken from the gently rolling hills of Colorado County.

Recently Houston Chronicle Columnist Sigman Byrd, a feature writer without peer in reporting the life and times of Texans, wrote an excellent column on this subject. I ask unanimous consent to have printed in the Appendix of the RECORD his "Byrd's-Eye View" in the Houston Chronicle of March 30, 1960, entitled "Historic Parish Rolls Logs for New Building."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BYRD'S-EYE VIEW—HISTORIC PARISH ROLLS LOGS FOR NEW BUILDING

(By Sigman Byrd)

FRELSBURG.—The 120 families of this oldest Catholic parish in Texas are having a logrolling whose like probably has never been seen in this State before.

They're building a large, modern rectory on the 70-acre grounds of the church of Sts. Peter and Paul, and they're building it entirely of native stone and native timber, all donated by Colorado County property owners, and of course, they're working without pay.

There won't be a finer rectory anywhere when it's finished. Most of the timber is virgin cedar, worth 35 cents a board foot. All of it has been felled on the slopes of the gently rolling hills of Colorado County by members of the parish.

Milling operations are now well along at the Hugo Schuette sawmill, a mill almost 100 years old, on nearby Red Gates Creek. Helping Hugo and his wife, Odilia run the mill are other crews of church members, donating their services for the love of God and for the love of their church and its pastor.

Mrs. Schuette, gray-haired but trim in jeans, works as a blocksetter, and also keeps a record of the runs. "We're missing just 434 feet on the first 5,000 feet," she told me, checking her records. After that, we've got 15,000 more feet to cut. Isn't this beautiful timber?"

The big 75-year-old cedar logs were fine indeed, and the lumber was beautifully marked and colored in reds, yellows, and purples. Mounds of cedar sawdust sweetly scent the air around the live oak-shaded mill, and this sawdust is eagerly sought by poultry growers as an insect repellent.

The history of Sts. Peter and Paul parish goes back to 1836, the first year of Texas independence, when the first pastor, Father E. P. Stehle, arrived here. The present rectory is a frame building about 80 years old, with 12-foot ceilings, picturesque but no longer safe.

The new rectory will have four bedrooms, an office, and a vault. It will be warmed and cooled by heat pumps and will have an electric laundry and electric kitchen. Facing will be of cedar shakes, made at the Schuette mill, and of native sandstone and flint. Even the sand and gravel for the job, donated like the other materials, will come from Colorado County.

Exterior of the building will be rustic in appearance, to match the projected parish museum, which the pastor hopes will one day be worthy of nationwide attention.

"Practically everything for the rectory has been donated right here in the county," said Father Bockholt. "We only have to buy hardware, aluminum window frames, glass, and some bricks. Every stick of wood except the surface floors will be cedar—even the subfloors. We'll never have to worry about termites, ants, roaches or moths.

Pitching in 100 percent on parish projects is nothing new hereabouts. One Sunday recently Father Bockholt asked from the pulpit for volunteer labor to clear some of the church grounds. Every man in the parish came at the appointed time—except one.

He was too sick to work.

But his wife came and worked in his place.

When the pastor decided to build the new rectory a month ago, he drove to every one of the 120 homes in the parish to make the announcement. He came home with unanimous promises of volunteer labor and $3,000 in cash besides. Most of the parishioners are of German or Czech ancestry.

"Our people are far from rich," said Father Bockholt. "But there aren't any more generous people anywhere. Would you believe it, my grocery bill, for two people, since I've been here, has run between $12 and $17 a month, and I've never yet had to buy an egg."

The schedule for the new rectory calls for completion in 3 or 4 months.

The "Broker Government"

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1960

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an editorial from the March 24, 1960, edition of the Philip (S. Dak.) Pioneer-Review.

The editor, Robert Garness, has clearly pointed out the fallacy of so-called Federal aid. I know his views are representative of people throughout my district who prefer government at the local level, rather than centralized in Washington with a doubled price tag:

THE "BROKER GOVERNMENT"

An interesting comment on Federal aid comes from the Tax Foundation.

"There's nothing small," it points out, "about the nearly 100 Federal aid programs to State and local governments which will cost $6.8 billion in fiscal 1960, up $2 billion since fiscal 1958.

"Three out of four of these aid dollars (for agriculture, housing, veterans, highways, etc.) represent taxes that made the round trip to Washington and return to the State of origin. Such reallocation of tax moneys results in some States paying over $2 in Federal taxes for each $1 received as aid.

"The designation, 'Federal aid,' is a misnomer in the implication that the Government is the source of such bounty, but it is a handy label. The Government has no money to distribute other than that it receives from the taxpayers. It simply serves

as a broker, as a dealer in money, when its handouts are made. Because it costs money to handle money, the Government has to exact what amounts to a brokerage fee. Thus, it pays out in aid less than it receives. The greater the Federal aid the less the taxpayers get for their money."

And then there are those who want to inaugurate a Federal aid to education program that under its initial year of operation would require an additional appropriation of $600 million.

Dynamic Career of Jarrell Franklin McCracken, Divinity Student

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, April 4, 1960

Mr. JOHNSON of Texas. Mr. President, the spirit of personal enterprise, which has been a dynamic force in American life is not dead.

Neither is the ingenuity of our youth.

Eight years ago a 22-year-old student in Baylor University in Waco, Tex., launched a small recording company for religious records. Within 2 years the company sold $9 million worth of records. Sales now are about $4 million a year.

The amazing success of this young man and his associates was featured in a column by one of our able Texas writers, Tommy Turner, in the March 26 Dallas Morning News. Because I believe this story is an inspiration for all of us—and a testimony to the possibilities of the American system—I ask unanimous consent to publish this article in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CENTRAL TEXAS NOTEBOOK

(By Thomas Turner)

WACO, TEX.—We wouldn't believe this if we hadn't been there.

Nine years ago we met this young ministerial student at Baylor named Jarrell McCracken. He had a part-time job as a radio announcer while he studied and preached at little churches.

A friend suggested he take the two subjects he knew well, religion and sports, and bolster each with the other. Jarrell did that one night at a meeting, doing a play-by-play report of the "Game of Life"—it had all the sound and excitement of a football game except the players were Christian virtues and their opponents.

It intrigued people. They wanted to hear it again. With the help of some friends at the radio station McCracken made 2,000 records of it, with better sound effects.

That record evolved into the world's biggest religious recordings business. It's headed, naturally by 32-year-old Jarrell Franklin McCracken. His three top aids are all under 33, and his department heads are also considerably younger than the national average.

Two years after that first amateurish record was made, McCracken's Word Records, Inc., did a $9 million business. Sales are still moving along at a rate of about $4 million a year.

They can't build buildings fast enough to keep up with the company's expansion. It quickly outgrew McCracken's efforts to handle it from his one-room apartment—behind a cleaning shop. He moved into a small office, which was almost too crowded the next week. In 1953 it moved into a nice building which was to be its final home. Three years later, despite frenzied expansions, they were hopelessly cramped. So they moved into a new plant designed to last them forever.

Within months the business had overflowed four other buildings. Few days ago Word Records moved into an elaborate $325,000 plant. Now they know they'll have to double it and have already started.

Midway of this fantastic growth McCracken got some good financial backers but he's already bought some of them out. His first financial boost was the loan of $1,500 from a friend, which McCracken accepted fearfully.

Today his company puts out fine recordings featuring some of the Nation's finest religious talent. The list includes the famed Ethel Waters, as well as Dallas' Bill Mann. McCracken has gathered musicians and salesmen and box-packers that are the best in the business.

An international sales organization distributes the recordings to retail stores, homes, and through an album-of-the-month club. The latest costly mechanical brains handle the office records and the mountains of mail. The sales manager has a red-hot phone that only he can touch. It rings constantly with orders from everywhere.

Has the Manned Bomber a Future?

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. BOYKIN. Mr. Speaker, in the Washington Sunday Star of March 13, 1960, there appeared an excellent article by Associated Press staff writer, Bem Price, covering a question and answer session with Gen. Thomas D. White, Air Force Chief of Staff. Under leave to extend my remarks, I include the interview with General White in the RECORD:

WHITE TAKES A LONG VIEW—HAS THE MANNED BOMBER A FUTURE?

(By Bem Price)

The present controversy over defense policies involves a fundamental question:

Is the United States running grave risks through its continued reliance on manned bombers as an atomic deterrent force instead of converting more rapidly to missiles?

In a question-and-answer session with this writer, Gen. Thomas D. White, Air Force Chief of Staff, made clear his conviction that the Air Force will continue to rely on manned bombers as a major weapon for the foreseeable future.

Ultimately, the general believes, the U.S. arsenal will contain both intercontinental ballistic missiles (ICBM's) and manned aircraft—more missiles and fewer aircraft.

As for the present, General White contends that the Strategic Air Command can do its job—destroy any aggressor.

The interview:

"Question. General, I have heard the Air Force's reluctance to give up manned bombers compared to the Navy's reluctance to downgrade battleships before World War II. Is there a reluctance on the part of the Air Force to give up manned bombers and substitute missiles, or is this continued dependence on manned bombers a result of the missile shortage?

"Answer. Well, there is indeed sentiment in the Air Force for the flying machine, but that is not the reason we need them. The basic reason for our advocacy of the manned bombers is that it has some unique characteristics. One of the major ones is that you can control the manned machine after launching; whereas, once an ICBM is launched you cannot bring it back.

"I would go you one further than the analogy to the battleship. I would go back to the cavalry. The horse, I think, was a product of the Eocene age, and I don't think the horse improved its speed or characteristics very much as a fighting vehicle from that age up to the time it disappeared from modern military services.

"On the other hand, the airplane first moved from 40 m.p.h. to the sonic barrier, say about 600 m.p.h.; then we moved through the sonic barrier and we are now able to go out to about mach 2.4 (about 1,800 m.p.h.) where we run into the heat barrier. Now we have the ability to go through this heat barrier and the potential of manned aircraft still appears to be unlimited."

MAGINOT LINE APPROACH?

"Question. I have heard it argued that however mobile the Air Force may appear to be, its continued dependence on fixed airbases and the construction of fixed missile bases represents a maginot line approach to defense. How would you answer such an argument?

"Answer. I would answer it this way: A majority of our intercontinental ballistic missile launchers will be on permanent sites. There is no practicable way, or certainly no economical way, to make the big ones, the first generation ICBM's such as the liquid-fueled Atlas and Titan, mobile. There are advantages to fixed sites that you won't have with mobile sites. One is greater accuracy. Second, you can use a bigger missile with a larger warhead. Third is the matter of economy. While we intend to make the Minuteman (a solid-fueled ICBM) mobile, they will be more expensive than the fixed Minuteman sites.

"To answer your question about the maginot line approach: Whether fixed or mobile, missiles represent a counterattack capability, not a static defense. However, if we go to an all-missile deterrent, the psychological effect of those holes in the ground would be something like a maginot line."

OUR OFFENSE

"Question. The thought has been advanced that the fixed site, even a hardened site (underground concrete firing silos) invites a heavier retaliation. In other words, instead of firing a one-megaton bomb at an exposed soft site, you fire a 25-megaton bomb at a hard site which, aside from the military target, devastates the surrounding area.

"Answer. No. The size of the warhead is more likely to be related to the size of the missile and not to the condition of the target. A hardened site would have to be hit by a surface burst which would devastate much less surrounding area than an air burst of the type suitable for use against soft targets.

"Question. I gathered from a joint Federal Aviation Agency-Air Force announcement late last year that the Air Force was going to set up three low-level bombing ranges for practice by the Strategic Air Command. I am wondering if this indicated a familiarity with Soviet defenses, which might make a high-level attack almost impossible? Wouldn't a low-level attack be subject to the same intense de-

fense? And, along the same line, has anybody ever calculated in terms of the number of planes we have, whether we could actually launch these aircraft and get them through the defenses in sufficient numbers to carry out their mission?

"Answer. I think I can give you an answer that is not classified. We need the diversity of tactics which both high-level and low-level attacks give us. The enemy's defense problem is much complicated by that. For instance, if we were sure he could not make a low-level attack against us, we would not have to worry about many elements of our air defense. * * * The same way with high-altitude attacks. * * * I would point out that just one weapon alone we are adding—the air-to-surface missile—makes high-level attack look even more worthwhile.

"Question. Can you get these aircraft through in sufficient numbers?

"Answer. We have the ability to penetrate the potential enemy defenses. By that I don't mean to say we won't have loses, but the losses won't be prohibitive.

"Question. Does the Air Force still contend a thermonuclear war would be over in a matter of days? I have noticed the Russians do not subscribe to this contention.

"Answer. I feel the decisive phase of general war will be over in a relatively short time. Now, it could be measured in hours, it could be measured in days. It might possibly last a couple of weeks.

"Question. Can you foresee any recovery capability on the part of either nation which would allow them to continue to fight?

"Answer. I can only say that the nation which has the best offense, the best defense and an adequate civil defense program is going to come out relatively better off, but what the relativity is going to be, I could not measure."

EARLY WARNING SYSTEM

"Question. We have gone to considerable trouble to establish a ballistic missile early warning line. Of what value is that early warning system to our counterattack capability?

"Answer. If the only weapon we had to respond to enemy attack were ballistic missiles, and your warning system went out, which it might do from enemy attack or mechanical failure—or natural phenomena—you have only moments in which to decide what is happening and what to do.

"You wouldn't want to launch your counterattack until you were sure you were being hit. So, do you wait until the enemy's missiles land, or do you automatically strike back when your warning system goes out? You begin to see what kind of a box you get in if you rely too much on ballistic missiles.

"Question. What would be your reaction to a single research and development agency, similar to the Manhattan project agency which developed the atomic bomb, in which military services and the civilian scientists would state their requirements for missiles and then leave it to the agency to develop?

"Answer. The single research and development agency idea has some merit that I would not be opposed to looking into. In fact, I have given it some thought. I am not prepared to give a definitive conclusion yet. One of the dangers is that the developers would go off in a different direction from what the people who will have to use the weapon had in mind.

"Question. Do you buy the contention that a limited war, that is, anything short of an all-out nuclear war, is more likely?

"Answer. Certainly, the all-out war is less likely, but it is one that is quickly fatal if we don't deter it. Compared to this threat, all others, however important, are secondary.

AIR FORCE NEEDS

"Question. Department of Defense officials have said the B–70 bomber program was killed because other weapons systems would overtake the B–70 before it became operational. What is your feeling?

"Answer. I can only say there will be a requirement for manned aircraft into the indefinite future. Now what the opposing views are, I will not say in detail or speak for anyone other than myself. The regrettable thing is that many people think the ICBM is going to be the answer to all strategic problems. It simply is not.

"Question. What military systems do you think the Air Force will need to perform in outer space for the next 5 years? And do you think outer space has a military significance?

"Answer. There is no question in my mind that outer space has a military significance. The extension of speeds and altitudes into outer space is going to be a continuation of the things we have been doing in the Air Force for years—flying higher and faster and carrying heavier loads.

"Reconnaissance is something that can be done more readily and more quickly from higher altitudes. Detection systems such as infrared sensors, or a satellite, can pick up heat manifestations anywhere within its cone of observation.

"Communications can be greatly improved by the use of satellites. Weather forecasting, although not strictly military—nor is communication—will have military applications.

"Once unique military vehicles exist in space, then you immediately generate a requirement to defend against them. That means defensive weapons in space. So, it seems to me, the progress of military requirements will follow the same pattern it always has as we have progressed higher and faster."

PRESENT DANGER PERIOD

"Question. For some reason, many are using the target date of 1965 as a sort of cutoff point in our present danger period. If you were looking ahead to 1965, what would you see as the size and shape of the Air Force?

"Answer. First, let me clear up a point: 1965 is not a cutoff point at all. The years after 1965 may be more or less dangerous, depending on what we do now. I am sure the Air Force in 1965 is going to be composed of aircraft in very large numbers. The number of bombers in relation to the number of missiles will probably be lower. In the fighter-interceptor air defense field, I would not say for sure that the manned aircraft might not appear in larger numbers than it does under our presently forecast air defense program.

"Question. What would the reason be?

"Answer. Because the ground-to-air missile can only be used within the environment of a ground warning and control system; whereas, you can mount a self-contained early warning flying radar as well as missiles in your aircraft.

"In the field of tactical air, manned aircraft are going to be in the inventory in considerable numbers. That is because the tactical air forces deal so much with targets of opportunity. They are so closely tied to the land battle that I am sure missiles are not going to replace aircraft in this field as rapidly as they will in the stategic field.

"And, of course, in airlift I do not rule out the possibility that we may move passengers some day by ballistic missiles, or some adaptation of it. The airlift forces, however, are going to be composed of airplanes for many, many years.

"So, we are going to have manned aircraft. We are going to have ballistic missiles in increasing quantities and in increasing ratio to manned strategic bombers, and we are going to have a number of space systems."

The Case for a Social Security Amendment To Provide Medical Care for the Aged

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 4, 1960

Mr. PROXMIRE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which appeared this morning in the New York Times, and which constitutes one of the most persuasive statements of the case for the Forand bill.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MEDICAL CARE FOR THE AGED—LEGISLATION TO PROVIDE PREPAID SICK BENEFITS BACKED

To the EDITOR OF THE NEW YORK TIMES:

The average number of days of hospital care required by aged persons is almost three times greater than during their earlier years. When no longer employed, most of the aged cannot meet the high costs of hospital care out of their limited retirement income, or pay the excessive premiums demanded at their advanced age for adequate insurance coverage.

The outcome of the present controversy regarding the Forand bill (H.R. 4700), and similar legislation to amend the Social Security Act to provide prepaid hospital and surgical benefits for retired persons after age 65, will largely depend upon the merits of the claim that voluntary insurance can accomplish the same objective. In arriving at a decision, this data should be considered.

By 1980, 26 million Americans will be over 65 years of age, of whom 80 percent, or 21 million, will be eligible for social security.

Seventy-four percent of the aged have annual incomes of $0 to $1,000, 11 percent have incomes of $1,000 to $2,000, and 15 percent have incomes of $2,000 or more. (New York Times, Mar. 20.)

PERCENTAGE WITH INSURANCE

Only 35 percent of people over 65 have hospital insurance, most of it with inadequate benefit coverage. Only 20 percent of the aged with incomes below $1,200 a year carry any hospital insurance, and two-thirds of these have individual insurance policies with token benefits. (Wilbur Cohen, U. of Michigan.)

These observations are contradicted by a claim made by the insurance industry through its health insurance council, circulated throughout the medical profession. The council states that 65 percent of people over 65 years of age "who need and want this protection have health insurance protection." This statistic probably includes employed persons over 65 who are still covered by contributory group insurance plans and many hired persons who can afford only a niggardly health and accident insurance policy with inadequate hospital benefits.

The real joker is to be found in the fine print, which reads "who want this protection." In compiling its statistics, the council has obviously excluded two-thirds of the 11 million retired aged on social security who have incomes of less than $2,000 a year and who may not "want this protection" because adequate benefit coverage at their advanced age would take 10 percent of their income.

VARYING POLICIES

According to the health insurance council there are 1,255 companies in the United

States selling health insurance. Each sells a number of different policies varying from token benefits of little protective value up to comprehensive coverage. Almost all these companies also offer variable "experience rates" to insured groups so as to siphon off the preferred risks—the young people who are unlikely to be ill. This means higher costs for groups which include older employees and lower rates if older employees are excluded from employment.

This extremely complicated and confused rate and benefit structure makes it impossible for the 1,255 voluntary insurance companies to earmark reserves during the wage-earning years of the employed population which are needed to meet the much higher costs of their hospital care after retirement. The problem is further complicated by the fact that many workers move from job to job during their years of employment, which involves repeated changes from one insurance company to another, with quite different benefit patterns and costs.

In contrast, the social security mechanism provides a simple method for collecting the required earmarked reserves and also for spreading the risk of higher hospital costs in later life throughout the preceding years of employment.

GEORGE BAEHR, M.D.

NEW YORK, *March 29, 1960.*

America in the Next Decade

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. KEOGH. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, chairman of the board of the Coca-Cola Export Corp., before the School of Foreign Affairs of Assumption College, Worcester, Mass., on March 24, 1960:

AMERICA IN THE NEXT DECADE

(Address by Hon. James A. Farley, chairman of the board, the Coca-Cola Export Corp., at the School of Foreign Affairs, Assumption College, Worcester, Mass., March 24, 1960)

Father Desautels, members of the faculty, and the student body of Assumption College, ladies and gentlemen, last September when Father Desautels invited me to address the School of Foreign Affairs, there was some doubt as to whether I would be able to accept because of incomplete plans for business trips to Central America and the Far East. But, like everything else, time has taken care of the situation; those business trips have been completed and I am happy indeed to be with you tonight. I am going to talk to you about America in the next decade.

It has been said that the progress of man can be measured by the number of times he has successfully challenged maxims of previously accepted truth. That is to say, the world was both flat and stationary until the 15th century when Galileo perceived that it was round and in motion—and Columbus opened a new world in offering the final proof.

This philosophy has been experienced in nearly every field. Pasteur uncovered a new world, no less than Columbus, when he discovered antitoxin; modern medicine is almost his monument. Hertz and Marconi performed the same function of discovery of the air waves above us as Galileo, Columbus, and Magellan did for the seas that surround us.

Intellectually and spiritually, the human race tends to live in walls of cardboard, self-erected, and limiting, as if it feared the broader view. Once a perceptive soul has battered down this wall the mass of men enjoyed and, indeed, find it impossible to conceive of any existence except upon the wider plane.

Not every venture results in world-shaking discovery. Indeed, most fail. Yet if no ventures were made, because most fail, man would still be living in his cave, clad in skins and hunting with stones.

This is what I wish to talk to you young men about tonight. I wish to tell you that the currently fashionable axiom that we are living in an unpredictable world of confusion, uncertainty and imminent disaster is, in my opinion, false. Furthermore, I believe that within rough probabilities as, let us say, one can predict that a driver will send a golf ball 200 yards, whereas a No. 9 iron will send it a much shorter distance, the course of history is foreseeable, and foreseeable as it never was before. This involves no magical process. On the contrary, it is based on pure reason. Permit me to illustrate: In 1879 Alexander Graham Bell patented the telephone. There are over 400 million in use today. In 1892 the first automobile patents were taken out. There are over 150 million on roads today, and 7½ million more will make their appearance this year. In 1905 the Wright brothers flew a powered kite at Kitty Hawk. Today more than half the trans-Atlantic passenger traffic is carried by air. Now, does this mean more confusion, as the present philosophy illustrated in its more extreme forms by the beatnik would have you believe? Nonsense, far from confusion, it means far more exacting precision. Thus a jet navigator must have a thousand times more exactitude than Columbus. The reason is he is moving over 600 miles an hour for 6½ hours, while Columbus moved for 2½ months at 3 miles an hour, and thus had more time to correct his errors.

My second point is that this vast expansive movement is in a state of acceleration. It will move faster and require even greater precision and, of course, it will produce many times more than it is now producing. These successful challenges of the 20th century will multiply 10 times over in the next 20 years alone. Further, they will provide you with your personal challenge which to a wholesome, strong young man means opportunity, as never before in the world's history. For example, more than half of the American people earn their livings in industries which did not exist before 1900—and hadn't even been conceived in 1875.

Plastics, electronics, and atomic power reached volume only in the last 15 years. Can one, looking at the record since 1900, believe that the next 15 years will bring less?

As is so often the case, our own American sayings often provide the insight. Recently, a foreign diplomat arriving in Washington was conveyed by taxi to his embassy. As the cab passed our Bureau of Archives the foreign visitor read its motto aloud: "'The past is but prologue.' Very augustly put," he said to the taxicab driver, "but how would you express that in your everyday American language?" "In everyday American language," said the cab driver, "that means you ain't seen nothing yet."

It is my firm conviction that indeed we have not. A vast new industrial, scientific, and magnificent world is unfolding rapidly before your eyes, and the really important questions are—what is the role in it of these United States of America—and what is yours, the individual young man?

I think for the young American these are many, many examples of effective effort by our own history. To Horace Greeley's advice, "Go west, young man," I would add and east, and north, and south, because the industrial frontier is expanding in all directions.

Nor is example lacking in what to do when one arrives. It seems to me the shining light is the life of Benjamin Franklin. He brought to Philadelphia more than a printing press. When he had finished his work there were, among other things, community hospitals, sanitation, fire departments, and insurance companies. There are dozens of communities in this world begging for the arrival of a Benjamin Franklin right now. The modern young American will necessarily have to prepare himself in the ways of a new civilization; but once he has mastered his techniques an anxiously receptive world will be waiting for the skills he can bring.

The rise of a new civilization could be stopped by no nation; on the contrary, that nation will be strongest which most assists and augments it. The United States must exert every sinew to lead both the research and the distribution of the benefits of the new civilization. This, perforce, is all but certain to be done and it will result in one of the most benign, if not the most benign, cycle in human history. American bulldozers will cast concrete roads across deserts and jungles, as the covered wagons once broke trail across our own country. Hospitals, magnificently equipped, will blossom where disease now gathers its ghastly crop as it did in the Black Deaths of 1350. And those hospitals will be blessed for their American cleanliness, their American precision instruments and their American directed and trained personnel.

And American workers will prosper as they never prospered before. American enterprise will expand as it never expanded before—because in supplying the world the basic needs for a material civilization it will be performing the highest possible spiritual service, helping its fellow man.

I have heard a great deal about population explosion as a world menace but I cannot fathom the reasoning by which that conclusion is reached. Are we to assume then that the Sahara and Great Gobi Deserts are to remain deserts forever? Such is the type of reasoning which criticized President Jefferson for purchasing the whole Mississippi Valley for $15 million only a century and a half ago, and also criticized the purchase of Alaska, dubbing it "Seward's Folly," back in 1867. Doubtless it was the thesis in 1803 that 2 million square miles of forests could never support more than a few thousand trappers. And what of the world's most naturally productive areas—the rain-forest jungles? Is it possible to seriously urge that 50 feet of jungle-rich topsoil will produce less than our own magnificent 15 feet of Mississippi Valley earth? Sea water is already convertible to fresh water, at a high price, but what price human life?

Not within the next 10 years but by the end of this century men will have conquered both jungle and desert as certainly as he has already turned sea and air to the use of all, and 100 years from now great and magnificent cities risen in the spots where desert scorpions and jungle monkeys now live will ponder how the shortsighted 20th century ever arrived at the bizarre conclusion that the world had too many people. The actual physical machinery to accomplish these results is already in existence. What it needs and will get is a new concept of finance, whereby the less productive areas can be developed to a point of equal exchange in trade. Does this sound visionary? Again let us look at the actual fact. One hundred and thirty years ago it took eight men engaged in agriculture and transportation to maintain two city dwellers. Today, through modern machinery the ratio is exactly reversed and the products exchanged,

let it be added, are quite beyond the imagination of the 19th century farmer, as any 20th century television owner of a modern electrified farm will testify.

If these premises be accepted the function of the young American in it will not be hard to define. The qualifications of the new era, however, will be much more exacting than the last. A precision age demands precision men; a broader age will demand broader men and, last and perhaps most important, the soaring civilization will require and produce the highest standard of ethics in the men who run it.

Our country has already broadened beyond the concept of the thirties. Trafalgar Square was a marvel of monuments to farflung empire; Australia House, India, Canada, Malaya—all with their representative buildings—were unique reminders to visiting Americans that not every country was able to transact its business within its own 3,000-mile borders, as we were. Now, that has all changed and it changed me too. It will change you even more. Thirty years ago I would have found it startling indeed if a soothsayer had predicted that the paths of commerce would lead me beyond the borders of our own country. But, and I cannot emphasize this too much, the ordinary course of business has taken me from the Rhine to the Congo; from the Orinoco to the Ganges. Three weeks ago I returned from the Far East; I went as far as Bangkok. The jetplane which took me from New York to New Zealand accomplished the flight in exactly 28 flying hours, which is somewhat startling when it is considered that it took Magellan 3 years to do the same thing. One day in 1909 when I was swimming off the banks of the Hudson I had my first sight of an airplane flying above the river. It just happened that it was the historic Albany-to-New York flight made by Glenn H. Curtis, the famous aviator, in connection with Dutchess County's participation in the State Year of History Celebration in New York State, marking the trip Henry Hudson made 300 years earlier up the river which bears his name. I had no idea then that 37 years later I would take my first flight around the world. If this be the ordinary course of business for me, who is somewhat your elder, imagine what it will be for you who are starting your journey.

When I say the qualifications will be higher I am again merely referring to the progression. Fifty years ago it was a highly unusual young man who was lucky enough to go to college. Now it is the rule, certainly for those who aspire to leading positions. The standards will go higher and higher, which means the challenge also and the effort. Frankly, there will be small place on the bridge of the new ship for those who prefer ease, comfort and security. These never were the companions of leadership in any age, and those who seek them must yield the command of others. There was no ease in Washington's headquarters at Valley Forge, small comfort in the trenches in France, and no security in either. But if a man is unable to yield these in the first place he is disqualified for the command of others. This is not in criticism: this is a free world and every man has free will. To accept the challenge means to institute a self-imposed hardship, to train and prepare for the greater responsibility. I am not passing judgment on whether or not a young man accepts the challenge; I am merely identifying the challenge as much more rigorous than ever before, and it is a challenge which must be met from the classroom and lecture hall to the actual decisions to be made.

I have no doubt whatsoever that in unprecedented numbers the challenges will be accepted, equaled and surpassed by tens of thousands of young Americans. From this, I predict that all lines of effort will deepen in research and expand in result. And I predict that young Americans will broaden and deepen with the new civilization they themselves will be creating.

As one of the world's most prolific writer of letters and as one of the world's largest receivers of communications I was aware from my earliest days that while the world described these documents as letters, each was in fact the communication of an idea by one human being to another. Radium itself is no more active than the human mind and it is one of the greatest contributions of modern civilization that the transmitter of the human mind is a letter box on the street corner or a rural route.

Here I wish to do more than advance a theory. I wish to prove a fact. When I was Postmaster General of the United States the Department handled approximately 19 billion letters a year. Today, that Department is handling 62 billion pieces of mail. This means that though the U.S. population has grown only 25 percent its exchange of ideas, its brain and its energies, if you please, are working 300 percent faster. Let the defeatists and the beatniks answer that if they can.

I mentioned earlier that humanity, in its thinking, has imprisoned itself in cardboard walls. Cardboard walls cannot stand up before this rising standard of world civilization, particularly the cardboard walls of hate based on the mud-foundations of differences of race, creed or color. The moral advance of man will follow his scientific advance, and when the last cardboard wall between men is knocked down, as was predicted at Calvary, 2,000 years ago, men will stare not into the faces of an enemy but into the eyes of their brothers. Once men had nothing to fear but fear. In the new era upon us they will have nothing to hate but bigotry and hatred.

And now, let me reach by conclusion. I have just returned from an extensive tour of the Far East. I have spoken to people of every class of society, government, and business. These peoples, these nations, like us, are of every different shade of opinion. But on one thing they are in complete accord. From New Zealand to Tokyo they are certain that to accord—or to even consider according recognition to Red China—is to compromise the very soul of political freedom. A vast new Pacific community of free nations is rising in strength—and for America to in any way recognize the enemy of their freedom would be in their eyes to spiritually desert them in their hour of need. They believe, and I believe, that any weakening of the position of the free world in Asia would create a political vacuum which could and would be instantly filled by Communist forces. Such action by our part would bring about an Asiatic diplomatic catastrophe compared to which the Munich disaster would be regarded as merely a mild mistake.

A great German poet once said, "Pray tell me your convictions for I have doubts enough of my own." I have never hesitated to set forth my convictions, and I do so again, here and now.

The mighty Japanese nation is composed of millions of skilled workers. What these people need, and what they are entitled to have is the raw materials upon which they can exercise their skill, and a fair market in which to sell them. The reason they need them is the same reason we need them. They have to earn a living, even as you and I. There is one big difference between their problem and ours: they do not have the resources within their own borders. We must see to it that the Pacific Ocean is no country's lake but every nation's highway. Freedom of the seas is the lifeblood of Japan.

Japan is more than a freedom-loving nation. She is one of the main bulwarks of liberty in Asia. To abandon our ally, or to force Japan to seek economic deliverance at the hands of the Reds would be as shortsighted as handing Berlin to the Russians—on the ground that it is none of our business. Red forest fires and Red armies respect no boundaries. They respect only the force which can stop them.

Commonsense tells us that to the extent that we help the free nations of Asia to develop themselves that development protects us. When from New Zealand and Australia, to Thailand and Japan there is a strong freedom loving Pacific community then the Asiatic world will know a force far greater than the ancient Great Wall of China. That will be the fortress of freedom built into every man's heart—by the common purpose, common ideals of all freemen—from San Francisco to Kobe and from Melbourne to New York.

Tiros I—Special Pride for Jerseyans

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, April 4, 1960

Mr. WILLIAMS of New Jersey. Mr. President, it is always good to receive reports of specific progress in this Nation's space-for-peace effort. All Americans, I am sure, felt a sense of pride when they learned of Tiros I, our first weather research satellite. We in New Jersey, as an article and editorial from the April 2 issue of the Newark Evening News explains, have special pride in the national achievement.

I ask unanimous consent that the article entitled "Special Pride for Jerseyans" be printed in the Appendix of the RECORD. I also ask unanimous consent that the editorial entitled "Tiros I" be printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Newark (N.J.) Evening News, Apr. 2, 1960]

SPECIAL PRIDE FOR JERSEYANS

FORT MONMOUTH.—New Jersey could take a bow today for both developing and interpreting the achievements of America's weather satellite, which may help mankind to ward off weather disasters.

The drum-shaped "Tiros" satellite was developed by RCA's Astro-Electronics Products Division in Hightstown.

The main tracking station for the satellite is the Signal Corps laboratory here.

The satellite was launched from Cape Canaveral yesterday. The pictures were relayed from the satellite to the laboratory here and rushed to Washington.

THREE STAGES

The command and guidance system which directed the satellite into orbit was developed by Bell Telephone Laboratories in Murray Hill.

Sidney Sternberg, chief engineer for the RCA division at Hightstown, said the weather spotting system functioned in three principal stages.

Transmission from ground stations to the satellite of electronic instructions for picture taking.

Response of the cameras and other equipment on the satellite to the ground commands.

Transmission from the satellite to earth of the pictures on the completion of each orbit.

[From the Newark Evening News, Apr. 2, 1960]

TIROS I

As the Nation's electronics laboratory, New Jersey can take a special pride in Tiros I, the first weather satellite to be placed in orbit around the earth.

This latest in space vehicles, with its two television cameras on weather-watch, was developed by RCA's Astro-Electronics Products Division in Hightstown. The radio guidance system which sent Tiros I into its 400-mile-high orbit was produced by Bell Telephone Laboratories at Murray Hill.

The overall project, representing the most comprehensive cloud study ever maintained from space, is under the technical direction of the Army Signal Corps Research and Development Laboratories at Fort Monmouth. There, as well as at Kaena Point, Hawaii, Army scientists will "command" and monitor the cameras by which Tiros I will scan cloud patterns around the globe.

Through this application of space for peace, a new dimension will be given the science of weather forecasting. By relating the space photographs to ground observations, meteorologists hope to penetrate ever further into the mysteries of weather fronts, including such phenomena as hurricanes and tornadoes.

From the peaceful scanning of cloud cover, of course, it is not too great a step to military photographic reconnaissance from space vehicles. Thus Tiros I also plays a role in national defense.

By any standard, Tiros I may be considered a national achievement toward which New Jersey has made a significant contribution.

Platform for Both Parties

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. KING of California. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article from the Long Beach Independent Press-Telegram of March 27, 1960, by the distinguished American historian, Mr. Will Durant:

NEEDS OF GROWING NATION

(By Will Durant)

The following confession of prejudices is made by one who for the last 30 years has so buried himself in the past that he has small right to speak on current affairs. But he has challenged himself to stand up and be counted on living issues. This done, he will run for his life back into the 18th century.

EDUCATION

Every people, if it is not to be left behind in a rapidly developing world, must spare no effort, cost, or devotion to train each new generation in health, character, and intelligence. Education has become a national, not local, responsibility; and Federal funds should be added to raise educational standards and results throughout our country.

We suggest that these standards and goals be determined, and periodically revised, by a committee of educators, scientists, clergymen, businessmen, and Governors, chosen by the presidents of our 10 best accredited universities.

HEALTH

The first responsibility of education and government is to train and guard the health of our people. Education in health should receive an hour a week in every school year from the lowest grade to college graduation, and should be provided in evening schools for the adult population.

The Department of Health, Education, and Welfare should be empowered to prevent the pollution of the air, and to stop the sale of products which have been impartially and competently judged injurious to health. Insurance plans should be extended to guarantee medical care to all the people.

MORALS

We adults are the senile delinquents responsible for moral deterioration. Many of us have been criminally negligent in giving moral example to the growing generation. Too often we have shown the young that we judge success in terms of possessions and that we are ready to sacrifice honor and honesty for material gain. We have offered to our children, day after day, spectacles accustoming them to crime and violence, in order to sell our products.

We have pretended to a moral code favoring premarital continence, while we have surrounded the young with every simulus to sex; we have given them the example of seeking sexual excitement in a hundred forms and 10,000 places of entertainment; and we have showered publicity, acclaim, and rewards upon those who provide this entertainment, and who have shown the least regard for the stability of family life. We have disordered the lives of our children by the hasty breakdown of our marriages. We have created a public opinion that almost completely defaults in its normal and vital function of encouraging decency and discouraging vice.

In education, in morals, and in business practices we have carried liberty to a neurotic excess; and in psychology we have taught the young that self-restraint is a disease.

A greater measure of discipline in the home, the school, and the marketplace would make for a healthier, stronger, and more adult America, ready and willing to meet the tests of national cooperation and international competition.

CAPITALISM AND COMMUNISM

We need not fear the competition of other ways of life. It is by that competition that all economies are improved. We have successfully combined the virtues of capitalism—the stimuli of rivalry, free enterprise, private property, and variable remuneration—with the acceptance, by all our political parties, of our collective responsibility for the health and education of our people, and for that wide distribution of wealth without which our remarkably productive economy cannot work.

It is a virtue of our economic system that it cannot function unless the people progressively increase their power to buy what investment, management, science, and labor increasingly produce. The organization of labor, and the extension of social security, are indispensable to this spread of purchasing power.

Consumers, too, should organize to protect themselves from abuses of power by the producers or distributors of goods.

DEFENSE AND ARMAMENT

As the test of the rival ways of life takes increasingly an economic form, both will be impelled to devote more and more of their wealth to improving economic methods rather than military establishment.

It is clear, however, that until some international order develops the ability to protect national rights, no nation can rely upon international agreements to preserve its independence and security; disarmament, therefore, can proceed only in the measure that external danger is demonstrably reduced.

CIVIL RIGHTS

We believe that every American should have equal rights in voting, schooling, and law; and we believe that the great majority of the white population in our Southern States accept this principle, and will implement it in time. We recognize the difficulty of changing long-established ways of life and thought; we favor a gradual and patient method of effecting the change; but in a world increasingly interdependent and predominantly colored, we cannot afford to be found wanting in understanding the inescapable processes of our time.

TAXES

If statesmanship can organize a greater degree of international concord, it should be able, without reducing the welfare activities of the Government, to lower the taxes that now discourage economic incentive in management and labor alike. The stimulus to invention, economy, and work is nullified at the point where additional income would be punished by a higher rate and bracket of taxation.

It should be possible to revise tax schedules on profits and income so as to create, instead of destroying, incentive.

Representative Holifield of California

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, April 4, 1960

Mr. MANSFIELD. Mr. President, in the most recent issue of the Atlantic Monthly appears an article entitled "HOLIFIELD of California." The article is about one of the outstanding Members of the House of Representatives; and it was written by Warren Unna, one of the outstanding members of the Washington press corps.

Mr. President, Representative HOLIFIELD and I came to the Congress together in 1943. I have watched him with a great deal of interest, because of the many significant contributions he has made, not only to the welfare of his district, his State, and his country, but also to the welfare of the free world, through his membership on the Joint Committee on Atomic Energy.

By the same token, Mr. Warren Unna, who is one of the outstanding reporters in the Nation's Capital, has recently returned from more than a year of travel throughout the countries of the world, where he has been studying neutralism in those areas. He has returned with some concise and very worthwhile reports which I recommend most highly.

For some years before his latest trip overseas under a grant from the Institute of Current World Affairs, Mr. Unna had covered the Atomic Energy Commission for the Washington Post; and during that period of time he had come to know very well our colleague, Representative HOLIFIELD, the vigorous, popular, and exceedingly capable Member of Congress from California.

Therefore, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD this article,

about an outstanding Congressman, written by an outstanding reporter.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOLIFIELD OF CALIFORNIA

(By Warren Unna)

(Warren Unna has recently traveled for more than a year on a grant from the Institute of Current World Affairs, studying neutralism in countries that are not allied with either the Soviet Union or the West. Previously, Mr. Unna had for 3 years covered the Atomic Energy Commission for the Washington Post and during that period had come to know CHET HOLIFIELD, the vigorous and popular Congressman from California.)

Congressman CHET HOLIFIELD did not bother to go home to campaign in California's last primary: he thought his constituents knew enough about his work in Washington during the preceding 16 years and did not have to be told. They justified his faith in November 1958, when they voted 134,000 to 26,000 to return him to Congress for another term.

HOLIFIELD is a senior member and one of the most active participants in two key committees, the Joint Committee on Atomic Energy and the House Government Operations Committee. As a member of the House Post Office and Civil Service Committee, he is also one of the few Congressmen to have a third committee assignment. HOLIFIELD pushed hard for the development of the H-bomb, drew up the legislation creating the General Services Administration, served as one of the two House Representatives on the second Hoover Commission, initiated the fight to squelch the Eisenhower administration's now abortive Dixon-Yates power contract, has plugged for years—unheeded—for an adequate Federal civil defense program, and conceived and chaired the first full-scale investigation of radio active fallout.

CHESTER EARL HOLIFIELD, the 56-year-old Los Angeles Congressman, was born in Mayfield, Ky. His family stayed there only a year and then moved to Arkansas. After his mother died and his father remarried, HOLIFIELD at 15 made a permanent break with home and high school in favor of Kansas wheatfields, Oklahoma oil diggings, the rails, and the hitchhiker's road. He was not surprised to find himself in California: "I'd read of the romance of the forty-niners and, as a boy, wanted to go out there. Then, like 10 million other people, I went."

HOLIFIELD's first job was as a presser in a Pasadena cleaning and dyeing shop. Before he was 19, he had married Vernice Caneer ("Cam") and started his own cleaning and pressing business in Montebello, one of the many subcommunities in central Los Angeles.

By 1927, with the boom in full swing, HOLIFIELD borrowed $1,750 and converted his pressing business into a men's wear shop. Within 4 years, he had a double reverse. He was hunting wild goats on Catalina Island with a friend when a stray shot—origin still unknown—shattered his leg bone. That stray shot from nowhere kept him bedridden or in a wheelchair for 4 years.

The store was HOLIFIELD's second reverse. Soon after his hunting accident, in 1931, the depression reached the West, closed his bank, and made worthless the checks he carefully had made out to his creditors. HOLIFIELD mortgaged his five-room house and finally lost it. When he was finally able to get back to work, he found that his liabilities were about twice his assets.

It was then that Haberdasher HOLIFIELD started to turn political philosopher. "I realized that, regardless of a man's personal ability, economic depression could take away all of his gains through years of hard work." He began to read and speak out. He became a close friend of Jerry Voorhis, a man HOLIFIELD came to look upon as "the ideal public servant," and managed Voorhis' successful campaign for Congress. Following the 1940 census, southern California had such a population increase that a new 19th Congressional District was carved out, part from Voorhis' area, part from an adjoining one. At Voorhis' suggestion, HOLIFIELD decided to take a flier in the 1942 election. He beat out 13 other Democrats for the primary nomination. In the general election, he managed to defeat his Republican opponent, Max Ward, a Huntington Park newspaper publisher, by a vote of nearly 35,000 to 20,000.

HOLIFIELD has won with increasing pluralities ever since, three times secured both the Republican and Democratic endorsement in the primaries, and thinks he could have done this again in 1958 and avoided the bother of the November election. But instead he decided to run only on the Democratic ticket, "in an effort to bring some order out of the chaotic cross-filing situation in California. I was hoping that there would be a clearcut line drawn between the Republican and Democratic Parties in order to give the voters a decisive choice."

Because of his leg, not right to this day, HOLIFIELD was never able to get into uniform during World War II. As second-best choice, when he got to Congress, he sought and gained membership on the Military Affairs Committee. After the war and in the course of committee business, HOLIFIELD came across the May-Johnson bill, a measure jointly sponsored by former Senator Edwin C. Johnson, Democrat, Colorado, and the late Representative Andrew J. May, Democrat, Kentucky, which would have turned the Nation's new atomic energy program over to the military.

"I thought this source of energy should be developed along other than military lines and tried to get civilian control," HOLIFIELD commented. Although this was only 1945 and HOLIFIELD was but a second-term Congressman, he strode into the office of Chairman MAY and thumped on his desk to demand extended hearings. He found MAY's interest confined to what the bill would do for his Kentucky coal miners. The chairman gave him what HOLIFIELD now describes as "summary" treatment and held only a day or two of hearings on the May-Johnson bill.

HOLIFIELD also became aware of tremendous pressure from the Pentagon to nab this new atomic area for the military. Accordingly, he and Representatives Voorhiss, Helen Gahagan Douglas, Democrat, of California, George E. Outland, Democrat, of California, and Andrew J. Biemiller, Democrat, of Wisconsin, publicly appealed to the Nation's scientists to come to Washington and state their case. Several hundred jammed the caucus room of the Old House Office Building, including such renowned physicists as Leo Szilard and Harold Urey. The scientists backed HOLIFIELD and insisted that the great research and development which lay ahead for nuclear physics could not properly be conducted under military discipline.

MAY took a committee vote anyway. All but two of the members of the House Military Affairs Committee, HOLIFIELD and his close friend, MELVIN PRICE, Democrat, of Illinois, voted for military control of the atom.

But the furor engendered by the scientists' meeting did succeed in delaying the vote in the Senate. And then came a jurisdictional dispute in which Senator JOHNSON wanted to claim atomic-energy matters for his Interstate and Foreign Commerce Committee, and Senator Millard Tydings, Democrat, of Maryland, wanted it for his Armed Services Committee. A year of wrangling followed, time enough for a freshman Senator, Brien McMahon, Democrat, of Connecticut, to introduce a bill calling for a study of atomic jurisdiction. Vice President Barkley, presiding over the Senate, assigned the matter to McMahon under a special select committee, which a year later became the Joint Committee on Atomic Energy.

The scientists by now had organized themselves into the Federation of American Scientists. "This really brought them out from the laboratories and into public life; they became public speakers," HOLIFIELD recalls. And in the end a bill which had been greased to roll through both House and Senate in a matter of days and hand the atom to the military ended up with atomic energy under civilian control.

HOLIFIELD has been with the atom ever since, and in recognition of his vanguard work Speaker SAM RAYBURN made him a charter member of the Joint Committee on Atomic Energy.

HOLIFIELD was a strong defender of Dr. J. Robert Oppenheimer, yet he was completely opposed to the decision of Oppenheimer, chairman of the AEC's General Advisory Committee, and of the majority of the Commission itself not to go ahead with the H-bomb. Chairman McMahon appointed HOLIFIELD head of a special Joint Atomic Energy Subcommittee to gather testimony from scientists around the country, particularly from those at Los Alamos familiar with the thermonuclear theories of Edward Teller and Stanislaw Ulam. HOLIFIELD found himself in agreement with the majority of the scientists in believing that an H-bomb could and must be made. With the backing of the full joint committee, he and McMahon went to President Truman in late 1949 and told him that he should disregard the advice of his experts, Oppenheimer and the AEC, and go ahead with a project which would cost the Nation $1 billion and absorb most of the fissionable uranium 235 then on hand. Mr. Truman had the National Security Council take a new look at the problem and then, with the strong backing of Secretary of State Dean Acheson, the President made his decision.

On August 13, 1953, 9 months after this country had tested its first thermonuclear device, the Soviets exploded their first H-bomb. Says HOLIFIELD, "If Mr. Truman had not made the decision to go ahead, we would have faced a Soviet weapon a thousand times more powerful than the one we had."

Some consider HOLIFIELD to be too much of a militarist. Yet it was HOLIFIELD who first warned of the danger of creating a "fourth atomic power"—in addition to the United States, the Soviet Union, and Britain—when the administration sought wide nuclear exchange authority in 1958. HOLIFIELD stubbornly held out against nuclear promiscuity. A majority of the Joint Committee on Atomic Energy finally rallied around him. And in the end, the administration had to content itself with a nuclear exchange bill that was pretty much geared to Britain alone—and to congressional check back at almost every stage.

The California Congressman also has been very much concerned with the development of atomic power for peaceful uses. He and Senator ALBERT GORE, Democrat, of Tennessee, have repeatedly introduced bills for massive Government assistance to get this country's atomic power program going. The Eisenhower administration, particularly under former AEC Chairman Lewis L. Strauss, has feared future TVA's in such assistance. The Republicans have been convinced that once the Government set the precedent for constructing, operating, and owning prototype powerplants, the socialistic foot would be in the door. Accordingly, the administration has preferred to let private industry develop atomic power at its own pace.

HOLIFIELD finds this a bit ironic. As ranking minority member (now chairman) of the Joint Committee's powerful Legislative Subcommittee, a group which supervises an

annual budget in the hundreds of millions, HOLIFIELD saw to it that the Atomic Energy Act of 1954—the then-Republican Congress go-ahead to private industry—contained section 261, a no-subsidy clause.

HOLIFIELD remarks: "The sponsors of the act were so sold on the fact that private enterprise would do the job that I told them surely they would be opposed to any hidden subsidies by the Government. I had no trouble getting the clause approved, and my judgment in the minority report on the act was proved right. The act was premature, and the Republicans have been trying ever since to find some means for subsidizing the industry."

Another attempt was a plutonium buy-back provision which the AEC first tried to have inserted in the Government's contract with a powerplant under construction on the shores of Lake Erie by the Power Reactor Development Co., headed by Walker L. Cisler of Detroit Edison. The idea was to provide a Government-guaranteed price to purchase the weapons-grade plutonium which the powerplant produced in the course of its nuclear power operation. When this was stopped by the Joint Committee under the no-subsidy clause, the AEC tried to have a plutonium buy-back provision inserted in this country's aid treaty with the Euratom countries. HOLIFIELD and the Joint Committee Democrats, suspecting a foreign precedent for future domestic action, spiked that one too.

It was also this shrewd Congressman who first found something irregular in the Dixon-Yates power contract. Dixon-Yates involved the AEC, but no atomic power. The proposal was that the Government should financially assist a private utility to build a steam-generating plant which would pump electricity into TVA lines, to replace power the AEC was using at its uranium-production plants. "The whole thing," HOLIFIELD observes, "was a devious attempt on the part of the Republican administration to destroy the concept of TVA by using an administrative means to finance and subsidize a private utility group in the TVA customer area."

HOLIFIELD went before the House with a full-dress analysis of the lengthy contract, citing 18 points in which he thought the Government would be at a disadvantage. The California Congressman's argument was picked up by Tennessee's Senators, GORE and KEFAUVER, and the 2-year fight was on. The Republican majority on the Joint Committee permitted the AEC to go ahead and sign the contract at the end of 1954. But a Democratic majority, returned by the electorate at the beginning of 1955, reversed the action. The State of Tennessee sued, the Government canceled the contract and began picking up HOLIFIELD's 18 points to avoid its breach-of-contract suit from the private utility people.

How does HOLIFIELD sniff these things out? "I'm always suspicious of a lack of frankness, either in the spoken language of a witness or in the text of a bill," he says. "When I read a draft of legislation that is not easy to understand, I usually find on investigation that the very reason for its ambiguity is that it is covering something up, something that its proponent wants to slip through."

Does the Congressman always get his way? HOLIFIELD laughs at that. "Not always. But it puts your opponent in a very difficult position when he tries to justify legislation on the testimony of witnesses' intentions."

There was one occasion in 1957 when HOLIFIELD got his way without argument from either the administration or his colleagues. This was during the 8 days of hearings on the whys and wherefores of radioactive fallout. HOLIFIELD, disturbed by "all this fog of propaganda on radiation," went to Representative CARL T. DURHAM, Democrat, of North Carolina, the Joint Atomic Energy Committee's then Chairman, and persuaded him that there was a need for objective testimony based on what scientists, not politicians, had to say about fallout. The HOLIFIELD hearings which followed were so successful that AEC Chairman Strauss and Commissioner Williard F. Libby complimented HOLIFIELD for his fairness—even though the HOLIFIELD hearings brought out the facts the AEC up until then had failed to provide.

HOLIFIELD's interests often parallel themselves. While the Congressman was chairing a series of Joint Atomic Energy Committee hearings on fallout, through his other capacity as chairman of the House Committee on Government Operations he was preparing a lengthy series of hearings on civil defense. His civil defense hearings are practically the only CONGRESSIONAL RECORD on the subject. Senator KEFAUVER held a series in the Senate some years back, but they petered out when KEFAUVER found himself the only Senator in attendance.

In his own hearings, HOLIFIELD not only secured expert scientific testimony on the problem; he persuaded Federal Civil Defense Administrator Val Peterson to recommend a $32 billion Federal shelter program.

The Holifield committee's civil defense recommendations contained such a tone of urgency that President Eisenhower appointed the Gaither Committee to look into the matter. The Gaither report, never made public, then proceeded to assess the whole state of national defense in this country. And its civil defense recommendations are believed to have been almost identical with those of HOLIFIELD's committee.

House Speaker SAM RAYBURN has seen to it that HOLIFIELD has been given the committee assignments of his choice and single him out as the sole Democratic appointee from the House to the second Hoover Commission. It generally has been assumed that the Speaker and HOLIFIELD, both ardent admirers of Presidents Roosevelt and Truman, hold pretty much the same political philosophy. But they part company on at least one issue: the natural gas bill. RAYBURN, of Texas, is not only for freeing natural gas producers from Federal price control; he is considered by some to be the bill's strongest advocate in Congress.

HOLIFIELD has the Santa Fe Spring oilfield, one of California's biggest, right within his congressional district. Another field is within 500 yards of his Los Angeles home. For his white-collar, small businessman constituents, the natural gas bill was not an issue; for HOLIFIELD's oil company constituents, it obviously was. They wanted freedom from Federal price control. So did RAYBURN. And in the spring of 1958 the Speaker turned every trick he knew to get the bill through the House. When the vote came, he called HOLIFIELD up to the Speaker's rostrum and made no bones about what he wanted.

It was the first request RAYBURN had ever made of his younger colleague in the 16 years he had been helping him along through Congress, and HOLIFIELD knew it. Says HOLIFIELD, still squirming with the memory, "It wasn't hard to turn down the oil and gas interests in my own district. But it was hard to turn down the Speaker. I told him I had to vote against it on principle."

Does HOLIFIELD ever aspire to be a Senator? He says "No." One reason is seniority. After 17 years in the House, he will become chairman of the Joint Committee on Atomic Energy, if the Democrats keep their House majority next year. He also is next in line to succeed the chairman on the House Government Operations Committee. Because of his seniority, he heads important subcommittees, has the leadership's ear, and can get his legislation through the various blockades of hearing, committee vote, and floor vote.

But an equal deterrent to running for the Senate, in HOLIFIELD's mind, is the high cost of getting elected in California. "I represent a workingman's district composed of people in the factories, railroad shops, downtown clerical jobs, and small businesses," he says. "Due to intense campaigning and the fact that the district is 3 to 1 Democratic, I am able to make a campaign on $5,000 or less. It takes $500,000 to be elected to the Senate in California. This means TV time, direct mail, advertising in the papers, in newsreels, and on billboards. I cannot depend upon any of the usual sources of financing in a statewide campaign. There is no strong Democratic Party organization in California."

Big business backing, HOLIFIELD thinks, is out of the question. His voting record has been for his small businessman constituent and against the bills put forth by the large utilities, the banks, and the oil companies. I considered them detrimental to my district."

American Merchant Marine—Address by Alexander Purdon

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Alexander Purdon, executive director of the Committee on American Steamship Lines, before the National Rivers and Harbors Congress, in Washington, D.C., on May 14, 1959:

I appreciate the opportunity of speaking to this group on the American merchant marine. Few organizations have such a brilliant record of constructive progress in analyzing and promoting the development of our transportation water resources.

Over the years, this country has developed the finest transportation system in the world—a network of rivers, rails, roads and airlines which has stimulated our development and helped to bring us to an economic level unsurpassed in the history of the world.

We are now in an age of unusual technological progress and some might assume that the oldest form of transportation—for water transportation surely is that—would have passed its peak and be supplanted in part by the newer transportation modes. Such views are not well founded. Not only do they ignore the lessons of history and the facts of geography but they fail to consider that the very technology on which they base their arguments has also produced weapons of destruction which make it more essential than ever that we consider the consequences if our manmade arteries of communication and transportation are severed.

Accordingly, we must reassess the vital necessity for adequate development of our natural transportation resources. Missiles may be aimed at rivers, harbors or oceans but their effect would not be as calamitous as similar attacks on rails or roads. Those cool, cool waters always heal themselves.

In my view, therefore, the Nation must develop its water resources and its ocean transportation to their maximum potential. To do otherwise would be to waste a priceless asset. Those who viewed the river boat as merely a nostalgic echo of the past have been confounded by the unprecedented development of river traffic. Tonnage increases over a 9-year period have reached phenomenal 5,000 percent.

Parenthetically, I might say the Soviets are not unaware of the desirability of improving and expanding their inland waterway system. They are diligently working to that end. This we must also do and we must join to it a more positive recognition of the vital importance of ocean transportation.

Admiral Burke has pointed out that the "sea reaches all islands and continents on earth where people live, fight and do business. There are no bridges to build, no mountains to cross, no tunnels to dig and the ship can alter its course at will."

Now there are many nations in the world who aspire to build their merchant marines. In some cases, as for example the Scandinavian nations—their merchant fleets are an important and, indeed, a necessary economic asset. In other cases economic questions are secondary to the value of ships flying the national flag. In others, as in Russia, where there is a vigorous program to build both a Navy and Merchant Marine, control of the seas is sought as a means of advancing their political, economic and military objectives. All of these considerations combined have caused a worldwide surge for maritime prestige. Where do we stand in this scramble for preferred position?

During World War II we built the greatest merchant fleet the world has ever known. We built it not only for ourselves but for our allies. We built it at tremendous cost. The traditional maritime nations on whom we previously had depended were either overrun or impotent. They gave us courageous assistance but, not having the resources, had to call on ours.

Just before the war, in 1936 to be exact, the United States adopted a sound policy to insure that we would maintain a merchant fleet adequate for our commerce and defense. Since the war, this policy combining private enterprise with government aid has had an opportunity to demonstrate its worth. Although frequently attacked by the shipping interests of other nations it is not a selfish policy. It acknowledges that we can count—and should count—on our allies but it also recognizes that when the chips are down and the going gets tough we must have a merchant fleet of our own.

The free world is our market and it is an area in which we are meeting increasing competition from friends and foes alike. From an economic standpoint alone, it cannot make sense to assume that we can compete vigorously for foreign markets yet depend entirely on ships owned and operated by our competitors. American business engaged in foreign trade has the right to know that it can rely on American ships whose interest in promoting our foreign commerce is identical to that of the American producer.

From a military standpoint, the problem has been complicated by the differences of opinion among our military leaders as to what kind of war we ought to fight and what kind of defense we need. But I do not know of any responsible military leader who has minimized the role of merchant shipping in whatever kind of war we may have to face. Out of the controversy between preparedness for nuclear or conventional war there seems now to be developing a shift of emphasis and recognition of the need for adequate preparedness against the more probable course of action that falls far below the flashpoint of general war yet maintaining a powerful nuclear striking power as a deterrent.

But the most recent assessment by Vice Admiral Wilson, Deputy Chief of Naval Operations for Logistics, was that our sea transportation for limited war is adequate but that we have only a marginal capability to carry out the sea transportation tasks of a general war. He says the Defense Department is "gravely concerned with regard to the posture of our U.S. controlled merchant fleet" and adds that there is an urgent need for an orderly ship construction program.

In this connection, let me say that the member lines of my organization have contracted with the Government to build 26 new replacement vessels in fiscal 1960 as part of a long range replacement program. The budget request however will provide for only 14 ships. We have written to the Congress and reaffirmed our desire to meet our contractual obligations and that we are ready, willing, and able to progress with the shipbuilding program to the extent that the Government is ready to appropriate its share of the construction costs.

Earlier, I spoke of the constant struggle between the maritime ambitions of other nations and our modest aspirations. This is highlighted by a meeting in June sponsored by our State Department to which 14 Western European nations are coming for informal discussions on a number of important policy matters. The agenda provides for discussions on cargo preference, shipping subsidies and "flags of convenience." There have already been international discussions, even repercussions, on the "flags of convenience" issue and it is, of course, a very complicated and controversial matter.

We are told that this is merely an informal session; that the other nations have merely asked for an opportunity to explain their views on our maritime policies which in turn gives us an opportunity to explain our position.

Frankly, I think that our position is well known but I am disturbed by statements from European ship operators which do not wholly support the impression that this is to be an informal exchange of views. One European shipowner stated in a major speech recently that he expected hard bargaining at the conferences in June.

What is there to bargain about? Our subsidy and cargo preference policies are developed because they are necessary to the maintenace of an American merchant marine. They were adopted by the Congress. They are part of the law of the United States.

Explanation is all right, if explanation is required or desired. But, I think this meeting is symptomatic of the constant concern and, indeed, opposition on the part of other nations to this country's maritime objectives. This despite the fact that in time of war our merchant fleet will be at the service of all free nations and that in time of peace their ships have free access to our ports and carry about 83 percent of our ocean-borne foreign commerce.

Instead of merely explaining our maritime objectives and policies, I believe that we should reaffirm our intention to maintain the kind of merchant fleet required for our national survival.

Were the Russians to disappear from the world, or become overnight as tractable as church mice, America would still be faced with the necessity for an aggressive economic program to maintain our prosperity and position as the world's No. 1 trader.

We have had a fantastic growth in production and economic activity. Our gross national product rose 450 percent in 17 years and foreign trade has grown even faster—nearly 500 percent. In 1939 foreign commerce amounted to $5.5 billion; by 1957 the figure exceeded $32 billion.

The more we grow, the more nations come to depend on one another, the more we depend on the sea.

We must have a strong American merchant fleet, whether to serve the growing needs of our growing population or to play a vital role in national defense.

Ancient truths are long truths and words of another age of desperate struggle still ring true today.

"He who would be secure at home must be supreme at sea."

Migratory Worker Problem

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, April 4, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the White House Conference on Children and Youth has taken forum action on many of the issues affecting our young people today. I was particularly gratified to note that the forum on "The Young With Socially Handicapped" has passed resolutions which indicate a deep and extensive interest in the migrant workers of this Nation.

As chairman of the Senate Subcommittee on Migratory Labor, I feel that the subcommittee should take full advantage of the additional national attention thrown on the migratory worker problem by action of the members of the conference.

Among the many fine resolutions passed by the forum are those endorsing Federal action to improve housing and education of migrants. The subcommittee is now considering bills to accomplish these purposes, as well as several others also supported by the conference forum.

The forum stand on education is particularly welcome, because education is certainly one of the bedrock problems facing migrants today. Our studies indicate that more than 50 percent of the estimated 100,000 school-age migrant children in the United States are from 1 to 4 years behind regular students in school.

I shall take the resolutions of the Conference forum as an indication of growing support and interest for Federal legislation in this field of critical human problems.

I ask unanimous consent to have printed in the Appendix of the RECORD those forum resolutions most directly concerned with legislation now before the Subcommittee on Migratory Labor, as well as those concerned with other existing or potential Federal action.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS ADOPTED BY FORUM XVIII OF THE WHITE HOUSE CONFERENCE ON CHILDREN AND YOUTH

A. We recommend expansion of Federal and State programs of domestic farm labor recruitment and placement to assure workers more regular employment, farmers a more reliable labor supply, and children of farmworkers a more secure existence.

B. We recommend that long-term, low-interest Farmers Home Administration loans be made available to the farmer for migrant housing.

C. We recommend the adoption of migrant crewleaders registration at Federal and State levels with necessary appropriations for implementation.

D. We recommend that departments of education assume responsibility for the education of migrant children while they are within their State by providing opportunities for uninterrupted education during the regular school sessions, and supplemental summer schools to help them reach their proper grade level; we further recommend

that Federal funds be provided to departments of education for general education and vocational training of migrant children and youth in both farm and nonfarm occupations, for basic education and vocational training of adult migrants, and for teacher training to meet the special needs of migrant children; we further recommend that such funds be allocated according to the density, location, and duration of residence of the migrant population.

E. We recommend that the child labor provisions of the Fair Labor Standards Act be amended to provide children in agricultural employment the same protection now afforded children employed in other industries.

F. We recommend that communities which depend on migrant labor make positive efforts to provide job opportunities for migrant workers during the months when they are not engaged in agricultural work, to enable the children of migrant families to become permanent residents of communities.

G. We recommend (a) the extension of Federal grants for preventive health services and medical care, public assistance and other needed welfare services, as well as the educational program of the agricultural extension service, to States in proportion to the number of migrant farmworkers and their family dependents, and that no residence restrictions be imposed for such assistance to migrants; (b) the use of such funds for (1) the development of local programs for medical care; (2) the extension of nursing and other professional services in the preventive health field; (3) the upgrading of housing and sanitation including field sanitation; (4) the strengthening of parental and child care services including the provision of day care; (5) the development of programs for parent and child health education; (6) the coordination of services—local, intrastate and interstate—to facilitate continuity; (7) the identification and development of leadership, including leadership by youth, within the migrant group.

Civil Rights Bill, H.R. 8601

EXTENSION OF REMARKS
OF
HON. TOBY MORRIS
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. MORRIS of Oklahoma. Mr. Speaker, I voted against H.R. 8601, the designated civil rights bill, which passed the House on March 24 and which is mainly to protect and secure the right of all qualified citizens to vote, for the reason that I felt deeply that the referee system provided for therein is very probably unconstitutional and definitely a wrong approach toward such purpose. It gives the Federal Government the power to take over State and local election machinery which I am afraid may do more harm than good toward all of our citizens—colored and noncolored—and will probably defeat the very objective of the bill.

I do not know, of course, what the final version of this legislation, nor what my vote on same, will be, as we have not as yet reached that stage. I am in hopes a good bill can and will be presented for my vote before this session of Congress ends. I most certainly will vote for one that I feel will properly help to so prevent discrimination against our citizens because of race or color.

The debate in the House on this bill up to this time has been overall gratifying to me. Except for a few words that I feel were ill considered and should not have been spoken, the debate generally was dignified and enlightening and I hope and feel beneficial to all our citizens, colored and noncolored.

Highways to Alaska

EXTENSION OF REMARKS
OF
HON. ERNEST GRUENING
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Monday, April 4, 1960

Mr. GRUENING. Mr. President, a great many thousands of Americans are going to Alaska. The coming summer bids fair to see an unprecedented rush heading northward both by air and over the Alaska Highway, for it is a regrettable fact that except for some excellent tourist ships, there is no regular passenger service to Alaska by American-flag vessels. That transportation of passengers ceased in 1954.

However, the Alaska Highway beckons invitingly. From the 48 lower States one may drive either to Anchorage or Fairbanks and to southeastern Alaska by way of the so-called Haines cutoff to the port of Haines at the upper end of the inside passage, from where the ferry will transport your car to the 49th State's capital, Juneau, perhaps the most beautiful capital of any of the 50 States.

Highway travelers to Alaska, however, will greatly profit by the advice given them in an excellent article appearing in the April issue of The Lion, the official monthly publication of the Lions International. The article entitled "Highway to Alaska" is written by Herb Hilscher, longtime resident of Alaska and the author of two excellent books on that great northwestern area, "Alaska Now," published in 1948, and "Alaska U.S.A.," published last year.

I ask unanimous consent that Herb Hilscher's article "Highway to Alaska" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HIGHWAY TO ALASKA
(By Herb Hilscher)

A million people have the Alaska fever—bad. They just can't wait to head north to the 49th State. The wide open spaces. The gold nuggets waiting for their shovel. The rainbow trout 2 feet long. The fertile homesteads that will make them landed barons—the easy way.

To these 20th century pioneers, statehood has conjured up visions of opportunities unlimited and jobs for everyone. To them Alaska is the promised land—the new utopia.

The rush north is growing day by day. We Alaskans are powerless to stop it. We wouldn't if we could. But we plead that these good people know what they are getting into before they burn their bridges behind them and, on arrival here, expect the bounty of nature and the big heart of the new State to bless them with abundance, wealth, and happiness.

Opportunities are unlimited in Alaska—for the right persons. Many young couples have hit the jackpot up here much sooner than they would have in the lower 48. But they have hit it the old-fashioned way: by hard work, long hours, personal sacrifice, and a special brand of stick-to-itiveness. Not by a 40-hour week, jobless insurance, and unemployment compensation.

Out of our years of experience in Alaska, we sourdoughs have a few suggestions we'd like to pass on to would be Alaskans before they quit their jobs in the other States and start north.

1. Before taking off for Alaska, have a round-trip ticket in your pocket and at least $500 in travelers' checks to cover expenses while you give the 49th State the once-over lightly. After seeing Alaska you may say, "I don't want any part of it."

2. If you like Alaska, see all of it before you decide where you want to settle, to put down roots. Let the wife do a lot of the deciding on where in the new State you will make your home.

3. If you are planning on getting a job in Alaska, write to the State of Alaska Employment Office, Juneau, and get a copy of the bulletin, "Job Opportunities in Alaska." Get this booklet before you start north. It can save you a lot of heartaches. Don't come north with the idea of making a pile in a year or two and then going back where you came from. Those days are gone forever.

4. If you decide to settle in Alaska, come properly prepared. A rockbottom minimum to tide you over until you get your stride is $5,000. Living costs are from 19 to 55 percent higher than in the Pacific Northwest, and going into business up here usually takes more capital than you had planned.

5. If you are planning on driving to Alaska, start with a good car. You are inviting nothing but trouble if you load up an old jalopy and a trailer that is past its prime.

This word of advice is seconded by Canadian officials who, through sad experience, have played unwilling host to many broken-down cars and abandoned trailers—all because the owner was attempting to pull a load too heavy for his motor.

After taking care of scores of these Alaska-bound Argonauts who were stranded without funds, the Canadian Government has adopted a strict Alaska traveler code: The driver of each car must have $250 and a valid gas and oil credit card, and each passenger must carry $100 when bound for Alaska. In addition, a trailer code specifies the size car required to pull a certain size trailer, and if your car is of ancient vintage, you'll have to post a bond on it.

Despite restrictions, about 40 percent of the people coming to Alaska today drive over the Alaska Highway. Some of them figure that, by going by car, they can make the trip on a shoestring.

This is wishful thinking. Many an ill-prepared and ill-financed traveler has blamed the dangers and perils of the Alaska Highway for his misfortunes enroute, and has given the highway the reputation of being a man killer.

Actually, we Alaskans feel the only legitimate complaint that any driver could make about the Alaska Highway is that it is pretty long, and that the Canadian section of the highway is graveled rather than paved.

The Alaska Highway proper does not officially start until Dawson Creek, British Columbia, almost 1,000 miles north of the Canadian border. And driving to Dawson Creek is only the warmup for your trip to Alaska.

From mile zero at Dawson Creek to Fairbanks is 1,520 miles, and from Dawson Creek

to Anchorage is 1,640 miles. You cannot drive to the Panhandle communities of Ketchikan, Petersburg, Juneau, Skagway, or Sitka. They are not connected by highway with the big part of Alaska. The only southeastern town that can be reached by the Alaska Highway is Haines, and it is accessible only by a branch road kept open during the summer. During that period ferry service connects Haines with the capital city of Juneau.

The Alaska Highway is by no means a Pennsylvania Turnpike or a California Freeway, but it is a wide, well-maintained road. Twelve hundred twenty-one miles are in Canada, and most of this section is hard-packed crushed gravel, but black-topping is starting to work its way northward from Dawson Creek. The last remaining section of the unpaved portion of the highway in the State of Alaska is now being black-topped.

Roadhouses, gas stations, cafes, and motels dot the highway on an average of one for every 30 miles, and accommodations are being upgraded every year. In the main, they're clean, warm, and sufficient to serve the needs of the traveler.

Of course, if you're looking for deluxe motels with heated swimming pools, barbecue pits, and dancing girl revues, we don't have them—yet. Right now, the highway roadhouses tend more to the "bath is down the hall" variety.

But even that's a big improvement over a few years ago when most roadside stops were memorable for the "ladies" and "gents" out back—a never-to-be-forgotten experience during mosquito season or at 20° below.

Garages en route can handle both major and minor repairs and fix flats while you're having lunch. If you're camping out, there are plenty of places along the highway selling groceries, so it isn't necessary to load your car with staples. There are a sufficient number of public campgrounds on both sides of the border, with toilets and outdoor cooking facilities.

How long does it take to drive to Alaska? That depends on how you drive. College boys have made it from Seattle to Fairbanks in 3 days—driving fast around the clock, burning up the gravel, their tires, and sometimes themselves. Highway patrolmen say that next to excessive speed, most accidents on the Alaska Highway are caused by drowsy drivers and drivers falling asleep at the wheel.

Most travelers find they can drive comfortably between 300 and 400 miles a day on the Alaska Highway. The speed limit is posted for 50 miles per hour, and if you have any respect for your tires—and for your life—you'll keep to it or under it. The faster you drive on a gravel road the hotter your tires get, and the danger of blowouts mounts with the heat. When you come to a ridge of loose gravel, slow down.

After all, the scenery on the Alaska Highway is magnificent, and you can't enjoy it if you're breaking all speed records. If you want to get to Alaska in a hurry, take a plane.

Although most travelers drive to Alaska in the summer months, the Alaska Highway is a year-around road. Many Alaskans prefer driving in the winter when the ground is frozen and there is just enough snow on the road to cover the gravel and turn the highway into a white paved boulevard. But at this time of year it is necessary to put on your woolies, have your car winterized, and carry emergency gear.

How much does it cost to drive to Alaska? That depends on your appetite and the amount you want to spend—whether you dine on T-bone steaks or the blue-plate special, whether you camp out or stay at roadhouses, and whether your car is a foreign model that gets 33 miles to the gallon or a fin-tailed giant that gets you all of 14. Also, whether or not you can resist the blandishments of the ever-present Alaskan curios and souvenirs.

On the basis of averaging 300 to 400 miles of driving per day from Great Falls or Seattle to Fairbanks or Anchorage, the trip will take you from 7 to 8 days. Meals for two adults will average about $85, lodging $80, gas and oil $85—a total of about $250.

But don't start out on an economy budget. If you have a blowout and have to buy a new tire, or have car trouble, your cash funds will disappear very rapidly.

Cars of every description, make, and model have traversed the Alaska Highway. As one newsman put it, "You see as many varieties of foreign cars in Anchorage as you do in Palm Springs."

No matter what the make or model, it's a cinch to spot a car that's just driven over this northern road. Like birds of a feather, many of them carry luggage racks on top and/or trailers behind, are well supplied with stickers that say "Welcome to Canada," and have mesh bug catchers shielding the front, and their headlights and bumpers are taped against flying gravel.

Authorities estimate that in 1960 almost 150,000 persons will drive to Alaska over the Alaska Highway. If these people are enthusiastic emissaries for the trip by car to the 49th State, it won't be long before the road to the last frontier will be built up like any stateside highway.

But so far the Alaska Highway can claim one distinction over thoroughfares in the "old 48." Where else can you drive for almost 1,500 miles without running into a red and green traffic light?

A White Fleet Salute

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. EDMONDSON. Mr. Speaker, mail continues to come into my office in connection with the proposal to establish a great white fleet of mercy ships to help other peoples in times of disaster and distress, and I am sure many of the supporters of this idea were cheered when the prototype vessel for the fleet was chartered last month.

It was my privilege to attend the charter party on March 13, when title to the SS *Consolation* was transferred from the Navy Department to the People to People Foundation, and the ship is being rechartered the "SS *Hope*."

I have received a number of enthusiastic letters supporting the great white fleet from a fellow Oklahoman, Mr. Rudolph N. Hill, a lawyer-poet of Wewoka, Okla. Mr. Hill, who believes that poetry could be used to help publicize the aims and purposes of the great white fleet, has kindly offered the use of one of his poems in this connection.

Mr. Speaker, this poem is entitled "Red Cross Nurse,' and Mr. Hill has added a "L'Envoi" to the poem as it originally appeared in the New York Times and in his book "Star of Peace on Trail of Cibola. I should like to insert this poem, with "L'Envoi' added, in the RECORD at this point:

RED CROSS NURSE

With Kremlin walls and Coliseum dust,
And all the Rhineland's castles crumbled down,
Some hour, beyond this day of battle lust,
Will not some hand the Queen of Mercy crown?
All robed in white, with countenance serene,
As Florence Nightingale once might have passed
The soldiers' candle-lighted tents between,
While some would kiss the silhouette she cast.
My friend, you ask me: "Does He walk again
This troubled earth—the Man of Galilee?"
Ah, yes, as long as there is one in pain,
You have his guardian angel you here see.
Nor would she ask one simple word of praise,
Her glory lies in lengthening man's days.

L'ENVOI

The Red Cross nurse, on globe-circling trip
Of the great white fleet, bearing drugs, food, and clothes,
Would be a true Queen of World Fellowship,
Causing man's love for man to bloom like a rose!

Commuter Passenger Service in Urban Areas

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, April 4, 1960

Mr. WILLIAMS of New Jersey. Mr. President, Congress is showing a very pertinent interest in the fate of commuter passenger service in our large urban areas. Some legislators believe that definite action is needed to:

First. Amend the Transportation Act of 1958 to slow hasty discontinuance procedures authorized under that act.

Second. Advance a long-range program to assure that mass transportation facilities will be saved and even increased to meet new demands.

Mr. President, an editorial in the Daily Home News (New Brunswick, N.J.) of March 30 describes one plan to deal at least with a part of the long-range program.

Another editorial from the Tuesday, March 29, issue of the Atlantic City Press describes the consternation of one community which is apparently faced by discontinuance or sharp reduction of passenger train service.

Both editorials will yield new facts to our deliberations.

I ask unanimous consent that the editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Daily Home News, Mar. 30, 1960]

FEDERAL MASS TRANSIT BILL

New Jersey's Senator HARRISON A. WILLIAMS, JR., has introduced in Congress a metropolitan mass transportation bill which would extend strong assistance to State and local governments in improving mass transportation in metropolitan areas.

The bill represents a modification and expansion of a proposal by the rail industry

and the American Municipal Association, representing 13,000 cities and towns in the Nation. The bill has the full backing of the association.

The bill is concerned both with planning and with loans.

It would permit current Federal planning grants to be used for determining transportation needs of metropolitan areas, for planning integrated and economical use of existing mass transportation facilities, for coordinating transportation planning of all public bodies in metropolitan areas, for studying the interrelation between metropolitan area growth and the development of a total transportation system.

In the field of loans, it would make available long-term low-interest loans to coordinate construction of rail, highway, bus, and other transportation facilities in metropolitan areas; to finance acquisition, construction, and improvement of equipment and facilities in mass transit and commuter service.

A significant departure of the Williams bill is that it would provide for administration of the mass transit program by the Housing and Home Finance Agency, instead of by the Commerce Department. This is a logical departure. Today the Housing and Home Finance Agency, engaged as it is in redevelopment and urban renewal, giving grants for planning assistance in many urban fields, is already as close to a Department of Urban Development as can be imagined, and is more deeply engaged in the urban field than any other Government agency.

The bill introduced by Senator WILLIAMS seems to hold great hope for the future of mass transportation in the Nation. In WILLIAMS' own words, it is "important recognition on the part of the Federal Government that it, too, has a tremendous interest and stake in the survival of our metropolitan areas—a survival that will in no small part depend on the establishment of good, modern mass transportation systems."

And the chances of the bill becoming law seems particularly good because of the impressiveness of the sponsorship of it. Joining with WILLIAMS in sponsoring the bill are Senators CLARK, JAVITS, KEATING, ENGLE, HUMPHREY, SYMINGTON, MORSE, HARTKE, and YOUNG of Ohio, a truly representative bipartisan cross section of Senate leadership.

[From the Atlantic City Press, Mar. 29, 1960]

RESIST FURTHER TRAIN CUTS

Reports and denials are again current concerning the imminence of discontinuance of passenger train service between Camden and shore points.

The latest statement on the subject was attributed to Joseph A. Fisher, president of the Pennsylvania-Reading Seashore Lines and the Reading Co. He was interviewed after a recent panel discussion on mass transit problems before the Delaware Valley Council in Philadelphia.

Elaborating on remarks made at the meeting, Fisher is reported to have declared: "The entire PRSL service is costing so much right at this point that we are determining action to discontinue the entire passenger service. The PRSL can no longer continue."

Commenting on the report later, a spokesman for Fisher branded it as premature and added: Something drastic will have to be done to cut losses, but that is not to say the service is to be dropped.

This is not the first time around for such reports and denials. The feeling is that where there is so much smoke, there must be some fire.

The latest rumor of cutbacks followed by a day the news that local commuters were going to contact PRSL officials in an effort to bring about a restoration of a midnight train from Philadelphia to Atlantic City. It was obviously a coincidence, and not to be regarded as a diversionary tactic.

In view of the fact that the PRSL has been cutting back its shore passenger train service to a disturbing extent in recent years, any indication of further curtailment must be viewed with genuine alarm by resort interests. South Jersey seashore communities cannot thrive without adequate transportation facilities.

City officials and representatives of resort hotel and business interests should waste no time in letting the Public Utility Commission know where they stand in the matter. The burden of proof in any abandonment case rightly belongs on the railroad.

Any effort to further reduce shore train service should be resisted to the utmost.

Gentleman of Achievement: President Alberto Lleras Camargo, of Colombia

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. PORTER. Mr. Speaker, President Alberto Lleras Camargo of Colombia is a welcome guest in our country. It is a honor to us that he has accepted the President's invitation to be his official guest.

In June of 1957, shortly after Colombia had thrown off Dictator Rojas Pinilla, I had the privilege of visiting in Colombia where I met and talked with many fine men. One of them was Alberto Lleras Camargo whom I consider to be an outstanding democrat.

Under the leave to extend my remarks in the RECORD, I include an article about this great Colombian leader which appeared in the Dilplomat, April 1960:

MOST INFLUENTIAL MAN IN LATIN AMERICA

(By Scott Seegers)

The bony little man on the 12th tee of the Bogotá, Colombia, Country Club was lining up his drive one day in January 1956, when a rifle shot reverberated in the thin Andean air. A bullet ripped into the turf near his feet. The other three members of the foursome dropped to the ground and frantically urged their companion to take cover.

"Ridiculous," he commented coolly. "Why would anybody shoot at me?" He waggled his club once more, then whacked his ball down the fairway and played out the hole.

Only after several more bullets had whispered past him on the next tee could the little man's companions persuade him to abandon his game.

The golfer, Alberto Lleras, was rector of the University of the Andes at the time, and about to lose his fight to stay out of politics. A couple of years later he was reelected President of Colombia—the first man in his country's history to be elected with support of both major parties.

Lleras (pronounced Yeras), who will arrive in Washington on April 5 as the official guest of President Eisenhower, has often been called the most influential man in Latin America. His specialty is unobtrusive achievement of the spectacular. In the 17 years that I have known him he has, without getting out of breath or out of sorts, brought peace to a nation shattered by a decade of undeclared civil war; overhauled his country's devastated economy; invented a unique system of representative government and made it work; remodeled one international organization and made it work. The Rio de Janeiro Treaty of Reciprocal Assistance, the 1947 mutual defense agreement uniting the American nations, is largely Lleras' work. As well as President and educator he has been a successful writer, editor, publisher, cabinet minister, and ambassador.

Far from the least of his achievements is that he has remained alive and universally respected in a political atmosphere that has produced many a violent demise.

Accomplishment of such Bunyanesque scale are at first hard to credit to this frail-looking man with the pixy grin, who might weigh 130 pounds with his pockets full of rocks. You have to know Lleras for a while before suspecting the rare quality of the intellect that lurks behind the alert brown eyes and the high sloping forehead. But Lleras' small frame is packed with a nice admixture of courage, energy, idealism, and practicality. He combines a working newspaperman's reverence for facts with a dispassionate, omnivorous mind, and a rare ability to apply logic to any situation.

In matters of principle Lleras is as unyielding as granite. As Colombian Foreign Minister during the first United Nations Conference in San Francisco in 1945, he opposed the Soviet-backed veto provision. In the backstage bargaining, the great powers compromised one by one and agreed to abstain when the issue came to a vote. But Lleras stood firm.

"My government is opposed to the veto," he said. "How can I abstain?" Colombia and Cuba cast the only votes against the veto, behind which Russia has since shielded so many abuses of captive nations.

A stout defender of U.S. policy, Lleras once said, "What some call the mistakes of the United States are precisely the virtues of a new-type, reluctant empire that prefers * * * friends to accomplices, good neighbors to subjects, and partners in the building of a better world."

Alberto Lleras' childhood was, he recalls, "of the most unrelieved poverty." His father, who operated rented ranches, died when Alberto was 11. His formal education ended at 18, with his graduation from the Ricaurte Military Academy. For a year he worked as a reporter for Bogotá's leading Liberal newspaper, El Tiempo. Wanderlust took him to Buenos Aires, where for 2 years he was a reporter for El Mundo and La Nacion. He returned to Bogotá and at 21 he became El Tiempo's managing editor.

Unlike most newspaper writing of the time, Lleras' stories and commentaries were clear and simple, edged with biting wit that quickly captured the irreverent bogotano public and attracted the attention of President Alfonso López. Soon he was writing speeches for López "in flawless Lopese."

Lleras married charming Berta Puga, daughter of the Chilean Minister to Colombia. Soon afterward he ran for Congress, and at 26 became President of the Chamber of Deputies. At 27 he was appointed Minister of Government, the youngest in the country's history.

In 1943, López sent Lleras to Washington as Ambassador. He tackled the job with his usual concentration, and he also turned his scalpel-like intelligence upon the Pan American Union, then such a sepulcher of routine that one frustrated official called it "the marble curtain." Lleras worked out an entirely new structure, giving it more authority and broader functions.

Political and economic disturbances forced López to resign with 1 year of his term to go, Lleras, elected by Congress to fill out the term, at 39 because Colombia's youngest President. He promptly named three Conservatives to his Cabinet. To Liberal outcries he replied, "Neither party has a monopoly on ability or responsibility."

A Liberal Party split gave the 1946 election to the Conservatives. Many Liberals urged Lleras to declare a state of siege, nullify the elections, and stay in office. "No," said Lleras. "Colombia is a constitutional democracy. In a democracy, the man who gets the most votes gets the job."

He went happily back to newspapering, this time by starting a lively new weekly news magazine called Semana.

This happy period lasted less than a year. Then Lleras was drafted as Director General of the Pan American Union. He appreciated the honor, his telegram of acceptance noted, "* * * but I will not venture to comment on the judgment of those who have chosen me."

Their judgment was all right. At the Inter-American Conference in Bogotá in 1948 the Organization of American States evolved from the Pan American Union, which remained its permanent secretariat, with the OAS having all the increased powers proposed by Lleras. Perhaps the most important of these is the authority to arbitrate international clashes within the Western Hemisphere. This has been so effective that several instances of what started out to be wars were held down to border skirmishes. In each case the OAS went on to probe into the matter and to say publicly who started the trouble. Because of this one Lleras innovation, war between American nations may well have become a thing of the past.

Lleras is one of the few men I have ever met who seem to be without personal ambition. Unlike most men who have known real poverty, he appears to have no interest in money. In 1954, after 7 years of directing the OAS, he left the $20,000-per-year, tax-free job (which also included a free house, automobile, and chauffeur) to become the unsalaried president of the then new and unendowed University of the Andes in Bogotá. His only income was the small pension drawn by every ex-President.

The university was an unlikely experiment in higher education, completely free of Government influence or support. It had too few teachers, too little money, and inadequate equipment and buildings to handle the students clamoring for admittance. Its symbol of a goat teetering precariously on an Andean peak was appropriate geographically, financially, and academically. Its only certainty was hungry but resolute independence, and this attracted Lleras.

Conscious of his academic shortcomings, the new president devoted himself to raising money. He got grants and outright gifts (one man sent $106,000). He wheedled equipment, buildings, and even building materials. But most important for Colombia, the new post brought Lleras back to his homeland.

Meanwhile, Colombia had become submerged in an orgy of political violence. Liberals and Conservatives traditionally hated each other so single-mindedly that no Colombian third party has ever attracted more than a handful of voters. Political reprisals that began soon after the 1946 Conservative victory exploded into widespread guerilla warfare after the 1948 assassination of Liberal Jorge Eliécer Gaitán in Bogotá. Until the end of his term in 1950, President Mariano Ospina Pérez ruled by martial law. Leonine, Liberal-hating old Laureano Gómez won a one-candidate Presidential election and intensified the persecutions. Political killings degenerated into banditry, with rape, murder, and mutilation at the fearful mortality rate of 20,000 Colombians per year.

After 3 chaotic years, Gómez was overthrown by General Gustavo Rojas Pinilla, who promptly set up shop as a worse—and more stupid—dictator. Families were dispossessed of their land, and those who were not slaughtered fled to the cities—where there was no work for them. These quickly overwhelmed the social welfare agencies and lived, perforce, on the streets. Children became separated from their parents and lived in packs, begging and thieving. In Tolima, where statewide violence was worse, an estimated 320,000 persons, 42 percent of the state population, were forced from their land.

Agricultural production dropped sharply. Commerce went down in proportion. People quit building homes and factories. The peso, at 1.75 to the U.S. dollar in 1946 when Lleras left the government, skidded to 8.10 to the dollar under Rojas. Each year's national budget carried less for education, more for the armed forces.

This was the demoralized and outraged nation for which Alberto Lleras was trying to build a nonpolitical university. But government brutalities continued to increase. Armed police fired on demonstrating university students. Only a few months later they attacked with guns and clubs thousands of defenseless bogotanos attending a Sunday afternoon bullfight. The crowd's sin was booing the dictator's daughter.

"Afterward bodies were stacked like cordwood in the arena," a witness told me. Lleras could remain on the sidelines no longer. He attacked the dictatorship in a public speech in the capital city. On February 24, 1956, he resigned from the university.

Working with the Conervative firebrand Guillermo León Valencia, Lleras spent nearly 2 years organizing the resistance on a nationwide basis. Meanwhile, eluding police and narrowly escaping assassination, he and his colleagues worked out a unique system of government. This called for automatic 4-year alternation of the Liberals and Conservatives in the presidency. Moreover, all government jobs, from cabinet ministers to janitors, and including representatives and senators, were to be split 50–50 between the two parties.

Laureano Gómez, discredited and in exile in Spain, still retained the fanatic loyalty of many Conservatives. Lleras decided that his support was necessary to peace in Colombia. He made two trips to Spain to talk to Gómez. Finally the old warrior urged all Colombian Conservatives to unite with the Liberals to overthrow Rojas.

Now Lleras was ready. On May 6, 1957, he passed the word for a meticulously planned general strike in Bogotá. The next morning it was as if the city had died. No business opened its doors. No buses or streetcars ran. Radios were silent and no newspapers came from the presses. Bakeries offered no bread for sale and no one came to buy. Laborers stayed in their homes. Even the churches were closed.

The raging dictator sent his tanks and armored cars rumbling through the streets. The armored cars bumped to a stop, tires shredded by the thousands of carpet tacks and broken bottles with which hard-working children had sown the streets. Thirty thousand troops patrolled the city, but there was no one to jail, no one to shoot, no meetings to break up.

The strange paralysis continued for 3 days. Rojas' anger turned to fear. At 5 a.m. on May 10 telephones all over Bogotá began to ring.

"The tyrant has fled." The inaccurate message flashed through the city. Men, women, and children poured into the streets, shouting, weeping with joy, singing the national anthem. Instead of firing on the celebrants, thousands of the soldiers and police dropped their guns and joined the celebration.

At 10 a.m. Rojas did indeed flee, leaving four generals an admiral in charge of the Government. Word soon reached Lleras and Valencia, who, following the only route left free of tacks and broken glass, drove to the palace, where they walked sedately through the ranks of armed guards to confer with the military junta.

Lleras, as always, knew just what he wanted—an end to armed oppression; a plebiscite to ask the nation's permission for his proposed change in government; elections and return to constitutional government. The junta, sick of bloodshed and chaos, agreed.

The plebiscite, held December 1, 1957, produced the biggest vote in Colombian history—4,250,000 voted "aye" for the change, only 250,000 against.

Lleras had no wish to be President, but the Conservatives could not agree on a candidate. Also, Laureano Gómez, back from Spain, insisted that his ex-enemy was the only man for the job. Reluctantly Lleras agreed to run. Elections were scheduled, but the danger was not over. Some of the disgruntled military officers had secretly planned a counterrevolution to return Rojas to power.

At 4 a.m., 2 days before the election, Lleras was awakened quietly by his night watchman. "Military police are everywhere," whispered the terrified man. Reconnoitering from the windows, Lleras saw more than 50 military police surrounding the block. The telephone rang.

"There's been a revolution," said an urgent voice. "They've captured all the junta except Admiral Piedrahita. They're coming to get you."

"I believe you," Lleras replied. Calmly he bathed, shaved, and dressed with his usual meticulous care. As he adjusted his necktie the front door shook under a heavy knock. Lleras opened the door.

"Good morning, gentlemen," he said formally to the two armed lieutenants blocking the entrance. "Shall we go?"

He was taken under guard to join the four captive members of the junta. Word of the coup flashed through Bogotá. Loyal army units had gone on the alert. As the jeep sped past the presidential palace a loyal army officer stopped it.

"Which one do you have there?"

"Lleras," replied the driver. "We're taking him to the prison."

The army man pretended to be a conspirator. "No, no," he said, "Lleras is to be brought here."

The confused military police saw their prisoner escorted into the palace. Lleras headed for the radio and told the nation what was going on. Admiral Piedrahita eluded his would-be captors and joined him. For hours they took turns at the microphone. Under the intense public scrutiny resulting from the Lleras-Piedrahita barrage the revolution evaporated. No blood was shed, and captive junta members were freed, and Lleras won the election by a landslide.

After his inauguration in August 1958, one of his first acts was to lift the almost continuous 10-year state of siege. He kept emergency controls only in the five states where violence was concentrated. Even there he abolished press censorship, restored civilian government and most civil liberties.

The Cabinet meetings of those first months lasted from 12 to 16 hours. "It was a rare meeting that broke up before dawn," one of his Ministers told me.

"He never cut a discussion short," said another. This thorough talking-out produced a large percentage of unanimous decisions.

The President listened calmly through the lengthy sessions. When Liberal and Conservative tempers rose he restored peace, usually with a gentle witticism. Slumped like a teenager in the huge presidential chair, listening, considering, improvising, Lleras had one rule against which all suggestions were measured: "We have to do what

we can with what we have." His mere presence in the government sent the anemic peso up 70 points during the first 25 days of his regime.

The supposed irreducible minimum of $40 million per month of imports was slashed to $25 million by forbidding the import of luxury and nonessential items. Desperate Colombians began manufacturing their own nylons, kitchen utensils, typewriter ribbons, wool textiles, glassware, cosmetics, and the like.

Gradually, some of the estimated $350 million that prudent Colombians and resident foreigners had cached in U.S. and Swiss banks began trickling back—people wanted to get in on the ground floor of what was to be the country's biggest building boom.

Rojas had left many half-finished public works. Now these contracts were dissected and scaled down to what the country could afford. Then Lleras ordered the pace of construction stepped up, so that investments might begin paying off. He established a department of rehabilitation and drafted José Gómez Pinzón, a millionaire construction contractor, to run it. Gómez Pinzón and Lleras worked out a widespread program of building simple roads, bridges, small airports, and telegraph stations in the wildest areas. These projects offered employment to anyone who would work.

As roads penetrated the wilderness, modest rural schools and vocational training centers were built. Polivalente (multifunctional) teams of doctors, nurses, engineers, agronomists and social workers went into devastated areas to begin the long job of rehabilitation. At first regarded with suspicion, they refused to talk politics, crime, or punishment, and gradually won the confidence of the wary hill people.

Homeless thousands in the cities were returned to lands from which they had fled. Men came back to work the coffee plantations, the fields of rice and cane. With agonizing slowness the curve of production turned upward. For refugees in the cities who had no land to go back to, low-cost housing projects were started. By the end of 1959 more than a hundred million pesos had been invested in rehabilitation. More than 8,000 families had been returned to an orderly life, and the simple mountain roads had opened new areas for many thousands more. This year a colonization program will begin for those who, for whatever reason, cannot return to their native regions. Congress renewed the rehabilitation act for 2 more years.

Colombia today is well started on the road back. Thanks to hard work and austerity, gold reserves have risen from $85 million to more than $210 million. The $498 million commercial debt is down to $60 million, and payments are made on time.

The last year Rojas was in office his Education Ministry received only 72 million pesos. For 1960 the congress has earmarked 195 million for education.

Some violence persists, as a hangover from 10 years of indiscriminate slaughter. Most of this is committed by youngsters in their late teens and early twenties. Lleras considers these two or three thousand young savages Colombia's worst problem. "They graw up knowing nothing but robbery and murder," he points out. "As the rehabilitation program spreads we shall be able to salvage some of them."

Lleras considers Communist agitation a potential danger. "They concentrate their efforts among the university students and the labor unions," he said. "Time will prove that they do not deliver what they promise, and improving conditions will give them less to talk about. But meantime they try to convert any incident into a national disaster."

All-night Cabinet sessions are no more. Lleras now sees his ministers and other dignitaries during the day. About 5 p.m. he gets down to writing his message to congress and his lucid public speeches.

"I worked on morning newspapers too long to get much done in the daytime," he quipped. Often the rattle of his typewriter echoes in the palace until 3 a.m.

Lleras' appearance in public is greeted by applause and the spontaneous waving of handkerchiefs. The reverent people press close and he make no effort to keep them at a distance. He will not have a bodyguard, and drives his own car except on state occasions.

A few months ago Lleras showed up suddenly on the campus of the University of the Andes. A gardener, recognizing his former boss, greeted him cordially.

"How are you doing in your new business?" he inquired.

"Frankly, Jorge, I'm not doing too well at it," replied Lleras. "Sometimes I think I should have stayed here."

He could get an argument on that point. Recently a conservative leader was asked privately to suggest the best man his party could name to follow Lleras. After some thought, he replied, ruefully:

"Alberto Lleras."

David Lawrence, Widely Respected Columnist, Speaks His Mind on Retired Officers and Conflicts of Interest

EXTENSION OF REMARKS
OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. HÉBERT. Mr. Speaker, David Lawrence, the nationally known and highly respected syndicated columnist, has written a very knowledgeable and penetrating piece on the current discussion of retired officers and their relationship to the Defense Department after they leave the Pentagon.

His article approaches the subject from a very analytical and objective position.

As with everything he writes, David Lawrence has again made a fine contribution to the problem which the House will have to decide when pending legislation comes up for disposition on Wednesday.

Here is Mr. Lawrence's article, to which I fully subscribe:

DEFENSE CONFLICTS OF INTEREST—BILL TO CURB PENTAGON SALES CONTRACTS BY RETIRED OFFICERS UP FOR HOUSE VOTE

(By David Lawrence)

In these days of payola and accusations of conflict of interest with respect to members of Federal commissions or agencies, it seems strange, that a big question mark isn't getting much attention generally.

This is in the Department of Defense, and it concerns some of the many generals and admirals who have retired from the armed services but who draw big salaries from defense contractors and nevertheless maintain their own sales contacts at the Pentagon.

A House committee has held hearings and uncovered an unhealthy and questionable relationship between former military officers and the bureaus in the Pentagon that award contracts. The House of Representatives will vote Wednesday on a measure that would prohibit any officer for 2 years after his retirement from making any sales contacts with the Pentagon.

House Members generally are agreed that the practice should be discouraged, but some of them want merely to limit the penalty to a loss of the retired pay. Other Members say that it would mean nothing for a retired officer to give up 2 years of a pension at $10,000 a year when he is being paid a salary of $50,000 or more by a defense contractor during each of those same 2 years.

Instead, Representative HÉBERT, Democrat, of Louisiana, who has been leading the fight against the so-called munitions lobby, is sponsoring an amendment to the pending bill so that it would be a violation of law, subject to criminal penalties, if a retired officer during the 2 years following his retirement engaged in any form of selling at the Pentagon.

This is in line with other existing law which forbids any attorney employed in the Internal Revenue Service from practicing before the Treasury Department for 2 years after he has left the Government. There is a similar statute which forbids attorneys from pressing monetary claims for clients before the Government within 2 years after being employed in the Department of Justice.

Many of the military officers, while on active duty, have a voice in recommending the appointment of their own successors in charge of important defense projects. Naturally, it is inferred that there might be an obligation of some kind felt by the incumbent if his predecessor appeared before him later as a sales representative of a defense contractor.

Conflicts of interest are difficult to legislate upon, and there is no way to instill honesty where it is absent, but the Government can take some steps to discourage conflicts of interest. One method embodied in the pending bill in the House calls for publicity of the names of all former officers who are employed by defense contractors. Such an enrollment would be posted and distributed inside the bureaus at the Pentagon and kept up to date.

There have been provisions from time to time in appropriation laws, ever since 1896, aimed at those who retire from the armed services and take jobs with defense contractors, but these statutes do not remain in permanent form in the law. The present effort is to enact a broad statute that will stay in effect continuously and bar retired officers from becoming salesmen at the Pentagon for at least 2 years after their retirement.

The House committee, which recently carried on an investigation of the whole subject for more than 2 months, found that there are 2,000 former officers now employed by defense contractors, and that of this number 260 are engaged in some form of selling at the Pentagon.

There is no objection, of course, to the employment of former officers by defense contractors. The knowledge these servicemen have is valuable and can be of great help in developing the proper weapons and improving the Nation's armament. But there is a difference between duties that are confined to consultations held inside the defense contractor's own offices where advice is given to associates, and a direct contact by such a retired officer on visits to the Pentagon.

There are other evils which have not yet been remedied but are under study by House Members. These concern the activities of civilians who resign from active posts in the Department of Defense and immediately be-

come highly placed executives in companies that are engaged in many billions of dollars of defense work. No bills have as yet been pressed on this issue, but steps to deal with it are in the making.

There are upward of $50 billion of defense contracts each year, and the existence of a "munitions lobby" has been mentioned by President Eisenhower himself at one of his press conferences. Much of the missile gap propaganda is believed to have had its origin among officers of defense contractor companies.

It would be a tragic thing if Nikita Khrushchev were able to get any support for his constant cry that disarmament is being blocked in America and armament is being increased largely as a result of a "munitions lobby." It is essential for the sound development of an effective defense program that America be rid of any practice that could cast doubt on the integrity of the Department of Defense and thus weaken the confidence of the American people in the judgment of the men who disburse the public funds for the armed services.

Storing Insanity

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 8, 1960

Mr. HIESTAND. Mr. Speaker, there is an increasing concern among those of us representing predominantly urban districts that the farm programs are claiming far too big a share of the city dweller's pocketbook.

But one of the most depressing aspects of the whole cumbersome, outmoded but burdensome business of farm subsidies is that even the long-time advocates of price fixing and production control programs admit the framer is not benefiting very much.

This is pointed up by an editorial appearing in the Wall Street Journal. The editorial, very appropriately entitled "Storing Insanity," points up the breakdown of storage costs per day for the various commodities supported by the Federal Government. Farmers get little if anything of these dollars.

I am more than ever convinced that worn-out political answers to the economic problems facing agriculture must be replaced by a sound program that increasingly gets the Government out of the farm business and gets it off the backs of farmers and consumers alike.

I include the editorial as a part of my remarks in the RECORD:

[From the Wall Street Journal]

STORING INSANITY

Would you care to know how much it costs the taxpayers every day for storage of commodities Uncle Sam has on hand because of the farm program's high price supports?

Let's ease into this with two low ones; honey and tobacco. Uncle Sam pays out only $131 a day for honey and only $238 a day for tobacco, which, if it indicates anything at all, suggests that people smoke nearly all the tobacco that's grown here and that the bees aren't nearly as busy as the peanut farmers.

The peanut storage costs come to $6,000 a day; flaxseed and rye costs come to $7,000 each a day. Oats cost the taxpayer $15,000 a day for storage; rice, $17,000 a day; soybeans, $23,000; milk and butter fact, $29,000; barley, $64,000 a day and cotton $76,000 a day.

But even these are peanuts compared to the big boys. Have a good look:

Grain sorghums cost $262,000 a day for storage.

Corn costs $444,000 a day for storage.

And wheat costs $579,000 a day for storage.

That's every day. None of these costs include what was paid by the taxpayers, through their agent, Uncle Sam, for the stuff. It's just storage costs.

Total cost of storage for all these commodities comes to $1,547,000 a day or better than $550 million a year—and that, in anybody's book, is a lot to pay for storing up our harvests of insanity.

Can United States Buy Respect?

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. GROSS. Mr. Speaker, another of the Nation's leading businessmen, Mr. Sterling Morton, chairman of the board, Morton Salt Co., warns that many of our foreign policies are leading us into trouble.

The following are Mr. Morton's views on this subject as presented to the directors of the Illinois Manufacturers' Association:

A QUICK LOOK AROUND

(By Sterling Morton)

This short talk will cover merely the highlights of certain important matters as they appear to an ordinary citizen—but one who has been around a long time and who has done much traveling abroad. So, hold your hats for a roller-skate trip to a few European countries—then we'll settle down for some comments on home affairs.

WEST GERMANY MAKING REAL PROGRESS

We shall look first at Germany, that miracle of recovery from a terrific punishment. But, like genius, this miracle is based mainly on hard work. The Germans have always been hard workers. Immediately after the war they seemed almost frenzied in their efforts to regain their premier position in Europe. In my opinion, they have attained it, financially and industrially, but that excellent habit of hard work persists. German factories, modern, efficient, well managed, are capable of competing with the very best we have. Their export figures are eloquent. Perhaps they now realize that their challenge to the world must be on the battlefields of peaceful trade, not those of war. They are a determined as well as an industrious people, so we should be well content to have some German divisions and some Luftwaffe planes taking their places in the defense pattern for Europe. Germans are intelligent and resourceful fighters. The West Germans know communism all too well; are divided by it from their eastern provinces, so are, undoubtedly, less tainted than any major Western nation, including our own. Probably less than 5 percent are possible Communists. I'm glad the Germans are now on our side.

FRANCE AT CRITICAL STAGE

France: Now under the benevolent dictatorship of a great, if difficult, man—a Frenchman to the core, a statesman who has abated the hatred, hundreds of years old, between France and Germany. Perhaps his dreams of "glory" are unrealistic, but they appeal to the French temperament and give the people a rallying point. France is a great country, a rich country, the most nearly self-sufficient in all Europe—and growing more so. For over 20 years it has suffered under Governments which had no respect, no leadership, no confidence. Now, De Gaulle gives the French all three. He is the most realistic of all Western heads of state in dealing with the Moscow gangsters. Granted a solution to the Algerian question, the country should continue prosperous—if it can stop that cancer of "social benefits" which is also draining its lifeblood and, parenthetically, erodes the economies of most Western nations. The Communists, an official political party, have, roughly, a third of the votes. I should estimate that at least another quarter or third of the population is so infiltrated with extreme socialism that it could easily cross the faint line between these two "isms" to cooperate with a Communist takeover. France is at a critical stage. We should, most fervently, hope for the "big fellow's" continued good health.

Let us deal with France on the basis of mutual benefits and mutual obligations, forgetting sentimentalism. Lafayette has, long since, been paid off—with compound interest.

ITALY AND COMMUNISM

Italy is hard to appraise, as conditions differ so from north to south with Sicily as a third factor. There is prosperity in the north and things are better than they were in Sicily and the south. Italy is full of Communists, but, perhaps, not too many are of the Moscow type. True, those of the north are "factory proletarians." But, southern Communists are, I feel, mostly poor devils trying desperately to wrest a living from a semibarren country. They would welcome any change, feeling it could hardly be for the worse. The Italian "right wing" parties hold power only through uneasy coalitions. But, so far, so good. At an estimate, perhaps over 60 percent of the Italians could be expected to go along with a Communist regime; that is, until they find out what it really means—then, it's too late to change.

BRITAIN HAS FIRM POLICIES

And now to the United Kingdom, considered our firmest ally. I wonder. We speak the same language (within limits), we share a common heritage of freedom, literature, and law, but we look at many things quite differently. They are a small island, dependent on trade for the very food they eat, we have vast food surpluses. They are old as nations go, we are approaching middle age. Their population is extremely homogeneous, ours perhaps the most heterogeneous in history. No British political party has to "balance" its local tickets with names denoting various racial stocks. There are no "hyphenated Englishmen." The royal house provides a banner around which they rally, we lack such a "standard." As peoples, we are quite different one from the other as well as quite similar. All in all, I feel we should make a mistake to count on their complete support in every emergency. Korea was a case in point for us—Suez a great shock to them.

It is axiomatic that Britain has no permanent allies and no permanent enemies. Britain has firm policies and tailors its alliances and its wars to further these policies. Right now, there are strong efforts to carry to success one old and steadfast policy—to again be the "third force" in Europe. A cynic once said, "The strongest continental power is always Britain's enemy, the second strongest is always Britain's friend."

So, it is not surprising to see Britain flirting with the Soviets, not only for the fancied, glittering opportunities for trade, not only as a check on us, but to insure her own survival should war between the two giants come. Remember, our bombers cannot take off from our bases there unless cleared by the Prime Minister.

Churchill has lived to see most of that "liquidation of the Empire" he decried so eloquently. Kipling was a true prophet when he wrote:

"Lo! All our pomp of yesterday
Is one with Nineveh and Tyre!"

But, the British are smart, able, and experienced, so we can learn much from them—about a Socialist government, for instance. And about shipping and banking, about diplomacy, intelligence, and education, and, above all, about high standards of public service. While we hope they will always be on our side, we should never be too sure. They will be with us when it is to their advantage—period.

And this observation on self-interest applies to all countries. It would be, indeed, most dangerous to assume that any other nation would come to our defense. NATO is today giving way to nationalism. We must be prepared to defend ourselves and, if necessary, by ourselves. It is sheer folly to expect to bribe alien governments to help us or to hire alien soldiers to defend us. Have we forgotten those Hessians?

CAN UNITED STATES BUY RESPECT AND FRIENDSHIP?

Now, for a look at our own country. The world, in general, seems to hold us in less and less respect. This is distressing but quite true. And perhaps with just cause. Respect comes to those who deserve it. Have we deserved it? Our airplanes are shot down, our soldiers are imprisoned, our citizens are killed and their property confiscated, while our Vice President is insulted and spat upon. Yet, we confine ourselves to mild "diplomatic representations." A bearded Communist murders and pillages a hundred miles from our coast. We gave him support which we denied to his predecessor, who, whatever his faults, was on our side. How can such actions create respect for a nation? Some of us still remember Teddy Roosevelt and hang our heads in shame when we contrast his militant protection of our rights with the shilly-shallying doubletalk of today. Panama threatens the canal, our lifeline, even after successive generations of Panamanian politicians have extorted millions from us.

We should say, in unmistakable language (and with a few marines), that the canal is ours, that we intend to keep it and that any who challenge our rights there are likely to get hurt. From time immemorial, men have been willing to go into battle for their country's good, yet our President says that literally nothing (except direct, armed attack) now would take us to war, big or small. No wonder that other nations take us at our word and feel safe in harassing us—that dime-a-dozen despots dictate to us. We try to buy respect and friendship. But we get neither—nor will we unless and until we take firm stands—yes, even risk war or wage war. Greece, Turkey, Quemoy—all proved that a firm stand brings results. War may be "unthinkable," but a United States of America on its knees is "inconceivable."

SOVIET PROPAGANDA AND PROGRESS

The visit of the head gangster gave him an outstanding propaganda triumph which, undoubtedly, strengthened him at home and brought dismay to freedom-fighters everywhere. But, he's a smart fellow, and it stands to reason that he learned a lot. The cool treatment at the start, climaxed by the wonderful going-over he got from the mayor of Los Angeles, made him show his true colors to millions of our people. The warming up afterward could not erase that picture of a cruel, intolerant despot. I am sure his sharp, little pig-eyes saw much to give him sober thought. The trip won't make him a good Indian, but it should make him a more cautious one.

On the other hand, let's not fool ourselves over the extent to which communism and socialism have penetrated this country. Am I wrong in my estimate that a quarter of our people would welcome one or the other? There must have been large numbers of spectators who wished to cheer Khrushchev—but felt it healthier not to. Even though the voices of most who actively fought communism here have been muffled, if not stilled, by official action, the reaction of the (literal) "man in the street" might have been very violent.

It is hard to understand the reports on Russia we get from our own returning travelers, except on the premise that they are usually uninformed as to the state and rate of industrial development at home. When they praise the great progress of recent years, many do not realize that in czarist days Russia had excellent engineers and technical people as well as many skilled workers and artisans. There were many, many Russians who were neither exploiting nobles nor ox-like peasants. The Bolsheviks killed off most of these, so they had to grow an entirely new crop of good brains. Now, that crop is ripening and, I surmise, giving the bosses in the Kremlin plenty to worry about.

UNITED STATES VERSUS SOVIET EDUCATIONAL SYSTEM

We have heard much recently about Russian education. Many say it gets better results than our system. If so, the reason lies in three words—hard study—discipline. Our educators experiment, desperately seeking some system which will educate our youth by a sort of osmosis, letting them soak up learning without study or application. Life adjustment looms larger than arithmetic, social graces are more to be desired than ability to read readily, and athletic prowess seems worth more than ability to construct a simple sentence. Our professors come back starry-eyed from junkets (usually at the taxpayer's expense) to the Soviet Union and bubble over with enthusiastic envy at the high status of educators there. But, how many of them would accept the iron discipline, the absolute conformity, the complete lack of academic freedom which is the other side of the coin? Would they enforce those long hours on students, would they flunk a student knowing it meant immediate transfer to the labor or Armed Forces and an inferior status for life, would they spy on and denounce their colleagues, sending them, possibly, to the execution cellars? Let's get a little commonsense into these discussions of education in Russia. Our educators can't have their cake and eat it too.

UNITED STATES CAN WIDEN GAP—IF

No well-informed person can believe that the Russians will soon catch up with us economically. In many departments, they will have to increase their pace even to keep the present gap from widening. We can leave them farther and farther behind if we have the will, determination and strength of character. To continue to progress, we must change our taxation so it does not stifle initiative, must bring the labor barons under control before they destroy the real gains labor has made. We must recreate the spirit of loyalty and careful workmanship at all levels—blue collar—white collar. Above all, we must quite soberly decide whether expense-account-paid conferences at fine resorts (in reality golf outings), cocktail parties, customer entertainment, and, above all, complacency-breeding pension plans are slowing down our business leadership. The ship of business has picked up a lot of barnacles, too. We can keep well ahead, but only by real work, not talk. We must have decent, honest, economical government at all levels. Now, the waste is appalling. Above all, we must rekindle our traditional dedication to equal opportunity, to free, competitive enterprise and to a patriotism which is as critical of our country's faults as it is proud of its greatness.

Yet, there are those in our country who are so muddle minded that they see only our faults, only our weaknesses. They skim over the real facts of our national life—the world's highest standard of living, the world's most tolerant and liberal legislatures and courts, they forget that emigration to the United States is still the heart's desire of millions. How many wish to move to a Communist state?

IS LESS GOVERNMENT AND MORE FREEDOM OUR ANSWER?

What, of late, has brought about the deplorable letdown in our national spirit—yes, even in that primary urge for self-preservation which is the first law of nations as well as of individuals?

What has come over this great country that we should be so terrified by our enemy? Should the odds be against us, which any reasonable person must doubt, they are small, indeed, compared to the odds against the Colonies in 1775 or the infant Republic in 1812. Have we gone soft that we should constantly retreat before a foreign enemy, that we should accept shameful compromises such as that in Korea, that we should appease a bloodstained murderer and treat him as an honored guest—even while he refuses to deliver up or account for our missing flyers?

Why are we so frantically seeking high-level meetings with the Soviet? Agreements resulting from such meetings in the past have been broken contemptuously by the Soviets in practically every instance. Why even talk with such untrustworthy scum? Do our representatives feel we are inferior to our enemy? We most decidedly are not.

Yet, our enemy does lack our hesitations, our confusions, our temporizings, our willingness to concede. We seem to have lost the drive which inspired our forefathers and built our Nation. Are we drifting, prematurely and leaderless, into that lethargy of age which foretells the doom of a Nation? Has not our Government already too much power—the kind of power which Jefferson feared, the power which throttles a country, the power to "lay taxes which eat out our substance." If so, should not all of us strive for less government and more freedom—except for Communists.

Health Insurance for the Aged

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, health insurance is especially important in meeting the high cost of medical care for older persons living on restricted and limited incomes. The future possibilities are discussed by James R. Williams, vice president of the Health Insurance Institute.

This is the fifth in a series of columns written for Ray Henry which appeared

in more than 100 newspapers throughout the country during January and February. In the face of the widespread attention this issue is receiving in the Congress and in the country, I commend it to the attention of the Members:

HEALTH INSURANCE FOR THE AGED

(By James R. Williams, vice president, Health Insurance Institute)

During the 1960's virtually all of the older people in America will have available one or more forms of protection against the costs of health care.

This great social objective can be achieved through the combined efforts of business, labor, the medical profession, insurance organizations, the community and the public as represented by government.

And all organizations and agencies striving to get the job done will, in this first new year of the new decade, intensify their pursuit of the goal.

Lifting the economic barriers of uncertainty regarding medical care will be accomplished in a variety of ways. Many already are being aggressively developed and promoted; others will be initiated in the near future.

The cooperative attack on the problem will move toward two goals:

1. Removing the concern of older people over possible medical expense they cannot pay.

2. Making it easier for older people with limited means to get the type and full share of health care help they need.

Many challenges still face those cooperating to overcome the complex problem. But experience informs us the objective is attainable and the record shows a willingness—even an eagerness—to pay the way there.

Business and labor, for example, already have demonstrated a partnership of purpose in their mutual desire to provide their employees and members with adequate health care benefits.

Their cooperation has provided a large share of impetus enabling 124 million Americans to have the protection of health insurance today, as compared to only 12 million so covered 20 years ago.

With the continued cooperation of business and labor, the next few years will witness a growing number of health insurance plans giving coverage to employees and their families after they reach 65, whether they remain on the job or decide to retire.

For many, this will be in the form of paid-up coverage, too, requiring no more premiums from the employee after 65.

Doctors, medical economists, and hospital people have played a tremendous role in helping the people to understand and use the various methods of offsetting costs of medical services.

Their mounting interest in this part of the overall problem of the aged and aging is indicated by the recent positions taken by the medical profession on the subject of fees for the aged.

Insurance organizations have built the mechanisms—indeed, have provided methods apace of the evolutionary changes in medical care itself—to bring many more millions of older people under the protection of health care programs.

Today, they are using mass enrollment techniques, issuing imaginative new forms of coverage and employing methods unheard of only a few years ago to provide senior citizens with effective coverage.

In the next few years, a sizable majority of all older people will have the coverage they need, when they need it most and at costs they themselves will help to meet.

Community interest in aiding the aged to have the tools and means of assuring this coverage will grow with the decade, and this will substantially decrease the dimensions of the problem.

Consequently, in the early 1960's, the challenge confronting this Nation as regards the costs of health care in the golden years will be of more manageable proportions.

Primarily the challenge will be that of finding and refining the best ways of helping those among the aged who may not have the resources to meet health care costs; those whose available funds may only be sufficient to pay for the necessities of life.

To the end of assuring adequate care for these people, it seems to us the 1960's will witness a strengthening of Government assistance programs where necessary to supplement the effort of voluntary agencies.

The health insurance business does and will support such assistance programs.

Moreover, as a service to the community, the insurance companies will make their know-how and facilities available to assist in the administration of such programs.

They also do and will support a Federal matching funds program to encourage the development of nursing homes. Such facilities, built on the scaffolding of such a program, can be expected to rise across the Nation during the 1960's.

Only full cooperation will achieve the goal of providing older people with the sound and necessary material blessing of longer life.

And the insurance business is certain that all organizations interested in the public welfare will join—as a matter of fact, already are joining—in the effort to provide the greatest possible protection for the aged against the costs of health.

Leader in Conservation Twice Honored

EXTENSION OF REMARKS

OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. DIXON. Mr. Speaker, C. J. Olsen, retired leader in intermountain forest conservation for 39 years, is being twice honored for his outstanding services: First, by the Subcommittee on Forests of the House Committtee on Agriculture; and second, by a testimonial banquet given by a board representing fire conservation-concerned organizations in Utah.

The tributes to Mr. Olsen, by the Forests Subcommittee and the announcement of the banquet in the Salt Lake Tribune follow:

MARCH 22, 1960.

Mr. CHESTER J. OLSEN,
Ogden, Utah.

DEAR MR. OLSEN: It has been brought to our attention that you are resigning for health reasons, effective April 1, from your position as Utah parks director.

We regret that the Nation must lose such an able administrator who has dedicated 38 years to forest preservation, the last 7 of which were as chief of the 30 million acre intermountain region, and the last year or two to the establishment of an ambitious Utah park system.

The committee greatly appreciates the fairness you have shown in handling the multiple-use principle of the forests. We have found that the public and all users of the forests are almost in unanimous agreement on your statesmanlike adjudication of the many conflicting interests.

We have been continually impressed by your dedication to the conservation of our Nation's natural resources and your outstanding research on the preservation of watersheds.

In addition to all of this, we have found you to be a real friend and particularly appreciated your hospitality on our trip west.

Our committee joins your family and many friends in wishing for you a speedy recovery and hopes that your health may yet permit many happy and productive years.

Sincerely,

Forests Subcommittee: GEORGE M. GRANT, Chairman; JOHN L. MCMILLAN; LESTER R. JOHNSON; D. R. (BILLY) MATTHEWS; W. PAT JENNINGS, HAROLD B. MCSWEEN; CLIFFORD G. MCINTIRE; HENRY A. DIXON; CHARLES M. TEAGUE; CATHERINE MAY.

P.S.—This letter is written as a result of a resolution passed by the Subcommittee on Forests of the House Committee on Agriculture.

[From the Salt Lake Tribune]

BOARD TO CITE OGDENITE ON FORESTRY

LOGAN.—Receiving the annual forest conservation award during Utah Conservation Week will be C. J. Olsen, Ogden, former intermountain regional forester for the U.S. Forest Service, and until recently director of the Utah State Park and Recreation Commission.

Mr. Olsen will receive the award April 8 at a conservation banquet. The award is annually presented to one who has made an outstanding contribution to forest conservation in Utah.

He was chosen by a board representing five conservation-concerned organizations in the State.

From 1919, when he became a ranger in Nevada, Mr. Olsen held numerous forestry positions including regional forester, until his retirement in 1957.

After his retirement from the Forest Service, Mr. Olsen became the first director of the Utah Park Recreation Council. He is now retired from that post.

He received Utah State University's distinguished service award in 1956.

Privileged Imports: Major Textile Peril

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by W. Ray Bell, president of the Association of Cotton Textile Merchants of New York, as well as a news article which appeared in the New York Daily News on March 31, 1960.

The article follows:

PRIVILEGED IMPORTS: MAJOR TEXTILE PERIL

(By W. Ray Bell)

The chief roadblock in the way of extended textile industry recovery and the source of direct peril to future progress lie in the always mounting tide of imported fabrics and apparel whose origins now represent over 50 separate nations. Each of them enjoys the waiver by our Government of the statutory working conditions and social standards under which American textile mills are forced to operate. This means a privileged status of low labor costs for

which there is no equalization in existing tariff schedules. Tariff reduction to impotency has long since been accomplished through concessions made in GATT negotiations. Many of the foreign competitors now possess ultramodern textile equipment supplied by American taxpayers and some of them share special benefits of large textile purchases by the U.S. Government either in the nature of off-shore procurement or in the processing of cotton under triangular deals. The crowning discrimination against American enterprise and employment has been the U.S. Government policy of selling American-grown cotton to foreign textile producers at a bargain price, now lower by 8 cents a pound or $40 per bale than the prices American mills are forced to pay for the same raw material.

Under these existing and extraordinary policies of preferential treatment, foreign competitors have been equipped with overwhelming advantages in price competition. Sharing no responsibility for the maintenance of American standards, employment, or taxes, they remain free to flood our markets with the products of ill-paid labor, made under any kind of working conditions, out of the bargain-priced cotton endowed by our own Government or cheaper foreign growths. Over the past 5 years, the records of market experience show an unmistakable trend toward displacement of American goods through their inability to cope in price with the competition especially from Asiatic countries whose wage and labor costs are but a small fraction of American minimum standards.

[From the New York Daily News, Mar. 31, 1960]

HOW CHINESE MILLS BEDEVIL OUR SOUTH WITH DIXIE COTTON

(By John Lewis and Eckert Goodman)

In South Carolina, there are two towns about 30 miles apart. In the first, Spartanburg, homegrown cotton is sold and shipped halfway around the world to a mill in Hong Kong. There the cotton is woven into cloth and shipped back to the second Carolina town, Greenville, where it is delivered to an American buyer.

Despite the cost of transporting the cotton a distance equivalent to once around the world, plus duties and handling charges, the cloth is cheaper to buy than it would be if purchased from a mill in the neighboring town some 20 miles away.

For several years, the American textile industry has been hurting at the hands of foreign competitors, partially as the result of the U.S. Government's cotton subsidy program.

Cotton sells in the world market for about 25 cents a pound. In America, through Government price support, it brings 33 cents a pound. To enable southern cottongrowers to compete in foreign markets, the Government buys their surplus at the established rate and sells it abroad at an 8-cent-a-pound loss.

The higher price which U.S. textilemakers have to pay for their cotton, plus higher wages and employment benefits, has made it possible for foreign mills to flood American markets with fabrics, shirts, brassiers, blouses, handkerchiefs and countless other manufactured cotton products.

Ten years ago, bolts of cotton cloth were being imported into the United States in a mere trickle—under 20 million square yards a year. By last year, this figure had jumped to a quarter of a billion square yards. Five years ago, only 180,000 shirts were brought into the country. In 1959, there were almost 2¼ million.

Japan was once the biggest exporter of cotton wearing apparel to America, but in the past few years the Japanese, who voluntarily limited their cotton shipments, have been nudged out of first place by Hong Kong, with Korea, Pakistan, and India also in the picture.

SAYS TEXTILE IMPORTS ARE VITAL TO UNITED STATES

At a meeting in Charlotte, N.C., recently, Henry Kearns, former Assistant Secretary of Commerce for International Affairs, told members of the textile industry: "No one will argue that the textile industry is not an important part of our national economy—it is vital to our everyday living. But by the same token, our country's total sales abroad, our exports, annually exceed greatly the total sales of the entire textile industry—and foreign trade, too, is vital to our everyday living.

"In 1959, the textile mill products industry employed some 963,000 workers. Each year about 4½ million Americans derive a livelihood from some form of foreign trade.

"Pakistan is a country where 90 million tough, industrious people literally are lifting themselves from the depths of poverty—their need for foreign exchange is acute.

"They must export in order that they may buy the food, machinery, raw materials and other items they absolutely need for everyday living.

"The Pakistanis like Americans, but if we don't buy the few lines of products they can export, including textiles, they must look for other customers—and the Soviets are nearby, ready and available."

Kearns went on to warn the group that the United States could not consider import restrictions in a field like textiles, which might mean the loss of export sales in another field. He added that many industries in America were seeking new foreign markets and that the textile industry must find new outlets abroad.

A few week after making this speech, Kearns resigned. Some felt that his resignation was brought about by pressure from the cotton industry, but Kearns remarked in parting that if he were resigning under fire, he would have done so long ago.

IMPORTS IN WOOL MORE THAN DOUBLED

The situation in the wool industry also causes concern. To give our processors and fabricators some measure of protection, the United States—at a world trade meeting in Geneva in 1947—reserved the right to levy a 45 percent tariff on all imported wool fabrics exceeding 5 percent of our own production, based on the preceding 3-year average.

Although the wool industry enjoyed increased sales last year, imports more than doubled 1958's, reaching 5 million pounds, the highest point in 35 years. Japan sent in more than twice as much in the way of woolen products as any other nation, while England led in the export of "tops." Tops is the term for wool which has been scoured, carded, and combed for spinning. The total value of these imports was more than $84 million, compared with about $67½ million the previous year.

With Japanese-made suits already posing a threat to our men's clothing industry, Japan is expected to be exporting 10,000 suits a month, at from $15 to $20 apiece to retailers, before the end of this year.

U.S. manufacturers assert that there is no way in which they can hope to compete with such prices.

Employing 385,000 workers throughout 40 States, the men's clothing industry is one of our most highly competitive businesses. It is composed mainly of small firms whose net profits on the manufacture of suits and coats average 1 percent.

Between 1947 and 1958, the number of workers actually engaged in the production of men's and boys' suits and coats fell from 138,000 to 95,000—a drop of 31½ percent.

THREE THOUSAND PRODUCTION JOBS ELIMINATED

While a good deal of this falling off can be attributed to a change in men's wearing habits, a deluge of cheap suits and coats from abroad could, at this point, be disastrous.

American glove makers, also facing cheap labor competition from overseas, are currently suffering even more acutely than our textile industry. There used to be two major leather glove-producing areas—Fulton County, N.Y., and New York City.

New York has virtually stopped producing the hand wear, and Fulton County's firms have dwindled from 184 to 56.

Fulton County is a typical example of an area dependent for its major support on one industry. The wheels of the tanneries turn in relation to the activity of the glove factories. Local box manufacturers and suppliers of all kinds face a similar situation, and retail activity comes almost to a standstill when glove production slows down.

Today, the county is classed as a labor surplus area—as it has been for nearly 10 years. Between 1947 and 1959, 90 glove factories and 14 tanneries ceased operations in the area, with the loss of some 3,000 production worker jobs.

While Fulton County is considered a high-cost labor area for the glove industry, workers' earnings, which average under $49 for a 34-hour week, are low in contrast with the $81-a-week average earnings of industrial workers in New York State as a whole.

As of last January, 3,712 persons were drawing unemployment insurance in Fulton County, 2,646 of them glove workers. Retail sales in Gloversville dropped 7 percent during 1959, a year during which they climbed 8 percent throughout the Nation as a whole. Building permits granted for residences were only a third of what they had been in 1958.

THEY'VE JUST ABOUT LOST THE MARKET

Said James H. Casey of Gloversville, executive secretary of the National Association of Leather Glove Manufacturers: "We make 95 percent of the ladies' fine dress gloves produced in the United States, but we have just about lost the market. The rate of imports is now 126 percent of our domestic production, and it is increasing every month.

"We are not isolationists and have long known oceans act only as rivers between countries. We have over the years shared a portion of our market with exports from many European countries. In addition, we have contributed our fair share and today, as in the past, purchase 90 percent of our raw materials in foreign lands.

"We think that import quotas are the answer to our problem, not highly-restrictive ones, but quotas designed to give countries with higher living standards a fair share of our market."

Harry Moss, Jr., of Gloversville, executive secretary of the American Knit Glove Association, pointed out that of 44 manufacturers in business in 1947, only 12 remain today and these have drastically curtailed operations.

Perhaps the supreme example of what can happen to an area which loses a large part of its industry as a result of foreign competition is West Virginia. One of our richest States in terms of natural resources, West Virginia has the highest unemployment ratio in the country—almost three times the national average.

A number of West Virginians, including Representative CLEVELAND BAILEY, blame imports for much of the State's economic woe.

West Virginia's coal mines, the biggest soft coal producers in America, employed some 123,000 workers 8 years ago. Today, there are only about 41,000 miners still working. Competition from residual oil imported from Venezuela and the Netherlands Antilles, and natural gas piped in from Mexico and Canada

helped to make job-eliminating mechanization necessary if the mines were to remain in operation.

HAMSTRUNG ALL ALONG THE LINE

According to Bailey, the West Virginia pottery industry was once the world's biggest. Today, 87 percent of the pottery sold in the United States is made abroad. Forty-three percent of the State's glassworks industry has been lost to foreign makers, and the clothespin manufacturers have been hamstrung by cheap imports from Scandinavia.

One of America's largest dinnerware manufacturers, the Homer Laughlin China Co., of Newell, W. Va., used to boast 4,500 employees. Today it has about 1,000 and is operating at about half capacity through intensive mechanization. Laughlin was forced to the wall by Japanese dinnerware, selling at about half what U.S. manufacturers have to charge. It has driven a dozen other U.S. companies out of business.

"Our people are literally starving to death," said Bailey. "Many of the miners and other workers have exhausted their unemployment and welfare benefits and there are currently some 468,000 people living on surplus Government food.

"There is 67 percent unemployment in the State's coal mining industry. Besides the flow of cheap residual oil from Venezuela, our mines face additional handicaps: For instance, it costs West Germany $4.76 more per ton to mine coal in their own fields than it costs us to mine it and ship it to Germany.

"So what did the Germans do? They put a duty of $4.76 a ton on coal imported from the United States.

"Canada pipes into our country every day 7,600,000 cubic feet of duty-free natural gas. West Virginia coal going into Canada, however, is subject to a tariff of 50 cents a ton."

Asked how he felt about the Government's reciprocal trade agreements policy, which determines what U.S. tariffs will be, Bailey remarked:

"Why, it's been crazy as hell."

The Agricultural Outlook for 1960

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. WILSON. Mr. Speaker, the gloom-and-doom campaign of the Democrat presidential aspirants in Wisconsin has been geared at convincing the farmers in Wisconsin and other Midwestern States that they are close to bankruptcy and that all is lost. This would be tragic if true, but recent news from the farm areas shows the pessimism of the presidential pretenders is out of step with the optimistic outlook of people who really know. Under unanimous consent I include with my remarks in the Appendix of the RECORD a series of wires from important farm editors from all over the country, reporting their views on the bad and good spots in the farm economy. These wires were collected by the Bert S. Gittens Agency, of Milwaukee, Wis., producers of the nationally recognized and highly respected radio program, "National Farm and Home Hour," and are as follows:

WIRE SERVICE FARM BULLETIN

By telegram and long distance phone, editors, economists, and other farm leaders reported to us this week on the agricultural outlook for 1960.

Contrary to recent headlines, high optimism and favorable prospects for a good farm income year sums up the situation throughout rural America.

A few gray spots in the picture appear unlikely to have a major effect on the overall farm economy.

Now here are quick quotes from farm authorities coast to coast and border to border:

CHICAGO, ILL.

Livestock prices currently very close to a year ago. Numbers larger. Ample feed supplies with excellent grazing in prospect. Soil moisture high. Possible delayed spring planting. Winter grains excellent. Corn hog ratio best in 12 months. Prospects good this year and next. Hog price advance brings improved feeling on farm. Efficient producers concentrate on widening spread between cost and sale price. Good farmers never quit.

A. W. MCGHEE,
Director, Corn Belt Farm Dailies.

PHILADELPHIA, PA.

Dairy outlook unquestionably brightest spot in Northeast. Broilers probably darkest. Cutbacks in numbers should improve prospects. Prices will be higher. Central states: Greatest lift probably will come from upswing in hog prices, strong dairy situation. Southwest looks forward to big cotton and wheat crops. Highly favorable moisture conditions. Wool outlook also good. Prospect of lower cattle prices, but not critical. Better future for eggs later in year. Favorable wool situation on plus side in Far West.

VERNON VINE,
Director of Editorial Relation, Farm Journal.

INTERMOUNTAIN.

Downturn in cattle prices will have effect, but not critical net outlook. Well-balanced year if farmers' costs are kept under control. Current trend favorable.

VERNON VINE,
Director of Editorial Relations, Farm Journal.

CHAMPAIGN, ILL.

Enough corn will move into storage to force prices to redemption level. Soybean market still going away. Grain sorghum prices will advance in line with strengthening feeder cattle market.

HAROLD G. HALCROW,
Economist, University of Illinois.

DES MOINES, IOWA.

1961 will be better than 1960 for those who sell to farmers. Hog prices will be in neighborhood of $18 this summer. Won't fall fast or far this fall as last. Cattle numbers aren't going high or fast as we had feared. No bust—barring severe drought. Egg prices going to be fat this year.

We're at the bottom of the price support cuts this year. Better farmers are cutting the pie in fewer chunks.

DICK HANSEN,
Editor, Successful Farming.

DES MOINES, IOWA.

Hog prices to average equal or above 1959. Egg prices to average well above 1959. Cattle feeding profits only slightly below 1959. Dairy income stable. Equally good corn crop with average maturity should return farmers more, even with lower supports. Other crop prices stable. Iowa gross in 1959 8 percent above 1957, only 7 percent below 1958. High year in Iowa.

RICHARD ALBRECHT,
Editor, Wallaces' Farmer.

CHICAGO, ILL.

Farm market outlook improved somewhat since first of year due largely to quick recovery in hog price. Cattle and broiler prices will be in slight downward trend. Egg prices up. Grain prices will hold steady. Slight downward trend in corn and wheat. Farmers will be in continued cost-price squeeze, but expected to buy moderately well. Purchased inputs being substituted for farm labor. Biggest problem: buildup of feed grains.

PAUL C. JOHNSON,
Editor, Prairie Farmer.

KANSAS CITY, MO.

Farm income this area will be better than 1959, not as much as 1958. Hog prices strengthening. Cattle prices should be about the same as 1959. Wheat prices at same support level and moisture conditions for big crop excellent. Too much moisture for early spring work. Corn prices also under support and almost same as last year. Poultry outlook better than last year for latter part of 1960. Dairy outlook one of best in years on gross. Excellent moisture assures fine start for grass, extremely important for livestock. Biggest problem: high cost of production. Best opportunity: cutting costs.

RODRICK TURNBULL,
Editor, Weekly Star Farmer.

TOPEKA, KANS.

Actual livestock count shows 11½-percent cut in sow numbers. Reduction is forced. Spring pig crop likely no larger than 1958, which was one of most profitable hog years farmers have ever known. Another bright spot: milk production. Another slight cut in milk cow numbers. Production per cow likely to continue upward but no faster than popluation increase. Should be stable for the demand. Another bright spot: eggs. Egg prices should be better than last year. Demand for cotton another bright spot. Export demand up. Carryover may be reduced 1,300,000 bales. Another bright spot: beef cattle. After midsummer marketing, prices could increase depending on marketing of cows and gross fats. Big runs could push down prices if moisture doesn't continue to support late summer grass.

DAVID KLINGER,
Editor, Cappers Farmer.

LINCOLN, NEBR.

Brightest spots in Nebraska are heavy snow cover, excellent soil moisture, upturn in hog-poultry prices. Nebraska farm income holding steady, Gross $12,464 per farm in 1959 same as 1958. Knottiest problem: cost-price squeeze. Badly need better legislation.

MARVIN RUSSELL,
Editor, Nebraska Farmer.

TOPEKA, KANS.

Brightest spot: Excellent soil moisture situation and prospective big wheat yields. Superior outlook for all crops. Biggest problem: wheat surplus.

RAYMOND H. GILKESON,
Editor, Kansas Farmer.

OKLAHOMA CITY, OKLA.

Agricultural outlook for all Oklahoma and Texas strong. Beef cattle brightest spot. Good market, large numbers, excellent outlook for grazing. Moisture plentiful. Big problem: finding market for surplus crops so production can be stepped up to capacity. Could double production of many commodities within 2 years, quadruple within 3 or 4 if markets would justify. Strong interest

in supporting research for new uses of farm products and sales promotion campaigns.

F. J. DEERING,
Editor, Farmer-Stockman.

BISMARCK, N. DAK.

Good snow cover makes crop prospects favorable. One of brightest spots our area increase in feeder operations. More ranchers feed cattle instead of selling to feeders in other States. Expect 3-percent increase in calf crop. Feed shortage throughout area. Biggest problem drought last summer.

MIKE CARTER,
Farm Service, Director, Station KFER-TV.

STILLWATER, OKLA.

Beef cattle situation brightest spot along with good moisture for fall planted wheat and grass. Declining income, result cost-price squeeze biggest problem. Delayed spring farming operations due cold, wet weather.

L. F. MILLER,
Economist, Oklahoma A. & M.

ABERDEEN, S. DAK.

Dry year 1959—better outlook 1960. Tremendous amount of livestock. Lots of hay. Abundant moisture. Expect surge of buying when spring opens. Dakotas building big livestock feed yards. One million acres new irrigated acreage.

VERN LAUSTSEN,
Manager, Dakota Farmer.

CHICAGO, ILL.

Pospects for improvement in farm income 1960 fair. Spending will be influenced by sharp cut income experienced 1959. Livestock and dairy brightest spots. Production supplies should move well.

CHARLES B. SCHUMAN,
President, American Farm Bureau Federation.

DENVER, COLO.

Farm market outlook good throughout West's irrigated sections. Farm income our area double national average. Farmers will continue to purchase needed supplies and equipment. Biggest problem: wheat and some feed grain surpluses. Could prove problem late 1960 or early 1961.

R. F. KENNEDY,
General Manager, Western Farm Life.

RACINE, WIS.

Brightest spot in farm picture dairying. Egg production later. Hogs uncertain. Beef cattle prices headed downward over next few years. Lots of feed grain in storage which tend to hold down prices.

RALPH YOHE,
Editor, Wisconsin Agriculturist.

ST. PAUL, MINN.

Dairying is brightest spot upper Midwest agricultural picture. Beef also excellent position. Moisture assures getting crops and grasslands off to good start. Rise in hog prices late spring and early summer indicated. Eight percent farrowing cut presages market strength late summer and fall. Material strengthening egg market.

W. H. KIRCHER,
Editor, the Farmer.

HARRISBURG, PA.

Dairy sales outlook brightest. Pipelines, bulk tanks excellent. Also all machinery, feed, seed fertilizers. Poultry weakest, although outlook better.

NORMAN REBER,
Editor, Pennsylvania Farmer.

SPRINGFIELD, MASS.

Potato prices high. Dairymen good shape throughout area. Biggest problem: poultry industry. Seemingly great hope farmer-owned marketing cooperative movement. Generally good year New England agriculture.

DON WATSON,
Editor, New England, Homestead.

ITHACA, N.Y.

Poultry biggest problem in northeast. Represents 15 to 20 percent of farm income. Outlook much better for fall. Outlook for efficient operators is fair to good. Problems will be solved by more efficiency.

Most hopeful situation is dairying. Good dairymen are making money. Dairy income represents 50 percent of our total. Smaller and part-time farmers solving problems by work off farm and growing more sheep and beef cattle.

E. R. EASTMAN,
President, American Agriculturist.

FORT ATKINSON, WIS.

Dairy outlook for 1960 remains strong. Slight production buildup by fall shouldn't dim bright 1961 estimate. Dairy outlook brightest spot on national scene in 1960 and outlook 1961.

W. D. KNOX,
General Manager, Hoard's Dairyman.

EAST LANSING, MICH.

Dairying our big item. Culled cows bringing good prices. Veal a little lower for 1960. Milk prices will hold above 1959. Average prices all farm commodities fully as strong or higher than 1959.

J. N. FERRIS,
Economist, Michigan State University.

MADISON, WIS.

One of the brightest spots in agricultural outlook is price of livestock. Prices for hogs, veal calves, cattle considerably better than predictions. Expected that livestock prices may not go as low during 1960 as November, December forecasts suggest. Biggest problem rising cost of production. Price-cost squeeze still on.

MARVIN A. SCHAARS,
Economist, University of Wisconsin.

WASHINGTON, D.C.

Some improvement prices, higher income from hogs, record cash receipts from dairy products, increased income from poultry and eggs, are favorable aspects 1960 outlook. Wheat surplus, tendency some crops to exceed outlets, big problems.

TRUE D. MORSE,
Under Secretary of Agriculture.

DALLAS, TEX.

Moisture always major consideration. Most of our area has adequate moisture. Biggest problem shrinking profit margin. Prices will be lower 1960, have been offset by increased efficiency.

EUGENE, BUTLER,
Editor, Progressive Farmer (Southwest Edition).

GREENVILLE, MISS.

Could be no brighter spot than Mid-South's Mississippi, Arkansas, Louisiana. Unusually bountiful crops cotton, soybeans, rice harvested, reinforced by usual large receipts from cattle, hogs, other crops.

W. C. LASSETTER,
Editor, Progressive Farmer (Arkansas, Louisiana, Mississippi Edition).

NASHVILLE, TENN.

Late snows and cold weather delaying early seedbed preparations. Milk market strengthening as in hog market. Overproduction broilers, eggs.

T. P. HEAD,
Editor, Progressive Farmer (Kentucky, Tennessee, West Virginia Edition).

RALEIGH, N.C.

Tobacco, dairying, fruit bright spots farm picture. New markets for milk, fruits, vegetables. Grade A dairymen doing well. Low price manufacturing milk causing shift and grade A herds increasing in size. Abundant grain, strengthening prices encouraging hog producers.

JOE ELLIOTT,
Editor, Progressive Farmer (Virginia, Carolinas Edition).

BIRMINGHAM, ALA.

Beef: good year likely. Best moisture condition in years. Cotton: quality of 1960 cotton should be better than 1959 crop. Better quality and more acreage more than offset lower price. Poultry: loss in volume may be made up by improved prices. Fruits and vegetables: larger pecan crop. Vegetable planting delayed. Georgia and Alabama may be advantageous. Avoid overlapping harvest with Florida. Peach outlook excellent. Hogs: moderate expansion. Tobacco: continued stable prices.

C. B. COPELAND,
Editor, Progressive Farmer (Georgia, Florida, Alabama Edition).

SAN FRANCISCO, CALIF.

The year 1959 highest income year our history. Government payments small percent of total. Farm gross will go up as additional land is brought under irrigation.

JACK PICKETT,
Editor, California Farmer.

SPOKANE, WASH.

Farm market outlook good. No particular dark spots.

CECIL HAGAN,
Editor, Pacific Northwest Farm Quad.

Inflation and the Aged

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. KNOX. Mr. Speaker, it should be completely understood that inflation has been a principal factor contributing to any economic difficulty besetting our present aged population. Generally speaking a retired individual lives on a fixed income; inflation diminishes the original purchasing power of that fixed income. That is the reason that President Eisenhower and other people who are really interested in the well-being of the aged have insisted that the threat and fact of inflation must be contained.

In the Washington Evening Star for March 29, 1960, Mr. David Lawrence had an excellent editorial comment captioned "The Bill for Past Inflation." Mr. Lawrence observed that while we may have succeeded in the current period in checking inflation, we are now experiencing pressures for increased Government assistance to our aged because of the inflation that has occurred in the past. Savings of noninflated dollars cannot buy as much at inflated prices. The labor chieftans know this but refuse to recognize it in their demagogic preachments.

Mr. Lawrence points out that the labor bosses were largely responsible for the

past inflation and are now advocating legislative programs that would add new momentum to the inflation pressures. One of these programs is the proposal to launch a massive compulsory health care program under the bureaucratic control of the Federal Government. Mr. Lawrence alludes to the fact that a Government program of socialized medicine in the United States would have the same deteriorating effect on the quality of medical services that has attended such national health programs in other countries.

Mr. Speaker, the AFL–CIO union bosses have gone on record in favor of a national health program. These same AFL–CIO union bosses have also gone on record in opposition to any liberalization in the $1,200 earnings retirement test on which social security benefit eligibility is determined. The one pressing problem that most aged persons complain about is money—money that they are forbidden to earn. It does seem a bit illogical to implement a much publicized drive to give these people medical care by amending the same law that prevents them from buying it for themselves. Our aged people are a proud people. They do not want a gift their grandchildren must pay for. They want the return of their God-given right to earn money while they draw the social security allowance they have already paid for. By what right does any democratic government refuse anyone the right to earn money merely because he is eligible to receive a return of money he has deposited with the Government in form of the social security tax.

I disagree with the AFL–CIO union bosses in opposing the liberalization of the $1,200 earnings retirement test, and I have introduced legislation to increase this amount to $1,800. The aged should not be prevented from demanding the honest return of the money they have been forced to deposit in the social security trust fund and to refuse them this money is improper. If those who have reached retirement are capable and willing to earn money after becoming 65, that should be their own business. What these union heads are really advocating for the aged is compulsory retirement and compulsory health care regardless of whether or not the aged citizen wants to retire or needs Government health care. It is my personal conviction that instead of regimenting our aged citizens under Government control, we should be taking steps to safeguard the purchasing power of their incomes, assure their economic independence, and permit the aged the full right of self-determination. This is contrary to the thinking of the labor boss who would dictate to the aged what the aged can and cannot do.

Mr. Speaker, as a part of my remarks I will include the editorial by Mr. Lawrence to what I have referred:

[From the Washington Evening Star, Mar. 29, 1960]

THE BILL FOR PAST INFLATION—HIGHER TAXES TO PAY MEDICAL EXPENSES OF AGED TERMED EFFECT OF PAST POLICIES

(By David Lawrence)

Inflation may be temporarily checked, but the bill for past inflation is now up for payment. The American people are about to be asked, for example, to pay in increased taxes the cost of higher medical expenses for the aged.

Naturally, union-labor leaders, who have been in large part responsible for the inflationary wave of prices in the last few years, are sponsors of the new program of medical care to be paid by the Government out of new taxes. But the largest number of citizens who may have to foot the bill is to be found among the self-employed and the farm and city workers who are not members of labor unions.

The union-labor leaders want the social security tax base to be increased from $4,800 a year to $6,000. This means that employers would have to pay an additional $420 million, while workers and self-employed would have to pay $520 million. But there are only 8 million workers with incomes between $4,800 and $6,000 a year, and they would pay about $200 million a year, whereas the 8 million workers with incomes above $6,000 a year would pay an increase of more than $320 million.

This would mean a diminution in weekly take-home pay and, of course, it could result in new demands by the unions for increased wages for those who have to pay the higher tax. Incidentally, under the labor-backed plan, about 57 million persons with incomes of $4,800 a year or less—including most trade union members—wouldn't pay any increase in social security taxes but would eventually receive the benefits, and so would their aged relatives now.

Under the bill proposed by Representative FORAND, of Rhode Island, Democrat, however, the social security base would stay at $4,800, but the tax rate would be increased for everybody paying social security taxes. Workers would pay $570 million more, and employers $530 million more, or a total of $1.1 billion more per year. All of the 73 million persons, therefore, now subject to social security taxes and employers of 66 million hired workers would pay more in taxes than at present.

All this is supposed to be for "medical care for the aged." Nobody knows just how much the program is really going to cost eventually but, once the scheme for adding to social security taxes to absorb the medical costs gets going, the increases will come as the medical costs continue to rise.

It so happens that over the last weekend some interesting figures were announced by the U.S. Department of Labor about the increase in the Nation's living costs for the month of February. The reasons given for the rise were twofold: "Higher interest rates and higher medical costs."

Mortgage interest rates have risen steadily since the middle of 1958 as the Eisenhower administration has been forced to compete for funds in the 5-year-or-less category of securities because the Democratic Party in Congress stubbornly has refused to let the law of supply and demand operate to bring interest rates down.

As for the rise in medical costs, these are due to the increased expenses at hospitals and medical institutions which are, in turn, largely due to inflation. Many of the cooperative private agencies that issue insurance policies for medical care have recently had to increase their premium charges because of the higher cost of medical service.

It is not surprising that President Eisenhower has come out against the plan to increase social security taxes and favors instead a plan by which the expenses would be met out of general revenues. The outlays, moreover, would be confined to those who are in need. The administration program is described as a "voluntary medical insurance plan for the needy aged."

The has been some talk about the whole problem becoming an issue in the coming presidential campaign. It should be. For the American people are going to have to decide sooner or later whether or not they want a cradle-to-the-grave welfare program, with certain taxpayers providing the money for everybody, including those who are well able to take care of the medical expenses of their parents and grandparents. The issue, of course, lends itself to political misrepresentation. Already some of the Democratic presidential candidates are trying to make it appear that the administration is opposed to medical care for the aged, which just isn't true.

The administration, to be sure, doesn't want to see a medical program started by the Government that would lead to socialized medicine, with the deterioration in medical service that has characterized such programs in other countries. Actually, at the end of 1958 a total of 17 million persons already had major medical insurance, as compared to 100,000 at the end of 1951. Also, the figures for the year 1959 are expected to show a further big increase in the amount of medical insurance among those who are 65 years or older.

The problem can be handled for the most part by the citizens themselves, through insurance programs at small fees per month. As for the needy, the Federal and State Governments are necessarily obligated to bear the cost. But it will be small compared to the welfare programs being proposed in Congress today to be paid for through various devices that call for increases in social security tax rates.

Civil Rights

SPEECH
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8601) to enforce constitutional rights, and for other purposes.

Mr. MILLS. Mr. Chairman, I would like to call attention to at least three provisions of our Nation's Constitution with which the refereee plan contained in section VI of the proposed civil rights legislation being considered here may be in conflict. These provisions are article III of the Constitution, which limits the jurisdiction of constitutional courts to the disposition of cases or controversies; the 15th amendment which prohibits the States from denying citizens the right to vote on account of race, color, or previous condition of servitude; and the 5th amendment, which prohibits the United States from depriving a person of life, liberty, or property without due process of law. I would like to briefly discuss these possibilities in order.

POSSIBILITY OF CONFLICT WITH ARTICLE III

A serious constitutional problem is raised by that part of title VI which states that after a court finds that any person has been deprived by State action on account of race or color of his right to vote "the court shall upon request of the Attorney General make a finding whether such deprivation was or is pursuant to a pattern or practice."

The consequence of an affirmative finding is that any member of the race against which the pattern was directed must apply for a court order declaring him qualified to vote. The court must consider such applications for a minimum period of 1 year from the date of its finding and thereafter until it finds that such pattern or practice has ceased. If the making of such a finding and the issuance of such orders were necessary for the resolution of the base before it, it is very possible that an attempt to impose these duties upon the Court is an unconstitutional incursion upon the judicial power. See *Muskrat* v. *United States* (219 U.S. 346 (1911)).

POSSIBILITY OF CONFLICT WITH THE 15TH AMENDMENT

The Supreme Court pointed out in the civil rights cases, 109 U.S. 3, 13 (1883), that the legislation enacted to enforce the 14th amendment—and by necessary inference the 15th amendment as well—should be adapted to the mischief and wrong which the amendment was intended to provide against. In *United States* v. *Reese* (92 U.S. 214 (1875)), sections 3 and 4 of the act of May 31, 1870, were held unconstitutional on the ground that they might be interpreted to reach voting abridgements by States for reasons other than race or color. This holding was made despite the fact that section 2 of the act prohibited only abridgements by State officers because of race or color. There is one provision in title VI of H.R. 8601 which has the same kind of infirmity which caused the invalidity of section 3 of the act of 1870. After a court has found the existence of a pattern or practice of voting abridgements by State officers because of race or color an applicant of the race discriminated against is entitled to a court order declaring him qualified to vote, if he proves the following things: First, that he is qualified under State law to vote; and, second, that since the court finding he has been (a) deprived or denied under color of law of the opportunity to register to vote or otherwise to qualify to vote or (b) found not qualified to vote by any person acting under color of law. Since the applicant is not required to show that the denial was because of his color, or that he was found not qualified because of his color, some people would be entitled to orders under the statute even though as to them there had been no State action in violation of the 15th amendment. Although there is little likelihood that this provision would be held unconstitutional as applied to an applicant whose voting right had been abridged because of race or color, there is a possibility that it is unconstitutional as applied to an applicant who had been found unqualified for a valid reason, that is, a reason other than race or color. Consider, for instance, an applicant who, after the court finding of a pattern or practice, applies for registration before a State official and is found unqualified because he has not paid his poll tax. Despite the fact that there had been no State action violative of the 15th amendment, under title VI he could pay his poll tax, then apply to the court for an order without any further attempt to be registered by a State official.

POSSIBILITY OF CONFLICT WITH DUE PROCESS CLAUSE

The activities of the court and of the referees it may appoint after finding a pattern or practice of distrimination are clearly designed to result in a determination that certain persons are qualified to be registered as voters. Yet title VI would propose to bind not only registration officers who would presumably be parties to the original suit initiated by the Attorney General, but also those election officials manning polling places who are not likely to be parties to the original suit. Moreover, the proceedings before the referees are to be conducted ex parte and the recommendations of the referees are to be incorporated in orders which purport to bind both registrars and polling officials after very limited opportunities to interpose exceptions to them. While Congress has the power under article III to regulate the entire process of the Federal courts including the power to prescribe rules of procedure, in exercising this power it is limited by the due process clause of the fifth amendment. The right of a fair and open hearing is one of the rudiments of fair play assured to every litigant by the Federal Constitution as a minimal requirement. *Ohio Bell Tel. Co.* v. *Public Utilities Comm.* (301 U.S. 292, 304, 305 (1937)), cited in *R. R. Commission of Calif.* v. *Pacific Gas Co.* (302 U.S. 388, 393 (1938)). It is certainly questionable that the provisions of title VI will guarantee the constitutional minimum of due process.

In addition to this, Mr. Chairman, it is my firm belief that there is an overabundance of law now in existence to more than protect the voting rights of all our citizens.

Since the days of Reconstruction, statutes have existed making it a Federal crime for two or more persons to conspire to deprive a citizen of any right secured to him by Federal law or the Constitution. This law clearly makes it a crime to deprive a citizen of his voting rights guaranteed by the 15th amendment. I would like to quote section 241 of title 18 of the United States Code in its entirety to illustrate this point:

> If two or more persons conspire to injure, oppress, threaten, or intimidate any citizen in the free exercise or enjoyment of any right or privilege secured to him by the Constitution or laws of the United States, or because of his having so exercised the same; or
>
> If two or more persons go in disguise on the highway, or on the premises of another, with intent to prevent or hinder his free exercise or enjoyment of any right or privilege so secured. * * *
>
> They shall be fined not more than $5,000 or imprisoned not more than 10 years, or both.

Another statute which provides criminal penalties for anyone acting under color of law who deprives a citizen of any of his constitutional or Federal statutory rights is found in section 242 of title 18, which reads as follows:

> Whoever, under color of any law, statute, ordinance, regulation, or custom, willfully subjects any inhabitant of any State, territory, or district to the deprivation of any rights, privileges, or immunities secured or protected by the Constitution or laws of the United States, or to different punishments, pains, or penalties, on account of such inhabitant being an alien, or by reason of his color, or race, than are prescribed for the punishment of citizens, shall be fined not more than $1,000 or imprisoned not more than 1 year, or both.

Let us now consider criminal sections specifically on the subject of voting rights. Section 594 of title 18 provides as follows:

> Whoever intimidates, threatens, coerces, or attempts to intimidate, threaten, or coerce, any other person for the purpose of interfering with the right of such other person to vote or to vote as he may choose, or of causing such other person to vote for, or not to vote for, any candidate for the office of President, Vice President, presidential elector, Member of the Senate, or Member of the House of Representatives, Delegates, or Commissioners from the territories and possessions, at any election held solely or in part for the purpose of electing such candidate, shall be fined not more than $1,000 or imprisoned not more than one year, or both.

Civil remedies, in addition to these ample criminal penalties, have also been provided for the protection of the right to vote. Any person acting under color of law who deprives a person of his federally secured rights, including deprivation of voting rights based on his race or color, is subject to a civil action for redress. Section 1983 of title 42 provides that:

> Every person who, under color of any statute, ordinance, regulation, custom, or usage, of any State or territory, subjects, or causes to be subjected, any citizen of the United States or other person within the jurisdiction thereof to the deprivation of any rights, privileges, or immunities secured by the Constitution and laws, shall be liable to the party injured in an action at law, suit in equity, or other proceeding for redress.

You will note this remedy provides for both legal and equitable remedies. Under it one may bring suit for monetary damages or injunction proceedings for coercion of any type. Anyone who feels they have been deprived by a State official of the right to vote, as guaranteed by the 15th amendment, has complete freedom to file suit in a Federal district court under this section.

This is not the only civil remedy available. Subsection 3 of section 1985, title 42, provides for recovery of damages from two or more persons who conspire to deprive another of his rights, including voting rights. Section 1986 of the same title provides for a civil suit against one having power to prevent a deprivation of rights and who fails to act.

Mr. Speaker, I would like to emphasize that these statutes have been in effect for nearly 100 years. I cannot conceive that this body of law is not effective today in securing the rights of all citizens. Severe criminal penalties are imposed for deprivation of civil rights; damages are allowed the complainant; and traditional equitable remedies are available in these cases.

Despite the existence of these laws, in the Civil Rights Act of 1957 even more laws were enacted on this subject of protection of civil liberties. I quote the pertinent provisions of the law now contained in section 1971 of title 42:

(a) All citizens of the United States who are otherwise qualified by law to vote at any election by the people in any State, territory, district, county, city, parish, township, school district, municipality, or other territorial subdivision, shall be entitled and allowed to vote at all such elections, without distinction of race, color, or previous condition or servitude; any constitution, law, custom, usage, or regulation of any State or territory, or by or under its authority, to the contrary notwithstanding.

(b) No person, whether acting under color of law or otherwise, shall intimidate, threaten, coerce, or attempt to intimidate, threaten, or coerce any other person for the purpose of interfering with the right of such other person to vote or to vote as he may choose, or of causing such other person to vote for, or not to vote for, any candidate for the office of President, Vice President, presidential elector, Member of the Senate, or Member of the House of Representatives, delegates or commissioners from the Territories or Possessions, at any general, special, or primary election held solely or in part for the purpose of selecting or electing any such candidate.

(c) Whenever any person has engaged or there are reasonable grounds to believe that any person is about to engage in any act or practice which would deprive any other person of any right or privilege secured by subsection (a) or (b) of this section, the Attorney General may institute for the United States, or in the name of the United States, a civil action or other proper proceeding for preventive relief, including an application for a permanent or temporary injunction, restraining order, or other order. In any proceeding hereunder the United States shall be liable for costs the same as a private person.

Frankly I have never known of any violation of voting rights in my home State of Arkansas; however, I should like to point out that in this area, as well, ample provisions of law exist to safeguard the civil liberties of our citizens.

The Arkansas Constitution in article II, section 3, provides that:

The equality of all persons before the law is recognized, and shall ever remain inviolate; nor shall any citizen ever be deprived of any right, privilege, or immunity, nor exempted from any burden or duty, on account of race, color, or previous condition.

The only tests of the right to vote are prescribed by article III, section 1 of the Arkansas constitution:

Every citizen of the United States at the age of 21 years, who has resided in the State 12 months; in the county 6 months, and in the precinct, town, or ward, 1 month, next preceding any election at which they propose to vote, except such persons as may for the commission of some felony be deprived of the right to vote by law passed by the general assembly, and who shall exhibit a poll tax receipt or other evidence that they have paid their poll tax at the time of collecting taxes next preceding such election shall be allowed to vote at any election in the State of Arkansas.

However:

No idiot or insane person shall be entitled to the privileges of an elector.

See article III, section 5 of the Arkansas constitution.

Further, article III, section 2 of the Arkansas constitution commands that:

Elections shall be free and equal. No power, civil or military, shall ever interfere to prevent the free exercise of the right of suffrage; or shall any law be enacted whereby the right to vote at any election shall be made to depend upon any previous registration of the elector's name; or whereby such right shall be impaired or forfeited, except for the commission of a felony at common law, upon lawful conviction thereof.

Article II, section 4 of the Arkansas constitution provides that:

Electors shall, in all cases (except treason, felony, and breach of the peace), be privileged from arrest during their attendance at elections and going to and from the same.

Article II, section 6, of the Arkansas constitution reads:

Any person who shall be convicted of fraud, bribery, or other willful and corrupt violation of any election law of this State shall be adjudged guilty of a felony.

These provisions represent the constitutional law of the State of Arkansas. They are implemented by numerous detailed statutory regulations, typical of which are the following:

Arkansas Statutes—1947—section 3–1414, punishes by a $500 fine any interference or intimidation or other act to prevent any person from voting in a primary election; and section 3–1415 makes it a felony to intimidate, and so forth, any person in any general or special election.

It is made a misdemeanor for an officer to exact from any person more than $1 for a poll tax. The offense is punishable by fine, $100 to $250. Section 3–111 prohibits the imposition of a penalty for delinquent payment of the poll tax. Section 3–112 authorizes the issuance of a poll tax receipt without the payment of property taxes.

These statutes are only a few examples of the legal machinery that the State of Arkansas has provided to protect the right to vote. This machinery in no part discriminates against any elector because of race or color. It disqualifies only infants, aliens, idiots, and felons.

On the basis of these facts, Mr. Chairman, I strongly urge that since passage of this legislation will tend to infringe upon our constitutional rights rather than to protect an area which already has more than adequate protection, it be defeated.

Gates System Settles Defense Differences Fast

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include an article by David Barnett, chief of the North American Newspaper Alliance, and recently released to approximately 130 members of the North American Newspapers Alliance.

This is a particularly timely article in that it analyzes what many defense organization experts consider to be the most significant action taken by any Secretary of Defense since the establishment of that Department in 1947.

I refer to the directive of Secretary Thomas S. Gates, Jr., of December 29, 1959. In that directive Secretary Gates announced that it would be his policy to sit with the Joint Chiefs of Staff for consideration of matters in disagreement in the Joint Chiefs of Staff. With this one directive, Secretary Gates has improved the fundamentally sound, war-proven, Joint Chiefs of Staff system; he has made the principle of civilian control a meaningful fact; he has provided the means by which such civilian direction will be knowledgeable of the issues involved; and he has established a procedure that assures that a civilian Secretary of Defense will be an actual participant in the decision-making process rather than a remote observer of defense policy.

Mr. Barnett's article is a brief but persuasive answer to those who would abolish the Joint Chiefs of Staff and supplant it with the alien and inferior Single Chief of Staff organization. The reassuring aspect of Mr. Barnett's analysis is that it is based entirely upon a close examination of how the Joint Chiefs of Staff system is actually working at the present time. Also, the article explains how the energetic and effective action of Mr. Gates is making the Joint Chiefs of Staff system increasingly efficient.

This recently instituted policy of the Secretary of Defense has been the subject of commendation by the press, widely recognized authorities in the field of defense organization, and by Members of both parties in the Congress of the United States. Such widespread approbation of this policy is fully justified. I believe that one of the most pertinent observations, and certainly one by an unquestioned authority in matters of defense organization, was expressed by the Honorable CARL VINSON, chairman of the House Armed Services Committee, on March 3, 1960. On that occasion, in directing his remarks to Secretary Gates, Chairman VINSON commented on the Gates Joint Chiefs of Staff directive by saying:

With this one directive you have left an impressive mark on defense organization. You have strengthened our great Joint Chiefs of Staff system, and at the same time have dealt a shattering blow to the advocates of a single Chief of Staff system. And—you have vitalized and reaffirmed the constitutional principle of civilian control.

I commend this article to the attention of all Members of the House:

NEW GATES SYSTEM SETTLES DEFENSE DIFFERENCES FAST

(By David Barnett)

WASHINGTON, March 25.—Secretary of Defence Thomas S. Gates has proved in the past 2 months that his new system for dealing with disputes among the country's top military officers can work.

Since January 21, Gates has met personally with the Joint Chiefs of Staff on 10 subjects about which there were differences of opinion of the 3 service chiefs. Five of the subjects required fast decisions.

In four cases, Gates resolved the dispute "on the spot."

In the other, the civilian Secretary made a final decision within a week.

That record, Defense officials say, justifies the assertion that the new system constitutes the most important step taken in Defense organization since the unified Department was established in 1947.

The change was initiated by a Gates memorandum on December 29 which notified the Joint Chiefs that the Secretary was to be informed when disagreements begin to develop on an issue before the JCS. The civilian Secretary then would sit with the Chiefs when the subject was under consideration.

TOO "CHANCEY"

Early in January, Gates decided the mechanics of that arrangement were too "chancey," that he might not be available at the specific time the disagreements developed. The Department then established a schedule of meetings. Gates now meets at 2 p.m. each Monday with the Joint Chiefs.

The system thus has been—in a favorite Pentagon word—institutionalized.

The directive has brought the Secretary words of unusual praise from Democratic Congressmen who are military experts. Representative CARL VINSON, of Georgia, chairman of the House Armed Services Committee, told him:

"With this one directive you have left an impressive mark on defense organization. You have strengthened our great Joint Chiefs of Staff system, and at the same time have dealt a shattering blow to the advocates of a single Chief of Staff system. And you have vitalized and reaffirmed the constitutional principle of civilian control."

Before the Gates memorandum, there was no device in the Defense Department organization by which the civilian Secretary could be kept informed and in contact with top military policymaking.

The Secretary did not get into policymaking until the JCS sent him an agreed position or the members became entrenched in disagreement. Sometimes unanimity among the Chiefs merely represented a position reached by bargaining among the services.

The Joint Chiefs deal with some 850 issues—or papers, as they are called in the Pentagon—a year. Less than 1 percent of them result in so-called split papers, or disagreements, but these disputed matters often are some of the most important the military men have to deal with.

What does the Secretary do at these Monday meetings?

Pentagon officials insist Gates does not attempt to steer the discussion to a unanimous decision.

LISTENS TO LEARN

As one put it:

"The Secretary is not interested in getting lukewarm agreements. He listens, to learn, and he does some probing. He shakes positions by questions. He tries to determine how strongly a service Chief feels and whether the position is the result of 'service conditioning.'

"He moves in at the precise point when the decision becomes one of military policy rather than military technology. If the Secretary got involved earlier, he would be meddlesome; later, he would be too remote to make an effective decision."

Of the 10 matters so far handled under the system, 9 deal with subjects that are classified and cannot be disclosed.

One has been implemented publicly. It dealt with the Middle East Command and has been in dispute among the services for almost a year.

All three services—the Army, the Navy, and the Air Force—have forces in the area. In simplified form, the problem involved organizing the command to remove overlapping of responsibilities and planning authority.

There were arguments for a completely separate command for the Middle East with headquarters in that area. The Army and the Air Force were concerned that they were being frozen out of planning in the area.

Gates worked out this arrangement within a week after hearing the discussion: the Navy got the component commander, but the area remained under the European command with headquarters in London. The component commander has two deputies for planning, one from the Air Force and one from the Army.

EIGHTEEN OTHER PAPERS

Disposition of the question of the Middle East command started a chain reaction in the Joint Chiefs of Staff. Backed up behind the command issue had been 18 other papers upon which action could not be taken until the command question had been settled.

Not all of the meetings of the Joint Chiefs of Staff and Gates result in such swift implementation. The whole idea is to get the Secretary into areas of disputes quickly.

Three of the ten subjects handled so far were discussed at presentation type meetings. The discussions have not yet reached the point at which the Secretary has to make decisions upon which action will be based.

The other two subjects involved intergovernmental affairs. The meetings were held to develop Defense Department positions on policy matters with which other agencies, such as the State Department, also had to deal.

Representative Chamberlain's Views on Defense Reassuring

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. FORD. Mr. Speaker, an editorial in the Flint Journal for Thursday, March 31, 1960, entitled "Representative CHAMBERLAIN'S Views on Defense Reassuring," is a fine tribute to our colleague and helps to put into proper perspective the discussion on defense policy. Under leave to extend my remarks in the RECORD, I include a copy of the editorial, as follows:

REPRESENTATIVE CHAMBERLAIN'S VIEWS ON DEFENSE REASSURING

Representative CHARLES E. CHAMBERLAIN is to be commended for once again seeking out the opinions and views of those he represents in Congress.

His questionnaire to qualified voters in Michigan's Sixth District represents a sincere effort to learn directly from the people what problems concern them and what legislation they favor. By knowing their desires, he can do a more adequate job as their Capitol Hill representative.

He further demonstrated his interest in his constituents by acknowledging each questionnaire and personally answering many which asked specific questions. One such letter summed up his own ideas about the controversy of national security. Inasmuch as he is a member of the Armed Services Committee, his thoughts on the issue are significant.

In part he wrote:

"It is certainly no wonder that the American people are confused about the status of our defense program when they read the divergent views expressed through various news media.

"As a member of the Armed Services Committee, I have spent a major portion of my workdays in recent weeks listening to and studying testimony in closed sessions with our military leaders, including the Secretary of Defense, the Service Secretaries, the chairman and the members of the Joint Chiefs of Staff.

"While I readily admit there are many areas for honest differences of opinion regarding our military posture, I certainly want to assure you that from all I have heard from these top military men, I do not share the grave apprehension of those who say that our defenses are grossly inadequate and that our planning for the future is deficient.

"You will recall that last year we were hearing much of the same talk from most of the same people—and what happened? The Congress voted to reduce the President's defense requests.

"While I make no inference that our defense is not a proper subject for public discussion, I regret that the issue has become so political. Neither do I mean to gloss over the areas in which we need more progress. We have many complex problems and it is understandable that brilliant men of integrity would differ as to specific solutions. Yet I have an inherent faith that when all the talking is over, what America needs will be provided.

"As for myself, my policy has always been to resolve all areas of doubt in favor of our security. I would rather provide too much than too little. With this, I feel you must agree."

Few persons are fully aware of the facts and figures of national defense. They are classified top secret. This doesn't prevent many self-styled experts from speaking on the subject in an authoritative tone of voice.

It is reassuring in the midst of the resulting confusion to hear an expression of faith in our defense from a member of the Armed Services Committee, which has the advantage of briefings by military men and intelligence officers on what the U.S. program is and what the enemy's capabilities are believed to be.

And it is comforting to know that we are represented by a man who has at heart not only the interest of his country but that of the people in his district who put their faith and fate in his hands.

Flight Data Recorders

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 8, 1960

Mr. HIESTAND. Mr. Speaker, the recent crashes of commercial airliners have caused great concern throughout the country due to the inability to determine, in many cases, the reasons for the disasters. Countless thousands of dollars and possibly hundreds of thousands of dollars are expended between government, the airlines, and aircraft manufacturers in the investigation of the causes of each aircraft accident. Despite this, we still do not know, in many instances, why the crashes occur.

Perhaps many lives and much money could be saved if all commercial aircraft were equipped with crash recorders

which were recording important types of information. Recently, the Federal Aviation Agency issued an order requiring installation of flight data recorders in additional commercial aircraft operating at certain altitudes. The application of such recorders has been extended from pure jets to turbo prop aircraft.

Mr. Speaker, I suggest additionally that the Government should extend the number of channels of information required of such recorders. Currently required channels are: Time, airspeed, altitude, directional heading, and vertical acceleration. If we could also obtain information on cabin pressure and airplane bank and pitch we could help determine whether an explosion may have occurred in an aircraft accident as well as additional information which could be extremely valuable.

In view of this, I urge that the FAA give serious consideration to the possible extension of channels of information currently required by existing flight data recorders.

John Volpe on Highways

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. SCHERER. Mr. Speaker, a timely and important address concerning the expanded Federal highway program was made by Mr. John A. Volpe before the Mississippi Valley Conference of State Highway Departments in Chicago on March 17. Few men are so well qualified to discuss the highway program as Mr. Volpe. As you know, he was appointed by President Eisenhower as the first Federal Highway Administrator under the new program, to serve an interim term of 7 or 8 months until Mr. Bertram D. Tallamy could assume the position. Earlier, Mr. Volpe served a term of several years as Commissioner of Public Works of the Commonwealth of Massachusetts by appointment of Gov. Christian D. Herter, now our distinguished Secretary of State.

Mr. Volpe has had long experience as a building contractor, being president of the John A. Volpe Construction Co. of Malden, Mass., which he started in the dark days of the depression more than 25 years ago and which he has built into one of the largest and most successful building firms in the Nation. His attainments as a contractor are attested by the fact that he is now the president of the Associated General Contractors of America, the national organization of general contractors which serves as spokesman for the industry. Active in civic and public affairs, Mr. Volpe is now a candidate for the Republican nomination for Governor of Massachusetts.

Under leave to extend my remarks, I include the text of Mr. Volpe's address to the Mississippi Valley Conference of State Highway Departments in the RECORD.

ADDRESS BY JOHN A. VOLPE, PRESIDENT, THE ASSOCIATED GENERAL CONTRACTORS OF AMERICA, AT THE MISSISSIPPI VALLEY CONFERENCE OF STATE HIGHWAY DEPARTMENTS, MARCH 17, 1960, CHICAGO, ILL.

I was delighted to accept your kind invitation to address the Mississippi Valley Conference of State Highway Departments. It has given me an opportunity to meet many old friends and renew acquaintanceships made during my services as a highway official and as interim Federal Highway Administrator. Today, however, I am wearing the hat of the vice president of the Associated General Contractors of America. Next week, I will be wearing the hat of the president of the Associated General Contractors of America as I will be installed at their convention a week from today. Of course, you know that I normally wear a hat as a contractor—a building contractor and not a road builder as some people think. Of course, next year I hope to wear another hat—that of Governor of the Commonwealth of Massachusetts, so you can see that I have been on both sides of the fence and have quite a few hats that have, I believe, given me an opportunity of discussing our national highway problems from different angles.

These various experiences make me very proud of my profession, and, now that I am about to assume the presidency of the Associated General Contractors of America, I feel that this new honor which has come to me will, in a very real sense, enable me to make a further contribution to my fellow citizens.

We general contractors feel our public responsibilities deeply. The position of our industry as the Nation's largest makes it imperative that we do so. The position of the AGC as the spokesman for the construction industry requires that the president of our association assume these responsibilities as part of his job.

One of the greatest responsibilities now facing the AGC and the entire construction industry is the Federal highway program. This is also your responsibility. We share it with you.

First of all, I would like to indicate my concept of the job that has been done by highway officials throughout the country for many years but, particularly, during the past 4 years. You and I are, of course, deeply concerned that there are those, both in official capacities and sideline quarterbacks, who have, in my opinion, unjustly critized the highway program.

I need not dwell on the fact that this long-range highway program boldly envisioned by President Eisenhower and passed by a nonpartisan Congress marked a real triumph for concise planning and orderly programing. Through the efforts of highway officials, the Associated General Contractors of America, and many other organizations and citizens generally, the President and the Congress were convinced that if we were to properly expend taxpayers funds, that we should do so on an orderly basis rather than on a feast-or-famine basis such as was the case in years gone by. Of course, this was a dream program, not only for State highway departments but for contractors, equipment manufacturers, and material suppliers, as well as many other interrelated groups associated with the program. All of us thought we knew just what we could expect during each year for the duration of the program—expected to be 13 years. We, of course, have had a sad awakening during the past 2 years particularly.

All of you are familiar with the problems and there is no need to repeat them here. Suffice to say that all of us were given the go-ahead signal as I so clearly remember when President Eisenhower swore me in as the first Federal Highway Administrator and said, "Let's get the show on the road."

The highway departments throughout the country geared themselves to a program based on specific commitments under this act and proceeded accordingly.

You, and other dedicated highway officials have worked long and arduous hours, very frequently beyond the call of duty, in prosecuting the program.

Based on statistics which I have procured from the Bureau of Public Roads, in the 3½ years prior to the passage of the 1956 act, on the ABC system, the total cost of projects completed amounts to $3.7 billion. In the 3½ years after passage of the act from July 1, 1956, to December 31, 1959, the total cost of projects completed amounted to $5.2 billion, an increase of 37 percent.

On the Interstate System in the 3½-year period before the passage of the act, projects completed amounted to $116 million. While in 3½ years after this figure rose to $2.3 billion, an increase of 1890 percent. When these two systems are combined it shows an increase of 94 percent in the two systems.

I have also checked on the volume of contracts advertised and funds obligated for both systems, and find on the ABC system that in the 3½ years before passage of the act, the total amounted to $4½ billion whereas in the 3½ years after the passage of the act the total was $5¾ billion, an increase of 29 percent.

On the Interstate System on contracts advertised and funds obligated, the figure was $422 million in the 3½ years before passage of the act and over $7 billion in the 3½ years after passage of the act or an increase of 1,559 percent.

Combining these totals shows that in the country as a whole, contracts advertised and funds obligated in the 3½ years after passage of the act showed an increase of 155 percent rising from less than $5 billion to over $12¾ billion.

I am proud of this record and I am sure you must be proud of it also.

I am sure that most of you are only too well aware that all of this has been done with a relatively small increase in the staffs of both the Bureau of Public Roads and the State highway departments.

And what has been your reward for this accomplishment?

Now, of course, I mentioned criticism and unfortunately a great deal of it was made without even one witness having been called. Now, I am sure most of you are not unhappy with the fact that an investigation is being carried on but, I am sure that you will agree with me that we are unhappy with the fanfare that developed even before the hearings began.

As an example, I call to your attention a news item which appeared in a Washington, D.C. newspaper of February 9. I quote:

"Hints of far-reaching irregularities preceded opening of House investigation of the multibillion dollar 41,000-mile Interstate Highway System."

The news item goes on to say that the "hints of irregularities" came from a Congressman who is quoted as saying, "Facts now being unearthed and soon to be disclosed could make the highly publicized payola irregularities seem like a child's game of marbles in comparison."

Congressman GORDON SCHERER, of Ohio, to his credit, indicated at the Boston AASHO meeting, that irreparable harm could be done to a fine highway program by ballooning all out of proportion unduly publicized mistakes and deficiencies, but failing to point out how few they were.

During the few months that I served as Administrator, I predicted that the highway program had moved into the big leagues. It undoubtedly would attract various interests which would try to rush in and reap profits from it.

There is no doubt that in a program of such vast scope undertaken in every State in the Nation some wrongdoing may be found.

I do not know intimately the highway officials and workings of every highway de-

partment in the country and there may be a small number where politics has entered the scene.

I do know, however, that the large majority of the departments are staffed with competent, honest officials dedicated to the task of getting for their States and the Nation a full dollar's value for every dollar spent.

I believe that the Bureau of Public Roads under the leadership of Bert Tallamy has done an outstanding job of coordinating and directing the overall effort. He and his associates certainly deserve warm commendation from all of the citizens of the country.

While I am on this subject, perhaps I may be allowed to say a few words specifically in answer to the suggestion of a pattern of collusion among contractors to reap undue profits from highway contracts. I am sure you all know that there is no such pattern—that in today's competitive construction world there could be no such pattern of collusion.

Facts prove that exactly the opposite is the true case. The increasingly keen competition for highway contracts is forcing the price of highway construction down, and it has been doing so for some time.

Last year, according to Bureau of Public Roads figures, contractor's bid prices were at their lowest point in 3 years. And State highway departments, as you all know, are receiving, in many cases, as many as 15 bids per project, and these bids run as much as 20 percent below the engineer's estimates. Indeed, it is a rare occasion when a highway contract is awarded on a bid that is above the engineer's estimate.

Now, it occurs to me that these facts indicate that if there is any collusion among highway contractors, it exists in a form guaranteed to give the American public the greatest possible value for its tax dollar.

There seems ample reason to believe that it is in the field of highway construction today that the American taxpayer receives the most for his money.

In view of the above facts, and taking into consideration the importance of the highway program to everyone, as well as the effort and expenditure that has already been devoted to it, it is my hope that many of the current remarks heard about the program will shortly be forgotten.

I trust that some comments about a cutback in the Interstate System within urban areas are just that—comments and nothing more. You have indicated that traffic jams are heaviest in the cities, and the bulk of taxpayers are concentrated in urban areas, so why shouldn't gasoline tax money finance highway construction in these areas. As a matter of fact, any change along this line would be contrary to the highway act itself which specifies that to the extent that such use is practicable, suitable and feasible, local needs shall be given equal consideration with the needs of interstate commerce.

Some talk also has been heard about the possibility of changing the 90–10 ratio provided for in the act. You, as highway officials have pointed out, and I concur with you that many States are having difficulty financing the 10 percent now required, and it certainly would be impossible for many States if this percentage were increased.

It all boils down to this:

The States believed that Congress had made a firm commitment in 1956 with respect to a specific highway system calling for a specific share of the cost to be borne by the Federal Government, and for completion of this program within a specific time. Based on these commitments, the States have made specific plans, borrowed money and in many cases, expanded their highway departments to complete the job they thought they were given to do. Contractors, manufacturers, equipment distributors and material producers also took Uncle Sam at his word.

The temporary 1-cent gasoline tax increase passed late in the last congressional session prevented a complete stoppage of the program. I might add that as late as July of last year it appeared we might have no interstate apportionment authorized because of this disagreement between the White House and Congress over the method of financing.

PERSISTENCE OF PRESIDENT

Now, what can we see ahead of us for 1960 and the years following.

Certainly you are all aware of the decline in construction awards in fiscal 1960 particularly because of the control of reimbursement planning which the bureau was obliged to place on the States to keep within the $3½ billion limit necessary to stay within funds available in the highway trust fund.

The worst is over and the second half of fiscal 1960 will allow the States to obligate the States twice as much money as in last half of 1959. The President as you know, has asked for an additional ½-cent gas tax increase this year. This is an election year, of course, so it is uncertain what will happen with this request. Of course, next year the economic study is due and all of us are hopeful a permanent solution to the financing of the highway program will be found.

I would hope that some States will proceed with interstate projects which have already been designed and prepared for advertising.

Financing of these projects in some States is being undertaken by short term borrowing which would be repaid by the Federal Government as additional apportionments become due. So much for financing.

In addition to financing, of course, there are also other problems in our highway program. These include the engineering problems, and you and I know that good engineering is the only satisfactory solution to any problem.

I certainly want to compliment the Bureau of Public Roads and the 50 State highway departments for the wonderful job that they have accomplished during the past 4 years in retooling their organization to handle such a tremendous undertaking. As I travel across the country, I marvel at each of the complicated urban interchanges which were designed by our engineers and constructed by our contractors under the Federal interstate highway program. These are truly wonders of the world. I want to compliment the AASHO, the Mississippi Valley Conference, and the Bureau, for its excellent work in disseminating good engineering practices and ideas amongst the States and would like to see this policy continued, not to the extent of making one State a prototype of another, but to advance the best engineering experience and theories so that each individual State can have a vast reserve of information and select that which is the best for their own individual problems.

From my experience as a building contractor, it is my belief that considerable engineering manpower could be saved by two other means, namely, more lump-sum contracts and fewer engineers on inspection. You might say now that he has changed his hat again and is favoring the contractors. Certainly this is not true in the first instance, because I know from my own business experience that it takes several estimators working full time to figure quantities and costs on lump-sum building contracts. The major saving in the use of lump-sum contracts applies to you gentlemen who have the responsibility of supervising construction projects. Lump-sum contracts eliminate the necessity of keeping records of unit items in detail and on many projects would save substantial engineering man-hours.

In my home State of Massachusetts, I initiated lump-sum contracts on bridges and realized immediately a considerable savings in engineering costs.

The second part of my recommendation to relieve engineering manpower is to have fewer engineers as inspectors on a project. On a building contract of $5 million, the owner would have one or possibly two inspectors known as clerk of the works or some such similar title. The architect makes periodic inspections, as well as engineers and consultants, on special type subcontracts, but in general, there are considerably less inspectors than on highway or bridge projects.

Assuming that most of the contractors are capable and reliable (that is your job to insist on proper prequalification of bidders) and the adoption of "results" specification on certain items that will allow a contractor to use his know-how and ingenuity, will result in better work and lower engineering and inspection cost.

I hesitate to get into the field of State highway personnel versus consulting engineers. I cannot imagine a highway division without an adequate permanent engineering force.

Consultant engineering firms are to be congratulated on their assistance to most of the States in getting the Federal highway program underway, but with a financial slowdown such as we are experiencing at the present I believe that the State forces should be kept intact to work on the multitudinous problems in redesigning and rebuilding the remainder of the roads in every State which will not benefit under the Federal Highway Act and must be improved to keep pace with the increased automobile traffic.

Of course, competent engineering firms should be utilized for complicated projects and peak periods, as they have much to contribute.

In some of your States you utilize prequalifications of contractors. We believe in this as it generally makes for better conditions and better competition. I suggest, however, that greater care should be exercised in the selection of contractors and that awards not be made to contractors unless they are financially qualified and have the equipment and know-how to complete the projects.

Gentlemen, you hold all the cards and I am sure that if you play them right, your contractor-engineer relations can generally be improved.

I recommend that frequent contractor-engineer conferences be held, that specifications be revised to eliminate obsolete, slow, and unsatisfactory methods of construction.

Payments to contractors should be expedited. In the East I know of two States; one pays its contractors 3 days after the resident engineer makes out his estimate, and the other takes 2 or 3 months to process the same type of estimate. Just imagine. Any estimate is generally only a good guess of the amount of work done as estimated by a busy resident, but redtape can delay the payment for too long a period. Moneys held in reserve should be reviewed occasionally, and only funds necessary to protect the State's interest should be retained. The percentage retained by many States is much higher than actually needed.

Remember, a penny saved is a penny earned, and a contractor who does not have to borrow to meet payrolls, equipment payments, etc., can save considerable money in interest on a project if the State and the engineers involved can use some of the expedient and simple methods of handling the finances as I have suggested. I am sure that such practices will reflect lower prices to some degree.

I would like to comment briefly on the fact that we have not done as good a job as should be done in keeping the public and legislators informed on the need and progress of the highway program.

Although it has been sold once, this is a continuing job, and we must continue to sell the need of the program and how essential

it is to keep it going on an orderly programed basis.

I would like to just say a word about urban renewal which ties in so closely with many of the highway projects being undertaken. I believe it is the duty of all highway administrators to coordinate their plans with redevelopment officials.

Oftentimes locations for sections of the new highway facility can be located in part of the slum area or sections can be utilized for parts of interchanges, ramps, etc., designed to serve the area after it is redeveloped.

The cost of construction of a new highway, contiguous with an urban renewal project, often is allowed as a down payment, or part of the communities contribution to the redevelopment project. We should not pass pass up any opportunity to improve our local streets when an urban renewal project is contemplated.

Before closing, I would like to touch on a subject that has been kicked around like a football without a receiver. That, of course, is mass transportation.

I am firmly convinced that we must concern ourselves with mass transportation if our large urban cities are to survive.

We are all aware of the fact that in urban areas our traffic surveys, highway designs, and construction have not been adequate and we are still encountering traffic congestions.

I recommend that serious consideration be given to this problem by highway planners and that recommendations be presented by highway officials to State legislatures on how mass transportation can best be coordinated with a highway system.

In closing, may I say that all of you are making an outstanding contribution to the welfare of your fellow citizens. I trust that you will not be deterred by occasional criticism. Do the best job you know how, and I am sure that your fellow citizens will thank you for what you are—dedicated public servants doing a constructive job for the welfare of the Nation.

The Washington Post Endorses as "Sensible" Proposal To Make Unlawful Retired Officers Using Influence or Selling to the Pentagon

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. HÉBERT. Mr. Speaker, the Washington Post on Monday joined with the Washington Star and the Washington Daily News in supporting criminal penalties for retired officers who use their influence or who sell to the Pentagon within 2 years after retirement. The action of the Washington Post makes the position of Washington's three great newspapers unanimous.

The Washington Post called my proposed amendment to the legislation which is scheduled to come before the House on Wednesday as "sensible reform."

Nota single editorial of any newspaper in the Nation that has been brought to my attention disagrees with me on the issue. From every section of the Nation has come favorable and encouraging comment.

There is no middle road. Either such practices shall be permitted and given the blessing of Congress or shall be made unlawful by the imposition of criminal penalties.

There can be no compromise with this issue. It is either wrong or it is not. I believe it is wrong.

The Washington Post editorial follows:

WHEN OFFICERS RETIRE

Two questions concerning retirement provisions for military personnel deserve public attention. The first involves the relatively modest problem of rectifying a defect in the military pay bill passed by Congress in 1958. This bill breached a century-old military tradition that retirement benefits should be related to active duty pay; it provided a benefit increase of 6 percent for officers who had retired before June 1, 1958, and continued the pay-benefit system only for those who retired after that date. Plainly this discriminatory policy has a demoralizing effect on service personnel. When the House Armed Services Committee begins hearings tomorrow there will be wide support for the legislation which would remedy this inequity.

A second matter, however, is far less simple. When some officers retire, they step into affluent positions with private concerns that do most of their business with the Pentagon. Investigations conducted by Representative F. EDWARD HÉBERT have disclosed a widespread disregard for the spirit, if not the letter, of conflict-of-interest laws.

A civilian official of the Justice Department is deterred by criminal penalties from accepting within a 2-year period of leaving the Government any private post that involves any matters he handled as a public official. However, when Mr. HÉBERT proposed a tightening up of similar penalties relating to retired admirals and generals, the House Armed Services Committee rejected this sensible reform. If the military has a just grievance in discriminatory retirement legislation, the public has an equally valid objection to practices which tend to tarnish the reputation of Pentagon brass.

In Support of Family Farm Income Act of 1960

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD my statement, "In Support Family Farm Income Act of 1960," which I submitted on March 30 to the House Committee on Agriculture.

I am proud to be a cosponsor of a proposal which reflects the thinking of Representatives from both rural and urban areas. Its sensible and workable approach will benefit the farm community, the consumer, and the taxpayer.

My statement follows:

IN SUPPORT OF FAMILY FARM INCOME ACT OF 1960

(Statement by Congressman JAMES ROOSEVELT submitted to House Committee on Agriculture, Mar. 30, 1960)

Mr. Chairman and members of the committee, I am grateful for the opportunity to supplement my brief remarks which I made before you on March 2.

I join with my colleagues in support of the Family Farm Income Act of 1960. This legislation would raise family farm income, which will reach a new low in 1960, and would, at the same time, drastically reduce cost of the Federal farm program. I believe that in the long run the legislation is not only to the advantage of these engaged in agricultural pursuit who suffer gross inequality in the marketplace, but to the advantage of consumers.

Family farmers are entitled to sufficient income to maintain their families at a decent standard of living—a standard of living, I might add, which compares with the standards of people living off farms.

Other groups, including labor and business, are protected by many Federal laws and in addition, because of the nature of our industrial organization, have been able to increase their bargaining power greatly. As a result, business as a whole—particularly big business—is in a favorable position. Labor, where it is organized, is able to maintain a relatively good income.

Farmers, on the other hand, as the largest segment of our economy which is unorganized, have comparatively little bargaining power. Every farmer is competing against every other. When there is a surplus, prices may be driven to below cost of production. Industry, on the other hand, maintains its prices and merely reduces production when demand falls off. The record indicates that farmers, partly because their costs are fixed and partly because of the competitive situation, must go on producing more and more as prices decline.

That is the reason, Mr. Benson's effort to reduce surpluses by increasing production has fallen on its face. Last year the Secretary of Agriculture turned corn loose, lowered the support price but told farmers they could produce all they wanted to. The result is that corn is running out of our ears and the corn situation constitutes another farm scandal. According to the Wall Street Journal, the inevitable result of reduced price is increased acreage. Here is a quote from the March 16, 1960, issue of that publication which never, to my knowledge, has been called irresponsible:

"DE KALB, ILL.—Husky farmer Joseph Faivre may be planting something more than corn on his 640-acre farm this spring. What comes up next fall could be the biggest crop of trouble the administration's farm program has faced so far.

"In 1958, the Government's price support for corn was $1.36 a bushel; Mr. Faivre planted 52 acres. Last year, the support dropped to $1.12 and the Illinois farmer planted 186 acres. 'This year,' he says, 'it will drop to $1.06, so I'm going to plant 287 acres.'

" 'With price supports going down, I have to increase my volume to end up with the same income,' Mr. Faivre explains."

This bill—the Family Farm Income Act of 1960—would cost the Government very little by providing for payment-in-kind to the farmer who reduced his acreage. It would authorize a 10 percent deduction in acreage for which the farmer would receive nothing and an additional 30 percent reduction for which the farmer would receive payment out of the Commodity Credit Corporation holdings. Thus, the surplus which is costing so much and which constitutes a major scandal would be reduced. In addition, the bill provides that farmers can get together and plan their production and vote on such a plan, a two-thirds majority being required to put it into effect.

I firmly believe that if something is not done to maintain and stabilize the family farmer that inevitably agriculture will be taken over by big business. Investigations of the House Small Business Subcommittee

No. 5, of which I am privileged to be chairman, indicate that national corporations are putting out of business small distributors of food products. Often the result of price wars carried on by large corporations is higher prices for consumers and lower prices for farmers. In some areas, where dairy companies carried on price wars, the consumer benefitted during the price war, but after the large corporations had accomplished their purpose of destroying local competition, they raised prices to a point higher than they were before the price war.

Investigations of the House Small Business Subcommittee indicate that chain stores are, to some extent, now taking over in the area of agriculture. They are engaging in cattle feeding and packing and they are manipulating the market, by-passing the Government regulated stockyards and paying the farmer the lowest possible price. At the same time, they have been raising prices to the consumer. For example, lamb producers a year or two ago experienced a net loss on their operations. Safeway stores at the same time raised the price of lamb chops to the consumers. I have introduced legislation which will prevent chain stores from engaging in agricultural activities.

The Family Farm Income Act of 1960 proposal is complementary to my proposed legislation which would prevent, or check, vertical integration in the food industry. It would give the farmer bargaining power and enable him to protect himself from price manipulation and discrimination practices of giant corporations.

The urban consumer, although he naturally wants to get his money's worth for food, has no desire to grind down American farmers to the status of peasant or peon. The urban consumer, I believe, is for fair play and not economic discrimination.

Critics of this 1960 proposal have not produce any convincing arguments against it. They talk wildly of regimentation. The farmer who is losing his farm, or is reduced to a state of penury because of low prices, is the one that is regimented—not the farmer who participates in a farm program to determine his own destiny. According to some of the gentlemen on the other side of the aisle, this regimentation seems to consist of two-thirds of all the farmers participating in a referendum to determine what kind of a program they want.

What could be more democratic and more in the spirit of free enterprise? A referendum by farmers is no more undemocratic than a congressional election.

Mr. Chairman, I respectfully submit that this Congress has a pressing obligation to act to resolve the farm delimma created by a bungling administration. I likewise submit, respectfully, that the Family Farm Income Act of 1960 merits support and enactment as a practical, workable and fair means to resolve this dilemma—a dilemma which is costly to the farmer and the American taxpayer.

The Cuban Situation

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following report on the Cuban situation and Latin America has been sent to me by a constituent who has been making a study of the many problems confronting our Nation in our own hemisphere.

As the report is intelligent, clear, brief, and authoritative, I commend it to the House of Representatives for their thoughtful consideration:

I. Cuban sugar: If it is decided by Congress to cut the Cuban sugar quota and to redistribute it among the nations more friendly to the United States than Cuba, I think it would be very important to back up this action by reasoning which is as invulnerable as possible to attack on the ground of being just economic retaliation.

One line that could well be taken could be as follows:

(A) Cuba has gotten itself in a position of having a kind of monopoly on the Latin American sugar trade with the United States. Cuba attacks the United States on monopolies when it is following the same policy itself. The virtual Cuban monopoly does positive harm to the legitimate desire of countries like Mexico, Costa Rica, Panama, Nicaragua, Haiti, Peru, Brazil, and others, to get a fair share of the prize U.S. market.

(B) It has been argued that if the Cuban sugar monopoly were taken away from it and sugar production was built up in other countries such as Mexico, Costa Rica, etc., that if and when Cuba would be a more reliable and friendly supplier of sugar to the United States, it would become desirable to again use large quantities of their sugar and this would cause trouble in the new countries. There are two possible fallacies in this point of view:

(1) The countries who are asking for an increased sugar quota to the United States are not doing so on the basis of building up their sugar quota but on getting a better price in the U.S. market for their existing production.

(2) Any proper reorientation of the Cuban economy in the future ought to involve less emphasis on sugar and a greater diversification of their agricultural production. At the very least Cuba ought to produce its own food crops, which it falls very short of doing today. Therefore there is plenty of room, after Cuba changes, to see that its restored economy follows sound lines.

II. Cuba as a base for subversive activities in Central America and the Caribbean in general: All the Central American governments and many others in the Caribbean area and South America also, have noted with alarm the tremendous build-up in activities of Cuba's diplomatic missions. For a little country with as few legitimate diplomatic problems abroad, an unconscionable amount of money is being spent by these Embassies and certainly—at least in Central America—the Cuban diplomatic missions are crudely intervening in the internal affairs of their host governments. The following activities are notable:

(A) Extraordinarily large and expensive propaganda campaigns. Masses of literature. Paid time on radio networks. Motion picture shows. Support and organization of "Friends of the Cuban Revolution" organizations are following an identical pattern in all the countries. Cuban Ambassadors are continually seen with and found encouraging leftist student and labor movements.

(B) In this connection the Communists in Cuba are clearly following orders from Moscow. In the past Moscow has been almost overtly using its tremendous diplomatic establishments in Mexico and Uruguay, for instance, as the focal points for dissemination of subversive literature and the carrying out of subversive activities. This conduct is becoming increasingly unpopular in the host governments. Mexico has declared certain Russian diplomats persona non grata and there are press stories that Uruguay is about to demand that the 80-man Embassy in that tiny country be cut down to 6 or 7, comparable to the Uruguayan representation in Moscow. It seems clear that Russia, foreseeing a future limitation in Latin America on the illicit activites of their own embassies, is building up, under the cover of Cuba, a strong mechanism to keep the same work going for the future.

III. Cuban inspired third force labor movements: Russia, for a generation or more, has had a very strong Latin American international labor mechanism which has very effectively placed Communists in key positions and even control in a very large percentage of the Latin American labor movements. In the past this has been operated from Mexico by the known Mexican Communist Lombardo Toledano. The overtness of the Communist connection, just as in the case of the Embassies, is becoming embarrassing to Russia and the new tactic is, again, working through Cuba to set up a so-called third force labor movement through Latin America. It is understood that the Communists, for cover reasons, are prepared to sacrifice their current mechanism if they can get the other one going.

IV. The Cuban counterpart of UPI and AP press news services: Cuba has recently created Prensa Latina, a wire service available throughout Latin America and subsidized by the Cuban Government, no doubt with help in that connection from the international Communist propaganda apparatus. This service is furnished free where papers, as all too frequently in Latin America, have difficulty in paying for legitimate wire service. The legitimate news articles are heavily interlarded with Communist propaganda and all stories play up the Communist point of view.

V. Cuban supported revolutionary expeditions in Central America: Since the rise of Castro a dozen or more expeditions, supported with Cuban Communist experts on guerrilla warfare and with Cuban arms, have been keeping the countries in the Caribbean in a state of upset conditions and instability. All of these expeditions are operating under the guise of antidictatorship forces, which of course is a tremendously popular thing in Latin America today. In fact, the last thing in the world that the Communist conspiracy wants to do is to overthrow dictators. They fatten on the ability to use the dictatorship theme as a slogan and an entering wedge into liberal movements. It is only when the Communist conspiracy feels that it can substitute its own dictatorship in a country, through control of revolutionary movements, that it is really anxious to win a revolution. Thus, this multitude of small, 50 and 100 man, expeditionary forces, is currently being used for 2 purposes which give real fundamental aid to the Communist conspiracy. These are:

(A) By creating a climate in the press of the world that Central America, for instance, is in a very unstable political situation because of constant revolutionary action, they are accomplishing their major objective of trying to bring about economic depression in the area, which will set the theme for popular discontent and uprisings. The existence of this apparent political instability freezes up the desire of nationals of the countries in the area toward investing their own funds in development of their own country and has virtually killed all possibility of additional foreign investment.

(B) A more subtle purpose of the manner in which these 50- and 100-man expeditions is used appears to be a deliberate attempt to liquidate the manpower available to sincere democratically inclined revolutionaries who are merely discontent with their home governments. It is obvious that so long as there are strong non-Communist revolutionary groups, that communism operating through Cuba cannot hope to control any revolution that succeeds. However, once the more or less legitimate revolutionary forces are weakened then they will have to, if they

wish to continue, seek Cuban support and permit Cuban control.

In furtherance of this tactic the recruits for revolutionary expeditions are invariably told that they can expect popular uprisings when they invade; that fleets of airplanes will drop more troops and supplies, etc. These promises, which emanate from Cuban sources, are never met and the poor, misguided revolutionaries have, as a result, stuck their heads into traps and are rapidly being liquidated.

Reds Court Suicide—The True Image of Our Defense

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks, I include an editorial "Reds Court Suicide—The True Image of Our Defense," from the San Diego Union, Friday, March 18, 1960.

This editorial is of particular significance at this time because it sets forth in clear, understandable terms the sound strategic reasoning that is the foundation for our defense policies. In so doing, the editorial underlines the strategic wisdom that characterizes our defense thinking which has rejected the dangerous clamor that our Nation should match the Soviet Union on a missile-for-missile, weapon-for-weapon basis.

As the editorial points out, the Secretary of Defense, Thomas S. Gates, Jr., has resolutely rejected such irresponsible demands, and has proceeded to follow a strategically sound policy of maintaining an unquestioned superiority of deterrent power over the Soviet Union. In so doing, he is protecting our Nation and the free world from the disaster that could result if we put "all our strategic eggs in one basket." In his forceful observation that as a nation "we must not allow ourselves to overconcentrate on any instrument of war," Secretary Gates has enunciated a fundamental and unquestionably sound concept. Because our Government is following the policy of basing our deterrent forces on balance, versatility, and mobility, we have a total power that surpasses that of the Soviet Union.

As the editorial indicates, it is indeed fortunate that the Nation possesses in Secretary Gates a man of such administrative ability and sound strategic thought. His views, as reflected in this editorial, make sense and underline the reasons why we can have a genuine feeling of pride and confidence in our Nation's defenses.

The editorial follows:

[From the San Diego Union, Mar. 18, 1960]

REDS COURT SUICIDE—THE TRUE IMAGE OF OUR DEFENSE

Defense Secretary Thomas S. Gates, Jr., has given the true image of our defense capabilities. An attack on this country, Mr. Gates testified before the Senate Space Committee and Preparedness Subcommittee "would be tantamount to suicide."

The defense issue has been so steamed by controversy that the mirror of the Nation's real strength has been blurred. Many politically inspired critics, notably Senator STUART SYMINGTON, Democrat, of Missouri, have insisted that the United States must match Russia on a missile-for-missile basis. And they have asked the public to pass judgment on how many long-range missiles we should have. The foolishness of having the public decide such a highly technical issue is obvious.

The important consideration is that the Nation have the power to bring destruction to anyone who attacks us. And, in Mr. Gates' words, we have that power in combination. The administration's program is designed to maintain this strength.

The administration has concentrated on the development of the solid fuel missiles, meanwhile depending on a mixed defense of our present missiles and manned bombers. Our existing deterrent power is acknowledged to be tremendous and far superior to that of the Soviet Union.

We would be in trouble if we put all our eggs in one basket, something the defense critics are asking the Nation to do. Mr. Gates, who with the President and the Joint Chiefs of Staff is charged with keeping the Nation strong, told the Senate committee that "we must not allow ourselves to overconcentrate on any instrument of war."

Our deterrent force in being shows that the administration is not letting this happen. It is predicated on balance and marked by versatility, mobility, and tremendous striking power. This balance embraces the capability for general war, limited war, and the quick-to-the-spot police actions.

The United States does not have a static posture. For Mr. Gates told the Senators that U.S. plans are constantly under review. And it very correctly has given first priority to deterrence. There is no deterrent gap now, and Mr. Gates made it abundantly clear that there will not be one.

The United States will not permit itself to be mesmerized by one weapon or one threat. Its eyes are open to the broad challenge.

Hon. Russell V. Mack

SPEECH
OF
HON. JOHN YOUNG
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1960

Mr. YOUNG. Mr. Speaker, I want to join my colleagues from the State of Washington and others in paying a brief, but sincere tribute to the memory of our departed colleague and friend, Representative RUSSELL V. MACK, of Washington.

He was a fine gentleman, a genuine representative of his district and his Nation, and a man of great courage in his devotion to the public interest.

He served for many years on the Public Works Committee, where he proved to be at all times broad in his approach, kind in his treatment to those in disagreement with him, and helpful to those of us whose tenure of service on the committee was less than his long and fruitful years of dedicated work on the committee.

He will be greatly missed. In his passing, the Congress of the United States has suffered the loss of one of its Members it could least afford to lose. My deep sympathy goes to his family, to the congressional district he represented so well, to the great State of Washington, and to the Nation.

Airline Asks Subsidy

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. CUNNINGHAM. Mr. Speaker, I have had occasion previously to comment upon the way in which when the weather becomes unfavorable mail which ordinarily is transported by highway or airway is assigned to the railway for transportation to the postal patron.

All of us are concerned about the way in which the pattern of airline accidents have caused alarm among the general populace. Now a new ingredient has been added in that one of the country's major airlines, Capital Airlines, is asking the taxpayers of the United States not only to venture as an individual to travel in equipment having a poor safety record but the taxpayer as a group is being asked to sustain the company's losses as a result of such accidents.

Capital Airlines is asking for a subsidy of 22.5 cents per revenue-plane-mile to offset its losses brought about by bad winter weather and "the public's worry over air accidents." Presumably the transportation of first-class 4-cent mail by air might be thought potentially to offset some of this subsidy if it should be approved. But if mail traffic to offset Capital's losses is taken away from surface transportation, would not the railroads then be justified in asking for a subsidy to make up for the loss of mail traffic?

Mr. Speaker, in the question of transporting first-class 4-cent mail by air there is the basic legal determination of whether or not Congress consents that it be done. I have asked that the House Post Office and Civil Service Committee take speedy action on my bill, H.R. 9488 to clarify the law in regard to transportation of first-class mail by air and to provide specifically that only mail bearing first-class airmail postage shall be furnished air transportation.

I hope that we will not now again become involved in a series of subsidies to airlines. It might be worthwhile for the United States to copy the European system under which a nominal charge of $1 is charged to each user of an airport thereby enabling the users of an airline to pay in part for the facility, to lower the tax burden on the general public and generally to assign the cost of maintaining air facilities in a more equitable manner.

I hope that the fresh request for a subsidy will be laid aside and under leave to extend my remarks I include a newspaper article from the Washington Eve-

ning Star for March 26, 1960, at this point in the RECORD:

[From the Washington (D.C.) Evening Star, Mar. 26, 1960]

AIRLINE ASKS U.S. SUBSIDY

Capital Airlines, suffering from bad winter weather and the public's worry over air accidents, asked the Government for financial help yesterday.

Lawyers told the Civil Aeronautics Board that Capital had a net loss of $1,811,679 in January and one of $2,131,745 in February.

For the 12 months which began March 15, they said, Capital requires subsidy payments of $12,949,000.

Accordingly, they asked "an immediate 22.5 cents per revenue plane mile rate to supplement its present service rate for carrying the mail."

This was based on an estimate that the line will fly 57,510,000 revenue plane miles in the coming year.

Capital last had a Government subsidy in 1951. Trunk airlines generally have not been subsidized for several years. In aviation's earlier years, subsidies designed to foster air transportation were common.

Capital's petition to the CAB said:

"The several major air accidents which have occurred within the past several months have seriously depressed Capital's traffic. These accidents, coupled with an unusually large amount of publicity (especially the repeated publicity relative to the unknown causes of these accidents and the speculation that they may have been caused by bombs), have served to shake the confidence of certain segments of the public in the safety of air transportation."

"The extremely bad weather which has prevailed over Capital's system has caused major disruptions of Capital's operations with a consequent economic loss. Capital has been forced to cancel many flights."

The airline serves 72 cities in the Eastern half of the United States. Last year it carried almost 4 million passengers.

College Youth for Nixon

EXTENSION OF REMARKS

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. CRAMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call your attention to a publication entitled "College Youth for NIXON." The issue of February 1960 tabulates polls taken at 13 of the Nation's colleges, and I believe the results of these polls will be of interest to many Members of this body:

COLLEGE YOUTH FOR NIXON

FLORIDA COLLEGE YOUTH PICK NIXON IN 1960

University of Miami students disprove the "solid South" theory by picking RICHARD M. NIXON for President by a surprisingly wide margin in a poll of the campus this month.

The poll, which included 312 registered voters on the campus, revealed that 573 of the 1,154 students questioned favored NIXON, with Senator JOHN KENNEDY, of Massachusetts, polling only 259 votes, in second place. Adlai Stevenson, twice the Democratic presidential candidate, was the third choice of the Miami students with 193 votes.

Eric Raepple, chairman of the Dick Nixon club on the University of Miami campus, reports that the results received coverage on the wire services and local TV and radio stations.

Arthur T. McGonigle, Jr., son of the Republican candidate for Governor of Pennsylvania in 1958, is organizing youth-for-Nixon clubs on other Florida campuses. Art is a student at Rollins College in Winter Park.

SMALL RELIGIOUS SCHOOL FINDS NIXON HAS EDGE

Not to be outdone by the scores of other colleges in America solidly behind NIXON for President, Monmouth College, deep in the heart of Lincolnland at Monmouth, Ill., has picked NIXON by a landslide.

A mid-January poll of the campus at the 700-student Presbyterian college showed 201 for Nixon; 55 for Kennedy; 37 for Rockefeller, and the residue scattered among numerous Democrats.

Four hundred and six students participated in the poll which was conducted under the auspices of the political club. The Nixon sweep and the Democratic breakdown is as follows:

NIXON versus KENNEDY, 187 to 73.
NIXON versus HUMPHREY, 165 to 25.
NIXON versus Stevenson, 170 to 28.
NIXON versus SYMINGTON, 170 to 16.
NIXON versus MORSE, 172 to 19.
NIXON versus JOHNSON, 177 to 15.

UNIVERSITY OF NEBRASKA STUDENTS PREDICT NIXON VICTORY IN 1960

The Daily Nebraskan, campus newspaper at the University of Nebraska at Lincoln, reports that in a cross-section poll of 100 students, Nixon scored 65 percent of the vote, while his chief opponent, Senator John Kennedy, was a poor second with only 24 votes, Adlai Stevenson and Hubert Humphrey received 1 vote each, with 9 ballots undecided.

EISENHOWER CLUB SURVEYS HARVARD FRESHMEN

In a somewhat closer race, Harvard freshmen rate the candidates as follows, when asked which candidate they favored irrespective of political affiliation:

NIXON versus HUMPHREY, 170 to 114.
NIXON versus JOHNSON, 168 to 113.
NIXON versus KENNEDY, 122 to 159.
NIXON versus Stevenson, 119 to 166.
NIXON versus SYMINGTON, 179 to 100.

For a traditionally Democratic stronghold, the Harvard survey indicates a major breakthrough. Those who considered themselves independents preferred NIXON over HUMPHREY, JOHNSON, and SYMINGTON, and Republicans favored NIXON over all other candidates. An interesting sidenote: Democrats' choice for their own presidential candidate included one vote each for Eleanor Roosevelt and STYLES BRIDGES.

INDIANA COLLEGE REPUBLICANS ENDORSE NIXON AT CONVENTION

Meeting in convention, representatives of all the college young Republican clubs of Indiana adopted a resolution unanimously endorsing RICHARD NIXON for the Republican nomination, and expressing their "complete confidence that he will be overwhelmingly elected."

MIDWEST FEDERATION OF COLLEGE GOP ANNOUNCE SUPPORT FOR NIXON

A group of college leaders in the Midwest Federation of Young Republicans met in Madison, Wis., and polled themselves on presidential preference. According to Jim Mack, Midwest Federation chairman, members of the federation's executive board favored NIXON unanimously. The group represented campuses from Illinois, Indiana, Missouri, Kansas, Oklahoma, Iowa, Minnesota, South Dakota, North Dakota, Nebraska, and Wisconsin.

GOUCHER GIRLS ELECT NIXON IN CAMPUS MOCK ELECTION

Vice President NIXON captured 66 percent of the vote, easily beating his nearest opponent, in a recent mock election at Goucher College, Baltimore, Md.

Dr. Brownless Corrin, director of Goucher's field politics center, which conducted the poll, was baffled by the apparent contradiction of a situation in which KENNEDY received 30 percent of the votes in the preliminary poll, but students calling themselves Democrats voted a slate of Stevenson for President with KENNEDY as his running mate in the actual elections.

Tape-recorded interviews verify the results of the poll, in which the students predicted Mr. NIXON would win the Republican nomination and Senator KENNEDY would win the Democratic nomination.

COLUMBIA BASIN COLLEGE SHOWS NIXON FAVORED BY STUDENTS

Secret balloting by means of the county's portable voting booths added realism to the Columbia Basin College, Washington, mock presidential elections, in which NIXON ran far ahead of all other candidates.

The CBC Collegiate reports that Nixon received 55 percent of the vote, Rockefeller 22 percent, Kennedy 19 percent, and all others 14 percent.

Columbia Basin plans another mock election to be held in May, because, the Collegiate explains, "by that time the clouded political atmosphere will be somewhat clearer, and the issues will be better defined."

WESTERN MASSACHUSETTS COLLEGE IS ALL FOR NIXON

Paul R. Boire, chairman of the Williams College Young Republican Club, Williamstown, Mass., reports 44 percent of the students polled at Williams are for NIXON. Rockefeller has 12 percent of the student body; Kennedy 21 percent; Symington 1 percent; Humphrey 2 percent; and all others 2 percent.

ROCKEFELLER STUDENT CHAIRMAN ANNOUNCES FOR NIXON

Bruce Chapman, of Harvard College, formerly chairman of the National Students for Rockefeller, has announced his support for NIXON, now that the Governor has withdrawn from the race.

Bruce says in a recent newsletter to collegiate Rockefeller supporters:

"For myself, I believe that events have proven that Vice President NIXON is a modern Republican worthy of wholehearted support by progressives within and without the party. On the 27th of December I issued a statement announcing my own support of the Nixon candidacy and my intention of urging other Rockefeller supporters to do the same."

MOST TEENAGERS FAVOR NIXON; PURDUE POLL SHOWS

The best argument for lowering the voting age is shown in the intelligent choice made by the Nation's teenagers as revealed in a recent poll. An opinion research panel of Purdue University questioned 15,000 teenagers, carefully selected to represent a fair sampling of high-school students.

The results are overwhelming support for NIXON from the high-school age group. NIXON received 45 percent of the nationwide vote, with Stevenson, Rockefeller, and Kennedy his nearest competitors.

NIXON strength was slightly better among youth in the East and Midwest, but he received 39 percent of the vote from the South, still far ahead of any other candidate. West coast teens favor NIXON by 43 percent.

DISTRICT OF COLUMBIA STUDENTS GREET NIXON WITH SONGS, CHEERS

As Vice President NIXON and his wife, Pat, entered the Mayflower ballroom in Washington, D.C., where they were being honored at the annual Lincoln Day dinner, a contingent of 70 students from area colleges greeted them with placards, cheers, and songs.

One group had written a song to the tune of "Clementine," which began: "RICHARD NIXON, tell your lady, you're to be next President."

NIXON took note of the enthusiasm by observing, "If being a delinquent means having the support of these fine young Republicans from Trinity, Dunbarton, and Georgetown, then I'm for it." He was referring to Senator HUMPHREY'S labeling of Mr. NIXON as the "juvenile delinquent."

WYOMING STUDENTS PICK NIXON

The citizenship clearinghouse, in cooperation with young Republicans and young Democrats, conducted a poll on the campus at the University of Wyoming, Laramie, in which NIXON received the highest percentage.

His runnerup was again Senator KENNEDY, of Massachusetts, and the rest of the vote was distributed among a myriad of other hopefuls. Another poll is scheduled for the spring to test any change in student attitude.

Kinzua Dam

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. FULTON. Mr. Speaker, I am calling to the attention of my colleagues in the Congress and the American people, a thoughtful letter which was sent by my good friend Carl Jansen, an outstanding civic leader in Pittsburgh and western Pennsylvania to the Honorable ROMAN HRUSKA, Senator from Nebraska.

I have long been interested in the proposed flood control projects in western Pennsylvania which will save many lives and much property from flood damage in the future and I feel Jansen's letter is a good expression of the deep and thoughtful civic interest in this project.

I insert the letter in the Appendix of the RECORD as a part of my remarks:

DRAVO CORP.,
Pittsburgh, Pa., April 1, 1960.

HON. ROMAN L. HRUSKA,
Member, Senate Appropriations Subcommittee on Public Works, Senate Office Building, Washington, D.C.

DEAR SIR: I am writing this as an interested voter and industrialist located in Pittsburgh and Allegheny County to urge your support of the early start of construction on Kinzua Dam as proposed by the Corps of Engineers, U.S. Army.

I understand that hearings are to begin during the second week in April on this matter. A great deal of controversy has entered this question, principally having to do with the interests of the Seneca Indians. Mr. Arthur E. Morgan has been employed by the Seneca Indians to further their interest in this matter, and primarily with respect to abandoning the Kinzua site in favor of Mr. Morgan's proposed Conewango-Cattaraugus plan.

Many of us here in the Pittsburgh area have studied the relative merits of these two plans over a number of years. We are convinced that the Kinzua location is by far the better of the two in all of its aspects. We are further convinced that the arguments in favor of Conewango-Cattaraugus are self-serving and are deliberately intended to delay construction of Kinzua and to confuse the issue.

Plans for building Kinzua dam have been thoroughly studied over a period of many years by the Corps of Engineers, U.S. Army, and have been confirmed generally by the consulting firm of Tippetts-Abbett-McCarthy-Stratton. I can see no reason for further complicating this issue.

Again, I urge your support of the Kinzua project in the location now recommended by the Corps of Engineers and supported by the majority of interests in the Pittsburgh-Allegheny County region which is so strongly in need of this added flood protection.

Respectfully yours,

CARL B. JANSEN.

"Education and Freedom's Future"—A Policy Statement of the Democratic Advisory Council—Part 1

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. BRADEMAS. Mr. Speaker, as an American citizen and as a member of the House Committee on Education and Labor, I am deeply interested in proposals to encourage greater support of education in our country. America's most valuable natural resource is educated young men and women.

Members of Congress who share this concern will find very useful the recent publication by the Advisory Council of the Democratic National Committee of a study entitled, "Education and Freedom's Future." This publication is another in a series of "Democratic Programs for Action" issued by the advisory council.

The policy pamphlet, published on January 18, 1960, was prepared by a subcommittee on education of the Advisory Committee on Economic Policy. Chairman of the subcommittee was former U.S. Senator William Benton. Other members of the subcommittee were: Dr. Seymour E. Harris, chairman, department of economics, Harvard University; Dr. Walter Heller, of the University of Minnesota; and Beardsley Ruml, economist and educator.

I am pleased to join with two of my colleagues on the Education and Labor Committee, Mrs. GREEN of Oregon and Mr. O'HARA of Michigan, to insert the three parts of "Education and Freedom's Future" in the CONGRESSIONAL RECORD.

Part 1 follows:

EDUCATION AND FREEDOM'S FUTURE

TABLE OF CONTENTS

Part 1. The educational challenge of the sixties.
1. Implications for national policy.
2. The Eisenhower formula: Strong words and weak deeds.
3. Dimensions of our educational needs.
4. The need for classrooms.
5. The need for teachers.
6. Financial requirements.
7. Disentangling the issues.
Part 2. Federal responsibilities in education.
Part 3. Recommendations.
1. Improving Federal organization.
2. The National Defense Education Act.
3. Federal support for public schools.
4. Federal-State cooperative scholarships.
5. Expansion of colleges and universities.

PART 1. THE EDUCATIONAL CHALLENGE OF THE SIXTIES

Since World War II American education has been propelled by a combination of massive forces into a new era of growth, change, and challenge. The explosions of population and of knowledge—the almost unbelievable breakthroughs of science and technology—the worldwide revolution of human expectations—the menacing contest between democracy and communism—these forces have compounded the educational needs of this Nation and every nation. They have required the American people to revise their educational sights sharply upward.

Even in a world at peace it would be priority business for our free society to help every young person develop his full potentialities through education. In a world threatened by the aggressive challenge of the Soviet Union, education becomes a means for national survival as well. The world struggle between freedom and communism has become a battle of brainpower. All citizens, and not simply scientists and engineers, are engaged.

Sir David Eccles, president of the British Board of Trade, told an American audience: "The prizes will go to the people with the best system of education—in the sciences and humanities." The shrewd leaders of the Kremlin agree thoroughly with this proposition. They have convinced their own people—and declared to the world—that education is their most potent instrument for promoting communism's goals. Because the Soviet Government has come to take education much more seriously than has our own, Soviet education has begun to rival American education in quantity and—in some respects—in quality as well.

The ultimate goals of these two educational system are radically different. Soviet education is training for the service of the state. American education is designed for development of the individual. Obviously, education is not just a struggle with the Russians; it is a struggle with ignorance and bigotry. Both challenges require us to strengthen American education in order to strengthen the pursuit of democracy's goals. It will not be enough for us merely to help our schools and colleges do more of what they are already doing. They have made great progress in the last half century and many believe that what they are doing today is much better than ever before. But it is not enough better to meet the new strenuous demands.

The boys and girls entering school today will be the men and women responsible for their nation in the 21st century. They must be prepared to meet that century's unimaginable tests. A fairly good system will not be good enough to prepare them. The kind and quality of American education, not merely its quantity, must be equal to the challenge.

The demands upon our educational system do not lie somewhere off in the future. They are upon us now. As Walter Lippmann warns, the United States has already developed an ominous educational gap and it threatens to grow to disastrous proportions. Closing the gap—and keeping it closed—will require a breakthrough comparable to the breakthrough in the level of our defense effort since Pearl Harbor.

1. Implications for national policy

First among the consequences of the new situation is that we Americans in the 48,600 school districts of the United States cannot longer afford to regard education as a matter simply of State and local concern and responsibility. Whether we like it or not, education has become a matter of highest national concern and responsibility, as vital to freedom's future as the national defense program. The educational role of State and local governments, and of private groups en-

gaged in education, must remain strong and paramount. But their efforts must now be supported by increased national effort—effort guided by a clear sense of national purpose.

Such a transition in our thinking is not easy; the world has a habit of changing faster than our attitudes and insights. An experienced Washington reporter has wisely observed that education is the one great issue of national policy which returns to kindergarten every year. Until we free ourselves of emotional rhetoric, clarify our thinking, and disentangle the issues which are genuinely educational from others which are not, we cannot hope to lift American education to the excellence the times demand.

Many States, and thousands of communities, have exerted themselves to expand their support of education over the past 10 years. They must now do even more. But in doing more they are entitled to stronger support from the Federal Government.

How can the Federal Government best carry out its share of responsibility for the education of American youth? Part II of this report recommends specific actions toward this end, including:

1. Improvements in the organization of the Federal Government designed to increase its usefulness in the field of education.

2. Implementation of the National Defense Education Act, including the student loan and fellowship provisions.

3. A program of basic Federal financial support for local public schools, devoid of Federal control.

4. A federally supported program of scholarship to help able but needy students to acquire a college education.

5. A Federal loan and grant program to help colleges and universities prepare their physical facilities to handle twice as many students as they do now.

2. The Eisenhower formula: Strong words and weak deeds

On issues of education the Eisenhower administration has been characteristically strong on words and weak on deeds. Periodically White House spokesmen have proclaimed the virtues of education and the urgent need for more and better education. Periodically also—when the time for action came—their voices grew soft or silent. They failed to heed even the modest recommendations of their own advisory groups—or to press Republican Members of Congress to support even the mild educational proposals of the President.

There has been no shortage of Presidential committees on education, and no shortage of committee recommendations. The White House Conference on Education, the President's Committee on Education Beyond the High School, and more recently the President's Scientific Advisory Committee have helped alter the Nation to the dimensions and urgency of its educational needs. Their reports have helped to stimulate some constructive actions outside of Washington. As for action by the very administration which sought their advice—these conferences and studies have been earnest exercises in futility. They have served as excuses for postponement and inertia. Seemingly, the Eisenhower administration has never quite been able to believe its own words.

Even before the first Soviet sputnik brought about a "rediscovery" of the importance of education, President Eisenhower told an assembly of educators: "Our schools are more important than our Nike batteries, more necessary than our radar warning sets, and more powerful even than the energy of the sun." Yet nearly 2 years after the first sputnik, in August of 1959, a member of his Cabinet warned that he would recommend a Presidential veto if Congress passed a modest compromise school construction bill similar to one the President himself had proposed in 1957.

This earlier bill lost in the House of Representatives by a close vote, 208 to 203. Three of the top four Republican House leaders voted against it, even though it had Presidential endorsement; their "ayes" alone could have made the shortage of schoolrooms today less acute. In that crucial vote, 111 Republicans voted to kill the measure and only 77 voted to save it; 59 percent of the Republicans opposed the President's bill while 57 percent of the Democrats supported it.

The President made no real effort to encourage Republican support of the bill during the critical period of debate; the phone from the White House never rang. A few days later at his press conference he expressed disappointment. But later, when he was reminded that a majority of Democrats stood ready to support his earlier request for a school construction measure, he added, "I am getting to the point where I can't be too enthusiastic about something that I think is likely to fasten a sort of an albatross, another one, around the neck of the Federal Government."

In the spring of 1959 the Democratic Congress passed a housing bill which, among other things, would have bolstered Federal capital loans to colleges and universities to help them to expand their physical facilities. The President vetoed the bill.

As a nation, we must make up our minds whether Federal support of education is a necessity or an albatross—whether it is vital to our life as a nation or only a threat to a balanced budget. Eloquent speeches will not build classrooms. Pious rhetoric will not staff them with able and decently paid teachers. Earnest utterances about the national need for young talent are not a substitute for adequate scholarships and fellowships. Until all of us in the United States, in both political parties and in every community, stand ready to match our words with deeds the ominous educational gap will grow steadily wider.

3. Dimensions of our educational needs

The need for more and better education in the United States isn't a new story. For many generations the people of the United States have responded to the need by investing heavily in educational expansion. What is new is the pace at which the need grows.

The number of boys and girls attending elementary and secondary schools, public and private, grew from less than 17 million in 1900 to over 43 million today. College enrollment in the same period rose 15-fold, from 238,000 to nearly 3,800,000. Today more than 80 percent of the young people of high school age are actually attending high school, compared with 11 percent in 1900, 51 percent after 1930 and 70 percent 10 years ago. College and university enrollments are now equivalent to 38 percent of all the 18-to-21-year-olds in the Nation, against 4 percent in 1900 and 12 percent in 1930.

Most observers—but not all—agree that, despite deficiencies, there has also been a growth of quality and variety in education. Taken as a whole, the educational qualifications of teachers have arisen steadily, the curriculum is broader, educational materials have improved, physical facilities and equipment are decidedly better, and most students are learning more.

An unparalleled investment in education in the past 60 years has proved highly profitable for the United States, whether it is reckoned in benefits to individuals or in benefits to national economic growth, cultural enrichment, and military security. Yet these benchmarks of past progress are modest measured against what must now be accomplished in a much shorter time.

The high level of births since 1944—twice as many babies were born here in 1956 as in 1936—has overcrowded the elementary schools. It will force enrollments still higher in the next few years. High school enrollments will rise more than 50 percent in the next 10 years; and by 1970, college enrollments are expected to reach 6 or 7 million compared to 3.8 million in 1959. The time is within view when the majority of all young people in the United States will continue their formal education beyond high school.

4. The need for classrooms

Good facilities can contribute greatly to good eduction. American schools and colleges entered the postwar period with a serious physical handicap. The low level of construction during the depressed thirties and during the war had given them a big backlog of building needs at the very time they faced rising enrollments. As a result—despite the greatly increased level of educational building since the war—millions of youngsters have had to spend their days in crowded and often dangerously obsolete classrooms. The widespread inspection of public schools prompted by the tragic parochial school fire in Chicago last year confirmed that many of these old buildings are physically hazardous.

We have had to "run fast to stand still" in our school building needs. From 1949 to 1958 a total of 500,000 new classrooms were built—an accomplishment to the credit of local communities and State governments. Yet at the end of that period, according to the Office of Education, there remained a shortage of 140,000 classrooms. Some qualified experts believe this figure is low by at least 60,000. In August 1959 the Secretary of Health, Education, and Welfare stated that, conservatively, "the number of pupils whose education is being impaired in varying degrees by the classroom shortage is about 10 million."

The physical needs of higher education are no less great. Despite a high level of construction in the last 10 years, particularly in tax-supported colleges and universities, a large proportion of existing collegiate structures are obsolete and overcrowded. The new buildings needed by higher education in the next 10 years are equivalent to all of the college structures built in the previous 200 years.

The total construction needs of the schools and colleges combined have been conservatively estimated at $4 billion a year for the next 10 years, or $40 billion. This is a large but an entirely manageable requirement for a Nation as economically strong as the United States—provided we decide that it is important to meet it.

5. The need for teachers

A far more formidable task than housing tomorrow's students will be providing them with good teachers.

About 1,500,000 new teachers must be recruited over the next 10 years if the present ratio of teachers to pupils in the public schools is to be maintained. This exceeds the total number now in service. It would require about one-third of all the 4-year college graduates expected in the same 10 years. Considerably fewer new college graduates than this can be expected to enter teaching—even under improved conditions. Further, if present trends prevail a substantial proportion of new teachers may be drawn not from the ablest category but from the bottom half of the ability spectrum of college students. Unless standards for teaching are raised—and unless teaching becomes more attractive to young people of high ability—we may wind up with the tragic reality of poorer rather than better education.

There is no mystery about the shortage of good teachers. The "small generation" of the thirties has had to supply teachers for the "large generation" of the forties and fifties. But an even more important factor is the increased market demand for able and well-educated people for all kinds of nonteaching functions in our society. Despite

recent substantial increases in teacher salaries, the schools and colleges suffer a competitive disadvantage against other bidders for top-quality manpower whose purses are stouter.

It should never be forgotten that our educational system is both a consumer and a producer of manpower. The human talents of one generation are required to develop the human talents of the next. If schools and colleges are deprived of their fair share of society's able manpower society will pay a heavy price later on; the effect is cumulative. The United States is today storing up serious trouble for itself. When—as an example—industry takes the lion's share of today's new crop of able young scientists and engineers it cuts down the Nation's capacity to produce an equally good crop later.

The central issue of teacher-supply for the next 10 years is not whether enough people will enter teaching. It is whether enough qualified people will choose teaching against other careers. If we act as if the problem is merely one of numbers our schools and colleges will become mediocrity mills at a moment of history when the pursuit of excellence is imperative.

Obviously the first requirement for improving the supply of good teachers is to improve their compensation. This will help attract them and hold them. Simultaneously the prestige of teaching must be lifted to a high level. Along with higher salaries and prestige must come a large-scale strengthening of the teacher-preparation programs of the colleges and universities.

These approaches will strengthen the supply of able teachers. The problem must be attacked also from the demand side. The number of teachers required is determined not only by the number of students but by the method of teaching. Many of our conventional practices in education are demonstrably obsolete and inefficient. They waste the abilities of teachers and the time of students. It is educationally wasteful, for example, when a good teacher is obliged—as most are—to spend time on clerical, housekeeping, and other duties which could be handled satisfactorily by a less highly trained assistant.

The good teacher should be permitted to concentrate upon those things which only a good teacher can do. A redeployment of teaching staffs on this basis would make teaching more challenging, more productive, and better paid. And by making it possible for able teachers to be more productive we shall need relatively fewer of them to improve the quality of education.

Also promising is the more extensive classroom use of modern means of communication such as motion pictures, television, and sound tapes. Through these instruments it is now possible to give unlimited numbers of students access to the finest teachers and scholars and to provide rich learning experiences—such as scientific demonstrations, re-creations of great historic events, acquaintance with distant lands and peoples—which would be impossible in the ordinary classroom. Along with the imaginative application of these newer educational tools there is need for still more effective use of books and other printed materials from which students can dig out their own educations and make their own contacts with excellence.

6. Financial requirements

The combined expenditures of schools, colleges, and universities in the United States in 1958–59 for current operations and new buildings was nearly $20 billion. It is conservatively estimated that these expenditures, measured in today's prices, must be raised to between $35 and $40 billion by 1970, or nearly doubled. This is a conservative estimate; several estimates are higher.

Such an increase seems large. But it is small by comparison with expected increases in America's gross national product between now and 1970, as projected for Fortune magazine, the Rockefeller panel, and others. (Indeed, a superior educational system can, by virtue of its excellence, increase the gross national product.)

Total educational expenditures in 1958 were equivalent to roughly 4.5 percent of the gross national product. If national output continues to grow at no better than the average annual rate since World War II, educational expenditures of $35 to $40 billion in 1970 would still not exceed 5 percent of the gross national product. The Democratic Advisory Council insists that the United States need not and must not longer tolerate the reduction in growth rate which has characterized the period of the Eisenhower administration. This reduction has brought the postwar average well below where it should be. The Council will issue a separate policy statement on this question.

Measured against any reasonable or likely growth-rate the real problem of education finance is not whether the United States can afford good education. It can. Though members of the Democratic Advisory Council would be willing to see Federal tax rates increased if this were necessary to meet the educational challenge we do not believe this is necessary. The real problem is whether we can agree on what good education is, and on a set of fiscal measures for channeling an adequate share of national income into the support of education.

7. Disentangling the issues

Over the years issues of public policy toward education have become entangled with other important issues in ways which have confused and frustrated constructive action. The most notable example is the issue of racial segregation for which the schools unhappily have become a battleground.

Unequal treatment of races is a profoundly important and deep-rooted problem which affects all aspects of community living. It is not simply or even primarily a problem of the schools. Encouraging progress is being made toward its resolution. Because better education can contribute greatly to this end we should redouble our efforts to strengthen the schools rather than use segregation as an excuse for postponing action.

Federal funds obviously should never be used to impede this progress. Most certainly Federal support for education should never be allowed to slow the carrying out of the 1954 decision of the U.S. Supreme Court on segregation. Neither must we condone actions such as those by a group of House Republicans opposed to Federal support for education who in 1956 supported an anti-segregation amendment to the school-construction bill with the ultimate purpose of defeating the bill.

Education and Freedom's Future—Part 2

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mrs. GREEN of Oregon. Mr. Speaker, under unanimous consent, I should like to insert in the RECORD part 2 of "Education and Freedom's Future," a policy statement of the Democratic Advisory Council:

PART 2. FEDERAL RESPONSIBILITIES IN EDUCATION

Does the United States as such have a national stake in education? If so, what should be done about it? Past utterances and debates on these two questions have reflected confusion, inconsistency and detachment from reality.

The critical reality today is that, at minimum, the national interest can be deeply injured by the inadequacies of our educational system wherever these inadequacies occur. A soldier who cannot communicate and compute is a positive menace. During World War II and since, poor education in some States has meant the failure of a high proportion of young men in selective service examinations. This reduces the Nation's total supply of manpower for military service. It also imposes disproportionate draft demands upon States where education is better. These facts are ignored by those who, on grounds of equity, oppose the use of Federal taxes collected in high income States to strengthen educational opportunities in low income States.

The vast migratory streams from rural to urban areas and from one region to another mean that a high proportion of tomorrow's adult citizens in almost every community will have been educated in some other community and some other State. Each year 35 million people—20 percent of all Americans—change their addresses. No State of the Union, rich or poor, can escape the heavy costs of poor education in any other State—or fail to share the benefits of good education.

The importance of good education, universally available, has been an article of faith for Americans for more than a century. When the Soviets borrowed this American idea of universal education they took only that half of it which holds that education is a powerful instrument for building national strength. The more important other half is profoundly subversive to their ideology; it holds that education is the principal means by which every individual in a free society achieves his inalienable right to life, liberty, and the pursuit of happiness.

Since in our Nation the Federal Government is both the ultimate guarantor of individual rights and the primary instrument for promoting and protecting the national welfare it can no longer be questioned—if ever it could be—that education deeply affects the national interest. Where there is a national interest there is a Federal duty. In the case of education that duty requires the Federal Government to do what others cannot or will not do to insure that every American youngster is given a reasonable opportunity to developed his potentials through education and to insure further that our national educational effort keeps pace with our national needs.

Federal duty in this respect should not be confused with Federal authority. The silence of the Constitution has been taken to mean that authority over education rests with the States, and it has indeed so rested. But the framers of the Constitution never intended to imply by this silence that the Federal Government had no interest or duty concerning education. Their writings and recorded discussions show that education was very much on their minds and that they considered making specific reference to it in the Constitution. But they also had very much on their minds the problem of keeping separate the powers of church and state. Since nearly all education at the time was under the sponsorship or control of church groups the assignment of constitutional authority for education to any level of government, Federal or State, would have raised perplexing issues. All things considered, it seemed best to them that the Constitution

should remain silent about education. This has put the question up afresh to each new generation.

When these considerations are taken into account it seems clear that the emphasis in recent educational debates upon States rights, local autonomy, and the dangers of Federal intervention has served more to confuse than to clarify the issues. But the question of where ultimate control over the content of education shall rest remains vitally important. Many persons of differing political persuasion have expressed deep and honest concern about the dangers of Federal control. We insist that the recognition of a national interest, and the exercise of a Federal duty, are not at all the same thing as the declaration of supreme Federal authority over the content of education. Nor is it valid to assume that an increase in the Federal Government's role in education necessarily reduces the role of State and local government. It has been demonstrated again and again with respect to highways, hospitals, unemployment compensation, public welfare, and other important public activities that initiative by the Federal Government has stimulated State and local governments to exercise their own responsibilities more adequately. Senate testimony on the Murray-Metcalf bill demonstrated that in nearly a decade of experience with Public Laws 815 and 874, which provide support for schools in federally impacted areas, Federal control need not be a consequence of Federal support.

There is no fixed quantum of responsibility and activity to be divided, like pieces of a pie, between the Federal and State governments. The combined responsibilities of governments at all levels, and of private groups as well, expands as the complexity and needs of society expand. This is clearly the case with education.

Some who have opposed Federal support of the public schools in the name of avoiding Federal control in reality oppose it mainly because they are unwilling to pay a price for better education. They proclaim their devotion to the cause of better education but insist that State and local governments can and should achieve it. Yet often the same individuals and groups are later found in the lobbies of State capitals and townhalls vigorously opposing larger education budgets—this time because they threaten to increase some State tax or the local property tax.

If the distinction between interest in principles and interest in pocketbooks can be kept clear our educational debates will be more productive.

Education and Freedom's Future—Part 3

EXTENSION OF REMARKS

OF

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. O'HARA of Michigan. Mr. Speaker, under unanimous consent, I should like to insert in the RECORD part 3 of "Education and Freedom's Future," a policy statement of the Democratic Advisory Council:

PART 3. RECOMMENDATIONS

1. Improving Federal organization

The Federal Government is poorly organized in the realm of education—even to carry out efficiently its educational responsibilities already enacted into law.

Nowhere in the executive branch, not even in the Office of Education or the Bureau of the Budget, can one obtain a simple check list of the educational programs now being conducted under legislation adopted piecemeal by Congress over the last hundred years. A study by the Legislative Reference Service of the Library of Congress shows that the Federal Government is presently engaged in more than 300 educational programs, most of them administered by departments and agencies other than the Office of Education.

There is scarcely a semblance of coordination among these programs. Most are designed to meet some specific need such as training of particular types of personnel or the conduct of specialized research. Federally supported fellowships, research grants, and officer training programs, have a marked impact, for better or for worse, upon the schools, the colleges, and the universities. Yet no one is in a position to assess their net impact, or to judge whether the same purposes could be accomplished more effectively or at less cost.

For example: Through a variety of fellowships and research grants administered by a variety of Federal agencies, each with its own particular objectives in mind, the Federal Government is supplying a surprisingly high proportion of the total revenues of some of the higher institutions, including private universities. These programs are having an enormous influence upon the shape and direction of the universities. But what kind of shape? And in what directions? What is their impact on other needed fields of teaching and research, and on the supply of teachers? No one in the Federal Government knows, and no one is responsible for knowing.

Congress is no better informed. The various pieces of legislation authorizing these programs have emerged from various congressional committees, most of them concerned primarily with matters other than education, such as defense, atomic energy, agriculture, health, labor, and foreign affairs. No committee has an overview.

Here is a danger that has not been mentioned in the debates. There has been little complaint of deliberate Federal interference in education despite the substantial and growing Federal role in education ever since President Lincoln signed the first Land Grant College Act. The real danger is that through a piecemeal approach the Federal Government is producing unintended distortions in the national pattern of education while at the same time it fails to provide education the help it really needs.

The experience developed in the past dozen years under the Employment Act of 1946 provides suggestions for a remedy. The Employment Act, after declaring that the Federal Government has a basic interest and responsibility concerning the Nation's economy, established certain goals and procedures to enable the Federal Government to function more intelligently and efficiently. No new powers were given anyone. The President was provided with a Council of Economic Advisers to help him maintain a continuing review of basic economic trends and of the effect of various Federal economic policies. On the basis of this review the President was required to submit an Economic Report to Congress annually. A Joint Committee on the Economic Report was established in Congress to provide a forum for competent discussion of the President's report and of major economic problems and policies.

These arrangements have helped notably to keep the President, the Federal agencies, Congress, business and labor, and the Nation as a whole better informed about the state of the economy, about its strengths and weaknesses, its trends and needs. Public debate about economic policy has been better informed. The formulation of both public and private economic decisions and programs has improved.

A similar set of procedures for education could do enormous good. It need not involve the grant of any new Federal powers. It would keep the White House, the administration, the Congress, State and local governments and the Nation better informed about educational policies and problems including those in adult education.

Annual presidential reports on education could provide a surer basis than any that now exist for detecting strengths and weaknesses, spotting important countrywide new trends, and identifying serious gaps or deficiencies. Considering that one-quarter of the population of the United States is enrolled in our schools and colleges, and that economically the educational system constitutes one of our largest enterprises, our factual knowledge about the system is astonishingly inadequate for purposes of planning and decisionmaking, regardless of where final authority rests. Relative to the need, we have much more adequate information about Dutch elm disease, wheat crops, fish runs, bank balances, horseracing, baseball, and hogs.

The first obligation of the Federal Government is to furnish to the Nation adequate and up-to-date facts about the broad spectrum of our educational system and to put its own house in order with respect to Federal education programs already in existence. Passage of an Education Act of 1960 which would require the President to submit to Congress on Annual Report on Education, prepared with the assistance of a small Council of Education Advisers, on which hearings would be conducted by a Joint Congressional Committee on the President's Education Report, would go far toward meeting this obligation.

2. The National Defense Education Act

The National Defense Education Act passed by Congress in August 1958 is the most significant action by the Federal Government in education since the first Land Grant College Acts in the 1860's. The act does not provide for general support of education. But its 10 separate titles mount specific attacks on a series of critical problems. Through fellowships, grants, and loans, the act seeks, for example, to improve instruction in foreign languages, science and mathematics; to strengthen guidance and counseling in the public schools; to assist needy college students with loans; to expand the supply of college teachers in all fields; and to encourage broader application to instruction of films, television, and other audiovisual aids.

Most educators welcomed this new legislation because it was addressed to problems they know are vital. The funds made available for carrying out the purposes of the act were small measured against the dimensions of the problems being attacked. Moreover, the Office of Education, in its attempts to recruit outstanding people to develop and administer these new programs, was severely handicapped by lack of funds and authorization.

It is probably too early to say from experience what changes are needed. But one amendment should be made immediately. The act requires that any student who borrows money from his college under the loan provisions of the act shall take an oath that he does not belong to a subversive organization. However well intended, this oath is an affront to the college youth of the Nation. It not only singles them out as a special class under suspicion; it is doubly unfair because it furnishes no guide as to whether any particular organization is subversive within the meaning of the law. No such oath is required by farmers, businessmen, home own-

ers, or other groups who receive Federal loans, payments, or financial guarantees. And it is obviously ineffectual. Actual subversives would not hesitate to sign any oath, and every student intelligent enough to be in college knows this full well. Requirements of this sort imposed by the Federal Government upon young people are more likely to foster disrespect for Government than to foster good citizenship. An attempt in 1959 by Senators KENNEDY and CLARK to eliminate the affidavit provision was killed by the Republican Senators, who with few exceptions voted for its retention.

The National Defense Education Act should be supported by appropriations to the full amount authorized by Congress, and the act itself should be restudied to determine if its authorization limits are adequate; the Office of Education should be authorized and given funds to employ topflight people to administer the new programs under the act; and the requirement of an antisubversive oath in connection with student loans should be dropped as being ineffective and undesirable.

3. Federal support for public schools

Today we rely nearly exclusively on State and local tax revenues to finance the public schools. Forty percent of all State and local tax revenues goes to finance education. This reliance has brought our hopes and plans for strengthening the schools face to face with a series of roadblocks. Here are some of them:

1. A high proportion of school costs are borne by real estate and other taxes which fall most heavily on lower income families and which—unlike the progressive income tax—are relatively unresponsive to increases in the national income. An even heavier tax load on real estate is not the answer. Future increases in school costs must be financed largely from increases in the national income. The present pattern of tax support for education is, to put it mildly, unpromising and unsatisfactory.

2. The overall fiscal position of State and local governments has become increasingly strained because of growing demands for many types of public services. The increase in State and local debt since the war has been much larger than the increase in the Federal debt. Since 1946 the indebedness of the States has increased 500 percent and that of local governments by 200 percent while the Federal debt rose by 10 percent. A pattern of resistance to school-construction bonds has been developing, for example in votes in November of 1959 in New York, Pittsburgh, and other centers.

3. Education is at a disadvantage relative to many other public services. If local taxpayers feel that their total tax bill is too high they exert greatest restraint upon increases in local taxes and expenditures. And since a major proportion of local taxes goes for education the public schools tend to be the first and the main victim of taxpayer frustration and resistance.

4. At the State level education is also at a disadvantage. One factor is the policy of the Federal Government to grant to the States matching funds for expenditures on highways, hospitals, and welfare programs. There are no such matching funds for education, and State governments are naturally tempted to spend their limited dollars where they can find matching money. Another factor limiting State expenditures for education is fear that new or higher taxes will result in loss of industry to other States.

Dr. James Conant sees the choice as one between "massive" Federal support by the schools and "drastic" revision of State and local tax systems. His second alternative is so unlikely as to be unreal.

The Democratic Advisory Council believes that the moment has at length come when the Federal Government must provide some significant share of the cost of education. Although it is involved in a miscellany of educational projects the Federal Government today pays less than 4 percent of the Nation's school bill. The main financial responsibility—and certainly the control of the curriculum—must remain with State and local governments. But the Federal Government must now share the burden. This is not a question of sacrifice. It is a proposal for investing public funds in the Nation's future.

The simplest, most efficient, most equitable, and safest way for the Federal Government to support public education is by annual grants to the States, on a per pupil basis, with no strings attached except that such funds should be used for public elementary and secondary education, what is "public" to be defined by the States. State and local governments would be free to use these funds to meet their highest priority school needs. In some cases it might be new construction. In other cases it might be teachers' salaries, stronger guidance programs, or better educational materials.

Safeguards such a matching funds should perhaps be established to insure the Federal funds are not used as a substitute for educational expenditures already being made by State and local governments. This is not likely to be a serious danger so long as States and localities continue to provide the preponderant share of school costs and so long as these costs continue to rise.

The case for Federal support of public education, on grounds of national interest and of the superior fiscal powers of the Federal Government, is compelling in every State. There is a further case for additional Federal support to those States whose internal means to finance adequate educational opportunity are strikingly below the national average. These States by and large are devoting a proportionately greater financial effort to education than the highest income States. The fact that our wealthiest States have three times the per capita income of our poorest States should not be perimitted to impose an inferior education upon the boys and girls who happen to live in the poorer States. Therefore a program of Federal support should aim also toward the equalization of educational opportunity for all young Americans.

A Federal support program should be started at a modest level. After procedures are worked out and experience has been gained the level of support should be stepped up over a period of years. The schedule should if possible be predetermined so that State and local governments can plan their own budgets and taxes accordingly.

It is recommended that a basic Federal support program be established whereby each State would receive $25 a year in the first period for each resident child of school age; $50 a year in the second period; $75 a year in the third period, and $100 a year in the fourth period and each year thereafter. Supplemental support should be provided to those States in which per capita income is significantly below the national average. All such funds would be distributed by the State governments for the support of public education in a manner to be determined by each State.

4. Federal-State cooperative scholarships

Each year tens of thousands of able and deserving young people are prevented from going to college—or from attending the college or university best suited to their abilities—because they cannot afford it. They are thus deprived of educational opportunity. And the Nation is thus deprived of educated manpower.

The loan program under the National Defense Education Act allows many to borrow for a college education. Senator LYNDON JOHNSON has introduced a bill to make $100 million of Federal guarantees available for student loans. State governments and colleges are providing increased resources for college loans.

These programs help democratize college education. By stretching the financing over many years they can enroll many who otherwise would not attend. They help make higher education competitive with other goods and services available through credit financing. The average American family is indebted more than $3,000 for housing, automobiles and other durable goods. The average student is in debt less than $30. Rather than the $100 million per year currently available for student loans we should have $500 to $1,000 million.

Several State governments recently have taken steps to assist able and needy young people by establishing competitive scholarship programs at State expense. These scholarships can be used at either private or public institutions, thus giving the student maximum choice and spreading increased enrollments over a large number of institutions.

There is considerable merit in administration of scholarship programs by States, as against a nationwide federally administered program, particularly if a scholarship winner is free to choose a college in any State. And it is reasonable that the Federal Government should assist the State governments in financing such scholarship programs because of the national benefits and obligations involved.

It is recommended, therefore, that a Federal-State cooperative scholarship program be established to provide for the award of 25,000 scholarships a year in the first period rising to 100,000 a year by the fourth period, to students of outstanding ability selected by an appropriate agency or commission in each State, with half the costs borne by the Federal Government and the other half by the State. These scholarships would cover a period of up to 4 years if the recipient maintained a satisfactory academic record; they could be used in any approved institution of the student's choice in the United States and where desirable in a foreign country; the amount would be adjusted to the individual's financial needs, but would not exceed $1,000 per year.

Our goal is that no qualified boy or girl be denied an education for purely financial reasons.

5. Expansion of colleges and universities

Within the next 10 years the colleges and universities of the United States will be called upon to accommodate about twice as many students as now. If they are to achieve this objective, maintain and improve their quality at the same time, they will require help from every available source, public and private.

The expansion plans of many colleges and universities are being blocked by lack of capital funds to finance new facilities and improve old ones. The college housing program of the Federal Government, under which institutions can borrow to build self-financing buildings—mainly dormitories and dining halls—has been helpful to many colleges and universities. President Eisenhower in his budget message last year proposed phasing out this program. Far from being killed, the program needs to be expanded, as the President's Committee on Education Beyond the High School urged. Since the most important buildings on a college campus are those designed primarily for teaching and learning, the College Housing Act should be amended to permit loans for academis structures such as classrooms, libraries, laboratories, and faculty offices, at the present low-interest formula. These are the structures most needed by the scores of community colleges that have been created in recent decades.

A broadening of the Federal loan program for college construction will be helpful but not enough. In the years ahead colleges and universities will need to put all of the resources they can into faculties, books, and other essentials to quality instruction. Too

heavy a commitment of future income to paying off capital loans will jeopardize quality.

These considerations led the President's Committee on Education Beyond the High School to recommend, nearly 2 years ago, that the Federal Government establish a matching grant program for college and university construction comparable to the Hill-Burton hospital grants program which has worked so well.

To help the colleges and universities secure the physical facilities and equipment to handle greatly expanded enrollments the college housing loan program should be expanded to include all types of college structures needed for housing or instructing students, and a new program should be established under which matching grants would be made to colleges and universities for improving existing structures and building new ones. Consideration should also be given to providing Federal insurance of capital loans to colleges and universities by private lenders, comparable to FHA mortgage loan insurance.

These five recommendations are designed to strengthen the system of formal education. It is also important and urgent to strengthen the Nation's opportunities for adult education, and for civic education. These become more necessary as the pace of social change grows ever swifter. Intelligent use for these purposes of the great new medium of television—misuse of which was so dramatically revealed in 1959—is one of the Nation's great undeveloped resources.

The total cost of the five recommendations affecting formal education is substantial—as indeed it should be. In its first stage this program would require perhaps $1 billion a year in Federal support; in its fourth stage $3 to $4 billions. But these costs are small in comparison with the financial commitments of the Federal Government for highways, defense and many other public purposes. They are small especially in comparison with the enormous growth of our national economy and with the contribution that better education will make to national growth.

No one can question that dollar cost is important. But far more important to the health and survival of our free society is the fullest possible development of every individual. This is the goal toward which we as a Nation have aimed from the very beginning. It is this goal that gave our Nation birth. It is this for which our fathers and sons fought and died through generations. And this is the goal which distinguishes democracy from tyranny.

Whatever progress we may make in new weapons and new ways to deliver them, education remains our ultimate weapon in the unending battle against human misery and strife, in the quest for realization of mankind's ageless dream of peace and progress. There is no greater claim upon statesmen—no greater claim upon every citizen—than the improvement of educational opportunity. Here, ultimately, we must place our trust.

Hon. Russell V. Mack

SPEECH
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1960

Mr. CRAMER. Mr. Speaker, it was my privilege to serve with our deceased colleague, Congressman RUSSELL MACK, for the last 6 years on the Public Works Committee, particularly with regard to his being the ranking minority member on the Flood Control Subcommittee. I had the pleasure of working closely with him and knowing firsthand of his dedication to his job as a Member of Congress. He spent many tireless hours toiling for the people of his district, and was one of the best authorities on flood-control matters as well as many other problems before the Public Works Committee and Congress. He was a dedicated public servant, and gave tirelessly of his time and energies, and, typical of that, is the fact that he should spend his last breath in carrying out his congressional duties on the floor of the House.

I remember well the tremendous contribution he made on the floor of the House on many occasions toward better legislation and toward serving all the people. He was a fighter for his point of view, and demonstrated this many times in recent years on the omnibus public works bills, during debate of which he took a most active part.

I also had the privilege of serving under him in the Republican whip organization as the assistant regional whip, he being in charge of the western and southern division, and I can attest to his efforts spent in that important duty. His knowledge, his forthrightness, his ability, will be impossible to replace and the people of the State of Washington and the people of America have lost a great public servant. I have lost a very dear friend, upon whose judgment, and with acknowledgment of his ability, I have on many occasions relied very heavily, and I join in expressions of bereavement to his wife and family.

Georgia Postal Employees Support H.R. 9488

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. CUNNINGHAM. Mr. Speaker, I am pleased to include a resolution unanimously adopted by the members of the Georgia Branch, National Transport Association, at a recent meeting:

Whereas airmail facilities are seldom, if at all, located near railroad stations, which is not conducive to speedy transfer, in case space is not available, or the weather does not permit flying, thus contributing to the loss of transit time of 1 to 3 days; and

Whereas the general feeling of persons using the mails is that they prefer a dependable, all-weather service in the regular manner, not subject to the above-described delays; and

Whereas the airlift mail is thus subject to the whims of space availability and weather conditions; and

Whereas the railroads are, and must be at all times, ready to take over the transportation of airmails and airlift mails, delayed by weather or the unavailability of space; and

Whereas airmail facilities are avalable for those who wish to pay a premium price for faster service, which gives them preferential treatment, as paid for; and

Whereas the airlines are now subsidized to a considerable extent, at the expense of all taxpayers, though seemingly under the rate of compensation jurisdiction of the CAA, the costs are still chargeable to the Post Office Department; and

Whereas the bulk of airlift mails will, in all likelihood, be flown to outer distribution centers, for return by train or truck, a probable source of further delay and expense: Now, therefore, be it

Resolved, with due consideration of, and justice to the taxpaying public, together with the concomitant confusion and loss of morale among thousands of mobile postal transportation employees, That further expansion of the airlift of 4-cent postage (surface) first-class mails be prohibited by specific act (H.R. 9488) of Congress, at the current session.

Good Advice—Write Your Congressman

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. STRATTON. Mr. Speaker, I am sure all of us realize the importance of mail as a major means of keeping in touch with the people we represent back home. Certainly the more we hear from our constituents the better able we are to represent them and their interests here in Washington. Under leave to extend my remarks, I include an editorial from the Amsterdam Evening Recorder of March 28, 1960, which expresses this idea more appropriately and succinctly than I know I could do. I commend it to the attention of my colleagues. The editorial follows:

DON'T GRIPE—WRITE

Your spokesmen in Washington are the two Senators from this State and the Representative from the 32d Congressional District. In Albany they are your State senator and assemblyman.

This is true whether they represent the political party to which you belong or an opposing party. Once they have been elected to public office they represent all the people.

But they cannot be expected to do a good job for you unless they understand your views and you, in turn, understand their problems. They need and want the opinions of all their constituents.

It must be remembered that a public official's first obligation is to his constituents. Their views are always given first place in his thoughts. Accurate and useful information sent by voters in his district is always appreciated. When he hears from "back home" it shows him the people know he is alive and are interested in what he is doing.

Until we realize our representatives welcome our views and we take the trouble to make them known, our relations in Washington and Albany will not be what they could be—or ought to be.

Remember, too, you don't have to wait until you have a complaint to register. Our elected officials are human, too, and a pat on the back is appreciated by them as it is by you. The important thing is: Don't gripe—write.

Questionnaire to the People of the 17th District of Ohio

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. LEVERING. Mr. Speaker, I recently circulated a questionnaire among the constituents it is my honor to represent in the 17th Ohio District and I want to say that I am extremely gratified by the response received from people in all walks of life. It is indeed reassuring to learn that so many of our people in the midst of the daily routine of making a living are willing to take whatever time is necessary to think and write about the important public issues of the day. This kind of citizenship responsibility at the local level assures continuance of vigorous representative government.

I was especially impressed with the fact that most people not only answered the specific questions asked, but in addition, made their views known on many other matters, such as disarmament, food additives, TV programing, high taxes, high interest, tight money, and inflation.

It is apparent from tabulating the returns of a typical cross section of central Ohio that the subject uppermost in the minds of the people is waste, extravagance in all departments of Government, and particularly in the foreign aid program. The items most frequently mentioned were the interservice rivalry in the Defense Department, the high cost of storing surplus farm commodities, and the losses involved in procurement and disposal of defense equipment.

The tabulation in percentages follow:

1. Do you favor an acceleration of our defense effort in such fields as long-range ballistic missiles, nuclear weapons, and the satellite program? Yes, 55 percent; no, 35 percent; no opinion, 10 percent.

2. Would you favor an increase in taxes to meet any added expenditures for the defense program? Yes, 33 percent; no, 61 percent; no opinion, 6 percent.

3. The President, in his recent budget message, proposed appropriations of $4.2 billion for our foreign aid program. Do you favor the appropriation of the entire sum? Yes, 19 percent; no, 61 percent; no opinion, 20 percent.

4. The President, in his budget message, indicated a surplus of about $4 billion for fiscal 1961. This comes about chiefly through an increase in revenue rather than from a reduction in services. In which way would you favor our arriving at a surplus? Present taxes with some increases, 9 percent; reduction of spending, 86 percent; no opinion, 5 percent.

5. Do you favor Federal assistance to elementary and secondary schools? Yes, 34 percent; no, 57 percent; no opinion, 9 percent.

6. Are you in favor of amending the Social Security Act to include medical expenses, the financing to be shared by the employers and employees? Yes, 39 percent; no, 54 percent; no opinion, 7 percent.

7. Do you favor lifting the restriction of $1,200 on what a retired person may earn and still collect his social security payments? Yes, 66 percent; no, 31 percent; no opinion, 3 percent.

8. What kind of program should Congress adopt to solve the farm problem?

(a) Institute farmers self-help plan whereby bona fide farmers would be given greater freedom to develop a program of their own liking with provisions against Government buying and storing commodities. Yes, 58 percent; no, 10 percent; no opinion, 32 percent.

(b) Enlarge the soil bank program by paying farmers to take approximately 60 million acres out of production at an estimated cost of $1.5 billion. Yes, 15 percent; no, 52 percent; no opinion, 33 percent.

(c) Free farmers of all controls allowing them to plant as much as they wish to plant of any crop on any land; and, do away with all price supports and other subsidies to farmers. Yes, 53 percent; no, 20 percent; no opinion, 27 percent.

9. Are you in favor of stronger civil rights legislation? Yes, 45 percent; no, 20 percent; no opinion, 35 percent.

10. Do you favor an increase in the Federal gas tax to meet the additional cost of the Federal highway construction program? Yes, 26 percent; no, 59 percent; no opinion, 15 percent.

11. Do you favor the establishment of a youth conservation corps as one means whereby we can combat juvenile delinquency? Yes, 48 percent; no, 34 percent; no opinion, 18 percent.

Depressed Areas Legislation

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. SAYLOR. Mr. Speaker, the policies of government are sometimes most difficult of interpretation. Without challenging the basic philosophy of foreign aid at this time, I cannot understand how or why the application of this beneficence should under any circumstances supersede consideration for our own people. America stands ready to provide the funds for a powerplant in the Middle East, a highway in South America, a steel mill in Europe, or a railroad in Asia, yet there is no response when representatives of seriously depressed regions of the United States ask for a medium of stimulating the economy of these areas.

Several millions of Americans may be unemployed, yet the United States will go on and on bestowing cash so that foreign nations may purchase—wherever in the world they may chose—automobiles, generators and other electrical apparatus, machine tools, coal, petroleum products, glass, aluminum products, chemicals, textile products, mining equipment, paper products, leather goods, and a myriad of other items that may be in surplus awaiting purchase here at home. When one of our many charity agencies exhausts its annual allowance, a loan office of convenience will be established to assure continuance of the flow of dollars abroad.

For years we have had pockets of heavy surplus labor in Pennsylvania and a number of other States, but getting a very small percentage of the sum lavished on foreign countries to provide employment for these unfortunate Americans is perennially denied us.

Mr. Speaker, is it asking too much of the Democratic leadership in the House to permit us the opportunity to vote on a depressed area bill? We have waited patiently in line while our foreign friends march by and have the cash ladled out to them. Should not Americans be given just one turn through the turnstile? Our people are not looking for handouts, but just a chance to get back to earning a living.

Dakota Territory Centennial

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. McGOVERN. Mr. Speaker, next year, 1961, marks the 100th anniversary of the establishment of the Dakota Territory.

South Dakota and other States comprising the original Dakota Territory will be commemorating this centennial year.

Believing that a matter of such historical importance should be recognized by the U.S. Government, I am today introducing a resolution calling upon the President to designate 1961 as the Year of the Dakota Territory Centennial.

The text of my resolution is as follows:

HOUSE CONCURRENT RESOLUTION 653

Whereas the year 1961 marks the 100th anniversary of the establishment by President Lincoln of the Dakota Territory of the United States of America, comprising the States of South Dakota, North Dakota, Wyoming, Montana, and Minnesota; and

Whereas recognition of the Territorial government in 1861 was one of the most significant milestones in America's history in that it symbolized the new and greater strength of the pioneers who settled in this area and signaled the beginning of a century which was to be one of continuous and rapid progress; and

Whereas the centennial will commemorate the history these early settlers lived and recorded, along with the progress of the people and the communities since that early beginning; and

Whereas this anniversary is to be commemorated with ceremonies, celebrations, and festivals in the State of South Dakota and other territorial States; and

Whereas all of the people of the United States should be given an opportunity in educational, religious, business, agricultural, labor, and governmental units to participate in this historic observance; Therefore be it

Resolved by the House of Representatives (the Senate concurring), That the President of the United States is authorized and requested to issue a proclamation designating 1961 as the Year of the Dakota Territory Centennial and calling upon all citizens to

join in commemorating the early pioneers who came by covered wagon to develop this area that now holds a position of greatness in our Nation.

Patty Ellis Tells: Why I Love My Country

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1960

Mr. PORTER. Mr. Speaker, the White House Conference on Youth has just ended. I am hopeful that from this major meeting will come the actions which will enable our Nation to meet today's problems with the vision of tomorrow.

It is a pleasure at this time to call to the attention of this body an essay by Miss Patty Ellis. Miss Ellis is an eighth-grade student in Langlois School, in my district. Her beliefs, incorporated into her essay, "Why I Love My Country," are well defined. They are a credit to her, her family, and her teachers.

Her article as reprinted in the March 24, 1960, edition of the Port Orford News follows, under the leave to extend my remarks in the RECORD:

WHY I LOVE MY COUNTRY

(By Patty Ellis, Langlois eighth-grade student)

In this land of America that I call home, I have more freedom than any other people in the world. I have mentioned this first because I feel that freedom is the most important one thing that any individual in the world can possess. This freedom that we have is guaranteed by the Constitution of my country and cannot be taken away from me or any other person, if I respect the rights of others.

I have the right to worship God as my conscience may direct me and in doing so I need not fear any man. I have the right to say what I may choose, as long as I do not bear false witness against my neighbor. I have the right to meet with others and discuss the problems of my America without fear of being molested by those who do not agree with me.

I love my country, because it is respected by the other nations of the world. We are looked upon as the foundation of the democratic way of government. This democratic system gives each and everyone the same privilege to advance as far as the individual may desire. It is this form of self-government that has made my country great.

I know that many people of the world are far less fortunate than I and do not have these rights of freedom. I know that in the years that lie ahead I will be able in some way to help them realize a small part of this freedom I enjoy.

I love my America, too, because it is the land of plenty. There are few who are hungry or in need of food. Many people of the world do not know the satisfaction of knowing that they will have another good meal.

My country is a beautiful land of forests, lakes, mountains and plains. Large rivers flow through almost every State bringing an abundance of water to the farms and homes of its people. These rivers also furnish electric power to the huge factories that produce the many things that help to make life much easier in our homes.

The plains feed the large herds of cattle that go to the markets to soon be on the table of the families of my country. From the forests come the many wood products that make modern homes that we live in and the offices and the factories in which our people work. The lakes and mountains furnish wonderful opportunities for recreation and relaxation and are open to all people whether rich or poor.

I love this country of mine because it is home and I wish that every person on earth could enjoy the blessings that I have of freedom of speech and worship, and the privilege of choosing what I may desire to be or make of myself. In doing this I have the right to obtain as much education as I wish. Education is the foundation for a people who rule themselves in our democratic manner.

This is my America, the land of the free.

Nobel Physicist Comments on Sharing of Atomic Weapons

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. COHELAN. Mr. Speaker, Prof. Owen Chamberlain, of the physics department at the University of California, in Berkeley, recipient of the Nobel Prize for Physics in 1959 and a distinguished resident of the Seventh California Congressional District, recently wrote to the President with reference to the President's proposal to share atomic weapons with our allies.

On February 3, 1960, the President, at his press conference of that date, was asked his thoughts on changing the law so that the United States can provide allies with custody of weapons that Russia has or knows how to make. He replied:

Well, from the very beginning, from what I know about allied cooperation, and so on, I have always been of the belief that we should not deny to our allies what the enemies, what your potential enemy already has. We do want allies to be treated as partners and allies, and not as junior members of a firm who are to be seen but not heard.

Under permission to extend remarks, I submit for the RECORD, Professor Chamberlain's brief letter referring to this proposal, so that all Members may be advised of the views of this distinguished scientist.

The letter is as follows:

President DWIGHT D. EISENHOWER,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I am strongly against your proposal of February 3 that we share our atomic weapons with our allies.

I believe that if we shared atomic weapons we would then have to make satellites out of our allies.

Sincerely yours,

OWEN CHAMBERLAIN,
Professor of Physics.

Departments of Labor and Health, Education, and Welfare and Related Agencies Appropriation Bill, 1961

SPEECH
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 11390) making appropriations for the Departments of Labor and Health, Education, and Welfare and related agencies for the fiscal year ending June 30, 1961, and for other purposes.

Mr. BROYHILL. Mr. Chairman, I rise to endorse favorable action by the House by which the appropriation for aid to schools in federally impacted areas has been continued.

My position on Federal doles or gifts to the schools of our Nation to help them educate our children has been consistent throughout my terms in the Congress. I am firmly opposed to such aid. At first glance, it may seem, then, that my equally consistent stand in favor of full appropriations for the aid to federally affected areas progams is contradictory to my overall position on general Federal aid to education. I do not believe that it is. The federally affected areas programs have been incorrectly labeled "aid," "assistance," "grants"—connoting beneficence, good will, and charity on the part of the Federal Government toward these particular communities. If this were true, I would oppose the programs vigorously. But it is not true, as I propose to show.

The payments under these two programs are merely assumption by the Federal Government of its just responsibility to those communities in which it operates. The reason for this responsibility is twofold. First of all, the presence of Federal Government operations within a community tends to swell the public school enrollments in the community to a marked extent, thereby necessitating the construction of new facilities, as well as an increase in operation and maintenance costs. But the second side of the responsibility is yet more significant. Property owned by the Federal Government cannot be taxed. This means that at the same time that these activities of the Federal Government are adding enormously to the expense of operating the public school system, they are subtracting from the tax base upon which the school district can draw. When a private business moves into a community, it may produce a great swelling in school enrollment, but at the same time it swells the tax base.

Secretary Flemming, in his testimony last summer before a subcommittee of the Committee on Education and Labor, repeatedly and rightly labeled this assistance as "payments in lieu of taxes." In speaking on behalf of the President's proposals to cut payments under these two laws, Secretary Flemming described

the philosophy behind these programs as follows:

I believe that the Federal Government should provide assistance to those school districts whose school revenues are impaired by reason of the tax-exempt status of Federal property.

I also believe that this assistance on the part of the Federal Government should be reasonably related to the school revenues actually lost by school districts by reason of the tax-exempt status of Federal property.

Since we are agreed that the payments under these programs are "payments in lieu of taxes," then it would seem logical, when debating the amount of appropriation, to consider just exactly how much is lost in taxes due to the presence of tax-exempt Federal property, and compare that to the amount received under these programs. If these payments really exceed the tax loss, then we must agree with Secretary Flemming and the President that the programs should be cut.

Last summer figures were compiled in my constituency, the 10th Congressional District of Virginia, to illustrate the impact of Federal Government activities on the operation of the public schools in the northern Virginia communities of Arlington County, Fairfax County, Alexandria, and Falls Church. It was estimated that almost $12 million would be added to local tax revenue if the federally owned land were privately owned. In these northern Virginia communities a very high proportion of local tax revenue is channeled into the public school systems. It therefore seems most apparent that the amounts these school districts would receive if this property were privately owned would be considerably in excess of the $4,138,255.28 now received each year under Public Law 874. Furthermore, almost $94 million has been spent in these communities since World War II on school construction. Unquestionably the primary cause of the vast increase in enrollment that necessitated this plant expansion was increased Federal Government activity. Yet the Federal Government payments under Public Law 815 have been only $17 million or 23.7 percent of the construction costs.

It seems obvious, then, that these communities are being underpayed rather than overpayed. It is hard for me to understand why Secretary Flemming, after so well describing the Federal responsibility to these communities, is recommending an appropriation that would cover only 68 percent of the entitlements under Public Law 874 and only 70 percent of the entitlements under Public Law 815 for fiscal year 1961. I hold that this is both illogical and unjust.

The people in my district have done an extraordinarily fine job of helping their school systems cope with the 338-percent increase in enrollment over the last 13 years. So large is the Federal impact on the area that 51 percent of the pupils in our public schools are federally connected, and payments under Public Law 874 comprise 11.8 percent of the school budgets. If the Federal payments were cut as drastically as Secretary Flemming recommends, the impact on our school districts would be disastrous.

Secretary Flemming has stated that the Federal Government has a responsibility to compensate "those school districts whose school revenues are impaired by reason of the tax-exempt status of Federal property." I agree with him completely. And I do not see how a reduction in the appropriation for these programs now or in the future can mean anything but a shirking of that responsibility.

Mr. Chairman, the payments under Public Laws 815 and 874 are not Government doles or gifts, but rather are "payments in lieu of taxes." It seems only just that we continue to appropriate the full amount authorized in these laws, thereby enabling the Federal Government to more adequately carry out and fulfill its responsibility to those communities in which it operates.

Penalty for Speaking Out on Legislation?

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the New Orleans Times Picayune for October 15, 1959:

PENALTY FOR SPEAKING OUT ON LEGISLATION?

The Internal Revenue Service says the money spent by business firms or various organizations to promote or defeat legislation or for political campaigns, is not a legitimate business expense and therefore it should be taxable. It also holds that the dues, membership fees, etc. paid to trade, labor or civic organizations should not be "deductible" if a "substantial" part of these dues are paid to lobby, influence legislation or do political campaigning.

The revenue service has proposed a "rule" to this effect and will hold hearings on it soon.

When business people or organizations support or oppose legislation, they usually do so because the legislation would affect the business of their members. In that case we don't see why the money so spent is not a legitimate business expense. It is hard to think of any expenses more necessary to a firm than money spent to fight a bill that might destroy the business. Government agencies spend public money to do their lobbying.

When the revenue service says members can't deduct their dues to trade associations, labor union, chambers of commerce, etc. if these organizations devote a substantial part of their activities to influencing legislation or campaigns, what is meant by "substantial"? Apparently it would be whatever some bureau officials said it was.

Of course many business groups and other organizations will oppose this apparently unfair rule. The revenue service may have in mind instances of excessive or improper expenditures to influence legislation or political campaigns. But if so it ought to make its rule to cover what seems to be illegitimate and not penalize what organizations and groups have a right to do or an obligation to do.

The Navy's Pioneer Aviation Camp at Annapolis

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1960

Mr. LANKFORD. Mr. Speaker, recently an account of the Pioneers of Naval Aviation was brought to my attention. This article, by Miss Ruby R. Duval, entitled "The Navy's Pioneer Aviation Camp at Annapolis," first appeared in the May 1959 issue of Shipmate, the magazine of the U.S. Naval Academy Alumni Association. It is a valuable contribution to the history of this branch of the naval service, and it is a tribute to the fearless pioneers who established naval aviation. The article follows:

THE NAVY'S PIONEER AVIATION CAMP AT ANNAPOLIS

Fifty-one years ago, the U.S. Navy first investigated the possible advantages of aviation for naval usage; and 2 years later Capt. Washington Irving Chambers, U.S. Navy, received orders directing him to attend certain aviation meets as an official observer. He had already envisioned the practicability and value of airplanes in naval warfare and—after attending meets at Belmont Park, N.Y., and Halethorpe, Md.—he tried to interest the Wright brothers in arranging for a demonstration flight from the deck of a naval vessel. When the Wrights declined, the Curtiss Co. was consulted and they agreed to make the attempt.

Necessary arrangements for the flight were made, and on 14 November 1910 a Curtiss representative successfully flew a landplane from a platform erected on the bow of the U.S.S. *Birmingham* as the ship got underway just off Old Point Comfort, Va. Captain Chambers was enthusiastic in his appraisal of the feat, but the Navy Department was reluctant to seek an appropriation of funds for the development of naval aviation. However, when Glenn H. Curtiss of the Curtiss Company offered to instruct several naval officers in the art of flying "free of charge," his offer was accepted and Lt. Theodore Gordon Ellyson, U.S. Navy, was ordered to the Curtiss Camp at San Diego, Calif., in December 1910. Successful experiments followed and, after the perfection of a hydro-airplane attachment which is credited to Ellyson and Curtiss, many naval officers were volunteering for flight training. Lieutenant Elyyson had qualified and was recognized as naval aviator No. 1.

The first appropriation of $25,000 earmarked for naval aviation was included in the Navy Appropriations Allotment for 1911–1912, and Captain Chambers was ordered to the Bureau of Navigation with instruction to devote his efforts to aviation and the coordination of the aeronautical work of the various bureaus of the Navy Department. Lt. John Rodgers, Lt. John H. Towers, and Ens. Victor D. Herbster were detailed for flight training early in 1911. Rodgers and Herbster received instruction at the Wright Brothers camp in Dayton, Ohio, and Towers took his flight training at the Curtiss Camp at Hammondsport, N.Y.

The U.S. Navy soon had three more licensed pilots. Lieutenant Rodgers, Lieutenant Towers, and Ensign Herbster qualified, and they were designated as Naval Aviators Nos. 2, 3, and 4, respectively. Two Curtiss

planes and one Wright plane were purchased and, in the summer of 1911, the first naval aviation unit was organized as an aviation camp on U.S. Government property. This was located at Greenbury Point, opposite Annapolis where the Severn River meets the Chesapeake Bay.

Weather conditions in this locale, however, prompted recommendation that the pioneer camp be moved to San Diego, Calif., for the winter months—and the transfer was made.

Early in the summer of 1912, the first naval aviation unit was brought back to Annapolis. Hangers were set up on the north shore of the Severn River, near the Naval Engineering Experiment Station, which was by far preferable to the Greenbury Point site. Lt. John H. Towers, Naval Aviator No. 3, was put in charge of the camp, and had the able assistance of Ensign Herbster, Naval Aviator No. 4.

More pilots were needed; the enthusiasm of those who had qualified was rapidly filtering throught the fleet, and more officers were clamoring for flight instruction and training. The Marine Corps expressed keen interest and two of their officers, 1st Lt. Alfred A. Cunningham and 2d Lt. Bernard L. Smith, were ordered to annapolis for duty at the aviation camp. Ens. Godfrey de C. Chevalier, U.S. Navy, joined the group that summer and the three novices, Cunningham, Smith, and Chevalier, wone their coveted licenses as Naval Aviators Nos. 5, 6, and 7 in the order named. Two of the pioneers, Lieutenants Ellyson and Rodgers, had been detached.

In the late fall of 1912 Lt. (jg) Patrick N. L. Bellinger and Ens. William Devotie Billingsley reported for flight training at the camp on the Severn. It is of interest to recall an incident in relation to their assignments, for while Ensign Billingsley had anticipated orders to the Naval Academy and the Department of Ordnance and Gunnery for his first shore duty, he had not requested aviation duty. Lieutenant Bellinger had officially requested aviation instruction there; but, through some misinterpretation in the office of the Detail Officer in the Bureau of Navigation, Billingsley received orders for flight gation to personally inquire about his regard to his request. It was only after Lieutenant Bellinger visited the Bureau of Navigation to personally, inquire about his request that he learned what had happened. The Detail Officer was ready to make amends and promptly asked Billingsley whether he would like aviation at Annapolis. The reply was "yes." Lieutenant Bellinger also got his orders to the camp on the Severn and both officers were happy.

From the inception of the naval unit dedicated to the theory and practice of aviation these pioneers collaborated with the aircraft industry and thus kept in touch with rapidly developing phases of aeronautical technology. Their sponsor and mentor, Captain Chambers, although not a flier himself, was enthusiastic about the advantages adaptable to the naval service.

The seven officers, including Lieutenant Towers, who made up this distinguished group seemed to be a happy family who were learning much through practical experience. A corps of mechanicians attached to the camp had been selected from the enlisted men in the Navy, and each man evinced pride in his assignment.

Even though officers and men exercised the greatest care at all times, there were some accidents and trying experiences. The hangars were rather flimsy, and on more than one occasion high winds damaged the planes. Motor truble was another problem which was perplexing and ofttimes upset plans for flights, but the ingenuity of the pilots and mechanicians usually "saved the day."

While the officers on duty at the pioneer aviation camp were under the Superintendent of the Naval Academy, they understood that the Superintendent, Capt. John H. Gibbons, took no interest in them officially. In fact Vice Adm. Patrick N. L. Bellinger, U.S. Navy, retired—the only surviving member of the nine pioneers—recalls that no one, with the exception of Captain Chambers in Washington, seemed to take any particular interest in them and what they were doing for the naval service. Socially, however, these young officers were in demand at the Naval Academy, and were never at a loss for invitations to dinners, teas, and the then popular Sunday breakfasts.

Captain Chambers, in an article in the "Naval Institute Proceedings" of December 1912, referred to his proteges as follows:

"There is no risk that these zealous aviators will not cheerfully undertake in the interest of adapting the art of aviation to naval purposes. Work has progressed so far without serious accident although it has been arduous, dangerous, and replete with temptations for the aviators to rival many of the sensational performances that have resulted disastrously to contemporary pioneers in civil aviation."

Early in January 1913 the aviation camp was transferred to Guantanamo for operation with the Atlantic Fleet on winter maneuvers. The group, commanded by Lieutenant Towers, was subject to orders from the Commander in Chief of the Atlantic Fleet, and opportunity was afforded for practical tests of the employment of airplanes in cooperation with ships. The usefulness of planes as scouts in spotting the approach of distant vessels, and in detecting mine fields and submarines, was soon recognized.

Ensign Billingsley's description of routine at the Guantanamo camp in mid-January is of interest to our naval aviators of today:

"The camp here is situated on a nice beach on the bay and its location is almost ideal. * * * We are early to bed and early risers. We get up at 5:30 in the morning and get all of the flying in before breakfast which is at 8:45. After this time there is too much wind for flying. * * * The latter part of the forenoons and the afternoons are spent in overhauling and dolling up our machines."

Later that month he wrote of moonlight flights the aviators were making and he explained that they were for pleasure and not because of insufficient flying weather during the day. It is understood that the U.S. Navy's first night flight was made by Ensigns Herbster and Billingsley.

Some of the difficulties encountered by the pioneers of 1913 are revealed in Ensign Billingsley's letter of February 14:

"* * * I wanted to make my first flight alone before writing to you today, but we are having quite a bit of motor trouble. Our machine (the Wright plane) is out of commission about two-thirds of the time; and as a result, I have not yet qualified to take a machine up alone. We need a new motor and we understand it was due here the first of this month. Now we hear it will not get here before March. * * * I am out of luck for much flying before then. With a good motor I can qualify to fly alone in 2 or 3 days.

"With 2 hours of sure flying weather a day the camp gets in quite a bit of flying. We made 134 flights last week. That is the whole camp, you understand, not I."

The new motor finally arrived, and on March 5, 1913 he received his orders confirming his qualifications as Naval Aviator No. 9. A few days later he wrote of the satisfaction and fascination of being a full-fledged pilot, and explained that flying had become very popular with the officers of the Atlantic Fleet. He said there were groups of visiting officers at camp early every morning awaiting rides in the aircraft. The aviators were accommodating as many as possible.

While the aviation camp was at Guantanamo for winter training, Leslie's Illustration Weekly sent their columnist and photographer, Mrs. C. R. Miller, to get a timely story for the publication. A few excerpts from her article are of historic interest:

"My first view of the aviation camp at Guantanamo was early one morning, about 7 o'clock. I had come from Caimanera in a motorboat, and as I landed, a Curtis hydroplane shot out from the beach and skimmed along the water. Lieutenant Bellinger was going for altitude and rose higher and higher to a height of perhaps 2,500 feet. Then he began to descend and a few minutes later I was talking with him on the beach. * * * Ensign Herbster was gliding over one of the battleships with Ensign Billingsley in a Wright hydroplane and after a number of turns and twists in the air a landing was made in front of his hangar.

"Lieutenant Cunningham, who was giving one of the naval officers a ride, was the next to land. Then came Lieutenant Smith from Caimanera whither he had taken the steward. * * * All this time Lieutenant Towers and Ensign Chevalier were flying about in a Curtiss boat. At last they landed and I was able to get a good look at the queer looking air and water craft.

"I pictured a number of flights as the aircraft darted about over and alongside the battleships like so many gulls. Then I returned to camp and we began to talk about photography from a flying machine and just what could be done along these lines. * * * Ensign Herbster suddenly looked up at me and said: "Would you like to go up and try picture making?'

" 'Delighted,' I answered * * * and soon we are off. I made two exposures over Fisherman's Point showing the aviation camp. Then we rose higher and, it seemed, hovered over the battleship *Connecticut* as it was coaling from the big collier *Cyclops*."

The aviation camp returned to Annapolis early in April 1913, and the hangars were again set up on the north shore of the Severn River. Routine flights and the establishment of new records in altitude, mileage covered in endurance tests, and stability in the air were winning nationwide acclaim; and Josephus Daniels, who had joined President Woodrow Wilson's Cabinet as Secretary of the Navy the previous month, took a personal interest in the endeavors and accomplishments of the able pioneers. Secretary Daniels visited the camp on several occasions and, in the late spring, enjoyed a ride with one of the officers.

A Baltimore newspaper, the American, reported on May 1, 1913, a successful flight by naval aviators in three machines from Annapolis to Baltimore and return without touching the water at any time and without the slightest mishap. The men named were Ens. Victor D. Herbster with Ens. William D. Billingsley, and Lt. B. L. Smith, USMC, with Mechanician Pullin—both of whom operated Curtiss hydroaeroplanes. Also Lt. P. N. L. Bellinger with Mechanician Boyden, in a Wright earoplane with hydro attachments. The news item stated that the start from Annapolis was made at 3:05 p.m. and that arrival after the trip was at 4:27. The machines followed the water route—rounding Greenbury Point at the entrance of Annapolis harbor and headed up the Chesapeake to the mouth of the Patapsco River which they followed to Baltimore. "After several spiral flights without touching the water, the machines started at once for Annapolis * * * and it is considered that the performance of the three machines and their corps of aviators was a notable indication of the standard of reliability which has been reached by the naval birdmen," commented the newspaper. An altitude of from 2,000 to 3,000 feet was maintained during the flight. The account further explained that the appearance of the three

planes in the air aroused great interest and that many persons lined the shores of the Patapsco enjoying the sight. It concluded as follows: "The spiral flights and other figures cut in midair by the aviators were rewarded with applause from the spectators."

The statement of figures cut in midair brings to mind one of the commanding officer's firm directives—that the aviators avoid unnecessary acrobatics. It was said that Ensign Chevalier was somewhat a daredevil and that he was eager to diverge from routine at times. Fortunately the group, as a whole, pulled together and the intrepid young flier refrained from any sensational maneuvers in the air.

By the first of June all was progressing well at the camp at Annapolis even though flight training was not "a bed of roses" as one of the aviators expressed it. There were minor accidents and many delays caused most often by motor trouble; but on Friday, June 20, the first fatality shocked the camp, the Naval Academy, the surrounding community, and the whole naval service. This was the first accident to naval aviators resulting in loss of life since the Navy began aviation experiments.

Lieutenant Towers and Ensign Billingsley crashed from about 1,600 feet in the Wright machine which had left camp in the early afternoon for a flight over Chesapeake Bay to Claiborne, Md. Billingsley was at the controls and was thrown clear of the plane. Safety belts had not been adopted at that time. Towers, riding as a passenger, happened to have hold of a stanchion to which he clung during the plane's fall, and to this he doubtless owed his life. He was seriously injured and was hospitalized for some weeks. A special board appointed to investigate this tragedy reported to the Navy Department that "only the ungovernable elements" could be held responsible. A strong current of wind had upset the plane from behind.

A memorial tablet erected at the Naval Academy by the classmates of Ensign Billingsley records that he was "the first naval aviator to meet death in the performance of duty."

The Need for Eliminating Waste in Our Armed Forces

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. STRATTON. Mr. Speaker, because of the enormous size of the Nation's defense budget, more than half of our total national budget, it is particularly important that we should make every effort to eliminate waste in our Armed Forces and to insist on rigid economy. As a member of the Subcommittee on Manpower Utilization of the House Committee on Armed Services, I have been particularly concerned with this matter. And while I know that the Defense Department is also attempting to eliminate unnecessary waste, I think it is frequently helpful when outside observers bring to their attention possible areas of improvement. In this connection, I was particularly impressed with an editorial that appeared in the Oneonta Star for March 25 of this year, and under leave to extend my remarks I include the editorial and invite the attention of my colleagues and the Department of Defense to its wise comments:

[From the Oneonta Star, Mar. 25, 1960]

ARMED FORCES WASTE SHOULD BE CORRECTED

The military mind is not much given to economies. There is some historical justification for this. The business of providing the Nation with a good shield is far too important, it might be argued, to warrant being overparticular about what it costs to do the job. But does this really justify the general lack of concern about the taxpayer's dollar which pervades the Armed Forces? We think not.

The Department of Defense spent $24 billion last year for supplies and equipment. It has on hand surpluses with a book value of nearly $27 billion, for which the annual storage bill runs to about $134 million. Yet there is little coordination of procurement among the services, with the result that vast sums are wasted. This waste cuts into the amount of defense we get per dollar.

The lack of any general supervision of procurement has been underscored in a new report prepared for the Joint Congressional Committee on Economics. This report recommends creation of a separate service to purchase supplies and equipment for all the Armed Forces. Such a system would, demonstrably, reduce waste—if only by letting the Pentagon's right hand know what its left hand was buying.

The military people don't like the idea of unified procurement, though it seems to work all right in limited areas. But the Armed Forces will have to put up far better arguments than they have yet advanced if they want to be convincing.

Year 1960—The Challenges We Face

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an excellent article on Dr. Ralph Johnson Bunche. This article appeared in the Pittsburgh Press of Saturday, January 2, 1960, and was written by Charles Lucey of the Scripps-Howard staff.

Because I feel Dr. Bunche has done an outstanding job in his position at the United Nations, and in many other endeavors, I am calling this article to the attention of my colleagues in the Congress and the people of America:

YEAR 1960—THE CHALLENGE WE FACE—DR. BUNCHE CONFIDENT CRISES CAN BE MET, HAILS ATOMIC FUTURE—OUTLOOK BRIGHT FOR U.N.

(By Charles Lucey)

NEW YORK, January 2.—There is no despair in Ralph Johnson Bunche, scholar-diplomat, as he views a world harried by greed and arrogance and rowdyism of men and nations.

A man of heart and hope is the world figure, one of the greatest Negroes America has produced. He is our highest representative in the United Nations central structure, second only to Dag Hammarskjold.

He measures the march of the U.N., not by headlines but by history. With other men he finds cause for "guarded optimism" in the East-West struggle. But his real benchmark for today's newest crisis—whatever it is—is to recall that other crises stirred the world 3, 5, or 10 years ago and, largely with U.N. help, were settled and forgotten.

A year ago Cyprus threatened to inflame the Mediterranean. Earlier, the Arab-Israeli war. Tunisia and Morocco were almost as bitter as Algeria today. If India and Pakistan haven't agreed on Kashmir, neither have they gone to war. In 1959 a Thailand-Cambodia dust-up was settled quietly through U.N. The North Vietnam-Laos flareup is dampered down. The Red China-India border may be uneasy, but no war rages.

NO COMBAT FATIGUE

Dr. Bunche had every right to show combat fatigue after the long General Assembly session just closed. But on this day, sturdy and still young at 55, he was bright-eyed despite meetings that kept him up until 3 a.m. Quiet in voice and dress, in manner and mood, he looked out across the world from his stylish 38th-floor office in the big slab above the East River.

Few men have tramped the sod and sand of that world as has Ralph Bunche. No one has followed its postwar stir and ferment more closely. Now, preparing to be off again for Africa, he marvels at the breakthrough from colonialism to independence which has swept whole continents.

"When the United Nations was set up only 14 years ago," he muses, "800 million people still lived as non-self-governing colonials. By the end of 1960 there will be fewer than 125 million. India and the Philippines signed the charter though they were not yet independent. Then came Ceylon, Indonesia, Nepal, Laos, Vietnam, Lebanon, Syria, Israel, Jordan, Libya, Morocco, Tunisia, Ghana, and Guinea.

MORE NEXT YEAR

"Next year will come at least 4—Nigeria, with 35 million, to become the largest country in Africa, and Somaliland, French Togoland and the French Cameroons. French Sudan and French Senegal seem likely. The British West Indies are uniting to emerge from colonialism into dominion status. So it goes all over the world.

"When I came to United Nations in 1946 to set up the Department of Trusteeship and non-self-governing territories, I predicted we would work ourselves out of a job. Many thought self-government for so many lands would take many decades, even centuries. I was convinced that once colonial peoples got the bit of nationalism in their teeth, given the encouragement from the outside such as from the United Nations, self-government would come faster. But nobody foresaw that the tempo would be so great as it has.

"Within a decade there'll be only a vestige of colonial life in Africa."

STRUGGLE NOT ENDED

The surging for independence and equality is by no means ended. The Union of South Africa can be a violent trouble spot. The struggle will focus in Algeria, the Congo, and Kenya as other peoples become self-governing and put pressure on those holding to colonialism. But, said Dr. Bunche:

"There is always a threat of violence but it can be averted with statesmanship. The United Nations is trying to see through this vast transition without resort to war. It's not easy to isolate a colonial war in today's world, and keep it from spreading. But there's encouraging evidence of good will and moderation on both sides in some of these disputes."

Not for a moment does Dr. Bunche accept the picture of the United Nations shunted onto a sidetrack by Big Four and Summit Conferences. "Below the Summit," he says, "the way must be prepared for agreement at the top on broad principles; after the decisions have been made the United Nations must be ready to implement them."

Indeed, the United Nations has greater world acceptance today than at any previous time, Dr. Bunche insists. Except for the issue of Germany, which is a peace treaty that it never was intended that the U.N. should settle, the U.N. has had a role in every major international question since it was founded.

LEDGER LOOKS GOOD

"The U.N. ledger looks good. It is approaching universality in membership. It has been effective in stopping bloodshed in Indonesia, Palestine, and Kashmir. The fact of the complete devastation of nuclear war is causing more and more people to look to it. Its work in health, agriculture, and technical aid has touched millions.

"The United Nations has developed a kind of international common law today rooted in no specific authority. All over the Near East and in India and Pakistan with regard to Kashmir there are U.N. uniformed personnel, aircraft, vehicles, flags. You probably never could have got this into the charter in 1945. But it is part of maintaining peace; it is accepted and no one complains.

"There's a quiet-working diplomacy that goes on all the time. Take last spring's Thailand-Cambodia trouble, which threatened to be serious. Secretary General Hammarskjold sent out an experienced Swedish diplomat and it was smoothed over. Yet it was never on anybody's agenda.

"Mr. Hammarskjold's recent trip to Laos was quite informal. Yet it has pulled the tension out of the Laos-North Vietnam situation. A lot goes on that never reaches the stage of big news."

VISION OF TOMORROW

Nothing more excites Dr. Bunche's vision of tomorrow than peaceful use of nuclear energy, a United Nations project under his direction since President Eisenhower made his dramatic 1953 plea for such a program.

"Here lies a means of development far greater than the industrial revolution. Today, sponsored by the United Nations, there is free international exchange of information on fission and fusion. Many nations will share the knowledge of atomic reactors in which the United States, the United Kingdom, and Soviet Russia have pioneered. Fusion would mean harnessing ocean water to provide energy for underdeveloped nations which now lack it.

The hopes all this holds for the world stagger the imagination.

As Dr. Bunche heads for Africa he looks over his shoulder and appraises the progress of desegregation here at home. The back of the fight has been broken, he believes. Achieving integration now is a matter of time. For the individual Negro and his family it is bitter medicine that he still must suffer some unfairness and indignity which one day will be wiped out.

But the road forward looks good to Ralph Bunche.

The Problem of the South Tirol

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. REUSS. Mr. Speaker, both Austria and Italy are stanch friends of this country. For this reason, I am concerned about the increasing tension between Austria and Italy arising out of the problem of minority rights in South Tirol.

Just a few weeks ago the Italian Government refused admission to Italy to the Austrian Deputy Prime Minister, Professor Gschnitzer. Almost at the same time, the Austrian Government announced its intention to bring claimed Italian violations of the rights of the German minority in South Tirol before the United Nations.

South Tirol, which contains 250,000 German-speaking citizens in an area of 74,000 square kilometers became Italian as a result of the Peace Treaty of Versailles in 1919. President Woodrow Wilson, it is said, later came to regret this decision, and the failure of the treaty to call for a plebiscite in the area.

During the Fascist regime, there was suppression of the rights of these mountain people. After the Second World War, Austria and Italy signed the Paris agreement to regulate the minority rights of the German-speaking inhabitants of South Tirol. Once again, the Western Powers acquiesced to the incorporation of South Tirol into Italy. In the words of former British Foreign Minister Ernest Bevin:

We for our part were never altogether happy about leaving some 200,000 German-speaking persons in Italy, and were anxious that the Italian Government should do everything to preserve the minority rights of these people.

The Paris agreement left two or three important provisions to be negotiated between Austria and Italy. The most important one, which was not settled until 1948, dealt with the question of the options for citizenship resulting from the 1939 Hitler-Mussolini agreement. In 1939, Mussolini permitted any South Tirolean to opt for German citizenship. Eighty-six percent of the population did so, but only about 25 percent actually emigrated northward before the war was over. In 1948, under a supplementary agreement, almost all of the South Tirolese were able to retrieve Italian nationality, although for many this was dragged out for several years. Of the 70,000 who emigrated, only 9,000 persons have returned.

The Austrian position on the social and economic rights of the South Tirolese has been put forth in a speech in the United Nations General Assembly on September 21, 1959, by Dr. Bruno Kreisky, Austrian Foreign Affairs Minister:

Austria, needless to say, has full confidence in the principle of the peaceful settlement of disputes—a principle fully applicable to the question that ranks among the highest of our foreign affairs, namely the question of the South Tirol, whose cultural and economic development must be safeguarded and whose ethnic substance must be preserved.

Clearly this is a problem which can only be solved in the spirit of the United Nations Charter, whose aim it is, in conformity with the principle of justice and international law, to bring peaceful means to bear on the settlement of international disputes, and to develop friendly relations among nations.

SOUTH TIROL'S TRAGIC FATE

The Saint-Germain Treaty of 1919 severed the southern part of the Tirol from Austria and made it part of Italy. The South Tirol now is a territory of 2,860 square miles with a population of roughly a quarter million Tirolese.

Under the Fascist regime, South Tirol suffered the consequences of a sustained campaign of denationalization. Even the children were prevented from receiving instruction in their own language and finally, in 1939, an agreement between two dictatorships led to the displacement of tens of thousands of families. After the end of World War II, all attempts to find an equitable solution of the problem of the South Tirol ended in failure. I should like to stress in this context that it was not only Austria which considered this state of affairs unjust and, indeed, untenable. For instance, an Italian manifesto appeared in the American press as early as 1944; it was signed by prominent political leaders, scientists and artists, among them Randolfo Pacciardi, Prof. Giuseppe Borghese, Prof. Gaetano Salvemini, and Arturo Toscanini. In this manifesto it was even suggested that Italy relinquish her control over the ethnic minorities in the extreme north and northeast of her territory.

In 1946, Italy and Austria reached an agreement which, it was then hoped, would assure the South Tirol a cultural and economic development unhampered by restrictions. This agreement which, as Annex 4, is a part of the Italian peace treaty, expressly provides for "special measures to protect the national character and the cultural and economic development" of the South Tirol; it also grants this minority group autonomous legislative and executive powers.

And yet, the correct interpretation of the Paris agreement has been subject to differences between the Governments of Italy and Austria ever since.

Let me briefly summarize the situation in South Tirol:

There can be no doubt that, compared with the Fascist era, the South Tirol is relatively free from restrictions in the cultural field. The social and economic area, however, presents a different picture. Here the situation is indeed serious.

Let me say at once that the South Tirolese are an extremely vital ethnic group. And yet, the present practice of the administration undermines the very foundations of their existence on their native soil. It discriminates against them when they look for employment; and, as far as housing is concerned, it may be apposite to point out that only 7 percent of the apartments built with Government aid in the South Tirol have been made available to its indigenous inhabitants. This is indeed a gross and incomprehensible discrimination; it has compelled many thousands of young South Tirolese to emigrate.

The South Tirol problem which, of course, remains a national question, is increasingly becoming a social and economic concern. It is one of the more tragic aspects of the problem that, in a court of law, a South Tirolese will probably be faced by a judge with whom he cannot communicate in his own language. Among those to whom jurisdiction over the South Tirol—a population of a quarter million—is entrusted, there are only five South Tirolean judges.

The parliamentary representatives of the South Tirol have repeatedly sought redress of this utterly unsatisfactory state of affairs; they have also submitted a draft bill outlining the proper autonomous status for the region of South Tirol.

In their draft, the representatives of the South Tirol insist on their people's right to use their own language in public life, to claim their share in public office in proportion to their population, and, finally, to create conditions requisite to the equality of opportunity in their daily lives, paying particular attention to housing and employment.

AUTONOMY FOR BOZEN PROVINCE

The Austrian Government cannot but endorse these just aspirations. Clearly, there is no other way to implement the Paris agreement, in spirit as well as in fact, but to create an autonomous Province of Bozen. Indeed—is there any other way of assuring an ethnic minority its full democratic rights than to grant it self-administration?

It is only thus that an ethnic minority may claim to profit from the principle inherent in the Magna Carta of modern democracy, the Declaration of Independence of the United States of America, according to which governments derive their just powers from the consent of the governed.

In the true spirit of the Paris Treaty, the Austrian Government will continue to claim its proper share in the implementation of that international agreement. Should, however, bilateral negotiations not succeed in creating conditions satisfactory for a minority of 250,000 in a nation of almost 50 million, Austria will have no alternative but to appeal to the United Nations to put this question on its agenda at the earliest possible moment.

It is quite evident that it is neither spite nor hostility against our Italian neighbor that compel us to state the case of South Tirol. Indeed—how could we have hostile feelings against a nation which, for many centuries, we have been bound by mutual ties of commerce and trade, a nation whose abundant spiritual heritage has greatly enriched our own culture.

It is, let me repeat, not enmity which motivates our step, but the responsibility which rests upon us. It is, moreover, the restlessness of thousands of young people of the South Tirol, who want to plan their future and to shape their lives, as young people do elsewhere in the world.

Nothing divides us from our Italian neighbor but this open question. If a solution can be found which the South Tirolese can accept, new avenues of fruitful cooperation would be opened up in our part of Europe.

I am indebted to Mr. Gabriele Paresce, press counselor of the Italian Embassy here, for a statement of the Italian position on Alto Adige—the South Tirol:

It must be recalled that five German-speaking representatives of Alto Adige are members of Italian Parliament and that some of them, as a matter of fact, represent it in multilateral assemblies.

German-language newspapers in Alto Adige may criticize the Italian Government in complete freedom and they certainly do not restrain themselves in the exercise of this right. The Italian Government is as pleased with the criticism per se when it is constructive, as it is by the fact that criticism, whatever its nature, is completely free.

In almost 500 Alto Adige schools, German-speaking students are taught in German by German-speaking teachers who employ textbooks mostly printed in Germanic nations. In addition, Italy recognizes all of the scholastic achievement records acquired in Austria by its own citizens, even when the level of such accreditations is more than doubtful when compared with similar Italian scholastic achievements.

The economic situation is very satisfactory and may be favorably compared with that of adjacent territories in Italy or on the other side of the frontier. The preferential trade agreement with the Tirol-Vorarlberg naturally creates a privileged situation. Even though this was criticized by other parts of Italy the Italian Government nevertheless persists along this line. Regarding access to public employment, the Italian Government did not limit itself to assuring equality with others to German-speaking citizens, but agreed that a special quota of local employment be reserved for German-speaking residents. Regarding state employment, it agreed that a special quota of jobs be reserved in various cases for applicants with a knowledge of German. Furthermore, where professional qualifications are required in certain instances (state examinations) applicants may take the examination in all subjects in the German language.

Bilingualism—that is the parity of German and Italian—is generously applied in the Province of Bolzano. Beginning with the immediate postwar period, German-speaking citizens could correspond with public offices in German. Recently it was also agreed that public offices or agencies, may exchange correspondence exclusively in German if they wish.

A matter which has received considerable polemical treatment is the appropriation of State funds for popular housing. Efforts were made to have these funds allocated according to different criteria from those applied in the rest of Italy where such allocation is based on purely social considerations. While it is the responsibility of the constitutional court to establish certain principles of law, as far as the Government is concerned, it has already taken steps to satisfy the desires of communes with German-speaking populations.

* * * * *

With the Italian Government's full acquiescence, Alto Adige's traditions and customs are still extant and visible. There are many organizations of all kinds, even those which give training in the use of firearms. Uniforms, often of a military type, are used on every occasion. The multiplicity and compactness of the various organizations are closer to the German than the Latin tradition.

The Province of Bolzano was even allowed to retain the institution of "Maso Chiuso," which permits a farmer to will his entire property to only one son. This is contrary to Italian law—to the very spirit of private law—which forbids restriction of the right to inherit to the first-born son. Despite this, it was permitted precisely because primogeniture (Maso Chiuso) is part of the traditions and cultural patrimony of those peoples which Italy wishes to respect as well as to safeguard.

* * * * *

The Alto Adige problems are concrete and can be solved; they are not mutually opposed absolutes based on principle. Thus, for example, one of the continuing difficulties has been the insufficient knowledge of the two languages in public offices. Few Italians know German, and even fewer German-speaking citizens are interested in a government career. Therefore, it is necessary on the one hand to encourage and facilitate the study of the German language and on the other, to make a government career easier and more attractive to German-speaking citizens. The Italian Government is considering both these matters.

The social aspect of the question is another matter to be followed with the utmost interest. Everyone knows how important the creation of jobs is for Italy. In the zone in question, this problem is of a special nature, particularly in the exclusively agricultural mountain valleys prevalently inhabited by German-speaking citizens. There the transformation into a mixed economy is undertaken unwillingly and with difficulty.

The "landsknechte" (disinherited children) who cannot find agricultural employment must seek work in the cities. There, however, they must compete with Italian-speaking workers skilled in industrial work. This necessarily creates the complicated need for adaptation. The Italian Government's financial means are limited by force of circumstances and are inadequate for the nation's needs. But in Alto Adige, another important consideration is added: the Italian Government does not in any way wish to promote industrial development projects which may seem designated to favor artificial immigration from other provinces. Therefore, enterprises must be purely local with minority participation. The Italian Government may then help them to the extent of its means.

These are the problems in which the Alto Adige question is articulated. Certainly they are important and they can be solved through the good will of everyone concerned.

The United States has a deep interest in assuring that the minority rights of these 250,000 German-speaking mountain people are protected. This interest flows from the principles of our own Declaration of Independence; from the rights proclaimed by the Atlantic Charter; and from our participation in the European settlement which gave rise to the South Tirolese problem.

The leaders of both Austria and Italy are men of good will. Surely discussions and negotiations between the two countries—perhaps under the aegis of a binational conciliation mission such as envisaged by article 83 of the Italian constitution—can lead to a great recognition of the human rights of the South Tirolese.

To these discussions, Mr. Speaker, the United States, I am sure, will want to bring whatever good offices the parties shall request.

International Air Carriers

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. GUBSER. Mr. Speaker, in behalf of many airline pilots residing in my congressional district, I call to the attention of my colleagues the following communication from Capt. R. J. Regnery, a pilot with Pan American Airways. Captain Regnery's views are representative of those expressed my many airline pilots, who are deeply concerned with maintaining a strong U.S. international carrier system.

In considering route applications by foreign carriers I believe the Department of State has adopted a sound and commendable policy as outlined in the Department's letter which also follows:

LOS ALTOS, CALIF., *March 11, 1960.*
Representative CHARLES S. GUBSER,
House Office Building,
Washintgon, D.C.

DEAR REPRESENTATIVE GUBSER: As a California voter and a pilot with Pan American Airways, I strongly support the recent stand of the State Department in being opposed to the route application of the Dutch airline, KLM, into Los Angeles. I feel you should request of the State Department that they continue to inspect operation rights of foreign carriers into the United States on the same realistic basis. The Italian airline, Alitalia, and the German airline, Lufthansa, both have pending route applications into west coast cities.

In the refusal to approve the application of KLM into Los Angeles the State Depart-

ment for the first time has examined foreign carriers' applications into the United States on the basis of an "equitable exchange of traffic." The examination of KLM's application disclosed:

1. KLM is now serving two U.S. cities, New York and Houston, while the U.S. carriers are only allowed to serve one Dutch city, Amsterdam.

2. In 1957, 38,835 passengers were flown out of the Netherlands to the United States; 36,032 were carried by KLM; 2,803 were carried by four other carriers, one of which was a U.S. carrier.

3. In 1956, KLM's revenue out of New York was in excess of $12 million; U.S. carriers' revenue out of Amsterdam, $108,000.

4. In 1959, KLM collected $29,400,000 from 86,225 U.S. passengers; U.S. carriers collected $1,700,000 from 2,842 Dutch passengers.

It is obvious the U.S. international carriers cannot continue to exist under this type of foreign aid giveaway program. It means they die an economic death due to the U.S. route giveaways. It will mean a great cost to the U.S. Government to keep them in operation. The State Department should be commended so that the public will know and become acquainted with the importance of this realistic approach which is vital to the life of the U.S. international carriers.

Yours sincerely,

R. J. REGNERY.

DEPARTMENT OF STATE,
Washington, March 17, 1960.

HON. CHARLES S. GUBSER,
House of Representatives.

DEAR MR. GUBSER: Thank you for your letter of March 2, 1960 transmitting a telegram from the Airline Pilots Association in California and asking to be informed of the background information which led to this Department's decision concerning a commercial air route to Los Angeles for the Netherlands.

A civil aviation consultation was held in Washington between January 7 and February 3, 1960 to consider the request of the Netherlands for such a route. On February 3, the Netherlands delegation was told that the executive branch, after considering all of the factors put before the U.S. delegation, was unable to give a commitment to grant the route to Los Angeles.

In negotiations of this type the balancing of the various aspects of the public interest is difficult inasmuch as conflicting interests sometimes appear. In this case, the interests of the Los Angeles community had to be weighed with the interests of the U.S. domestic and international airlines. Overall relations between the United States and the Netherlands were also involved.

In order to balance the routes which we grant to foreign countries against the rights achieved for our own carriers, we have adopted certain fundamental principles which we believe result in an equitable exchange of rights and assure the future development of U.S. international air operations. In the report on civil air policy dated April 30, 1954, and prepared for submission to the President, the Civil Aeronautics Board and the interested agencies of the executive arm of the Government took the position that in determining the routes to be included in bilateral air transport agreements, the United States should continue its objective of establishing insofar as possible an equitable exchange of economic benefits. This policy is still pursued.

In this connection, it is difficult when treating with countries of small territorial expanse such as the Netherlands to achieve a route exchange resulting in economic benefits of similar value to both the United States and the country concerned. At the time of the conclusion of the Air Transport Services Agreement with the Netherlands in April 1957 it was recognized that factors other than those relating solely to aviation should be taken into account. As a result, the Netherlands was authorized to operate air services on separate routes from the Netherlands to New York and Houston and from the Netherlands Antilles to New York and Miami but did not receive authorization to serve Los Angeles. In turn, the United States airlines were authorized to operate to Amsterdam, Surinam, the Netherlands Antilles, and points beyond.

The Netherlands Government's recent request for a route to Los Angeles was supported by considerations of broad economic and political nature which, upon examination by the United States delegation, were found to differ but little from those which were exhaustively considered in 1957 and which led to the decision to grant additional routes, but not Los Angeles. Consequently, in view of the economic advantages from which the Netherlands airline had greatly benefited under the 1957 agreement, and in view of the impossibility of obtaining reciprocal advantages for United States carriers, it appeared that a further grant to the Netherlands was not warranted.

I hope that this information will meet with your needs. If I can be of any further service to you, please do not hesitate to call on me.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary.

Michael J. Kirwan, HH.D.

SPEECH
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1960

Mr. CANNON. Mr. Speaker, it was my misfortune not to be on the floor the morning the announcement was made of the academic honor conferred on our distinguished colleague from Ohio by one of the great universities of the Nation. And of course with his customary modesty he did not enlighten me.

I was not aware of it until I read of it belatedly in the CONGRESSIONAL RECORD and so am taking advantage of the first opportunity to extend felicitations to him and to the House, which is also honored by this well deserved tribute to one of its outstanding Members.

MIKE KIRWAN is one of the great men of the House and the Nation. The congressional committee of which he is chairman does not contribute to my campaign. He is a typical American and his career might well be an inspiration to every American youth in the land.

From the other side of the track, as a breakerboy working 10 hours a day for 50 cents a day—without formal schooling—without pull or favor or help from anyone—through his own unaided efforts, he has come to membership in the greatest parliamentary body in the world.

But to every assignment along the way he gave the best that was in him. Wherever he found his niche, he worked, indefatiguably and loyally.

Seest thou a man diligent in business; he shall stand before kings.

What he has achieved the humblest boy who walks the meanest street of the smallest hamlet in the remotest corner of the land may, under our free American institutions, aspire to achieve.

Mr. Speaker, no academic authority has ever conferred a degree more worthily. If anyone here feels the need of a mental checkup you could do no better than consult Dr. KIRWAN. He is the best judgment of human nature I have known. I would rather have his diagnosis of the personality and character of a man than that of the most eminent psychiatrist of the day—and he will not charge you $50 a visit. In fact one of his most notable characteristics is that he does so much for so many, without asking for himself. He loves his fellow man.

Abou Ben Adhem (may his tribe increase!)
Awoke one night from a deep dream of peace,
And saw, within the moonlight in his room,
Making it rich, and like a lily in bloom,
An angel writing in a book of gold:
Exceeding peace had made Ben Adhem bold,
And to the Presence in the room he said,
"What writest thou?"—The vision raised its head,
And with a look made of all sweet accord,
Answered, "The names of those who love the Lord."
"And is mine one?" said Abou. "Nay, not so,"
Replied the Angel. Abou spoke more low,
But cheerly still; and said, "I pray thee then,
Write me as one that loves his fellow men."
The angel wrote and vanished. The next night
It came again with a great wakening light,
And showed the names whom love of God had blessed.
And lo! Ben Adhem's name led all the rest.

Editorial Backs Up Congressman Fogarty's Appropriation for Juvenile Delinquency Study

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1960

Mr. BOLAND. Mr. Speaker, for many years our distinguished colleague from Rhode Island, the Honorable JOHN E. FOGARTY, has contributed unstintingly of his time, his talent, and his knowledge of social problems to the particular area of juvenile delinquency.

As the chairman of the House Appropriations Subcommittee for the Department of Health, Education, and Welfare Congressman FOGARTY this year has persuaded his colleagues to make more money available to the National Institute of Mental Health and the Children's Bureau for the study and drafting of a "major national blueprint" for juvenile delinquency control.

Congressman FOGARTY has for some time been aware of the need for this approach to the problem. It is gratifying to me, as one who sits on the Appropriations Committee with Congressman FOGARTY, to know that support of the FOGARTY approach to this social evil is gaining acceptance from the public, Congressman FOGARTY is to be commend-

ed for his efforts which will pay rich dividends to the youth of America.

Mr. Speaker, I include with my remarks an editorial from the Holyoke (Mass.) Transcript-Telegram of March 31 entitled "Anti-Delinquency Plan Up" which backs up Congressman FOGARTY's program of study of youth problems:

ANTIDELINQUENCY PLAN UP

Perhaps some material will come out of the present White House Conference on Children and Youth to support the drive in Congress to get Federal funds for a national program to control juvenile delinquency. The leader of this campaign, Representative JOHN E. FOGARTY, Democrat, of Rhode Island, says that most of the States taking part in the conference put juvenile delinquency at the head of the list of youth problems they need help with.

Meanwhile some citizen backing could be used to get action on bills now in both Houses of Congress, to support projects to combat juvenile delinquency. These bills authorize $5 million a year for 5 years for this purpose—a small amount compared to what delinquency costs us in our home communities.

In addition, Congressman FOGARTY, Democrat, of Rhode Island, says the House Appropriations Committee has requested $1 million for the National Institute of Mental Health and $60,000 for the Children's Bureau to get them started to work together on a major national blueprint for delinquency control.

This would finance exploratory work in four vital fields: research in child development, field studies and pilot programs to help delinquent children, more and better trained manpower, and improved direction and coordination of activities to combat delinquency in the States and communities.

There is a mass of evidence to show the need for such an undertaking. Communities are frustratingly hampered in their efforts to combat delinquency, first of all by the general ignorance of the cause and basic nature of delinquency, and secondly by their inexperience in marshaling all community resources to attack a major social problem such as this. With all the good will in the world, and even with all the money in the world, communities still do not have the tools for this extremely difficult task.

Congressman FOGARTY is absolutely right in backing any national budget policies to push through this kind of program, which the whole country desperately needs, and which costs less than one new prison.

New Orleans States, Twice Winner of Award for Courage in Journalism, Supports Criminal Penalty for Retired Officers Selling or Using Influence

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. HÉBERT. Mr. Speaker, another one of America's great newspapers, the New Orleans States, twice winner of the Sigma Delta Chi award for "Courage in Journalism" has raised its voice in support of my position regarding criminal penalties for retired officers who use their influence or who sell to the Department of Defense within 2 years after leaving the Pentagon.

The House will come to grips with this issue Wednesday when consideration of legislature dealing with the subject comes before the House for consideration.

The lines are clearly drawn between those who favor giving congressional consent to such activities and those who desire to legally outlaw such a probability or such a practice.

Here is what the New Orleans States has to say on the subject:

INFLUENCE PEDDLING

Influence peddling by retired military officers furnishes one of the more sordid sides of the Nation's defense effort.

Last year Representative F. EDWARD HÉBERT, member of the House Armed Services Committee, following revelatory investigations by his subcommittee, offered remedial legislation.

Sharpest teeth in the bill were those which would exact fines, prison terms, or both from retired officers who peddled or tried to peddle material or services to the Defense Department within 2 years after retirement.

But those teeth were extracted, leaving only a mild penalty for wrongdoing: Guilty retired officers would merely suffer a dock in retirement pay.

Bristling over this watering down of his bill, HÉBERT has offered a new bill imposing a maximum fine of $10,000 and sentence of 1 year.

Committee investigations have disclosed shocking abuses in this field. Need for legislation is beyond question, but that legislation will not install the safeguards necessary if it confines its penalties to wrist slapping.

National defense accounts for half of the U.S. budget and the competition for a slice of that spending is terrific. The temptation for defense industry to take on retired officers solely for the string pulling they can do has seemed irresistible in countless instances.

If there is not strong legal restraint, military strength of the Nation suffers, and along with it the taxpayer.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

Skiing at Big Mountain in Montana

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 5, 1960

Mr. MANSFIELD. Mr. President, on several occasions I have spoken to the Senate about the ever-increasing importance of recreation and tourism to my State of Montana. In fact, it is rapidly becoming one of our major sources of income.

We have many fine resorts, both summer and winter, and one of the best is the skiing resort at Big Mountain in northwestern Montana. The resort is a few miles from one of the State's most delightful small towns, Whitefish.

During March, Montana's first winter carnival was held at Whitefish. It was the first of the annual events, a milestone in the development of one of the Nation's finest ski resorts.

I ask unanimous consent to have three newspaper articles printed in the Appendix of the RECORD concerning the Whitefish carnival and the Big Mountain resort—the New York Times, February 28, 1960; the Kalispell-Daily Inter Lake, March 10, 1960; and the Columbia Falls-Hungry Horse News, March 26, 1960.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Feb. 28, 1960]

CARNIVAL TIME AT WHITEFISH, MONT.

(By Ed Christopherson)

WHITEFISH, MONT.—Winter carnivals in snow-covered sections of the country are becoming almost as common as sunshine festivals in the South. It comes as little surprise, therefore, that this town in northwestern Montana is making elaborate plans for its first winter carnival, which, it hopes, will become an annual event.

The carnival, to be held March 10 through March 13, will serve a twofold purpose. It will celebrate the fact that skiing on Big Mountain, 7 miles north of Whitefish, helps to keep this town alive during the cold winter months and, in addition, it will mark the beginning of spring skiing.

The carnival will get underway on the evening of March 10, when King Boreas and his queen arrive here from St. Paul, Minn. The royal couple will lead a torchlight parade that will proceed along the main street of Whitefish to Big Mountain, where torch-bearing skiers will etch their flaming patterns in the night and demonstrate their skills in a slalom race.

PRETOW SKIING

The program on March 11 calls for broom hockey, skating races, a novel crosscountry race on skis and ski-joring. In ski-joring, a sport in vogue long before modern tows were developed, the skier is towed by a fast-galloping horse. The crosscountry race will find the skiers charging along a trail in the business section of Whitefish. Their course will take them into such places as stores and restaurants.

Other events on the 4-day program include ski races for junior and senior contestants and dogsled races for youngsters. Interspersed with these sports activities will be dances, special luncheons, cocktail parties, a pancake breakfast and a snow-sculpture contest. Also on hand will be a group of nonspeaking "Yettis," or abominable snowmen, who promise to add a humorous touch to the entire proceedings.

Big Mountain is now in its 13th year as a skiing resort, and the fact that Whitefish is easily accessible via all means of transportation has added to its popularity. Whitefish is on the main line of the Great Northern Railway, and West Coast Airlines provides regular service to Flathead County Airport, adjacent to Whitefish.

This Northwest area also is reached easily via U.S. 2 and U.S. 93.

Whitefish, a town of 3,200 persons, is about 20 miles west of Glacier National Park. Its namesake, Whitefish Lake, is a favorite spot in the summer for swimming, fishing, and boating. But skiing on Big Mountain did not come into prominence until after World War II. It now has 9 miles of runs, 2 square miles of open snowfields, a T-bar with a rise of 1,024 feet, a Pomalift and a tow.

Accommodations are numerous. The ski lodge on the mountain charges $8.50 a day for a dormitory bunk and three meals; room rates at the chalet, also on the mountain, go up to a maximum of $13.50 a day, double occupancy. In Whitefish itself, hotel and motel rooms rent from $5 to $10.50 a day, also double occupancy.

PACKAGE RATES

Package plans also are available. For $98.68, the skier can spend 7 days and 6 nights, or 6 days and 7 nights, here. This includes lodging at the chalet or in Whitefish, three meals a day, unlimited use of all lifts, daily ski lessons and transportation between the town and Big Mountain.

The carnival, incidentally, also will serve as a kickoff for Big Mountain's $600,000 expansion program. This includes a new 6,880-foot double chairlift that will start near the chalet and rise 2,083 feet to the summit of the mountain. This lift will exploit the higher powdersnow areas that skiers now reach via Big Mountain's Sno-Cat.

The expansion program also lists additional housing, dining and entertainment facilities on the mountain, a swimming pool, an intermediate Pomalift, a new ski shop, and a building for the ski patrol.

[From the Kalispell (Mont.) Daily Inter Lake, Mar. 10, 1960]

FOUR-DAY WHITEFISH CARNIVAL OPENS TODAY; COMPLETE SCHEDULE OUTLINED

WHITEFISH.—Festivities at the 4-day Whitefish winter carnival will begin today as residents and visitors turn out at 6:30 p.m., to welcome King Boreas and his queen from the St. Paul, Minn., winter carnival at the Great Northern depot.

A crowd of winter sports enthusiasts and other interested spectators will then join a torchlight parade from the depot down the Whitefish main street to the municipal tree at Central Avenue and Third Street for the official opening of the winter carnival by the Whitefish king and queen at 7 p.m.

At 7:30 p.m., there will be full-length ski movies at the Orpheum Theater. Carnival festivities will then move to Big Mountain where the schedule, beginning at 8:30 p.m., includes a fireworks display, a spectacular torchlight skiing parade and a night slalom ski race.

FRIDAY

Friday there will be two luncheons for the St. Paul and Whitefish queens sponsored by the Women's Club at the Reeves Restaurant and at the Cadillac Hotel a luncheon sponsored by the Rotary Club for the St. Paul and Whitefish kings.

At 1:30 p.m., the Whitefish Lions Club will meet the Whitefish Rotary in a broom hockey tourney on Central Avenue followed at 3 p.m. by ski-joring on Central Avenue. At 4 p.m., there will be children's races at the Whitefish High School rink.

Friday night highlights include a dinner at the Whitefish Lake Golf Club sponsored by the Soroptimist Club honoring the St. Paul and Whitefish royalty.

At 7 p.m. there will be special student ski movies at the Orpheum Theater. Rounding out Friday night activities will be gala merchants night at 8 p.m. and a metropolitan cross country race which will run through downtown sections as skiers follow a circuitous route in and out of business establishments. At 9 p.m. there will be ski movies at the Orpheum Theater, "White Victory," a film of the 1956 Olympics and "Gold and Silver Slopes."

SATURDAY

First event on Saturday will be the kid's dog sled races on Central Avenue at 10 a.m. followed at 2 p.m. by go-cart racing by the Glacier Goat Cart Association at the high school ice rink.

At noon the carnival royalty will have lunch on the Big Mountain followed by flag-raising ceremonies to start the Doug Smith Memorial ski race on Big Mountain at 1 p.m.

Saturday night there will be a smorgasbord and dance for adults at the Moose home. At 10 p.m. there will be a teenage dance at the Central School gym.

SUNDAY

Sunday morning at 6:10 a.m. the St. Paul royalty will depart on the Great Northern Empire Builder. The Mountain Trails Saddle Club will have a pancake breakfast at the clubhouse and sleigh rides for all children.

Big Mountain ski area will again be spotlighted at 10 a.m. with the flag-raising ceremonies which will open the final day of racing.

Sunday at 1 p.m. the award ceremonies at Big Mountain will include the presentation of racing awards, event awards and the drawing for the winter carnival grand prize of 500 silver dollars.

Many unscheduled events are also included in the 4-day program, among them periodic unannounced appearances by the "yettis," frivolous funmakers who plan to add spice to various events.

[From the Columbia Falls-Hungry Horse (Mont.) News, Mar. 26, 1960]

TELLS OF BIG MOUNTAIN'S NEW CHAIR LIFT

(By Jacqueline Adams)

WHITEFISH.—A double chair lift which will carry skiers and summer sightseers well over a mile to the top of the Big Mountain,

Whitefish, has been purchased by Winter Sports, Inc.

Installation work for the new lift, one of the highest in the Nation, will start at the close of the ski season on the Big Mountain, about May 1, Heron Engineering Co., Denver, manufacturer of the lift, estimates it will be ready for operation October 1, 1960.

The 6,800-foot lift will have a vertical rise of over 2,000 feet and will triple the present skiable area on the Big Mountain, with the addition of a variety of new runs. It will take skiers high into the deep powder snow and make possible uninterrupted downhill trips of 2½ miles and more.

Although the chair lift will be continuous from just outside the Big Mountain chalet to the summit of the mountain, there will be an intermediate station at which skiers may embark or disembark, should they want to ski either half of the mountain.

With the existing T-bar Pomalift, and rope tow facilities on the lower slopes of the Big Mountain, the addition of the chair lift will enable the area to handle well over 1,000 skiers a day without crowding.

EXPANDING HOUSING

To take care of the expected increase in number of skiers on the slopes, the Big Mountain also is expanding housing and food facilities.

Work on an annex to the present ski lodge is scheduled to start May 15. The additional space will approximately double the resort's present capacity for overnight lodging. The lodge's present snackbar will be converted to a dining room to augment the present dining facilities in the Big Mountain chalet.

Also added to the lodge will be a warming room and cafeteria for day and weekend skiers. The new facilities are expected to be open before Thanksgiving 1960.

Construction this year will begin a 5-year long-range expansion plan for the Big Mountain. This first phase, which represents more than a quarter-million-dollar development, will be financed by means of private capital and sale of the corporation's common stock.

DESCRIBES NEW LIFT

Some statistics on the new double chair lift:

It will have 117 chairs with foot and arm rests and will be supported by 26 tubular steel towers.

It will be powered by a 150-horsepower electric motor, with a gasoline engine standby. Its top speed will be about 500 feet per minute.

It will employ a 1¼-inch steel cable.

It will have a capacity of 530 skiers per hour.

Will the area skiable from the new lift be for experts only?

Not at all, says Karl Hinderman, head of the Big Mountain ski school, Hinderman says his instructors can take a third lesson beginner from the top of the mountain to the base of the lift without getting the skier "in over his head" (both literally and figuratively).

Conversely, the area offers runs challenging enough for top skiers. In its 13-year history, the Big Mountain has been host to three national championship ski meets.

And for nonskiers, the chairlift will operate in the summer to take them to an international view 4,000 feet above the floor of Montana's Flathead Valley. From the top of the Big Mountain can be seen the peaks of Glacier National Park and Canada's Waterton Lakes National Park. Sightseers also can look down into the nationally known Hungry Horse Dam and onto the Flathead's lakes and communities, including Whitefish, Kalispell, and Columbia Falls.

The Big Mountain already is well-known, particularly to skiers from the Pacific Northwest and Middle West, who can reach it by Great Northern Railway in a few hours or a day.

The area was opened by Winter Sports, Inc., on December 19, 1947, with a T-bar lift and a lodge. The T-bar, 3,220 feet long with a 1,024-foot rise, was then one of the biggest in the country.

In 1949, a chalet was built privately, and in 1954, Winter Sports purchased it and took over its operation.

In the third year of its existence, the Big Mountain got a 675-foot permanent rope tow. Added in 1958 was an 1,800-foot-long Pomalift, giving two new beginner-intermediate slopes over 2,000 feet in length.

Each year, in fact, new runs have been added to the two original ones, until at present there are more than 9 miles of open slopes and trails.

With its expansion, the resort will employ more than 100 persons.

The lower parts of the ski area belong to Winter Sports, Inc. The corporation uses upper faces of the Big Mountain under lease and special use permit from the U.S. Forest Service, which owns them as a part of the Flathead National Forest.

The Big Mountain opened for skiing this season at Thanksgiving and expects to operate through Easter vacation, well into April.

White House Conference on Narcotics

SPEECH

OF

HON. JOSEPH M. MONTOYA

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. MONTOYA. Mr. Speaker, I am very interested in this resolution and urge its passage. I want to commend the gentleman from Massachusetts and the members of his subcommittee, and the chairman of the full Judiciary Committee, for having given this matter an early hearing and having brought it to the floor for early consideration. I think this subject is one of great national concern. We might talk about the stiff penalties that are provided in both Federal and State laws, we might ask why a locality cannot under our criminal statutes cope with this problem. Penalties and enforcement alone will not eradicate this menace. We forget that juvenile delinquency has not been stamped out by Federal criminal statutes or by State criminal statutes. We forget that excessive drinking is not stopped by laws provided against it.

We must go to the core of this problem and search out many other problems which affect our social structure. We must go into the civic clubs, into the parent-teachers associations; we must disseminate information which brings out the evils of addiction to opium and other drugs; and I believe that the White House Conference will bring into the open and focus attention on the problems that exist not only on the part of law enforcement officers at the Federal level and at the local level, but also on the part of parents who are plagued with the dangers of delinquency among their children. We will be able to recruit the help of local civic clubs and parent-teachers associations to expose these evils and to educate our young children to guard themselves against those who would menace their social welfare.

It is in this spirit that this resolution is offered, I know; and I think it will do great good to the American structure, social and otherwise.

Key Club International—1960 Theme and Objectives

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 5, 1960

Mr. WILEY. Mr. President, across the Nation, efforts are being made at the local, State, and international levels, to deal with problems of delinquency or, more positively, to provide constructive, creative programs for the energies and talents of our youth.

Today, I would like to pay tribute particularly to efforts by Kiwanis International to sponsor Key clubs—youth organizations designed to encourage youth to seek individual excellence.

Currently, over 2,000 Key clubs are serving youth in over 2,000 communities.

According to its high code, Key Club International realizes that today's youth will determine the future; that this youth lives in an age of continuing challenge to freedom and our heritage.

The club, too, believes that the worth of man is what he can do for his fellowmen through service; and that each man, as a child of God, can reach his excellence by building his own gifts and talents.

Under this splendid concept, these clubs are doing an outstanding job.

Recently, the Keynoter, official publication of Key Club International, published a statement of its 1960 theme and objectives.

I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

KEY CLUB INTERNATIONAL—1960 THEME AND OBJECTIVES

1. Let us strive for a deeper understanding of God and His Creation with a sense of humility, sound faith, and abundant hope; denote service of club to needy places of worship for property repair and fundraising; urge regular church attendance and sponsor "Go to Church" programs; encourage Bible and religious activities for school and community publications; use "Prayer Before Meal" cards in school cafeteria and local restaurants; contact Laymen's Committee, 300 4th Avenue, New York 10, N.Y., for ideas; try to base your philosophy of life on a sound spiritual foundation.

2. Respect the rights of others; practice courtesy in driving and promote this policy in school and community; prove brotherhood by accepting each person as an individual; support local law enforcement agencies in fighting vandalism; promote honesty in school and teenage community; promote safety campaigns; "love they neighbor as thyself."

3. By example, emphasize juvenile decency; publicize objects of Key Club in school paper and other media; aid school and community programs publicizing acts of juvenile

decency; write National Teenagers Day Committee, 582 Sunset Boulevard, Los Angeles 46, Calif., concerning other suggested programs; have school dress-up campaign and/or sponsor boys' and girls' fashion shows; prove that it is not "sissy," that it is decent; let people know that teenagers are decent, not delinquent.

4. Build a complete and happy life by daily mental, physical, and moral improvement; obtain and use better reading program material; emphasize good study habits, athletic competition, regular medical checkups, etc.; pay tribute through public recognition for high mental, physical, and moral achievement; arrange Career Days to show need for education in all fields; assist Kiwanis Career Day program, science fairs and mathematical competitions; consider establishing a scholarship for the most deserving.

5. Realize that a family based upon love and mutual respect is necessary for a responsible community; plan an Honor Thy Parents Week; say family grace at meals; advocate family vacations; plan Key Club family socials; encourage individual respect and pride of all members of the family unit; learn to appreciate the wisdom and knowledge of your parents.

6. Encourage school achievement and stimulate student-faculty cooperation; request and use Youth Salutes Its Teachers kit; spearhead school beautification programs; encourage good grades for members, and, through example, for the complete student body; set up programs to give lessons, text, and tutoring to ill student stay-at-homes; develop programs for building school spirit and good sportsmanship; help your fellow students excel in their school activities.

7. As a citizen of a democracy, spearhead an appreciation of your heritage; request and put into operation the "CQ" (citizenship quotient) program material; cooperate in disaster relief and worthwhile community charity drives; invite students who are not club members to attend club meetings; urge participation in Voice of Democracy contest; urge a study of the Constitution, Declaration of Independence, and the British North American Act; plan municipal government study groups; ready yourself by education and experience to accept your democratic responsibilities.

8. Promote international understanding by taking an active interest in world affairs; schedule Key Club fundraisers with proceeds going to UNESCO, Crusade for Freedom, CARE, or other worthwhile charitable organizations; take part in Kiwanis-sponsored United States-Canada Good Will Week (April 24–30, 1960); have carefully selected "pen pals" abroad; take an active part in the United Nations Day programs; individually budget time and urge others to do the same in order to read about and intelligently understand world affairs; study other countries—land, customs, people, and history.

Mr. Veteran on Hill

EXTENSION OF REMARKS
OF
HON. ERWIN MITCHELL
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1960

Mr. MITCHELL. Mr. Speaker, there appeared in the April 2, 1960, issue of one of our best and most influential publications on military and veterans' matters, Army Times, an editorial entitled "Mr. Veteran on Hill." This editorial called attention to the tremendous contribution in the field of veterans' legislation which has been made by our distinguished colleague from Texas the Honorable OLIN E. TEAGUE, chairman of the Committee on Veterans' Affairs. We in this body are keenly aware of the conscientious and devoted manner in which our friend has led us in the multiple and complex problems arising in the field of veterans' affairs. It has been an inspiration to me to observe one who, while working unceasingly to obtain just benefits for the veterans of our Nation, has at the same time kept in perspective the interest of the taxpayers.

Under leave to extend my remarks in the Appendix of the RECORD, I include this article and commend it to the attention of the membership:

MR. VETERAN ON HILL

We hear that $1,000 is being offered to the person who can name any Member now serving in Congress who has authored more benefit legislation for war veterans than has Texas' hard-working epresentative OLIN E. "TIGER" TEAGUE.

That's one proposition which will find no takers. Mr. TEAGUE'S accomplishments in the field of veterans' legislation run to imposing lengths. His efforts have not been entirely devoted to war veterans. The House Veterans' Affairs Committee which he chairmans recently completed extensive hearings on extending GI bill benefits to peacetime veterans.

During 14 years on Capitol Hill, the Texas lawmaker has achieved vast increases in service-connected compensation for disabled veterans and survivors of the war dead; he has been the principal advocate and supporter of the Veterans' Administration hospital program; he authored the Korea GI bill which has benefited over 6 million veterans; and he pushed through a liberal pension increase last year that will benefit some 1 million of the country's older veterans, their widows and children.

His legislative achievements for veterans have drawn endorsement from all of the major veterans' organiaztions, including the American Legion, the American Veterans of War II and Korea (Amvets), the Veterans of Foreign Wars (VFW) and the Veterans of World War I.

The various veterans benefit programs fathered by Mr. TEAGUE have shown careful balance between the just needs of veterans and their dependents—and the interest of the taxpaying public as well.

By astute judgment and professional handling of the veterans benefit programs, the Texas lawmaker has avoided the always-present danger of public reaction against any hint of a "gravy train" philosophy.

The measure of his accomplishment is further enhanced when one recalls the persistence with which TEAGUE has worked for passage of a sound and just "cold war" GI bill. Final enactment rests on many uncertain factors.

One factor is certain, however. On the cold war issue, "TIGER" has made it plain he will not be listed among those who maintain we are in a period of peace—with regard to readjustment benefit proposals—but in a cold war for purposes of foreign aid, armaments expenditure, crash programs for outer space, and compulsory military service.

Freedom of Choice

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 5, 1960

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the following editorial from the Richmond News Leader, Richmond, Va., of April 4, 1960, entitled "Freedom of Choice."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FREEDOM OF CHOICE

It is about time that we Virginians stand back a bit and admire the two new freedoms, still in swaddling clothes, that were born at this time last year when the general assembly delivered itself of the revolutionary freedom of choice school plan. The law creating these freedoms has just been strengthened and reenacted, without one single adverse vote, which must mean that it is now the settled policy of Virginia.

Few people in this State and fewer still outside this State know that Virginia offers to every child—black child or white child, rich or poor—the individual option of attendance at a public school or a scholarship for use in any qualified private or public school in the entire world, in England, in Switzerland, in, if you please, darkest Ghana.

Involved in this are these individual freedoms:

Freedom of association, by which is meant the individual freedom to associate as one pleases and the individual freedom not to associate as one pleases, the latter of which of course takes precedence because otherwise there is no freedom.

Freedom of education, by which is meant the individual freedom to accept a State-directed education or to arrange a private education. This new freedom marks the first time in American history that a State has given up, voluntarily, its monopoly in education that comes about by the use of educational tax money in public institutions only.

The first of these great freedoms also marks the first instance of State action against the welling movement in this country to dictate the citizen's association in matters of employment, trade, housing, and of course education. An instance of what we mean is the recent action by the New York Antidiscrimination Commission against the employment of British secretaries, which would be laughable were it not so unctuously serious. No fewer than 14 States now have laws denying the individual freedom of choice in real estate, and 4 of them go so far as to force the individual to rent or sell wholly owned private property to anybody.

Before we set out the terms of the new Virginia scholarship law—thus far widely misinterpreted—let us recall the comment by the late Judge John J. Parker on the Supreme Court's decision of 1954. Judge Parker pointed out a distinction never adequately appreciated, that the intention of the Court was to prohibit State-enforced segregation, but not to require State-enforced integration. This must mean that what the Supreme Court really undertook to guarantee back in 1954, without understanding its implications fully at the time, was the indi-

vidual freedom to associate as one pleases—without interference by State, or any other law.

On that premise, Virginia now has stepped aside and allowed her citizens to arrange their private education in any way they want. At the same time other States, misreading the Warren opinion, have been denying this very same individual freedom. Of course a clash will come, and in that clash the Supreme Court will be forced either to yield a State the power to prescribe association—which means either segregation or integration—or to yield the individual the freedom to do as he chooses. The Virginia fight in that contest will be to add to the four famous freedoms of the first amendment which she herself defined—of speech, of press, of religion, of assembly—the new freedoms of association and of education.

Now this, quite obviously, is a tremendous thing. Yet not one single word of it has been reported, let alone commented upon, in the national press. There are two reasons for this:

First is the unfortunate fact that freedom of choice has been badly reported as meaning, in the one case, local option, or alternatively, pupil placement, neither of which has anything whatever to do with it. Because of this reporting, Georgia just lately has been told that the Virginia freedom of choice plan, said to be working so well, was nothing but the North Carolina placement plan. Another common mistake, gleefully repeated by such papers as the Washington Post, is that the Virginia scholarships, erroneously supposed to be geared to segregation situations only, have gone astray, and that the general assembly in its dumbness has given them to everybody.

On top of all this foolishness, from which the Virginia press itself is not blameless, Freedom of Choice just cannot get a hearing in the national press, which is to say the northern press, because the plan grew out of segregation. Here we have a plain instance of guilt by association. In answer we submit that only a put-upon people ever can be expected to come up with anything new, and that the South, challenged in the Toynbee sense, has made its response. Moreover, every single one of our freedoms is soundly based on a defense of those with whom we disagree, even down to the ultimate minority of one. But does the North consider that fact? Hardly.

And, now, the terms of the Scholarship Act itself, which bear repeating because of the importance this act may have for Richmond and other troubled areas this fall:

The State offers out of its own coffers $125 and $150, respectively, to elementary and secondary school pupils. In addition, it guarantees by assessment on localities to make up the difference between these grants and the least of these three amounts: (1) actual tuition cost, (2) locality operating cost, or (3) $250 and $275, respectively. Apart from this, the locality is left free to add to the scholarships whatever it pleases, which means there is no "maximum," although public school operating cost has been the rationale of such places as Charlottesville.

The qualification of private schools is left to the State Department of Education, with this one restriction: the school must be nonsectarian. This is the one legally questionable aspect of the scholarship law and the assembly has taken care of it by adding a section affirming its willingness to give the scholarships to whomsoever a court might decide.

To sum up, Virginia has discovered and agreed to the freedom of association and it has invented the freedom of education to make that first freedom possible. And we are learning to live with these new freedoms. Already the Negro candidate for the Charlottesville City Council has espoused them, and so will everybody else—in time. The reason we know this is that everybody now accepts, no matter his own beliefs, the freedom of speech for other people * * * and we are dealing here with exactly the same fundamental thing.

He Used Tax Money

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1960

Mr. SMITH of Kansas. Mr. Speaker, Woodrow Wilson said, while a professor of history at Princeton, that the power of the Congress to conduct legislative hearings and make investigations was as important as the power to make laws.

This power to investigate has been under criticism of late years largely due to the fact that it has been abused by some legislative committees. One would naturally expect that any group or organization would feel they were being "picked on" when called before a legislative investigating committee.

But over the years, some dangers have become apparent because of the methods and attitude displayed by some investigating committees—for various reasons. It was never intended that these committees should investigate purely for political advantage.

I am sure it was never intended that tax dollars would be used simply to propagandize some theory of government. A few years ago a branch of the Federal Government, the State Department, was accused—and many thought rightfully—of using its appropriations to sell their own theories of foreign affairs to the taxpayers. Taxpayers were being sold a "bill of goods" by the use of their own money.

A great deal of discussion has been had in connection with some investigations that have been conducted recently in regard to high costs of drugs in the pharmaceutical field.

I append hereto an article from the Chattanooga News Free Press in regard to some of the dangers involved in conducting legislative investigations:

[From the Chattanooga News-Free Press, Mar. 9, 1960]

HE USED TAX MONEY

Several weeks ago, Senator EVERETT DIRKSEN, Republican, of Illinois, called attention to the fact that Senator ESTES KEFAUVER is asking $425,000 of the taxpayers' money for a variety of investigations to be initiated at his whim without approval by the entire Senate Judiciary Committee.

Chattanoogans got a taste the other day of one very questionable phase of the way the tax funds allocated to the Kefauver subcommittee are spent.

To this city came one Paul Rand Dixon, who is counsel and staff director of the Kefauver subcommittee. Mr. Rand did not come here to investigate anything. He did not come to counsel the subcommittee or to direct its staff. His purpose was to appear on a program in which he was asked questions about the drug probe. He used the occasion to continue the one-sided propaganda which has characterized the probe from the beginning.

And who paid Mr. Dixon's expenses to come to Chattanooga and propagandize? He was asked the question. He answered:

"My responsibility is to the subcommittee and I came here at the expense of this group."

In other words, the money of the taxpayers was used to finance the propagandizing appearance of the Kefauver subcommittee counsel and staff director.

He is not an elected public official. He does not represent constituents. He is supposed to develop facts for the Senate. But here we see tax money spent to put him before the public with his tale. And the kind of tales coming from the subcommittee may be seen in the spectacular claim that one drug manufacturer charged a price on one item that gave a profit of 1,118 percent—when the facts, later brought out with much less fanfare, showed the company's base profit was only 12.3 percent. The 1,118 percent figure had been fraudulently arrived at by a process equivalent to a claim that bread ought to cost only half a cent a loaf if that's what the wheat in it cost on the farm.

Democratic process is not being served by the use of tax money to finance propaganda appearances by the salaried counsel of a Senate subcommittee.

"Employment Insurance" Instead of "Unemployment Insurance"

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, April 5, 1960

Mr. BEALL. Mr. President, in a recent issue of the Carroll County Times, published at Westminster, Md., there appeared a well written editorial which, I believe, presents a viewpoint worthy of consideration. It concerns the present use of the terms, "unemployment insurance" and "unemployment office," with the suggestion that we instead should use the terms, "employment insurance" and "employment office." The editorial was written by Mr. Charles Mooshian, editor of the Carroll County Times, a good friend of mine.

I ask unanimous consent to have printed in the Appendix of the RECORD the editorial to which I have referred.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EMPLOYMENT INSURANCE—A POSITIVE TITLE FOR A POSITIVE PROGRAM

We have yet to hear of a life insurance agent extoll the virtues of death insurance, yet everyday dedicated employees of the Bureau of Employment Security in Westminster, Md., and around the Nation are subjected to the use of a negative title for a positive program—"unemployment insurance."

To us, no single program, developed during the early days of the New Deal, has benefited the workingman as the (un)employment insurance program, originally designated as unemployment compensation.

Enacted into law along with social security and the strong, vigorous, and close-knit nationwide employment service sys-

tem, these programs gave hope and help to those millions of hard-working Americans struggling out of the depression of the early 1930's.

Fifteen years ago we were part of a crusading group, which insisted on the program being designated as "insurance" rather than "compensation" pointing out the essentials of an insurance program as against compensation.

Gradually, the various States commenced the use of the "insurance" title. It caught on until the majority of the States and the Bureau of Employment Security headquarters in Washington began its use.

We believe the time is ripe for one additional and final change in the title of this positive program. We favor the removal of the two letters "un" from "unemployment", thus making the title "employment insurance."

And, the positive approach in the title will eradicate another pet peeve of ours—that of calling the Employment Service office the "unemployment office." Our colleagues around the Nation are just as guilty of this misnomer as are our uninformed citizens who utilize the services of these two great agencies.

In so doing, the negative word "unemployment" would be used only in interoffice reporting and in newspapers and other publications reporting employment and unemployment statistics.

As in the change from "compensation" to "insurance" the only method of getting the public, press, and other informational media to use the positive title is to use it and use it often. By so doing we can, once and for all, abolish the designation "unemployment office."

We urge our congressional leaders in Washington to use the term "employment insurance" in drafting future amendments to this important law.

A positive program deserves a positive title—"employment insurance."

Operation Big Slam

EXTENSION OF REMARKS

OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1960

Mr. MUMMA. Mr. Speaker, Operation Big Slam was another event in our unending determination to be prepared for any eventuality. Ted Gress, editor for the Lebanon Daily News, from Lebanon, Pa., in my congressional district, put down his impressions in the written word as only a newspaperman of his background can do. Not only was he present at Operation Big Slam, but has written many years about the military and has flown with the Military Air Transport Service on numerous occasions. That is why I would attribute an air of authority about his personal writings on the subject and his opinions on MATS.

Mr. Gress' article follows:

OPERATION BIG SLAM CARRIES OVER 20,000 AMERICAN TROOPS, 11,000 TONS OF COMBAT GEAR INTO PUERTO RICO AND BACK AGAIN

(By Ted Gress)

RAMEY AFB, P.R.—Giant Globemaster cargo planes roar in from over the Atlantic Ocean and circle the field in a precise holding pattern. A voice from the control tower gives one the okay to land and it settles down on the long concrete runway like a prehistoric bird.

Within a few minutes after touchdown, the huge nose doors swing open and out roll five military vehicles, including a 2½-ton truck and ambulance.

Shortly after, a C–118 comes roaring in for a landing. Infantrymen loaded with packs and carrying rifles hustle from the plane and are quickly moved from the flight line by trucks.

This is Operation Big Slam, Puerto Pine, largest peacetime military airlift in history.

By the end of this week, more than 20,000 American troops and 11,000 tons of fighting gear will have been flown into Puerto Rico and then flown home again.

Prime purpose of this airlift is to test the ability of the Air Force's Military Air Transport Service (MATS) to rapidly and efficiently move a large ground force to an oversea staging area.

It also is designed to test the readiness and mobility of our Regular Army, National Guard, and Reserve troops.

WEATHER CONDITIONS BAD

By the time every soldier and every piece of equipment has been returned to the United States at the end of this week, MATS will have flown more than 100 million ton miles.

And this has been done under weather conditions that veteran pilots described as the worst they have ever encountered.

The success of the operation—and there is every indication already that it is a success—is due mainly to two factors. First, the official operation of MATS, this country's only strategic air lift. Second, the close cooperation between the Air Force, the Army and the Navy.

Lt. Gen. William H. Tunner, who commands MATS, personally directed the staff deploying the more than 200 strategic aircraft used in the airlift.

MATS also airlifted 850 members of its own support personnel and equipment to Ramey Air Force Base and to the Roosevelt Roads Naval Air Station at the other end of the island which also was used in the operation. More than 1,150 support personnel also were moved in to other key bases. Some came from as far as Japan.

VALUABLE INFORMATION

Aircraft being used by MATS in the exercise include: Douglas C–133 Cargomasters, Douglas C–124 Globemasters, Douglas C–118 Liftmasters, and Lockheed C–121 Super-Constellations. All are MATS four-engined strategic airlift aircraft, capable of flying either cargo or troops.

MATS expects to obtain valuable information from this operation. This would include: better means of predicting its maximum wartime airlift capability; an evaluation of its ability to maintain sustained wartime operations, and information about the complex logistical and operational problems of quickly airlifting large numbers of fully equipped combat troops.

An impressive fact is that during the exercise MATS is continuing to meet its responsibility for strategic airlift to the United States of Armed Forces overseas.

Typical of the interservice cooperation was that of the Joint Information Task Force operated under command of Lt. Col. Raymond L. Towne, an Air Force officer who is in charge of the MATS public information office at Scott Air Force Base, Ill.

WORK TOGETHER

Colonel Towne drew on the Army and Navy to assist in the project. One of his right-hand men was Maj. Arnold Goldberg, a Pennsylvania reservist called back for an active duty tour. Goldberg in private life is the editor of the Uniontown Standard.

But no matter what insignia was worn by the officers or the enlisted men, they all worked together in the common cause.

They had their hands full, too, with 350 news media representatives coming down to witness this gigantic exercise.

There were also many top ranking dignitaries which meant that press conferences and briefings were held daily. Among the distinguished visitors were Secretary of the Army Wilber M. Brucker, Deputy Secretary of Defense James Douglas, Secretary of the Air Force Dudley Sharp, and U.S. Senator Dennis Chavez, Democrat, of New Mexico, head of the Department of Defense Subcommitee, of the Senate Appropriations Committee.

And, of course, generals were a dime a dozen.

BRUCKER IMPRESSED

Secretary Brucker said he was impressed with the operation and declared it to be "worth every cent it cost."

Brucker said cooperation between the Strategic Army Corps (Sirac) and MATS was a practical demonstration of "what each can do if they get together and work in harness."

Operation Big Slam also got a pat on the back from Gen. Bruce C. Clark, commanding general of the Continental Army Command.

"The fact that the exercise has shaken down into a routine procedure is the best indication of its excellence," he observed.

Despite the favorable comments, hovering like a shadow over the entire operation was the knowledge that the planes now being used by the Military Air Transport Service are rapidly becoming obsolete in this jet age.

It was evident to veteran observers that if the United States is to maintain its global activities it will have to update its equipment. MATS is doing an excellent job with what it has, but the time will come when being second best won't be enough. And that day is not too far away.

Problems of the Radio and Television Industry in Recent Months

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, April 5, 1960

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a full-page article which appeared in the New York Times on March 30, under the sponsorship of Broadcasting magazine.

The article deals with the problems that have beset the radio and television industry in recent months. Its central theme is that existing law is sufficient to remedy these problems.

While I do not agree with all of the arguments set forth in the article, I think it poses many points on the thesis of existing law.

I suggest this article as provocative reading for Members of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AT THIS MOMENT TELEVISION AND RADIO ARE IN URGENT NEED OF HELP

They need wise administration from within and wise guidance from without. They have not had enough of either, but right now wise guidance from without is in especially short supply.

Instead of guidance, television and radio are getting abuse; instead of helpful criticism, they are getting vilification. In certain newspapers and magazines broadcast baiting has become an editorial policy. The sure way for a politician to be quoted in those publications is to make a speech denouncing television and radio as the domain of rogues and thieves.

In the Federal Government the prevailing attitude toward broadcasting is punitive when, of all times in broadcasting history, it should be constructive. The Congress and Federal agencies are moving toward the imposition of controls far more rigid than are necessary to correct the defects in television and radio.

Four undesirable conditions in broadcasting have been turned up in Government investigations over the past 3 years:

1. The use of improper influence on members of the Federal Communications Commission by rival applicants for television stations.

2. The rigging of television quiz shows.

3. The acceptance of payola from music interests by performers and other broadcasting employees.

4. The broadcasting of false or misleading advertising.

The extent and seriousness of each of these disorders have been exaggerated. Beyond that the ill-informed assumption has been made that these conditions are symptomatic of general corruption in broadcasting and in the Federal agency that regulates it. The cry is for new laws and new rules that would be more suited to the administration of Alcatraz than to the guidance of communications media engaged in the infinitely complicated job of creating and conveying more entertainment and more information to more people than any other media yet invented.

There are laws enough. If the Government has failed in its regulatory duty, it is not for lack of laws, as the record clearly proves.

IMPROPER INFLUENCE

As a consequence of investigations by the House Legislative Oversight Subcommittee, a Chairman of the Federal Communications Commission has resigned and a member of the FCC has been indicted for violation of existing Federal laws and is awaiting a second trial (his first ended in a hung jury). Under existing laws and regulations the U.S. court of appeals has ordered the FCC to reexamine four contested television station grants, and the FCC, on its own initiative, has ordered rehearings of two others and is investigating at least seven more.

QUIZ RIGGING

The mere disclosure of this practice has forced almost all quizzes off the air. Those that remain are being administered—by broadcasters, not the Government—under controls that make rigging extremely difficult if not impossible. The New York district attorney has asserted that 100 witnesses committed perjury during a grand jury investigation of the subject. If he wishes to put his assertion to a test, he can request indictments under existing New York criminal law.

PAYOLA

The Federal Trade Commission has issued more than 60 complaints against record manufacturers or distributors. The defendants are charged with giving illegal inducements to diskjockeys or other radio station personnel, in violation of existing law. The Federal Communications Commission has begun citing stations for failure to identify the sources of free records, in violation of existing law.

FALSE ADVERTISING

The Federal Trade Commission last November announced an intensified campaign against false or misleading advertising on television. Since then it has issued eight complaints, all charging violations of existing law.

(Two important features of the FTC's campaign against television advertising have been underplayed or ignored in most accounts published in newspapers and magazines and indeed in the FTC's own announcements: 1. Of the eight complaints, only three were directed exclusively to the television advertising of the defendants; the other five also involved advertising in newspapers or magazines or both. 2. In rigorous monitoring of television commercials, the FTC has so far found only eight cases to prosecute. Competent authorities estimate that during a year at least 7,000 different products and services are advertised nationally on television.)

In and out of Government there are vocal critics of broadcasting who are impatient with the orderly prosecution of the wrongful acts that the investigations of influence, rigging, payola and false advertising have disclosed.

These critics want the Government to fix other things that they, the critics, find objectionable. The list of things they want fixed is as long as the list of their personal prejudices.

What each of these critics really wants is a transformation of broadcasting to satisfy his own desires. In this respect, the critics are reflecting, in an exaggerated way, what is probably a universal feeling. It is reasonable to assume that most people have at times wished for more programs of the kinds they like and fewer of the kinds they dislike, just as they have wished for more newspapers, magazines and movies that appeal to them and fewer that displease or bore them.

But most people have better sense than to ask the Government to reshape broadcasting according to their private specifications. They express their discontent by switching to another program or switching off the set. These acts do more to improve the quality of programing than all the powers of the U.S. Government could do.

The main creative energies at work in broadcasting are directed toward the prevention of tuning out or tuning elsewhere. To remain in operation a station must capture and keep an audience. It can do neither without programs that are different from those on competing stations and more appealing than the many nonbroadcast diversions that are available to the public nowadays.

The advocates of government control argue that the present system encourages the production of programs having mass appeal and discourages programing for minorities. They assert that diversity of appeal can be assured only if the Government invokes and enforces program standards. This argument reveals ignorance of broadcasting's current structure and practices.

The creative process at work in the present system is induced and sustained by competition. The search for new programs and for improvements in those already on the air is compelled by the strongest of all instincts, survival. The process often fails, but is regenerated by failure. The more stations there are in competition with one another, the greater is the incentive for each of them to find or create programs that will differ from the others on the air.

In a community that has multiple choices of stations there is no mass audience in the sense that a dominant majority tunes to one station, program after program, day after day. There are minority audiences of infinite complexity tuning in and around and out or not switching on the set at all. The whole constitutes a mass, but the whole is composed of as many minorities as there are programs.

The existing broadcasting system is its own best argument for careful preservation of the liberties under which it has developed. In less than 40 years radio has grown from the idea stage to a complex of 4,107 stations. In only a dozen years a television system of 524 commercial stations has been built.

There are now radio sets in more than 50 million homes, 96.3 percent of all U.S. homes, and television sets in more than 45 million homes, 86.9 percent of all homes. Nobody forced people to buy those sets, and nobody is forcing them to use them.

The proper role for Government in the development of television and radio is the same as its role should be in the development of anything else. It should remove artificial barriers to competition and should guard the public against the crimes or deceptions which there is good reason to proscribe by law.

If the Government moves beyond those limits and into the field of program surveillance or control, the public will be the loser. As Louis Brandeis, Associate Justice of the U.S. Supreme Court, wrote in 1928:

"Experience should teach us to be most on our guard to protect liberty when the Government's purposes are beneficent. Men born to freedom are naturally alert to repel invasion of their liberty by evil-minded rulers. The greatest dangers to liberty lurk in insidious encroachment by men of zeal, well meaning, but without understanding."

Office Automation and Employee Job Security

EXTENSION OF REMARKS

OF

HON. TOM MURRAY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1960

Mr. MURRAY. Mr. Speaker, the Subcommittee on Census and Government Statistics of the Committee on Post Office and Civil Service recently held hearings on one of the most important developments affecting the future of Federal employees. I refer to automation through the use of electronic data processing equipment and related electronic devices.

Although the trend toward automation in office work holds great promise of increased efficiency and reduced costs, it presents also a serious threat to employee job security. I was glad to observe, through testimony presented at the hearings held by Mr. Lesinski's subcommittee, that some, at least, of the Federal agencies are cognizant of this threat and are taking steps to meet it through carefully planned programs for employee transfer and retraining. The Committee on Post Office and Civil Service will do all it can to encourage proper planning so that the benefits of automation can be fully realized at a minimum cost to the loyal and valuable employees on Federal rolls.

An informative article based on the hearings recently appeared in the Wall Street Journal, and I include it as an extension of my remarks:

[From the Wall Street Journal, Mar. 4, 1960]

CONGRESSMEN WORRY AS AUTOMATION EDGES INTO FEDERAL OFFICES—BUT TREND PUSHES FEW WORKERS OFF ROLLS; AUTOMATIC CHECKS SAVE $2 MILLION A YEAR

(By Paul Duke)

WASHINGTON.—Is Uncle Sam on the way to becoming a mechanical monster? Will

thinking machines someday outnumber people in the Government?

Such questions are, rightly or wrongly, beginning to worry some members of Congress. They fear in part that the Government may take on an Orwellian atmosphere of machine madness as Federal agencies turn to automation. Congressional investigators are finding that two machines are sometimes used where one would do, that 100 copies of a document are run off when 10 might suffice. At one Navy installation, the sleuths say, feeding of unnecessarily detailed inventory and other reports to a newly installed computer produced a documentary surplus that would tower twice as high as the Washington Monument.

What's more, some lawmakers worry that thousands of Federal employees could be thrown out of work by spreading automation. Yet modern machines, though their use in Government has been growing for years now, so far have made only the tiniest dent in the gigantic Federal employment structure.

The House Civil Service Committee, which handles legislation affecting the 2,350,000 civilian Federal employees, is showing particular concern. And now a subcommittee headed by Michigan's Democratic Representative LESINSKI has called in representatives of the Treasury, Post Office Department, and Veterans' Administration to explain at public hearings what steps these agencies are taking to provide work for employees who lose their jobs to faster, more efficient machines.

SHARING STEEL'S PROBLEMS

"The Government is beginning to have the same problem as the steel industry, the railroads and all other industries which are replacing men with machines," declares Representative PORTER, Oregon Democratic member of the subcommittee.

Actually, all signs indicate Government branches are making a determined effort to fit displaced workers into other assignments. In many instances, they're promptly switched to other divisions within their agencies; in other cases, they've been given new jobs in other departments.

Of nearly 900 Treasury employees in New York and Chicago affected by recent automation of savings bond auditing, 25 were shifted to similar work elsewhere and 311 were transferred to other Treasury offices and to other Government agencies; some others got private jobs with Treasury help.

In the Post Office, reports Postmaster General Summerfield, the effect of automation has been to free employees to improve mail service in other ways, rather than to cut employment.

FEW COMPLAINTS

Even when employees are due to be dropped, most agencies try to keep them on as long as feasible and fit them into vacancies which crop up. Individual complaints to Congress have been few.

It's true automation has already brought about some net reductions in personnel. Mechanization of accounting procedures in the General Accounting Office and the Treasury has reduced these agencies' combined manpower requirements by 800 persons. Similar steps in the Federal Reserve banks have lowered needs by 400 persons.

But the total impact of automation on Government employment is scarcely visible. In general, the Federal civilian work force continues to seesaw between 2.3 million and 2.4 million.

Automatic equipment is busily performing a variety of chores for the Government, most of them connected with defense projects. Huge, boxcar-size machines are employed for such projects as computing intricate measurements for rocket and missile firings at Cape Canaveral, Fla.

But the Pentagon doesn't have a monopoly on the machine marvels.

The Treasury is using the very latest in printing techniques to save money in making money. A new platemaking process for manufacturing dollar bills requires only about one-third as many plate printers as were needed a few years ago.

The Post Office is pushing ahead with a program to revolutionize the mail service. Machines to sort and count letters are in operation here in Washington and Detroit, and more are coming.

And Uncle Sam has been saving money. The Treasury estimates its automatic check-writing operation is costing some $2 million a year less than the old method. A modernization of the Washington post office, featuring new mail-handling machines, is bringing savings of $747,000 a year.

University of Wisconsin Reaches Out To Teach on a Campus as Big as State

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 5, 1960

Mr. WILEY. Mr. President, the University of Wisconsin, one of our great educational institutions—is carrying on one of the most constructive forward-looking programs in America.

Not confined to its campuses, the University—through its extension services—is reaching out to provide opportunity for individuals, in almost all walks of life, to gain greater knowledge in their chosen fields.

What is the scope of this program?

According to the latest figures: 12,000 persons take correspondence courses directly from University of Wisconsin; and 106,000 others take University of Wisconsin correspondence work under the Armed Forces Institute program; over 14,000 persons—many of them adults—attend special courses offered in their home communities; more than 30,000 persons participate in institutes covering projects ranging from bituminous road construction to management's role in politics—sponsored entirely, or in part by the extension division of the university.

In Wisconsin last year, over 715 communities requested and received special services.

In the face of an ever-growing need by our citizens for educational opportunities—even though many of these folks do not have an opportunity to take on campus training—this splendid program, I believe, is a fine example of university efforts to make its programs flexibly available to interested persons—wherever they may work and live.

Currently, the Milwaukee Journal is publishing a series of informative articles by Richard H. Leonard on Wisconsin's "big idea in education" entitled "University of Wisconsin Reaches Out To Teach on a Campus Big as State."

I ask unanimous consent to have a major article of the series printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Mar. 27, 1960]

WISCONSIN'S BIG IDEA—UNIVERSITY OF WISCONSIN REACHES OUT TO TEACH ON A CAMPUS AS BIG AS STATE—THOUSANDS COMPLETE COURSES, ENRICH LIVES IN HOMETOWNS AS "WISCONSIN IDEA" OF SERVICE TO EVERY HOME IS PUSHED

(By Richard H. Leonard)

MADISON, WIS.—The University of Wisconsin campus, thousands of its extension students know, reaches from rich farmlands along the Illinois border to lake-studded counties in the north, from bustling cities on Lake Michigan to quiet villages along the Mississippi.

These extension students, ranging in age from 13 to 84, participate in University of Wisconsin courses and activities away from the ivy-covered buildings on Bascom Hill in Madison and Kenwood Boulevard in Milwaukee.

For some of them, University of Wisconsin is as close as the mailbox to which their correspondence courses are delivered. For others it is no farther than a University of Wisconsin center where they can complete freshman and sophomore courses at low cost while living at home—or a public building in the hometown where University of Wisconsin classes are offered at night.

"THE WISCONSIN IDEA"

Extending university instruction and services to every home in the State is part of a philosophy, more than half a century old, that is known as "the Wisconsin Idea."

How is Wisconsin's big idea working out? Well:

In Campbellsport, a high school boy rushes home in the afternoon, feeds the chickens and then settles down to study a University of Wisconsin correspondence course in German.

At Brillion, university specialists in community development are working with Mayor Clarence Wolf to make the city an even better place in which to live and work.

Marathon County has a bright new college building at Wausau, with facilities rivaling anything in Madison or Milwaukee, where 260 freshmen and sophomores are earning University of Wisconsin academic credits.

The high school bands at La Farge and Readstown are receiving some expert instruction this winter from Prof. Emmett R. Sarig of the University of Wisconsin music faculty.

Pupils at Westby and West Salem High Schools, which do not have foreign language courses of their own, are learning Latin, French, German, Spanish, and Norwegian from lessons and tape recordings sent out from Madison.

The Lake Mills Moravian Men's Club is still chuckling about a humorous lecture on Alaska by Col. Arnold Maahs, a speaker from the University of Wisconsin Lecture and Concerts Bureau.

Union shop stewards in the Beaver Dam area are learning, in a school for workers program, how to present grievances to company officials.

University of Wisconsin courses in engineering are being given right on the campus of La Crosse State College, which does not have engineering courses of its own.

In Milwaukee, Mayor Frank Zeidler has taken more than 70 credits of University of Wisconsin work by correspondence and is now enrolling for a course in sociology.

At Wayland Academy in Beaver Dam, pupils were treated recently to a first-rate performance of "Othello" by the Wisconsin Idea Theater players.

ONE THOUSAND NINE HUNDRED AND FIFTY-SIX ATTEND CENTERS

How many people actually benefit from this program to extend the university throughout Wisconsin—and beyond its borders to the Nation and the world? The latest figures available at University of Wisconsin show:

Twelve thousand persons taking correspondence courses directly from University of Wisconsin—and 106,000 others taking University of Wisconsin correspondence work under the Armed Forces Institute program.

One thousand nine hundred and fifty-six freshmen and sophomores receiving university instruction at extension centers in Green Bay, Kenosha, Manitowoc, Marinette, Menasha, Racine, Sheboygan, and Wausau.

Fourteen thousand nine hundred and seven persons, many of them adults, attending special courses offered in their home communities—2,414 of them for University of Wisconsin credits and 12,493 in special classes not given for credit.

Thirty thousand two hundred and twenty-nine persons participating in institutes, covering topics ranging from bituminous road construction to management's role in politics, sponsored entirely or in part by the extension division in the last year.

Seven hundred and fifteen communities in Wisconsin requesting and receiving special services in the last year.

Wisconsin's idea of making the boundaries of the State the boundaries of the campus began to develop in 1860 when Chancellor Henry Barnard started a lecture series for teachers in the State. It grew in 1885 when the board of regents established short courses for farmers.

Probably the first formal reference to extension work was made in the university catalog of 1888, which said:

"This embraces two cooperative phases. First, original investigations and experimentation for the purpose of discovering and proving new truths, and second, a series of publications and a system of local professional institutes, by means of which certain available aspects of latest knowledge are communicated directly to the people."

The idea was expanded in 1891 with the formal acceptance of correspondence study as part of the curriculum. Then, at the turn of the century, Robert M. La Follette became Governor, Charles McCarthy became State legislative reference librarian and Charles R. Van Hise became president of University of Wisconsin.

SERVICE TO THE STATE

The combined influence of these men gave vigor to the movement to take the university to the people of the State, and to make use of university experts in framing legislation and administering the State.

At the inauguration of Van Hise in 1904, the university celebrated its 50th commencement by striking a medal inscribed: "Commemorating 50 Years of Service to the State."

This service to the State concept was crystallized in the minds of many and later, it is difficult to say exactly when, was referred to as the Wisconsin idea.

"I shall never rest content," Van Hise declared in a 1904 speech to the Wisconsin Press Association, "until the beneficent influences of the university are made available to every home in the State."

TOO MUCH CANNOT BE SAID

Two years later, Van Hise told the regents, "Too much cannot be said as to the importance of university extension under which the university goes out to the people."

The regents responded with a sizable budget for extension work and that year, 1906, is counted by University of Wisconsin as the true beginning of the Wisconsin idea in education.

In the years that followed, educators from other States came to Wisconsin to study its extension program and to adapt it for their own purposes.

The famed writer Lincoln Steffens said in a letter to Van Hise:

"When you stop to look beyond your own State you must find no little personal satisfaction in the thought that you are leading not only your neighbors but the whole round world."

So much for history. In future articles we will, among other things, visit correspondence students with unusual stories to tell, travel the twisting roads of southwestern Wisconsin with an extension fieldman, attend an extension center and tell of the university's role in promoting the arts throughout Wisconsin.

In Support of Secretary Benson

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1960

Mr. DAGUE. Mr. Speaker, one of our leading agricultural economists is Prof. George E. Brandow of Penn State. He recently participated in a farm forum in Des Moines, Iowa, and the summary of his remarks is that the party in power since 1953 has had very little to do with the economic ills that beset agriculture.

Numerous other references were made to the farm policy debate, and for that reason I ask that the Chicago News report of February 23 by farm writer George Thiem be made a part of these remarks:

BENSON DEFENDED ON FARM POLICIES
(By George Thiem)

DES MOINES, IOWA.—Economic conditions, not Secretary of Agriculture Benson, were responsible for the steady drop in farm prices since 1952, an eastern farm expert told the National Farm Conference here.

Prof. George E. Brandow, agricultural economist at Pennsylvania State University, said Benson's critics have put far too much blame on his shoulders.

"In a way it was unfortunate there was a change in administrations in 1952," said Brandow, "for the economic situation changed fast after that. Politics or the party in power had nothing to do with it."

When the Korean fire died, he explained, war scare buying stopped and the propensity to expand farm output began.

High price supports were continued by Congress at a time when reduced acreage, lower prices and less use of fertilizers would have prevented an excess piling up of surpluses.

The audience applauded Brandow enthusiastically.

Lauren Soth, Des Moines newspaperman, remarked: "People whose only farm program has been anti-Benson are going to have to get a new one in about a year."

There was unanimous agreement by a score of speakers that the U.S. agricultural plant has been expanded far beyond the opportunity for profitable markets.

Prof. J. Carroll Bottum, of Purdue University, suggested shifting 60 million acres of the 450 million total in plowland to grass and trees.

He testimated such a shift of 13 percent would cut production by 5 to 7 percent—the approximate annual accumulation of surpluses the last 8 years.

He conceded that more poor than rich land would go into soil conserving crops.

What It's Like in Hawaii

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES

Tuesday, April 5, 1960

Mr. LONG of Hawaii. Mr. President, since Hawaii has been admitted as the 50th and newest State in the Union, people from the mainland have been asking more questions than ever before about "What it's like in Hawaii." In order to make some of these answers readily available, I ask unanimous consent that material on this subject prepared by the Honolulu Chamber of Commerce be printed in the Appendix of the RECORD.

There being no objection, the material entitled, "What It's Like in Hawaii," was ordered printed in the RECORD, as follows:

STATE OF HAWAII

Hawaii is composed of five major islands (Oahu, Hawaii, Kauai, Maui, and Molokai), located in the Pacific Ocean 2,100 miles from San Francisco. Not only has Hawaii the distinction of being the youngest State in the Union, but her estimated civilian population of 597,910 is one of the youngest in the United States, the median age being 24.5 years as compared to the national average of 30.1 years.

HONOLULU

The capital city, Honolulu, is situated on the island of Oahu and is the hub of activity for government, commerce, and industry in the islands. It is a bustling, clean, modern American community with one of the highest per capita incomes in the Nation. The population of the city of Honolulu proper is estimated at 321,583 while some 144,819 persons reside in outlying areas. In addition, 56,000 military personnel are based in, or near, Honolulu.

Modern stores and shops offer a full range of both nationally advertised and locally manufactured merchandise. Added variety is gained by imports from the Orient.

Adjacent to Honolulu are two locations of worldwide renown: (1) Pearl Harbor, the Nation's largest naval base and headquarters for the combined military commands of the Pacific and Far East, and (2) Waikiki Beach, the operational center of Hawaii's tourist industry. It is because of the fame of these areas that Honolulu is so often referred to as "Hawaii" by mainlanders.

WEATHER

One of Hawaii's chief assets is her mild and temperate climate, relatively free of uncomfortable extremes. Tropical storms are not encountered. During an average year, there are 106 clear, 162 partly cloudy, and 97 cloudy days. The mean temperature over a 20-year period is 75.1 degrees with August as the hottest month. The average annual rainfall is 24 inches with December through March as the wettest months.

IMMIGRATION REGULATIONS

No passport or inoculation (except for military personnel and their dependents) is required for travel between Hawaii and other parts of the Union.

JOB OPPORTUNITIES

Oahu is classified as a tight labor market area. This situation exists because of the lack of diversified industries and the relative immobility of the work force. Therefore, employment service officials advise that "the chances of getting a job in Honolulu in most occupations are slim."

Civil service positions with the State and county governments require 3 years of residence in Hawaii. Such also is the case of the public utilities. Although there is no residential requirement with the Federal Civil Service, the local regional office confines its hiring to those already established in the islands.

Private employers hesitate to employ personnel who are not available for an interview. For those coming to the islands in search of employment, the Chamber of Commerce of Honolulu cautions that you have sufficient funds for return transportation in the event you are unsuccessful in locating suitable work.

Mainland students or others seeking "summer jobs" are cautioned that seasonal positions being few, they are adequately filled by local residents.

Information in these fields is obtainable from the following agencies, all located in Honolulu:

General employment, State employment service, 825 Mililani Street.

Federal employment, U.S. Civil Service, Federal Building.

Hotel, restaurant, and bar, Hotel and Restaurant Employees and Bartenders' Union, 420 John Ena Road.

Organized labor, American Federation of Labor and Congress of Industrial Organizations, 212 McCandless Building.

Construction, General Contractors Association, 1410 Kapiolani Boulevard.

Laws, Bar Association of Hawaii, Lewis, Buck & Saunders, Post Office Box 3117.

Real estate, Honolulu Realty Board, 934 Fort Street.

Teaching, Department of Public Instruction, Post Office Box 2360.

Specific information for, accountants, barbers, beauty operators, chiropractors, dentists, professional engineers, architects and land surveyors, doctors, nurses, opticians, osteopaths, pharmacists, and veterinarians may be obtained from Department of Treasury and Regulations, Post Office Box 3469 Honolulu, Hawaii.

WAGES

The 1960 survey of pay rates by the Hawaii Employers Council reveals the following average monthly full wage range for all industry as: Senior typist, $200–$425; stenographer, $170–$491; secretary, $175–$600; staff nurse, $275–$405; medical laboratory technician, $225–$490; licensed civil engineer, $500–$1,000; unskilled laborer, $1.00–$2.35 per hour.

TAXES

All Federal taxes are applicable in Hawaii. The State personal income tax follows the national pattern generally. Personal net income tax rates graduate from 3 percent on the first $500 to 9 percent on incomes in excess of $30,000.

The State levies a 3½-percent tax on retail goods and services (sales tax) and there are taxes on gasoline, liquor, tobacco, insurance premiums, public utilities, financial corporations, corporate income, and inheritance.

Each county sets its own rate for real property taxation within the limit prescribed by the State legislature. There are no municipal taxes or direct school tax, but a general excise tax is levied on gross income, and gross receipts or gross proceeds of sales on all business activities.

BUSINESS OPPORTUNITIES

It is not practical for the chamber to offer advice concerning investment possibilities and opportunities for establishing or operating specific types of enterprises in Hawaii.

It is recommended that anyone interested in establishing a business in Hawaii first personally investigate local conditions before making a final decision or entering into definite financial obligations.

A statistical publication, "Hawaii Facts and Figures," with detailed, current information on many facets of the State's economy, is available from the Chamber of Commerce of Honolulu for $1 per copy, including air-mail postage.

TRANSPORTATION

Major airlines and water carriers provide transportation to any major city of the Pacific coast, the Orient, and Australia practically on an any hour of the day or night basis. The five major islands of the Hawaiian chain are linked by two airlines which provide a schedule of daily service. A public transit system connects all sections of the city of Honolulu.

HOUSING

For those planning to establish new homes in Hawaii, housing authorities warn that because of the "low vacancy rate and high turnover," newcomers must be prepared to pay higher rentals than long-term tenants. In the better residential areas of Honolulu, furnished studio apartments will command from $115 to $165 a month. It is difficult to rent an unfurnished apartment or to purchase or rent a "small" house. The average cost of an unfurnished three bedroom home varies form $14,500 to $27,500 and this on lease land. There are no trailer courts or sites for "mobile" homes.

Information regarding real estate sales and rentals or real estate licenses is obtainable from: Honolulu Realty Board, 934 Fort Street, Honolulu, Hawaii.

Military families wishing to locate accommodations on Oahu are advised to contact: the Office of Armed Services Community Housing, APO 958, San Francisco, Calif.

COST OF LIVING

Hawaii's cost of living, while generally following trends similar to mainland indexes, is slightly higher in some respects because of the extra costs involved in transporting goods from the mainland. However, this is somewhat offset by the absence of heating fuel costs, and seasonal clothing requirements.

Utility rates (gas, water, electricity, and telephone) are determined by the Public Utilities Commission and are comparable to those of many cities. Modern appliances and conveniences are found in most homes. More than 70 percent if island families have television sets.

MOTOR VEHICLES

Islanders own more than 202,000 automobiles—better than 1 car to every 2.8 persons. All standard model cars, and many foreign made automobiles and repair parts are available. The cost of operating an automobile is slightly higher than on the mainland. The price of gasoline is approximately 40 cents a gallon with high-test gas costing about 43 cents.

To operate an automobile with mainland license plates, owners must present a State registration card and shipping receipt to the Treasurer's Office, City and County of Honolulu for a nonresident permit within 10 days after date of entry of the automobile.

Persons holding a mainland driver's license may operate motor vehicles for 90 days before obtaining a resident license.

SCHOOLS

The department of public instruction operates 111 public schools from kindergarten through high school, including technical and special training facilities on Oahu. As a special service, a number of community schools for adults and special schools designed for the care of retarded children and the deaf and dumb are also conducted.

Private and parochial schools number 139 from kindergarten through high school. In addition, there are a number of business institutes and vocational schools offering specialized training. Inquiries about the Hawaii public and private schools should be directed to: Department of Public Instruction, Post Office Box 2360, Honolulu, Hawaii.

The University of Hawaii, an accredited land-grant college is the largest institution of higher learning. The best source for information about the courses of study and academic requirements is: Registrar, University of Hawaii, Honolulu 14, Hawaii.

CHURCHES

Practically every religious sect and denomination can be found in the islands. There are 400 Protestant churches, 115 Catholic parishes, more than 100 Buddhist temples, and a Jewish synagogue in the State.

The Honolulu Council of Churches, Post Office Box 337, Honolulu, is the agency to contact for information concerning religious activities in Hawaii.

PET QUARANTINE

The islands are free of rabies and to continue to remain so, the Department of Agriculture requires all cats and dogs brought into Hawaii to be quarantined for a period of 120 days. A boarding charge of 75 cents per day for dogs and 50 cents for cats is levied at the State-operated quarantine kennels.

Inquiries pertaining to pets and plant life should be referred to: Department of Agriculture and Forestry, Post Office Box 5425, Honolulu, Hawaii.

MARRIAGE REQUIREMENTS

The legal age to marry in Hawaii is 20 years. However, a male may be married at 18 and a female at 16 if there is written consent. The State also requires a 3-day waiting period and a serology (blood) test before the marriage license is issued. The fee for the license is $5. Anyone who has any questions concerning Hawaii's marriage and divorce regulations should write directly to: State Department of Health, Kapuaiwa Building, Honolulu, Hawaii.

HOSPITALS

The newest State's enviable health record is attributable in part to its ideal climate, also to its excellent hospitals, outstanding medical profession, and stringent health laws. Registered with the State department of health are 25 general hospitals, also those institutions which offer special facilities for treatment of tuberculosis, Hansen's, mental, and chronic diseases.

NEWS

The two leading daily newspapers are: Morning: The Honolulu Advertiser, Post Office Box 3310, Honolulu, Hawaii; approximate monthly subscription rate to mainland, $2.25, regular mail, $18.75, air mail. Evening: The Honolulu Star-Bulletin, Post Office Box 3080, Honolulu, Hawaii; approximate monthly subscription rate to mainland, $2.25, regular mail, $20, air mail.

There are also several weekly and monthly publications, plus 15 radio and 3 television stations in Hawaii, most of them located in Honolulu.

OTHER SOURCES OF INFORMATION

Business: Department of Economic Development, 1124 Miller Street, Honolulu; Department of Business Research, Bank of Hawaii, Honolulu; Economic Research Department, Bishop National Bank, Honolulu, Hawaii.

Neighbor islands: Hawaii Island Chamber of Commerce, Hilo, Hawaii; Maui Chamber of Commerce, Wailuku, Maui; Kauai Chamber of Commerce, Lihue, Kauai; Molokai Chamber of Commerce, Kaunakakai, Molokai.

TRAVEL TO HAWAII

Most mainland travel agents can supply information on travel to Hawaii or can refer

such requests to mainland headquarters of the following: Hawaii Visitors Bureau, American President Lines, Matson Navigation Co., Pan American Airways, United Airlines, Northwest Air Lines.

GENERAL INFORMATION

Most school and public libraries contain encyclopedias and other reference books with general information about Hawaii. The "Reader's Guide" is suggested as a source for current magazine articles.

The American Medical Association Rebuts Labor's Demagogery

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1960

Mr. BOSCH. Mr. Speaker, in recent weeks considerable information has been made available exposing the role of the labor boss in seeking to force our aged into compulsory total retirement and to make our senior citizens totally dependent on the Federal Government for their subsistence. The labor leaders of our Nation have dedicated their political endeavors to making our aged subject to the dictates of a Federal bureaucracy.

One of the steps they have taken to distract public attention from this basic objective of enslavement of the aged has taken the form of a totally unwarranted attack on the American Medical Association and its membership.

Mr. Speaker, I submit my considered judgment that if labor had done as much for our aged as America's doctors have done, the senior citizens of our Nation would today be much better off than they are.

Labor's attack on the AMA took the form of a political memo issued by the AFL–CIO Committee on Political Education, which is the propaganda apparatus of the labor bosses and the Americans for Democratic Action. This political memo was issued on February 1, 1960, and resorted to the most brazen demagoguery in attacking the AMA.

Dr. Henry I. Fineberg, in an article in the Long Island Press on Sunday, April 3, 1960, commented on medicine's reply to this unwarranted attack. At this point in the RECORD I will include Dr. Fineberg's column:

THE DOCTOR'S CORNER—AMA HEAD REPLIES TO LABOR

(By Dr. Henry I. Fineberg)

We are certain that most people, who have kept up with the status of the Forand bill, know that labor, in general, is in favor of the measure.

Recently, AFL–CIO officials, in an effort to win support for Forand-type legislation, attacked the American Medical Association, its 178,000 member-physicians and its affiliated State and county medical societies. This assault has aroused the physicians. The AMA president, Dr. Louis M. Orr, of Orlando, Fla., in an issue of the Journal of the American Medical Association, has answered the charges that the AMA in past years has opposed beneficial health measures. Of course, that isn't so.

Dr. Orr refutes these allegations: that a generation ago, the American Medical Association, opposed the requirement that all cases of tuberculosis be reported to a public authority; that the AMA was against smallpox vaccination, immunization against diptheria, venereal disease clinics, tuberculosis and cancer clinics, blood banks, Medicare (the care of dependents of servicemen) and various other items.

The American Medical Association has advocated the reporting of all cases of tuberculosis since 1899 and as recently as 1944. The AMA has campaigned for compulsory smallpox vaccination since 1863. For over 80 years, our national medical society has cooperated with public health agencies for the prevention of contagious diseases. It has never opposed immunization against diptheria, whether it is done by private physicians or public health officials.

Back in 1874, the AMA took official action to fight venereal disease. We have never been against the creation of free diagnostic centers for tuberculosis and cancer. As a matter of fact, we have cooperated in every way possible in this direction. The AMA has worked very closely with our Federal Government in providing medical care for the dependents of men in the Armed Forces, under the Medicare program.

It can be said without reservation that the AMA has participated in countless important projects designed for the welfare of the public and for the furtherance of medical science.

WDSU–TV, Winner of Television Highest Award for Editorial Policy, Comments on Penalties for Retired Officers Selling to the Department of Defense

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 5, 1960

Mr. LONG of Louisiana. Mr. President, last year WDSU–TV, New Orleans, La., was honored by the Radio Television News Directors Association, in cooperation with the Medill School of Journalism, Northwestern University "in recognition of distinguished achievement in broadcast journalism."

In connection with the presentation of the award, the opinion of the judges was stated as follows:

Our first choice in the TV competition is WDSU–TV, New Orleans. We were all enormously pleased by the editorials submitted. They were professional, they were important, they were concrete, they were done with good taste and integrity, and they indicated a basic courage on the part of the station management.

On last Friday night Bill Monroe, news chief and editorial writer for WDSU–TV, wrote for broadcasting a timely and current editorial.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HÉBERT VERSUS BRASSHAT SALESMEN

(The following editorial was broadcast over WDSU–TV and WDSU radio on April 1, 1960.)

Congressman EDDIE HÉBERT, of Louisiana's First District, has a battle ahead of him in Washington next week. He is pushing a proposal in the House of Representatives to cut down on influence peddling by retired admirals and generals.

Last year HÉBERT's subcommittee found that almost 1,500 retired military officers have taken jobs with big defense contractors. In some cases they have quit their military jobs on one day, then on the next day, at a fat salary, gone to work for a private company selling its products to their old friends in the Defense Department.

Even if there is no out-and-out dishonesty involved, this inevitably builds up a smog of suspicion over the whole multibillion-dollar process of defense spending. The taxpayers have a right to wonder, under such circumstances, to what extent their money is being spent to strengthen the country and to what extent it's being passed around among old friends.

Congressman HÉBERT wants to make it illegal for former officers to sell anything to the Defense Department for a 2-year period after they retire. Penalty: $10,000 and 1 year in jail.

A few months ago the entire Armed Services Committee of the House unanimously approved this idea. But later the powerful committee chairman, Congressman VINSON, apparently changed his mind. VINSON got a majority on the committee to approve a meaningless bill with no criminal penalties. So, to put the teeth back into the measure, HÉBERT is going to have to offer an amendment of his own containing the penalties.

The Louisiana Congressman's proposal would simply apply to military men the same principle now applied to certain civilians retiring from Government service. It would protect the taxpayer's dollar and the reputation of high officers. We hope he wins his battle.

The Case of the Disappearing Money, or Why Financial Writers Rise With the Government Bond Market or Vice Versa

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1960

Mr. PATMAN. Mr. Speaker, during recent weeks the Government bond market has been rising rather nicely. Interest rates have not been brought down to any major extent, but they have been eased somewhat.

Only a month ago the administration and the Federal Reserve were still waging an allout campaign to have Congress remove the traditional 4¼ percent interest rate ceiling on Government bonds. At that time both the Treasury and the Federal Reserve were taking the position that if the Treasury attempted to sell any new bonds, it would push the yields on bonds already outstanding above 4¼ percent, and the bonds could not be sold.

The Treasury has, as we know, had a change of heart and is now offering up to $1.5 billion of a new 4¼ percent bond to mature in 25 years. This offer has not driven bond prices down as we were told that it would. On the contrary, the outstanding bonds most nearly comparable to the new issue rose by eight thirty-seconds of a dollar yesterday. This is the

Treasury 3¼'s of 1985, which, according to the Wall Street Journal this morning, were being bid yesterday at 86$^{24}/_{32}$, which would yield the buyer 4.11 percent. In other words, market yields on the 25-year bond yesterday were considerably lower than the 4.25 percent at which the new bond is being offered.

Why are Government bond prices now rising? The explanation we hear on all sides is that it is because the stock market is declining, and investors are putting their money into bonds rather than into stocks.

For example, a feature story carried by the Wall Street Journal yesterday puts it this way:

> The bond market has been winning investors away from the stock market. Stock prices surged to record highs at the end of 1959, buoyed by widespread forecasts of sharp gains in corporate sales and earnings in 1960. Since then, however, doubts have grown that this will quite measure up to the forecasts. In this atmosphere of uncertainty, many investors have been marking time by putting funds into bonds and other fixed income securities, rather than stocks.
>
> The enthusiasm for stocks in 1959 pushed prices so high that dividend yields in many cases sank below the yields available on bonds of comparable quality—in some cases to 1 percent or below.

And so on. This happy little explanation is what I call the "Case of Disappearing Money." It is based on a premise that money invested in stock somehow disappears. Normally we might think that when Mary Smith buys stocks from John Brown, John Brown will then have the money to invest in bonds or to put in the bank, in which case it will either be invested in bonds or free some third party's money for investment in bonds. But the financial writers obviously have a different theory, their theory being that when people are putting more money into the stock market, and thus driving stock prices up, that money somehow evaporates.

My point is the public is treated to all kinds of nonsensical explanations about money and financial markets. It seems to matter not to the explainers that their explanations today contradict the explanation of yesterday.

The "Case of the Disappearing Money" is exactly comparable with Chairman MARTIN'S recent boast which suggests that the high interest rates of last year brought about and stimulated a record increase in savings. This suggestion, which is now being reported as fact by some of the financial writers, rests merely on the fact that combined purchases last year of interest-bearing and dividend paper by individuals and nonbanking companies reached an alltime high.

Chairman MARTIN'S original statement on this matter—the one which made the headlines—was given before the Joint Economic Committee early in February. The extraordinary bit of news which he gave at that time was stated as follows:

> The activity last year of the nonbank public—meaning for the most part consumers and business concerns—in supplying borrowers with funds through the process of investment was truly extraordinary, and it did not stop with the purchase of Government securities sold by the banking system. The upswing in this activity shows up strikingly in the flow-of-funds data that I mentioned earlier. There, it appears that consumer and business investors increased the net amount of their purchases made directly in securities markets from about $4 billion in 1958 to almost $20 billion in 1959—a jump of 400 percent in a single year.
>
> The efficient and economically healthy flow of funds from savers to borrowers, directly and through intermediaries, did not come about without a price. The price was, of course, a rise in interest rates. These rates, representing a penalty to those who use someone else's money and a reward to those who save and risk their funds in loans and investments, rose in some instances to the highest levels in three decades. What happened is readily apparent: the pressure of demand for funds arising from a combination of forces converged to bring about a competition to borrow that drove interest rates upward; the rise in interest rates, in turn, operated to induce the savings and investment necessary to supply borrowing demands.

This statement comes very close to saying categorically that the high interest rates of last year were caused by an unusually high demand for credit, and, further, that the high interest rates of last year brought about an unusually large volume of savings. We need not debate the question whether the statement actually says these things or only suggests them. We need point out only that on the basis of the available evidence, what the statement suggests is contrary to fact.

Yes, there was an unusually large purchase of securities by the nonbank public, but what does this mean? It simply means that after the Federal Reserve drove the yield on 91-day Treasury bills up to astronomical heights, many nonbank corporations withdrew their demand deposits from the banks and put the funds into these short-term bills. But this does not mean that business firms and individuals saved any more of their incomes than in previous years, nor that the same funds would have not been invested in Treasury bills if the funds had been left in the commercial banks.

When interest yields on short-term Treasury bills are low, as they normally are, the industrial and utility corporations do not bother to draw their working funds out of the bank to invest them in these bills. Rather, they leave their working funds in demand deposits in the commercial banks and the banks use these funds to invest in the short-term bills.

But when the rate on Treasury bills goes very high, the nonbank corporations find it worth their while to take funds out of demand deposits, where they draw no interest, and put these funds into these bills. They can buy bills which mature in 3 months, 1 month, 1 week, or in any number of days they choose. In other words, they can buy a bill which will mature and return their cash at the time the cash is needed in corporate operations.

But does the fact that the nonfinancial corporations reduced their demand deposits with the commercial banks and bought more Treasury bills, because of the high interest rates, mean that more money was saved and less spent? Or does it mean that the demand for credit was greater last year than in previous years? It does not.

The flow of funds data which Chairman Martin has referred to as his basis for suggesting these things do not support his suggestions. These data, which are available only for the first 9 months of 1959, indicate that national savings last year, both on a net basis and on a gross basis, was a smaller percentage of the national income than was true in the years 1955, 1956, and 1957. Similarly, these data indicate that the demand for investment funds was a lesser percentage of national income last year than in the previous years I have mentioned, plus probably many other earlier years.

In other words, the high level of interest rates which the Federal Reserve maintained throughout the whole of last year simply meant that this Nation paid a higher price for the same amount of savings that would have been made in any case.

Why have Government bond prices gone up and interest rates gone down? I suggest that neither the theories advanced by the financial writers nor by the Federal Reserve people explain it.

It is not because stock prices have come down, because when one person buys stock from another, the money does not disappear.

And it is not because the Federal Reserve has now decided to encourage the American people to spend more and save less, for the simple reason that the Federal Reserve has had no luck whatever in changing this Nation's savings habits by raising or lowering interest rates.

The main reason that bond prices have improved and interest rates have gone down is that the political weather has been improving. It has been becoming more and more evident that Congress will not repeal the 4¼ percent ceiling on Government bonds, and it is becoming more and more evident to the people who buy most of the Government bonds that the long-term outlook is for a policy of more moderate interest rates. Their expectations of higher interest rates have declined and, inevitably, interest rates themselves have declined.

South Dakota—Land of Opportunity

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 5, 1960

Mr. MUNDT. Mr. President, South Dakota continues to be a land of opportunity for young and old alike. Blessed with many natural resources, a stimulating climate, rich soils, and energetic, patriotic people, our State looks forward to the decade of the sixties with confidence and optimism. We invite to join us all good citizens seeking new challenges and new ventures in this growing State which still remains uncrowded and unspoiled.

An editorial in the Aberdeen American-News, published in Aberdeen, S. Dak., reflects the spirit and the confidence of the forward looking folks of this great State, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Aberdeen American-News, Mar. 27, 1960]

SIXTIES CAN BE GOOD FOR SOUTH DAKOTA

South Dakota leaders and leaders in the Nation are looking forward optimistically to the decade just getting underway.

They expect the sixties to provide opportunity for individuals to continue the development of the resources of the United States. Some are saying this 10-year period will be known as the "Soaring Sixties." Others say it will be the "Sensational Sixties."

These leaders are encouraged by the years of peace. And with the peace has been a prosperity that, during times of peace, has never been matched.

It is good to hear from persons with faith in their State and faith in their Nation.

They offer relief from the faultfinders and those who blame the Government for what they don't like and at the same time look to the Government for more regulation of their daily lives.

South Dakota has two new developments on which to pin hopes for improvement.

One is well along its way. It is the Missouri River program which will be responsible for many benefits during this decade. It will give South Dakota a vast amount of water for multiple uses. And it will add to the supply of electricity as well as control floods and provide possibility for river navigation.

The economic values already felt will multiply many times in the years ahead.

A second major development that is anticipated during this new 10-year period is oil.

There is evidence that the same underground collection formations, that have helped North Dakota to rise to the 10th State in the Nation in oil reserve, exist in South Dakota.

The oil industry is aware of this. In due time there will be sufficient drilling of holes to locate the South Dakota reservoirs.

Progress in both of these fields—river development and oil exploration—will take some of the burden off farming as the State's leading industry while efforts are being made to assist agriculture in making adjustments in line with the changing conditions.

There is cause for optimism and it is good there are leaders in South Dakota who can see the good in the future.

Goldwater for President

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. DORN of South Carolina. Mr. Speaker, the following is the headlines and lead paragraph of The State, Columbia, S.C.:

STATE REPUBLICANS ENDORSE GOLDWATER

U.S. Senator BARRY GOLDWATER, Republican of Arizona, yesterday stampeded the South Carolina Republican Convention here and won support as a presidential candidate.

The tall rangy Arizonian chopped into liberals who, he said, wish to wreck the Constitution in order to enforce civil rights.

The following is from National Review of April 9, 1960:

It is generally assumed that conservative sentiment has no organizational or even personal vehicle around which to build, and that continues largely to be true. But the phenomenon of BARRY GOLDWATER may change that.

Last week, the Republican Convention in South Carolina heard Senator GOLDWATER deliver the keynote address. He championed (1) States rights; (2) decentralization of political and economic power; and (3) a conservative program for the GOP: "The right of center is the only place the Republican Party can stand today if it intends to win in 1960 and subsequent elections." The convention then voted to instruct South Carolina's 13 delegates to vote for GOLDWATER at the Chicago convention until such time as GOLDWATER releases them.

This astonishing fissure in the NIXON monolith within the Republican Party was widely and scandalously unreported in the major metropolitan newspapers.

The following is from Human Events dated Thursday, April 7, 1960:

The press has generally failed either to mention or to comment on the South Carolina action in favor of GOLDWATER for President. This press attitude confirms charges that Human Events has made. Last week, in an article "Enemy Columnists Hope To 'Help' GOP," James L. Wick, executive publisher of Human Events, ironically described how for many years "liberal" commentators and editorialists have sought to persuade Republican candidates that, to win, the latter should turn "liberal."

Today, they write similarly in respect to NIXON. This sort of performance (if NIXON continues to fall for it) might well—as in the case of Dewey and Willkie—result in a Democratic victory next fall. Such an outcome, of course, is just what the "liberal" men in the press seek to bring about.

No surprise, therefore, that these left-wing scribes have almost totally ignored the news from South Carolina, which by any standard should rate as news. Obviously, they give it "the silent treatment" for they fear NIXON may heed the portent. And they continue their game of polishing a "liberal image" of NIXON, so as to defeat him next November. As one observer put it this week, "The same old poisoned breakfast food is on the table every morning in the editorial pages of the paper."

Mr. Speaker, for a generation the American people have been denied a choice in presidential elections. Both parties nominated a liberal-radical, consequently millions upon millions refused to vote. Only 51 percent of our eligible voters went to the polls in 1948. They had no choice. Both candidates and platforms were pledged to more spending, high taxes, and socialism. The same was largely true in 1952 and 1956. This year if either party should nominate a forthright leader like Senator BARRY GOLDWATER or Senator DICK RUSSELL, that party would win. There is growing evidence the people may have a choice in 1960.

Toole County Student Court

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 5, 1960

Mr. MANSFIELD. Mr. President, I am taking this opportunity to direct the attention of my colleagues here in the Senate to an experiment in juvenile court. In Shelby, Mont., the Toole County Student Court of the Ninth Judicial District sits in judgment on law violators of their own age group.

The first court met February 17, 1959, and tried four cases. All who appeared pleaded guilty. Most who come before the court have been arrested for traffic violations by the highway patrol. Others are charged with curfew infractions by city police and some are accused of possessing alcoholic beverages.

This experiment has proven to be highly successful and the reason for the court's effectiveness was aptly described by State Highway Patrolman Gordon McDermid, when he said "Trying juveniles before a student court has great impact because teenagers do not like to show up badly before their own age group."

I ask unanimous consent to have a feature article from the magazine section of the Great Falls Tribune, March 6, 1960 printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Great Falls (Mont.) Tribune, Mar. 6, 1960]

STUDENT COURT AT SHELBY HEARS JUVENILE CASES

(By Clyde Reichelt)

SHELBY.—The Toole County Student Court of the Ninth Judicial District was in session.

The teenager settled uneasily into the chair facing a panel of serious youngsters from his own high school. Quickly he took the wad of gum from his mouth and straightened his already tidy hair with a nervous hand, for facing classmates about to judge your conduct does not induce a comfortable feeling.

A minute before he had been escorted into the courtroom by the bailiff, Gene O'Hara, a freshman. Then Verna Steyee, clerk of court, and a junior in Shelby's high school, had read the charges and he had signed a statement which read:

"I, the undersigned, do swear to tell the truth, being cited into this court to answer to the charge stated below. I hereby agree to waive all rights to appearance before a regular court of law, and to obey the findings, and penalties set by this court.

"I understand that such findings and penalties can be appealed to the ninth judicial district probation officer for Toole County."

Then he had given his driver's license to the bailiff.

As he settled into the chair, the moderator, Bill Greenup, read the charge: Failure to stop for a stop sign.

"Do you plead guilty or not guilty?"

"Guilty," was the answer.

Now the panel began shooting questions to determine the degree of guilt.

"Were you ever arrested before?"

"Yes."

"How fast were you driving when you went through the sign?"

"I don't know; about 35, I guess."

"Didn't you see the sign?"

"No."

After the questioning the bailiff escorted the boy out of the courtroom and the panel fell to discussing the degree of guilt and punishment.

The court panel decided to suspend the youth's driver's license and issue him a probationary license for 90 days. This meant that if he was caught in any traffic violation within that period his license would be suspended. In addition the boy was to prepare a 5-minute talk on reasons for stopping for a stop sign and present it before the panel at the next court session.

"Does the probation officer concur?" Greenup called. Mrs. Blanche Severson, Toole County probation officer, who was sitting in the audience, concurred.

Then the teenager was brought back before the court and Greenup read the penalty. The boy's driver's license was kept and sent with the court docket to Montana Highway Patrol headquarters in Helena which later sent the youth a probationary license.

Punishments vary to fit the crime. One girl who panicked and left the scene of an accident after sideswiping a car had to give an oral report on why one should never leave the scene of an accident. She also had her driver's license suspended.

A boy who was arrested for having liquor in his car made an oral report on alcoholism and another who was brought before the court for failing to dim his lights, in addition to other penalties, had to prepare a talk on why motorists should dim their lights when meeting other vehicles.

Forty-six cases were tried from February 1959, through last December. Fifteen of the cases concerned boys or girls who appeared on charges more than once. Only one case was referred from the student court to the Ninth Judicial District juvenile judge, W. M. Black.

The idea of a student court here originated with Duane Tooley, former Shelby policeman and Montana Highway Patrol examiner. Since its start, however, Mrs. Severson has called it to session and overseen its operation.

She enjoys her duties. She likes to help the boys and girls.

"The philosophy of the court is to help youngsters become better citizens—not only those who appear before the panel, but those who take part in the court as well," she said.

Organizing the court took the time and patience of several groups as well as individuals. Judge Black's approval was the first secured and the Toole County Juvenile Committee agreed it sounded like a good plan.

Mrs. Severson met with Tooley and Sgt. Al Buck, also of the Montana Highway Patrol, to decide which violators should appear before the student court and what the penalties should be.

Then the plan was taken to the superintendent of the Shelby schools, D. L. Johnson, and the principal of the high school, Don Driscoll. Both gave hearty approval.

After that the plan was presented to the most important group of all, the high school student body. The students grasped the idea with enthusiasm and decided the court's panel should consist of the members of the student council with the student body president as moderator. Each class also elected an alternate who sits in with the panel on all cases if he or she wishes to, and who is available if the regular member should be absent.

The first court met February 17, 1959, and tried four cases. All who appeared pleaded guilty or were found guilty. Most who come before the court have been arrested for traffic violations by the highway patrol. Others are charged with curfew infractions by city police and some are accused of possessing alcoholic beverages.

Most plead guilty but those who believe they are innocent tell their side of the story and present witnesses if they wish. The panel questions both the accused and the witnesses.

Some of the teenagers who have appeared before the court have tried to hide their embarrassment by showing disrespect for the panel. This was quickly noticed and taken into consideration when deciding punishment or degree of guilt. In the several times when this occurred Mrs. Severson talked to the offenders and convinced them their attitude and actions were wrong.

One boy had to be picked up by police and brought before the court after he had refused to appear voluntarily. He showed disrespect to the court and was taken before Judge Black. Black was convinced the boy's attitude was an attempt to cover up a feeling of inferiority. He talked to the youth, urging him to convince himself that he was as good as anyone, to throw back his shoulders and speak his piece.

By the next session of court the youth had changed. He appeared and apologized for his previous conduct.

Conduct also can be a bit of a problem for the members of the panel. The first group was badly in need of self assurance and guidance which Mrs. Severson was quick to note.

"Members of the panel can't chew gum, slump over their elbows, or be discourteous with the accused or witnesses. They must act and dress with dignity." Mrs. Severson said.

After the close of each court an evaluation session is conducted. Members of the juvenile committee, highway patrol, police department, and Mrs. Severson sit in with the panel. Action taken by the court and possible ways of improving its procedure and value are discussed.

Violations the court may hear and penalties it should consider have been changed as result of the discussions but no one doubts that the chief examiner of the State highway patrol, Gordon McDermid, pinpointed the reason for the court's effectiveness when he said:

"Trying juveniles before a student court has great impact because teenagers do not like to show up badly before their own age group."

Resettlement of Certain Refugees

SPEECH

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. WALTER. Mr. Speaker, the joint resolution under consideration is designed to implement the participation of the United States in what has been described as World Refugee Year promulgated by the United Nations Assembly in a resolution sponsored by the United Kingdom and cosponsored by this country.

In a proclamation issued on May 19, 1959, the President of the United States, in expressing the acceptance of the participation of the United States in the World Refugee Year, ending June 30, 1960, has outlined the extent of our participation, stressing the necessity of additional financial contributions for the rehabilitation of refugees and the need of more opportunities for their resettlement. A substantial financial contribution to the funds of the United Nations High Commissioner for Refugees in the amount of $4 million has already been made by the President pursuant to the authority granted him by the Congress last year.

The legislation under consideration is primarily designed to eliminate the remaining camps in Europe in which numbers of refugees have resided for a long period of time.

The Committee on the Judiciary reported this joint resolution by a vote of 30 to 1, I believe.

In taking up this joint resolution the committee considered the ability of the United States to absorb more people, having in mind the rate at which our population is increasing.

We believe that we have written into this legislation the safeguard which will prevent violence from being done to our basic concept of the admission of immigrants. By that I mean that everybody admitted, assuming this joint resolution will be adopted, will be required to comply with the provisions of the basic law. In addition, we have set up a provision under which by action of either the House or the Senate the entire program may be terminated within 60 days after the filing of a report by the Attorney General.

The joint resolution is designed to offer resettlement opportunities under the existing law, to wit: section 212(d)(5) of the Immigration and Nationality Act, to a number of refugees which will be determined depending on how many refugees are admitted by other cooperating countries.

Time is of the essence because the special refugee programs originated in the World Refugee Year should, of course, start in that year, if the participating countries are to implement what they have undertaken to do. Any delay in the enactment of this legislation will tend to impair the position of leadership which the United States has assumed in the field of internationally concerted humanitarian efforts.

In addition to that, there is a very important session of the Council of the Intergovernmental Committee for European Migration scheduled for the early part of May of this year. That session is to convene in Naples, Italy, instead of the usual meeting place which is Geneva, Switzerland. The main reason for this change of meeting place is the desire of the 29 member nations of ICEM to dramatize the departure of the one-millionth migrant moved from Europe by the organization which began its operations in February 1952. It is quite important that this legislation be well on its way to final enactment by the time ICEM's council convenes next month.

There have been recently certain proposals made in the field of immigration which appear to be based on the idea

that the absorptive capacity of the United States is practically unlimited. The proposals I have in mind have apparently not been based on sufficient studies of the implications which the fast-growing population of the United States, the inadequacy of employment opportunities, and the lack of facilities for housing, education, and medical care have made urgently necessary. No study of these matters has been made prior to the submission of recommendations under which the United States population would be further increased by a very considerable influx of immigrants. It appears to me that the interest of the United States has not been taken into consideration by the authors of those proposals.

This legislation does not belong in that category. It does not provide for any sizable increase in our annual immigration intake while it opens our doors to a reasonable and assimilable number of desirable people who need a safe haven and an opportunity to start a new life and who deserve to benefit from the blessings of freedom and American opportunities.

How many will come under this resolution? The answer to that question depends on the extent of cooperation which this country will obtain from our friends abroad. For example, according to the latest report I received from the Director of the Intergovernmental Committee for European Migration, that organization transported from Europe to oversea countries in the calendar year 1959, a total of 42,166 refugees; 9,652 of them came to the United States under the now expiring provisions of section 15 of the act of September 11, 1957. Consequently, the number of refugees admitted in 1959 by countries other than the United States was 32,514. Assuming that all of these refugees were subject to the mandate of the United Nations High Commissioner for Refugees and further assuming that in the year 1960 countries other than the United States will admit the same number of refugees, the Attorney General would be authorized to admit 25 percent of that number to the United States, which would be 8,126 persons. Provided, of course, that the Secretary of State has made that finding and has advised the Attorney General as to the precise number of those whom he may parole into the United States in each of the 6-month periods.

However, if the Secretary of State finds that the other nations have curtailed the size of their total semiannual intake of refugees of the category specified in this resolution, our intake will automatically diminish proportionately in the immediately following 6 months.

The legal concept of this resolution is based on the experience gained in 1956 and in 1957 when the very efficient administration and the successful results of the use of the parole provision of the Walter-McCarran Act has permitted us to assume the position of leadership in providing safety and resettlement of those who escaped the Soviet massacre of the heroic Hungarian revolution.

We have maintained then, and we still maintain, that position of leadership which we first assumed in providing resettlement for displaced persons and refugees in the years since 1945 up to the present time. I stress this point not because of a desire to boast about our achievements. I believe that it is necessary to remind certain facts, from time to time—not so much to our friends and enemies abroad who realize very well what the United States has done—but to some of our own people at home, who seem to tend too often to minimize our actions. As an example, let me remind you that just about 2 weeks ago it was stated in the other body that little Venezuela has done infinitely more for displaced persons and refugees than the United States. Suffice it to say that in the period of ICEM's activities, from 1952 until 1959, Venezuela has admitted 1,700 refugees while the United States has admitted 300,000. I do not say that in order to belittle Venezuela's contribution which has apparently done what she was able and willing to do, and we appreciate that, but to point out that the criticism of our own deeds by our people has about reached the high point of absurdity.

Mr. Speaker, I hope that the House and the other body will act promptly on this truly necessary and meritorious legislation. I am convinced that this resolution, after it is placed on our statute books, will be administered carefully and wisely, and that the required cooperation between the Secretary of State and the Attorney General will be as friendly and efficient as it was in the past. The functions of the Department of State and the Department of Justice in the administration of this legislation are of great importance, indeed. While the powers and duties of the Attorney General under section 212(d)(5) of the Immigration and Nationality Act as well as under all pertinent provisions of that law and under this resolution are preserved intact and inviolate, the prerogatives and functions of the Secretary of State in the area of foreign relations remain equally intact under the opening paragraph of section 2 of the joint resolution.

I urge the House to vote overwhelmingly in favor of this legislation.

There has been much said about the problem of refugees. Many of the nations have issued stamps, but many of them, outside of the Iron Curtain, have made contributions. Funds have been raised from various sources.

In this legislation we deal with the camp population, with those people who are subject to the mandate of the United Nations, High Commissioner for Refufees, and nobody else. We are exposed, in my judgment, to about one-fourth of 22,000 people.

There has been much discussion as to the number of refugees, and conflicting figures are being presented from various sources all the time. Some months ago, I said there were 28,000 people in the camps. This caused considerable consternation in the ranks of those people who have made this business of moving refugees a very profitable one. Just this morning, I talked with some people at the United Nations in New York. I was advised that the number is not 28,000 but it is now about 22,000. As I said earlier, we have written into the bill a provision under which the number we take will be determined by the total number of defined refugees taken by other nations participating in this program. That number is readily ascertainable so that in the opinion of your committee, the maximum number that could be taken, assuming that everybody in the camps wants to move, and I am sure that is not the case, our share will always represent 25 percent of those moved elsewhere.

If my colleagues will indulge me for a moment, I would like to tell of a conversation I had with a cabinet minister of the appropriate agency of the Austrian Government. He pointed out that most of these people are old. He said that emigration is not an attractive thing when people are over 35—I am sure that is the case. As I was saying, the numbers that would be moved would be relatively small. In view of the fact that we have actually been a participating sponsor of this World Refugee Year, it seems to me we are almost compelled to adopt the kind of legislation which will indicate our desire to participate and also the limits within which that participation will take place.

Mr. BURLESON. Mr. Speaker, will the gentleman yield?

Mr. WALTER. I yield.

Mr. BURLESON. As I understand the situation, the type of people calculated to come in under this measure are old people—people who are sick and those ordinarily described as hard core refugees; is that correct?

Mr. WALTER. May I say to the gentleman that everyone who is admitted for permanent residence will come under the terms of the basic code.

Mr. BURLESON. When we have had this type of legislation before this body on several other occasions, including the so-called Refugee Relief Act which has expired, the plea was that we should have that type of people in this country who would contribute something to the welfare of our country. Now this seems to me to be the very opposite. Is this strictly on a humanitarian basis?

Mr. WALTER. This is designed to meet the demand of some people that the United States do something in this field. May I say again in that connection, that just recently, in the other body it was stated that the United States had not done as well in the refugee field as little Venezuela. As I stated a few minutes ago, ICEM's records show that Venezuela had admitted since 1952, a little over 1,700 refugees in these categories and we had admitted over 300,000. Now, what useful purpose is served by minimizing our efforts, I do not know, but I would like to point out to the gentleman that ever since the cessation of hostilities in 1945, the United States has done its full share. We can certainly be proud of our efforts; but still, the

camps there remain. It seems to me that by the enactment of this legislation we will indicate to the world that we can eliminate them. When the question of the number arose, the gentleman from California [Mr. SMITH] visited the camps in Europe, and as a result of his investigation we reached what we believe to be a proper conclusion with respect to the modus operandi of elimination of the camps.

Mr. BURLESON. Did I understand the gentleman to say that many of these 22,000 would not wish to enter this country or any other country?

Mr. WALTER. My guess is that only a small percentage would want to move, and a correspondingly smaller one will enter this country.

Mr. BURLESON. Then in that case the camps are not going to be eliminated.

Mr. WALTER. Yes, they will, because other nations and local economies will also be absorbing these people.

Mr. BURLESON. We contribute something through the United Nations to the upkeep of the camps?

Mr. WALTER. That is right.

Mr. BURLESON. And we would continue to do so. If they do not want to come to this country or any other country they would remain there and we would continue our contribution. I assume that that would eliminate the humanitarian angle of bringing them into this country.

Mr. WALTER. I would like to feel that after the enactment of this legislation the United Nations would take steps immediately to eliminate those camps. They have already eliminated a great many. People have been concentrated in just a few camps.

Mr. BURLESON. If the gentleman will yield further, you have a bill before the Committee on the Judiciary which deals with immigration, ordinarily referred to as the administration bill, which would about double the 154,000 annual admissions provided under present law. This number represents regular quotas, but as I understand that proposal, an unpredictable number of immigrants would be permitted to come to this country if the President so desired. How is this related to that legislation?

Mr. WALTER. May I say this to the gentleman, that before the subcommittee, of which I happen to be chairman at the moment, considers that legislation, we will complete studies that we are now undertaking to determine the capacity of the United States to absorb more people. Personally, I hope there will be no action before this study is completed. I am almost sure there will be no action at this session, because the studies will not be completed. It is very important in that connection to note, particularly in those areas where we have much distress, the coal fields of Pennsylvania, for instance, that a vast majority of people coming to the United States seeking new homes, come to those areas. We certainly are not going to relieve unemployment in the United States by bringing unemployed from other places in the world.

Mr. BURLESON. I am delighted to hear the gentleman's remarks on that subject. If the Federal Government is going to provide public housing, unemployment compensation, medical care, and all other benefits which flow from Washington, it would seem we do not need to bring more people in for that purpose.

Mr. WALTER. I agree with the gentleman completely, but we are talking about something entirely different now. We are talking about the participation of the United States of America in a worldwide movement to relieve a very bad situation.

Mr. BURLESON. Mr. Speaker, if I could feel that House Joint Resolution 397 was purely a humanitarian act, certainly I would feel more kindly toward it. If it is humanitarian, then certainly our benevolence should extend to the teeming thousands of Arab refugees expelled from Israel. In this instance, our own policies contributed to this wholly unsolved, pitiable situation. I think there is no doubt that the refugees with whom we are dealing in this bill are cared for in luxury, as compared to these people living almost like animals with no hope for tomorrow.

It is difficult to obtain definite information as to the type of people remaining in the refugee camps in Europe. Some years ago before the Special Refugee Relief Act expired, the argument was made that we should admit people of special skills and abilities who would contribute something to our American life. The camps were supposedly drained of this type of individual, many of them coming to this country. I doubt seriously if very much has been contributed, and I opposed that legislation. However, the point to be considered now is why, after these several years, we are going back to the hard-core type which is left in the camps. If my information is correct, these people are mostly those who are diseased, with criminal involvement of some nature, or whose true status cannot be determined.

We are now going to take these people, which I have an idea is more or less on an indiscriminate basis, based on the challenge of other nations to take three-fourth of the total. They are being admitted on a permanent basis. They become eligible for permanent citizenship, and it is a circumvention of our immigration laws.

The most I can see coming out of this legislation is the hope that the administration's liberalizing bill now in the Committee on the Judiciary may get no further than it is at the present time.

It is difficult to understand why there are those who want to chip away and widen the breaches in the present Walter-McCarran Act. At a time when, in my opinion, we should be tightening immigration laws, we are loosening them up.

The gentleman from Pennsylvania [Mr. WALTER], chairman of the Subcommittee on Immigration, in response to my query a few minutes ago indicated he was not for liberalizing our immigration laws as proposed and requested by the President of the United States. He further indicated that he recognized the inconsistency of admitting more people to the United States who will contribute to that group for which there is always a hue and cry for more welfare benefits of one sort and another. Do you want to bring more people into this country for more public housing, more unemployment compensation and all the welfare benefits which can be dreamed up by those who would take care of everybody and everything from Washington?

Mr. Speaker, it seems the most I can do at this time is to give notice that I shall oppose with every possible effort any further legislation which weakens and liberalizes our present immigration laws. I simply do not think it is in the best interest of our country, and further believe that it is already one of the principal taproots of many of the difficulties our Nation is now experiencing. I know very well that there are those who will say this is a narrow view. I know very well there are those who will want to say it is an attitude of anti-this and that. But, I know in my heart it is no such thing.

It is a matter of seeing that there are no more people in this country than are already here who do not understand the American system. There are those already here who do not distinguish between license and freedom. There are many who do not understand that responsibility goes with liberty. Mr. Speaker, this is not a flag-waving statement, because the record will prove it, and as to that matter, most any day a newspaper out of any of the big cities will prove it in their reporting.

I am not going to support this resolution, and particularly do I repeat that the bill now considered by the Judiciary Committee, which can more than double the present immigration quota, will be resisted. I trust that you here who believe as I do will indicate your attitude to the Judiciary Committee to such a degree that the committee itself will reject the proposed legislation.

Beef Imports—Prices Fall

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. DORN of South Carolina. Mr. Speaker, farmers and industrial workers are being threatened by foreign imports. The following article is from the Lancaster Livestock Reporter, Lancaster, Pa.:

CATTLEMEN FEAR IMPORTS WILL SLASH BEEF PRICES

DALLAS.—The SS *Mariposa*, a steamship with hefty hunks of frozen beef stacked in its cavernous holds, will said from Sydney, Australia, stop at Auckland, New Zealand, to take on more meat, and then set a northeasterly course for San Francisco.

Thousands of miles away, on a rolling, windswept prairie west of Cresson in central Texas, A. W. Slocum, a grizzled, lifelong rancher, will ponder the vessel's voyage toward the Golden Gate with considerable distaste.

"I'm feeding 2,500 head of cattle out there," rancher Slocum remarks, nodding toward the snow blanketed rangeland outside his snug ranch home. "I figure I'll have to take less money for them this year, even without considering imports. And imports," he adds, deftly rolling himself a cigarette, "could flat ruin us."

The Texas cattleman's concern is shared by nervous ranchers from Florida to the Pacific Northwest. They're fearful that the swollen tide of imports pouring into east and west coast ports, while U.S. ranchers are readying record herds of their own for market might trigger a price collapse like the one in 1952 that slashed cow prices in half and dug deeply into beefsteak tags, breaking many a rancher in the bargain.

USING UP THE CORN

Most traders, however, regard the recent price rise as temporary; they predict prices will turn downward soon. Many cattle feeders have sizable quantities of corn which is too moist to qualify for price support loans. Cattle are being held off the market to use up this corn.

Predictions of rosy prospects for meat market shoppers are based on the huge herds feeding on grass or grain around the Nation. The Agriculture Department recently reported that there were a record 101,520,000 of the critters on U.S. ranches and farms as of January 1—a hefty buildup of nearly 4.9 million head during 1959, piled atop an increase of 3.5 million head the year before.

Ranchers are planning to send record supplies of meat to market this year as they attempt to stem the growth of their herds.

Despite their reputation as long-time holdouts against Government handouts, the nervous beef raisers are asking the U.S. Tariff Commission to step in and take action under the escape clause of the Trade Agreements Act to keep beef imports from putting "an undue pressure on downsliding prices."

"DO SOMETHING NOW"

"We believe it's better to ask the Government to do something now, before it's too late," Mr. Slocum remarks at this Texas ranch.

The cattlemen claim imports accounted for more than 8 percent of U.S. beef supplies last year and the year before. Beef imports in 1959 totaled 1.3 billion pounds, more than five times the 1956 level.

While U.S. cattlemen press for tougher imports curbs, the normal workings of supply and demand show signs of starting to do the job for them. Exports from Australia have been so heavy they have driven meat prices there to record highs, leading Australians to keep more of their beef at home. Canadian exports have left some lush ranges vacant, slowing the flow of cattle to the United States and leading some U.S. ranchers to ship feeder cattle north across the border for fattening. And Mexican herds have become so depleted that some Mexican ranchers are buying cattle here to ship south.

Muñoz-Marín as Governor of Puerto Rico—Has Developed Commonwealth's Influence for Stability, Moderation, and Understanding in Caribbean

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. PRICE. Mr. Speaker, recently I read a very fine article which appeared in the Baltimore Sun of March 14, 1960. It referred to the action of the White House in injecting itself into the political affairs of the Commonwealth of Puerto Rico. This was the first time in history that a national administration had taken such action.

This unprecedented action on the part of the White House is to be regretted.

The article follows:

A LESSON ON PUERTO RICO NOT IOWA

(By Price Day)

If the White House is to be credited with a new knowledgeability about Latin America it needs to revise its notion of what goes on in Puerto Rico.

On the word of Mr. James C. Hagerty, the President will support the candidacy of Mr. Luis A. Ferré for the governorship of Puerto Rico in the November elections. "Mr. Ferré is head of the Republican Party of Puerto Rico," the White House press secretary is quoted as having said. "He is also the Republican National Committeeman from Puerto Rico. Can you imagine the head of the Republican Party being against a recognized candidate of his own party?"

Mr. Hagerty, and Mr. Eisenhower, might take a moment to try to imagine it, after first consulting an ABC of Puerto Rico.

Puerto Rico is, shall we say, not Iowa. Its parties are not Iowa's parties. The insular political organization for which Mr. Ferré is the gubernatorial candidate does, as Mr. Hagerty indicated, have certain connections with the mainland Republicans. But besides being the Republican Party of Puerto Rico it is also the Statehood Party of Puerto Rico: It is the Republican Statehood Party.

Its opponents are the Populares, or the Popular Democrats, for two decades overwhelmingly dominant in Puerto Rican politics. They are led by the present Governor, first to hold that office by election, Luis Muñoz-Marín. They have no ties with any mainland party.

Unlike, shall we say, Kansas, Puerto Rico is not a State. It is associated with the United States in a unique arrangement as the Commonwealth of Puerto Rico.

Puerto Rico in this satus partakes of nationhood—though the Populares in the campaign already strenuously underway refrain from saying so, lest their statehood adversaries raise the false charge that the goal of the Populares is independence.

The statehood party holds that partaking of nationhood is bad; it makes Puerto Ricans second-class citizens. The statehood party brings forward figures from which the most earnest examination cannot remove the fuzz of vagueness, to dispute the Populares' contention that statehood with its Federal income taxes would bring ruin; that the island would be condemned indefinitely to the condition of poorest State in the Union. (Last fall the annual per capita income for Puerto Rico crept over $500: In Mississippi it is about $1,100). Anyway, the statehood party says, it is not a question of economics but of dignity and pride.

The Populares say that it is a question of pride, dignity, and economics all together, and believe that citizenship in the Commonwealth of Puerto Rico is more dignified than citizenship in a state of Puerto Rico would be.

They believe that in the past 20 years Muñoz-Marín and a group of able men around him have transformed the island from an economic and psychological colony-slum into a proud, free, prospering community: a lesson in U.S. good will toward Latin Americans, and an example of effective economic self-help.

This new Puerto Rico, they believe, has the duty of helping to show other peoples of the hemisphere—and beyond the hemisphere—what the United States is about. Dr. Arturo Morales Carrión, under secretary of state for the Commonwealth, has put it this way: "It is a place where the Latin American feels at home, where he sees the great impact of U.S. industrial culture on a Hispanic land, and yet feels that the land and the people have retained their identity, their dignity and their values and traditions."

Mr. Ferré, arriving in Washington last week as a guest aboard Mr. Eisenhower's plane, said substantially the same thing in other words: "Because of the ethnical similarities between the people of Puerto Rico and the people of Latin America, and the knowledge and experience the people of Puerto Rico have with American institutions, Puerto Rico is in an excellent position to cooperate toward the aims of better inter-American relationships."

Mr. Ferré quite naturally did not note the indisputable fact that it was the program of Muñoz Marín and the Populares that put Puerto Rico in that position, or the hardly less indisputable fact that without Muñoz Marín it would not have happened.

Nor, as his remarks were reported, did he on this occasion advance his own opinion that a Puerto Rico with U.S. Senators and Congressmen would have more influence in Latin America, not less, than Puerto Rico as a semination has.

Which of the two Puerto Rican points of view seems more reasonable to the White House?

Is the White House at all aware of Muñoz Marín's stature in Latin America, where the Puerto Rican ABC is thoroughly known? Does the White House understand how much influence for stability, moderation, and understanding he wields in the Caribbean?

Does the White House know that he is our most eloquent and respected advocate in all Latin America?

Does the White House perceive that to take sides in a Puerto Rican election will for some Latin Americans seem to have just a taste—considering Puerto Rico's degree of nationhood—of the interventive?

Is it the judgment of the White House that the value of Puerto Rican votes in New York next fall (both the Populares and the Statehood people in Puerto Rico think this the reason for the White House favors to Mr. Ferré) overweighs the disadvantage of backing in Puerto Rico a sure loser with no program but the perhaps not quite wholehearted one of statehood?

Would it even get the votes?

Looking ahead, does the Republican Party wish in effect to give to the minority of Puerto Ricans who sincerely want statehood soon a pledge that cannot in the foreseeable future be fulfilled?

A bit of rethinking seems indicated.

Wimmer Sounds Warning

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1960

Mr. SCHERER. Mr. Speaker, the Cincinnati Enquirer on March 28, 1960, carried a column by Mr. Ed Wimmer, the able and dynamic vice president of the National Federation of Independent Business. Mr. Wimmer has a wide grasp of current problems affecting American business. His article of March 28 entitled, "Paraproprietal Society Visioned by Experts," should be particularly sig-

nificant to Members of Congress. Therefore, Mr. Speaker, under previous permission I insert the article to be reprinted in the Appendix of the CONGRESSIONAL RECORD:

"PARAPROPRIETAL SOCIETY" VISIONED BY EXPERTS: "AMERICAN WAY" TO DISAPPEAR

The managing director of the Edison Electric Institute has made a statement to the effect, that the United States is "gradually adopting the Russian system, while Russia moves gradually in the direction of the American system." This ties in with a column we devoted to the subject some months ago, in which we pointed out that business and labor leaders, educators, and an increasing number of people in Government, are ready to throw in the capitalistic sponge—and let socialism take over.

Consider the statement of James Hoffa, that in the foreseeable future, "there will be no place in America for the small business, small union, or family farm." Weigh thoughtfully the prediction of Burton K. Homes, that in the next few years "Communism, in one form or another, will blanket the world," and—if this doesn't shake you out of your apathy, I call your attention to some words of advice, wisdom, and prophecy, from two German students, 145 years ago: "The choirs are marshalling on both wings of the world's stage. Russia is leading the one, and America the other, but a day will come when the contest between the two will end in the complete downfall of one, and victory for the other."

Paul Porter, former head of the War Labor Board: "All natural resources. All banks, insurance companies, public utilities, all basic industries, will become public property in the United States."

Robert Liebenow, Chicago Board of Trade: "We are being spoofed into a welfare state, a bite at a time."

Charles A. Beard (1932), world renowned historian: "We must eventually come to a system of cartels controlled by a national planning council controlled by labor, industry, and government."

Panel of Government economists: "The Federal Government is the only instrument we have for guiding the economic destiny of our country."

Dr. Ernest Fisher, Columbia University: "We ought to set up a local housing agency financed by Federal funds to buy and build pools of existing dwellings in urban renewal areas, to rent to low income families, and when a contractor cannot make a profit on the work, the housing agency construction crews should take over the job. Also, financial aid to landlords for property rehabilitation, if they do not raise the rent."

Do you believe that Lincoln was right when he said that America's destruction would "come from within?" Can you be aroused, or frightened, or be at least made aware of the threat to American liberty in student polls showing two-thirds voting clothes and sports "more important than patriotism"? With 63 percent in another poll voting "Government ownership of all big business and banking"?

In a new booklet released by the Twentieth Century, Paul J. Harbrecht, S.J., and Adolph A. Berle, Jr., have defined the "new system emerging" as the "Paraproprietal Society" in which the huge corporation, pension trust, huge union, and huge Government will be all-engulfing and be imbued with a new kind of "corporate, social conscience."

Reverend Harbrecht's new book, "Pension Funds and Economic Power," sees the big pension funds as the big capitalists taking over in the "Paraproprietal Society." He sees an almost complete end to economic influence by any "proprietorship" class, with all the power passing from the individual to "professional managers of great funds and corporations." Labor and Government, of course, would be the "counterbalancing powers."

Mr. Berle, one time avowed enemy of concentrated power, seems to accept this change as inevitable, although continuing to agree that genuine capitalism flourishes only in the "area of small businesses"—"no longer a dominant characteristic of the capitalistic system."

Since 1951, 6,000 American boys have given their lives in military air accidents, learning to "defend the American way of life." I ask what "American way of life"?

"Wheatland"

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1960

Mr. BREEDING. Mr. Speaker, "Wheatland" is a choral symphony writtend and composed at the suggestion of Kansas wheat producers. It has an interesting background, and both the music and the text have been written by talented individuals. I hope every Member of Congress will have an opportunity to pursue the thought behind this choral symphony as well as the symphony itself:

"WHEATLAND"

"Wheatland" is a choral symphony written and composed at the suggestion of Kansas wheat producers, and carried to completion with their assistance and lively interest in the work.

The premiere performance of the work is presented as the climax of a 3-day meeting of the National Association of Wheat Growers, in Wichita, Kans., December 10, 1959.

"Wheatland" was inspired by Henry D. Parkinson, of Scott City, Kans., wheatgrower, and vice chairman of the Kansas Wheat Commission. Mr. Parkinson conceived the idea of exporting art forms from Kansas, as well as grain, to carry the story of wheat. He suggested to Dr. David Foltz, professor of music, University of Wichita, Kans., that the cycle of wheat production might be used as the basis for a symphony or tone poem. "He described to me the union of words and music, tuneful and melodic, but respectable," says Dr. Foltz, "all of which, would tell of wheat, the glory of it, and what it has meant to man through the centuries."

More wheat producers became interested in this cultural approach to the story of wheat, and when Mr. Parkinson again contacted Dr. Foltz, the musician accepted the challenge, and "Wheatland" began to take form.

Dr. Foltz made special trips to wheat fields and to meetings of those interested in wheat. He was the guest of the Parkinson family during the 1959 harvest in the Scott City, Kans., area. First-hand looks at the flour mills, the elevators, the migrant workers during harvest—even a ride on a combine—were part of acquainting the composer with his subject of the plant, the land, the machines, the grain, and the people.

When considerable researching through the writings of poets such as Carl Sandburg and Walt Whitman failed to produce anything about the growing cycle of wheat, Dr. Foltz asked Dr. Geraldine Hammond, professor of English at Wichita University, to write the words for the choral symphony. She responded with a striking poem in eight phases suggested earlier by Mr. Parkinson.

The work was named from her poem, "Wheatland."

Dr. Foltz then contacted Mr. Joshua Missal, assistant professor of music theory and viola, for assistance in setting the poem to music. Mr. Missal wrote the orchestral parts, and Dr. Foltz wrote the choral sections.

"Wheatland" begins with a chorus, "Praise the land that gives us hope, that gives us life, that gives us wheat."

Narration is employed to tie the sections together. The narrator in the performance is cast in the role of a wheat farmer describing his life as a planter, his emotions as he watches the growth of wheat, his fears and prayers during storm and blight, his activity in harvest, and then his joy and happiness when the cycle is completed.

"Planting," "Waiting," and "Spring Greenup" build up to "The Storm." Then "Harvest" and "March of the Combines" lead to the joyous "Festival," bursting into American hoe-down music. All of this leads to the concluding section, "The Land of Wheat."

Credit for the completion and performance of "Wheatland" belongs to many, just as the success of the land of wheat belongs to many working together—to Dr. Foltz for writing the choral sections and guiding the entire production; to Mr. Missal for the orchestral work; and to Dr. Hammond for her beautiful interpretation of "Wheatland."

In addition, important assistance came from Dr. Margaret Vance, professor of music, Chico State College, Chico, Calif., and from Mr. William Bush, instructor of music, University of Wichita, both former students of Dr. Foltz, for arrangements; from Rodger Vaughan, instructor of music theory and appreciation, Wichita University, for orchestral arrangements; and from student copyists, who have been busily preparing the new music for production.

The work might never have been brought to completion without the constant interest of Kansas wheat producers and their producer organizations. And to the wheatgrowers also goes the credit for providing the setting for the premier performance at their national annual meeting.

Back of it all, inspiring and guiding the project to completion, has been Mr. Parkinson. His faith that this unique pool of talent at the University of Wichita could produce a new voice for wheat out of Kansas may have launched a permanent contribution to American music.

"WHEATLAND," A CHORAL SYMPHONY

(By Geraldine Hammond)

I. PRAISE THE LAND

Chorus

Praise the Land

The land of wheat,
Bright and wide,
Now we praise.
Praise the seeding,
And the growing.
Praise the greening
And the golden life
At harvest.
Praise the land
That gives us hope,
That gives us life,
That gives us wheat,
That gives us wheat.
Praise we the land.

II. PLANTING

Narrator

The Seed in a Man's Hand

The seed in a man's hand—
Like water—like sand—like gold.
Life, one seed,
A fact so simple that it is a dream,
And a dream so real that it is all truth.
For this seed alone,
Here in a man's hand,

Is the miracle of sun,
Of wide days,
And the turning earth.
Drop the seed, fling and scatter.
Space in rows precisely
By machines man builds
To stretch his faith
Wide on the fields.
Now tumble earth and gentle it
While sun lies golden on the trees
And strikes the river bright below,
And birds sing "Amen"
To a planter's faith.

Chorus

Hymn of Wheat

Bless the planting,
Watch the seed,
Bring forth the grain to harvest.
Give us wheat,
Our daily bread,
O give us wheat.

Solo

Song of the Planter

In the cool dark silence at the root
Now lies the miracle.
There in the blackness is a power,
A will, a thrust, a strength
So great it is a simple fact.
But I must stand here on this earth
To watch, to hope, to fear—
And wait,
And wait,
And wait.

Chorus

Hymn (Fragment)

Give us wheat,
Our daily bread.
O bless the seed
And give us wheat.

III. WAITING

Narrator

And Now the Waiting Grows

And now the waiting grows
And stretches out above ground too.
Bearing its own fruit, hope, fear, and silence,
While the field rests like a mother,
Quiet, knowing, winterwhile.

Chorus

Winter Prayer

Let the snow lie lightly,
Warm to the earth,
White winter waiting
Seal off the frost,
The bitter death of cold.
And keep the seed safe
For reaping joy
In spring time.

Narrator

A Man Stands Looking at His Work

A man stands looking at his work,
His partnership with earth,
And wonders how it came.
Who is he to spread the seed,
To care for life,
To tend the dream?
And then he turns away and knows
That seed is everywhere the same,
That wheat lies waiting in the ground
And holds its own life ready.

Solo

Waiting Song

Here on the earth I stand,
Waiting the winter while
To know the end of my beginning.
Is the enemy unseen now at the root
And deadly?
Has the cold crept to the heart
And I not knowing?
Help, O help uncertainty with trust,
And lay on waiting peace.

IV. SPRING GREEN-UP

Narrator

The Winter Waiting Is Over

The winter waiting is over
And snows to rivers run.
The mystery of seed,
The miracle,
Is green now, smooth and rolling.
Stretched like a sea,
Spread like a sky,
Soft with newness,
Rich with bounty,
Near for the hand
And far for the eye.
O praise the greening land,
The promise springing.

Solo

The World Is New

The world is new—
Who can resist its freshness
Running on the hills
And on the valley floor,
First light of day,
Morn of the year,
And life's beginning.
The greening comes unfolding
Plant by plant,
And fills the heart with joy
And gratitude.
Why did I doubt?
What did I fear?
I knew the blessed power of living.
And the promise that the seed gave,
Lying on the hand.

Chorus

The world is new—
Who can resist its freshness
Running on the hills
And on the valley floor,
First light of day,
Morn of the year,
And life's beginning.
Why did I doubt?
What did I fear?
I knew the blessed power of living.

V. THE STORM

Narrator

Before the Storm Comes Quiet

Before the storm comes quiet
But no peace.
The very fields are frightened
In the calm and eerie light,
A green, not spring's but fearful—
Fearful.
There in the sky the blackness
And the flash,
The blackness and the gash of danger.

Solo

Guard Us

There in the sky the blackness
And the flash
The blackness and the gash of danger.

Solo and chorus

What can protect us now?
How fend against so vast a foe?
The heart beats—beats—and beats,
But only the knee may bend.
Guard from lightning,
Guard from hail,
Guard from pounding,
Guard from fire.
Save, O save,
O save the wheat.
God the Father,
Guard the fields.
Bring forth the grain to harvest.
Give us wheat,
Our daily bread,
O give us wheat.

VI. HARVEST

Narrator

The Stalk Bends Now

The stalk bends now, fulfilled, bearing life serene
In a gentle rise and fall like breathing,
A world of gold and sunlight,
Swaying to the earth's deep music.
Wheat—standing to the harvest,
The golden spears of life,
The Staff,
The seed of daily bread.

Solo

Reaping Song

Let us bend now to the harvest,
Reap and bind,
Flail and gather.
Praise the sickle of our fathers,
Praise the dance of the threshing floor.
With joy now move to harvest.

Chorus

March of the Combines

Move to the field,
Take position,
Roll-roll-roll.
Lift and cut,
Lift and cut,
Gather—gather—gather.
Roll in rhythm,
Pounding rhythm,
The heart of the world
Beats today, beats today,
And the harvest
Takes the seed:
Dream to fact,
Fact to mill.
Give us
Give us
Our daily bread,
Give us
Give us
Wheat.
Give us
Give us
Our daily bread,
Give us
Give us
Wheat.

VII. FESTIVAL

Narrator

Joy of the Work

Joy of the work,
Joy of the waiting,
Joy now fulfilled,
So let the dance express it.
From hope came this harvest,
From seed came this joy.
Tell back to the earth
The pleasure of doing,
Peace of this fulfillment.

Solo

Festival Song

Join with me, friends,
Sing with our pleasure.
Thanks to the sky,
Thanks to the soil,
Thanks to the plow, to the harrow,
The reaper.
Joy for the work
And the cycle complete.

Chorus

Harvest Dance

Swing with the music,
Reel to the rhythm.
Send off the waiting like chaff.
Here is the harvest,
Here is the ending,
Here is the seed in the hand.

VIII. LAND OF WHEAT

From the Black Earth

From the black earth
Grew this green.
Under the white
Lay the gold.
All in time.
Weathered and watered
Tended and warmed,
Grew the seed.
The greening unfolded,
The gold stood tall.
From the hand to the earth
And back
A miracle goes.

Solo

Blest Be the Land

Blest be the land
That took this seed,

The seed to hold its dream.
Blest be the stalk
That bears its gold,
The staff of wheat,
The living bread,
The secret told.

Finale

Praise the land
For daily bread.
Praise the land
For golden wheat.
Praise we the land.

Joseph Sureck

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1960

Mr. INOUYE. Mr. Speaker, so very often we read and hear critical reports and comments of our public servants in their efforts to discharge the functions and duties of their offices. We seldom hear of the good that they do—of the lasting and appreciated impressions they create upon the community and those whom they have served. It is unfortunate, as Shakespeare put it, that "the good is oft interred with their bones."

In the State of Hawaii, we have been blessed with the presence of many men and women who, in the performance of the duties imposed upon them by the requirements of their public office, have acted over and above their postulated requirements, and in doing so endeared themselves to the people and community and brought new respect to the office they occupy.

Such a man is Mr. Joseph Sureck, district director of the Immigration and Naturalization Service in Honolulu, who, after a year and a half in Honolulu is being transferred to the district office in Los Angeles.

Not wanting to merely have the "good interred with their bones," the Senate of the First Legislature of the State of Hawaii, on March 21, 1960, adopted Senate Resolution 26. I am happy to say that the resolution expresses the heartfelt gratitude of the Hawaiian community for the services of a dedicated, devoted, and inspirational servant of our Government.

Under leave to extend my remarks, I include Senate Resolution 26, adopted by the Senate of the First Legislature of the State of Hawaii, in the RECORD, as follows:

Whereas Joseph Sureck, district director of the Immigration and Naturalization Service in Honolulu, is being transferred to the district office in Los Angeles, culminating a highly successful administration during his tenure as district director in Honolulu from June 1957 to March 1960; and

Whereas he is a person held in the highest esteem and respect by all persons in every ethnic group, including Members of this honorable body, governmental organizations, counsular corps, aliens, and persons of every race, color, and creed; and

Whereas by his intense interest in encouraging eligible aliens to become citizens of the United States of America, he did expend and devote unsefishly and humbly all of his time, effort, and even his personal funds to carry out his dedicated interest; making himself available at all times to speak on the subject of naturalization to all interested parties, groups, and organizations throughout the islands; and singularly, through his wealth of talent and tremendous efforts, originated and carried through a highly successful statewide citizenship program at the Waikiki Shell on September 17, 1959, when the Honorable Hugh L. Black, Associate Justice of the Supreme Court of the United States of America, addressed the huge gathering at the naturalization ceremony presided over by Judge Pope of the Ninth Appellate Court of the United States of America; and

Whereas as a public spirited citizen and administrator, he has served the people of Hawaii conscientiously, warmly, diplomatically, and with zeal, thereby bringing about a better understanding to his office and a more friendly approach to the encouragement of aliens to become naturalized citizens; and

Whereas his work is best expounded and exemplified by an editorial in one of our newspapers, which read in part that "his tour of duty here has been marked by friendly cooperation with other agencies and organizations and he has been particularly and commendably active in urging aliens eligible for naturalization to go through the necessary processes and become our fellow Americans. He has indeed exemplified the spirit and practice of public service above and beyond the call of duty"; and

Whereas by his transfer, the people of Hawaii have lost a great statesman, devoted administrator, dedicated citizen, and an eminent counselor: Now, therefore, be it

Resolved by the Senate of the First Legislature of the State of Hawaii, budget session of 1960, That it extend its profoundest and heartfelt thanks for an excellent job done as our district director of the Immigration and Naturalization Service, highly commending him for his dedicated contribution to the people of Hawaii, and extend to him the best wishes for good luck and success in his new position; and be it further

Resolved, That duly certified copies of this resolution be forwarded to Commissioner Joseph M. Swing of the U.S. Immigration and Naturalization Service; Hon. William Rogers, Attorney General of the United States of America; and Mr. Joseph Sureck.

Optional Retirement for the Aged

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, enforced retirement can be a human tragedy, says George Meaney, president of the AFL–CIO. He seeks to negotiate "optional retirement provisions which are in the best interest of a free society."

Mr. Meaney's views were called to my attention after I introduced legislation involving amendments to the Social Security Act, designed to encourage optional or gradual retirement in place of the present arbitrary work test.

I believe the Members will be interested in this article, the sixth in a series prepared for Ray Henry which were published widely throughout the country earlier this year. I commend it to the attention of the Members.

The article follows:

OPTIONAL RETIREMENT FOR THE AGED
(By George Meany)

During the next 10 years AFL–CIO unions will continue to work to broaden and improve the retirement plans available to American workers. The efforts will be directed to both the negotiated plans and the Government social security programs.

In this way we will lend our support toward lifting retirement from a condition of poverty, privation, and dependency to one of comfort, dignity, and independence.

Today we have 55 to 60 percent of our union membership covered by negotiated pension plans. It was only 5 percent 10 years ago.

In those years, improvements in industrial pensions and social security have doubled retirement benefits.

Most early negotiated plans did not permit workers to earn benefits for service beyond 30 years. And benefits were scaled down so people with 20 years service received little or nothing above social security at 65.

In those early plans, improvements in social security payments provided no net gain for workers because social security was deducted from what they had coming under the negotiated pensions.

While the initial plans were modest, they did represent an important beginning.

Now, the social security offset has been eliminated, benefit formulae have been simplified and improved, eligibility requirements reduced, disability benefits added and portable pension rights introduced.

This last feature is the greatest single improvement over the early negotiated pension plans. A worker who meets certain minimum service and age requirements may now leave his employment with one company and carry with him his earned pension rights, payable when he reaches 65.

But we cannot rest on these advances. For most workers retirement still involves a big reduction in their accustomed standard of living.

Pension benefits must be more closely geared to wage levels prevailing at the time the worker retires and to the cost of living during his retirement.

We will try to remove some of the most restrictive age requirements still attached to the pension provisions.

We want to raise the disability benefits and seek to make eligible any disabled employe unable to hold down any regular job within the plan or firm covered by the agreement.

We want to correct shortcomings of the retired employe's widow. Under social security, she gets only three-fourths of her husband's primary benefit, and under most negotiated plans she receives no further benefits after her husband's death.

We still feel that enforced retirement can be a human tragedy, and we hope to convince employers that they should not insist in retaining a veto power over the employee who wants to continue working after 65.

Experts in aging confirm our belief that compulsory retirement is disastrous for many people. We hope to negotiate optional retirement provisions which are in the best interest of a free society.

If we nail down the principle of optional retirement and if we can negotiate benefits giving a decent retirement income, the problem of when an individual should retire will be simplified.

The ideal pension plan of the future will have optional retirement over a wide range of ages with benefits that increase with the age one chooses to retire.

Pension funds are now largely managed by employers, and labor will seek a more ef-

fective voice in their administration. We are concerned about the investment policy of some managements.

Workers have earned these pension reserves and they have an interest in their decisions. Financial prudence and diversified investment of pension reserves can include more attention to such programs as low-cost housing and construction and equipment of health centers.

Some of the $25 billion in funded pension reserves should be used for better purposes than bidding up prices in the stock and bond markets.

Some of our unions have reduced pension costs and extended coverage through establishment of multicompany pension plans. This makes pension programs possible for many small companies, facilitates transfer of pension rights, and generally paves the way to higher benefits.

There are many opportunities for future progress in the pension field through collective bargaining, but we must face squarely a disturbing fact.

Retired people are having to spend an increasingly large part of their pension checks on medical bills. Of what value are higher benefits if they are siphoned away from their primary purpose of maintaining a standard of living?

Health insurance plans for the aged are not meeting the need—they are too restrictive, too limited in their benefits, and too costly for what they offer.

We must use the greater efficiency of social security and add medical benefits to old-age payments. The addition of hospital and other health benefits would prevent retirement payments from being used up on medical bills.

The Forand bill, now before Congress, proposes this by adding medical care to old-age and survivors insurance payments. Its enactment this year on the 25th anniversary of the Social Security Act would bring the retired worker the kind of protection that would make his pension check a passport to decency and dignity.

An Informed Citizen Speaks His Mind

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1960

Mr. DAGUE. Mr. Speaker, most of us are so used to verbal brickbats from constituents importuning us to support Federal aid for all sorts of projects that we are forced to our feet in amazement when out of the clear sky we receive a letter such as has just come to me from Mr. George O. Mark, Jr., of Lancaster, Pa.

Mr. Mark prefaces his letter with these words:

I am greatly disturbed, Mr. DAGUE, by the continuing expansion of Federal activity into what I feel should be local affairs.

And I submit, Mr. Speaker, that such sentiments are so rarely encountered in this Treasury-raiding period as to be almost startling.

And then Mr. Mark goes on to indict local governmental leaders by pointing out that the first question encountered when a community improvement is contemplated is, "Are there Federal funds available?" To this observation this conscientious citizen adds that loading down our social security system with additional handouts in each recurring election year can only result in the equalization of our society at a common level, which is the end objective of all socialistic planners.

But why burden you with my personal comments. Here is Mr. Mark's letter in its entirety which I am including with these remarks so that it may have a permanent place in the records of this House:

LANCASTER, PA., *March 31, 1960.*

Hon. PAUL B. DAGUE,
Downingtown, Pa.:

I am greatly disturbed, Mr. DAGUE, by the continuing expansion of Federal activities into what I feel should be local affairs. The proposed Federal aid to schools (H.R. 10128) is an example as is the present policy of aid to sewer projects. I have no doubt but what you are familiar with the near-range pros and cons, but let me dwell for a moment on some of the long-range aspects.

I am a member of two planning commissions and am therefore involved in many discussions regarding public improvements. The first question asked is, "Are there Federal funds available?" There is something wrong with a society that is unwilling to spend their own funds for their own improvements. And there is certainly something wrong when people have become conditioned to feel that it is their right to expect that someone else's taxes should pay for their improvements. The "wrong" lies in the Federal policy of the past decade or so which has bred just such an attitude.

This policy has already destroyed the initative of many local governmental units. Their attitude is, "We need a few schoolrooms now but if we wait until the situation becomes serious the Federal Government will pay the bill." And the same thinking is applied to sewerage, housing, highways, etc.

Fortunately our basic thinking hasn't changed. My neighbor still doesn't expect me to pay for improvements to his house. It is only when he thinks of Federal or State programs that this "something for nothing attitude" prevails. So you see it is not too late to change our Federal policy.

First, let's stop the expansion of such programs, then gradually reduce them until the responsibility once again is in the hands of those affected.

Now some thoughts on another subject. The basic concept of social security was good. There will always be those who lack the foresight to provide for their old age. But with each election year, expansion of the program becomes less of a social security and more of a social equalizer. Adding all the Federal and State spending programs together, it isn't too difficult to visualize the day when everyone will be economically equal, the wealthly reduced to the mean by heavy taxes, the poor raised to the mean by giveaways. That is the day that all progress ceases. The frightening thing is that we are well on the way and running to get there.

I'm afraid I've already imposed too greatly on your time, but one more thought. My confidence in Congress was somewhat restored when you, at long last, removed the "temporary" excise tax on telephone service. I trust the Congress will see fit to reject the President's request that it be restored.

GEORGE A. MARK, Jr.

High Interest Inflation

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1960

Mr. PATMAN. Mr. Speaker, Miss Sylvia Porter began her column yesterday with this question:

Why has the cost of living, measured by the consumer index moved up again to the all-time peak set last fall?

Miss Porter then answered the question this way:

A key reason is that interest rates on home mortgages have soared to the highest levels in a generation.

Miss Porter was speaking of the latest available consumer price index, which is that for February; and the point is that the index had been rising through February, not because of increases in the prices of food and of clothing, but because of the increases in interest rates.

To illustrate, the cost of food in Febrary was 1½ percent lower than it was in February a year ago; and the price of food was 5.1 percent lower than it was in 1958.

The main reason for the rise in the BLS consumer price index in February was the increased interest rate on home mortgages. In other words, the Federal officials who manage interest rates had been pushing all interest rates up, up, and up. Just as the BLS index takes account of the cost of rent, it also takes account of the cost of mortgages on owner-occupied homes.

ONLY INCREASED COST OF HOME MORTGAGES CONSIDERED

Yet the point that Miss Porter has brought to attention deals only with the effects of high interest on home mortgage costs. And this is minor compared with all of the other price increases which have resulted from high interest. The high interest policy has raised almost all prices. All levels of business operate on credit and on borrowed capital; so when interest rates are raised, this increases costs all down the line. Costs are increased for the mining and other raw materials industries. Then the metal producers, the manufacturers, the distributors, the wholesalers, and finally the retailers all pay increased prices to cover the cumulative cost increases due to high interest, and add on, in addition, their own cost increases due to high interest. And the increased cost to the transportation companies and the utility companies are also added into the price of the goods. Then finally the consumer who purchases goods on credit must pay not only the increased cost of credit to the manufacturers, processors, and distributors, but his own increased cost of credit. When the Federal Government raises interest rates, it is inevitably taxing consumers, for the benefit of the

moneylenders, whether the consumer buys on credit or not.

COST OF MEDICAL CARE GOING UP

The second important cause of the increase in the consumer price index in February is that the cost of medical care jumped by almost 1 percent from the previous month. The cost of medical care keeps going up and up, and this is causing a severe hardship on retired people who must try to live on their small pensions.

Miss Porter's article, as it appeared in the Washington Evening Star for yesterday, April 4, is as follows:

MORTGAGE RATES LIFT LIVING COSTS

(By Sylvia Porter)

Why has the cost of living, measured by the Consumer Price Index, moved up again to the alltime peak set last fall?

A key reason is that interest rates on home mortgages have soared to the highest levels in a generation.

You aren't feeling the higher mortgage interest load if you haven't bought a house with a mortgage, of course. But the Bureau of Labor Statistics must calculate the level of mortgage interest rates in the general level of housing costs. The Bureau of Labor Standards calculates its mortgage interest index only periodically. When it took its latest reading in February, it found that the index had jumped to 124.7 from 118.7 in September 1959. It estimated this index was up 8 percent over a year ago, was more than 24 percent above the base figure of 100 in 1952.

"This one factor of sharply higher mortgage interest rates accounted for over one-third of the entire rise in living costs from January to February," said Deputy Commissioner of Labor Statistics Robert J. Myers, during an interview. "Now mortgage interest rates won't influence the index until the next periodic check this summer."

MEDICAL COSTS RISE

Another key reason why the consumer price index went up again in February is that the cost of medical care jumped 0.8 percent, the biggest rise in almost a year and a half. The medical care index is up almost 4½ percent in the past year.

The climb in the cost of living did not reflect higher food prices. Presumably you are aware of this, but you may not be aware of the fact that on the official index food is 1.5 percent cheaper than a year ago, 2.4 percent cheaper than 2 years ago, 5.1 percent under the 1958 record high.

And the climb did not take place because the prices of most things are increasing at anywhere near the pace of rise in the prices of services.

It is imperative that we recognize these key points, for a read-and-run attitude toward the price headlines in coming months easily may mislead people into believing we're in another inflation—and we are not.

VITAL POINTS LISTED

Here are three vitally important points:

(1) The cost of living is heading toward alltime highs probably will be at new peaks right before the elections.

Service will continue rising in price. Most other costs will edge up a bit. And we're into the season when food prices normally increase—which alone would tilt the whole index upward.

(2) The prospect remains that the rise will not exceed the 1½-percent or so range of 1959.

This has been the reasonable prospect all along. Neither the extent of this rise nor the forces behind it indicate inflation. While a rise in mortgage interest rates directly raises the cost of living of the family buying a house, you cannot call a climb in interest rates inflation. While an increase in medical insurance premiums boosts the living costs of all of us, the increase reflects the expansion and improvement of medical services as well as higher medical costs. What is happening generally is not inflation as we define it.

(3) The probable rise in living costs this year will reflect relative price stability. And the odds are excellent that in 1960 we'll turn in one of the best price records of any major nation in the world.

Home Rule: The Leadership Question

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. UDALL. Mr. Speaker, the interim report issued last week by the Washington Home Rule Committee fixed responsibility on the effort that must be made if the House discharge petition is to succeed.

There are many who feel that the record of this Congress on the right to vote issue will rest as much on the success of the home rule legislation as on the enactment of a meaningful civil rights bill. In any event, the record to this point on home rule should be clarified and I am reproducing below, as part of these remarks, recent editorials in the New York Times and Washington Post for that purpose. These editorials follows:

[From the Washington Post, Mar. 31, 1960]

HAZARD FOR THE GOP

Whether or not they intend to do so, Republican Members of the House are strangling the local home-rule movement. More than 180 signatures have now been obtained to the petition to release the District self-government bill from the death grip of the House District Committee, but only 40 of these have been provided by Republican legislators. The recent drive for signatures resulted in the addition of 43 names to the home-rule honor roll, but only 7 of these legislators wear the GOP label.

This ought to be a matter of grave concern to President Eisenhower and Vice President NIXON, as well as to the voteless residents of the District. The restoration of voting rights to 870,000 citizens of the District—through the home-rule bill as well as through the proposed constitutional amendment, to permit voting for President and for Delegates in Congress—is a civil rights project of foremost importance. Editors, lecturers, public servants, and a vast number of other persons have come to recognize that elimination of this blot of disfranchisement is essential to the good standing of the United States among the free peoples of the earth. The Republican Party cannot be indifferent to this local demand for justice and democracy without condemning itself in the eyes of mankind.

This throttling operation is the more amazing because it is the administration's bill that is being done in. How can Republican legislators stand by and watch their Democratic rivals claim nearly all of the credit for advancing this vital civil rights measure? The situation ought to be of special concern to Vice President NIXON in his capacity as the prospective Republican presidential candidate in the forthcoming campaign. * * *

It is said that about 25 additional Republican signatures are needed to dislodge the discharge petition and make home rule here a reality. The Democrats have done their part well. It is difficult to believe that the Republican leaders in and out of Congress will permit this civil rights venture to topple on their own heads on the eve of an election.

[From the New York Times, Mar. 29, 1960]

CIVIL RIGHTS: DISTRICT OF COLUMBIA

While the attention of Congress and the country is focused, as it should be, on the extension of civil rights to Negroes of the South, the civil rights of Washington's million inhabitants—both black and white—ought not be overlooked either.

The two questions are related, for the fundamental reason why the citizens of the Capital are at present totally disfranchised is that there are so many Negroes among them. This is a harsh and shameful thing to have to say, but it is true. There are many contributing factors to Washington's failure to have even an elective municipal government; but at bottom is the same fear of a predominant Negro vote that has throttled civil rights in so much of the South. But in both areas progress is being made.

A bill to grant home rule to Washington passed the Senate last year for the fifth time. Another, more limited, measure is now as usual stuck in a committee of the House. Only a discharge petition, a perfectly orderly and—under the circumstances—a necessary procedure, can break it loose. Less than 40 signatures are still needed. It is interesting to note that the overwhelming majority of the more than 180 Members who have signed thus far are northern Democrats. Where, then, are the Republicans? This is, theoretically, an administration-approved bill. Where is the administration? Where is the necessary pressure, which is the only thing that will bring a District of Columbia home-rule bill to the floor? Where is the leadership?

There is no good reason why the people of Washington, one of this Nation's 10 largest cities, should not be allowed to manage their own affairs. There is no good reason why Congress should be saddled with this absurd burden. There is no good reason why the best chance there has been in years to get a home-rule bill through Congress should be allowed to go down the drain through prejudice, pusillanimity or coalition politics.

Asparagus

EXTENSION OF REMARKS

OF

HON. JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. McFALL. Mr. Speaker, under leave to extend my remarks I want to invite all House Members tomorrow to join me in enjoying some delicious, fresh, green, California asparagus in the House restaurant.

Asparagus, probably of Persian origin some 2,000 years ago, a spring staple in the diet of kings for centuries, and now one of California's major crops, is grown mainly in the rich San Joaquin Delta.

Today there are 72,466 acres of asparagus plants in the delta, growing a $20 million annual crop for world distribution by truck, train, plane, and deep-water vessel from the port of Stockton.

In order that you might better enjoy tomorrow's treat, I am putting in the RECORD the following history that was prepared for me:

Asparagus, the perennial vegetable that has served the needs of man for over 2,000 years, continues to be a vegetable of first importance in many parts of the world.

In vivaciously eating this wild plant and that, primitive man learned by experience that some plants agreed with him and some did not; some brought strength and exhilaration, and others illness, even death. It was in this fashion that our primitive ancestor learned to appreciate the properties of many wild plants and subsequently, as nomadic tendencies gave way to a desire for more settled existence, gave cause to introduce them into his garden that they might serve his needs. Thus it was with asparagus which was so named by Theophrastus of ancient Greece.

The original wild habitat of edible asparagus is not positively known, but it may possibly have been of Persian origin. It is now found naturalized throughout Europe, as well as in nearly all parts of the civilized world. tI has been cultivated in the North Temperate Zone of the so-called Old World since Greek and Roman times.

The average Roman of the earliest days lived on vegetables and in his garden patch raised them—asparagus, cabbage, endive, fennel, and leeks. Marcus Porcius Cato (234–149 B.C.), the Old Sabine Farmer, in the earliest of Roman horticultural writings gave full detailed instructions covering the mode of cultivating asparagus practiced in Roman times. The substance of the directions contained in his writings are not unlike those appearing in standard works on horticulture through the centuries and of the present day.

Following the elevation by man and the muck-heap of the wild asparagus of the beaches of the north Mediterranean into the cultivated asparagus of the garden, Pliny (A.D. 23–79) relates that at the seaport town of Ravenna asparagus was grown so fine that three shoots weighed a pound.

Since it could be found in the wild indigenous state along the coasts of Gaul and Britain, asparagus from very early tribal times had been used as a medicine by Britons, Gauls, and Germans. However, its cultivation and use as a vegetable by these peoples apparently resulted from the conquering marches of the Roman legions. In any event it is believed certain that the cultivation of asparagus took place in France and England following upon the heels of the Roman conquests. Its culture is detailed in the earliest French and English writings on horticultural subjects in the early 16th century. In Tusser's English horticultural publication of 1573 cultivated asparagus is called sparage, or sperage.

The horticultural practice of forcing of asparagus was introduced into England in 1688 by the Dutch gardeners who accompanied William III to England. In fact it is related that King William personally taught some of his close English subjects how to cut asparagus in the Dutch manner. In 1697, Meager mentions "that the London market was, at that period, supplied with forced asparagus early in the year."

The cultivation of asparagus was introduced by the English into many parts of the world, including the hottest latitudes of the Tropics where daily irrigation is a chief essential. No precise date of introduction into the American Colonies appears determinable. However, it would appear obvious that such a valued perennial vegetable would have accompanied the colonists who established the first permanent English-speaking colonies.

A list of available garden and flower seeds, plants, grapevines, and fruit trees were given in the Maryland Journal and Baltimore Daily Advertiser of March 8, 1793. Among those listed in that issue was "asparagus plants of the best sort."

Asparagus was grown commercially in a very limited way in Concord, Mass., as early as 1825. Mr. Edmond Hosmer is credited with having carried it to market in season on his milk wagon. However, it was not until 1872 that the first commercial bed of asparagus of any great size was set out in New England. Mr. George D. Hubbard is credited with that endeavor which with his subsequent plantings probably made him the largest commercial grower in Massachusetts for a period of over 20 years.

The growing of asparagus for market in California was underway prior to the turn of the century and in 1901 it was reported as "proving to be one of the most successful of its minor industries." California commercial asparagus farming in 1900 was initially limited to the reclaimed lands around the Bay of San Francisco, the marshy deltas of the San Joaquin and Sacramento Rivers, and the peat-type lands of Orange and San Luis Obispo Counties.

Commercial asparagus growing in the United States after a long period of time characterized by rather limited beginnings and of restricted marketings has emerged since 1900 into a food producing enterprise of substantial economic proportions. Our delta section of northern California has been the leading asparagus district of the United States for a number of years. The principal commercial asparagus producing districts in our country at the present time are located in the Sacramento and Imperial Valleys of California, in the Upper Coastal Plain section of New Jersey, South Carolina, and in Illinois.

Jean de LaQuintinge, director of the King of France's fruit and kitchen garden, period 1679 and 1682, was able to set before the King of France fresh asparagus in the winter months of January and February. Likewise, Dr. Phillip Mazzei, an Italian who came to Virginia in 1773, was able to provide fresh asparagus on the table in March for such notables as President Blair of William and Mary College. Today our State of California provides wonderfully delectable fresh asparagus to yours and the Nation's tables in the early months of each year and makes it possible for you and me to eat in such respect like the kings of bygone days.

Eisenhower Republican Administration Most Expensive in Nation's History

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Ike: Alltime Alltime Champion Spender," which appeared in the Thursday, March 10, 1960, issue of the St. Louis (Mo.) Labor Tribune, an official weekly trade union newspaper affiliated with the American Federation of Labor and Congress of Industrial Relations:

IKE: ALLTIME ALLTIME CHAMPION SPENDER

It is one of the ironies of history and evidence of the short memory of the people that President Eisenhower and his party ran for office on an economy program. GOP spellbinders reamed up and down the land denouncing the spendthrift, prodigal administrations of Roosevelt and Truman and promising if Ike and the GOP got the popular nod, thrift and national debt reduction would be the major concern of the party which would bring the best business brains into the Government to undo the wastreldry of the spendthrift Democrats.

During Roosevelt's administration, which included the greatest depression on record and a world war, a total of $375 billion was spent in 12 fiscal years.

Under Truman, faced by a postwar challenge even more menacing than winning the war, the so-called Marshall plan was put into effect. This, the cold war, and the Korean war made the 8 years of Truman cost the Nation over $395 billion.

While the national debt was about $20 billion in 1932, the year F.D.R. was elected, it has soared to the present $284 billion under 7 years of Eisenhower, who outspent both F.D.R. and Truman, although he was faced with no war or massive depression or a postwar situation which required an orderly transition from a wartime to a peacetime economy and multibillion aid to Europe and Asia on the brink of communism.

The question the Eisenhower fiscal record poses is whether the United States can afford 4 more years of this kind of business administration. Frankly, we doubt it. It's time for a change.

White House Conference on Narcotics

SPEECH
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. DOYLE. Mr. Speaker, I rise in support of House Resolution 431, resolution by my distinguished colleague from California, Mr. JAMES ROOSEVELT. Said resolution was filed by him January 27, 1960, and referred to the House Committee on the Judiciary, from which committee it comes to the floor today with appropriate amendments embodied in the text. Whereas this very timely resolution, in effect, recommends to the President of the United States that he call a White House Conference on Narcotics, and asks that emanating therefrom said White House Conference on Narcotics should report back to the President of the United States and to the U.S. Congress setting forth recommendations with respect to the problem of narcotics as found to be, and the traffic therein, and any other pertinent and germane results of the deliberations of said White House Conference, I concur with and join with all of my colleagues who have previously spoken in favor of this resolution.

But, I wish to make further crystal clear that it is not only my native State of California which is afflicted with the smuggling of narcotics, and the illicit use thereof, but other States as well. The justification, of course, of this resolution

is that there has developed a very substantial traffic in the narcotics system itself in and across the borders of several other States. There being no question but that the traffic in and use of narcotics definitely contributes to juventile delinquency and adds materially to the expenses of law enforcement, to say nothing of the deterioration and destruction of the individual user thereof in his mental, moral, physical person, it should be crystal clear that such White House conference as is indicated in Congressman ROOSEVELT'S timely resolution should undertake to recommend to the President of the United States and to the U.S. Congress adequate and practical and feasible ways and means of obtaining substantial uniformity as between State and Federal enforcement of narcotics statutes and of their penalties, and in like manner to delegate the area and jurisdiction which must be occupied as between Federal, State, and local authorities on the subject. These and other related and germaine purposes are clearly set forth in the resolution before us and it is my sincere hope that the President of the United States, even though this resolution makes it entirely optional, of course, with the President to call such conference, may find it entirely appropriate to promptly call such White House Conference on Narcotics and set the machinery in motion to promptly organize and have such conference expedited and its results made known and put into practical effect.

The Federal Government and the Cities

EXTENSION OF REMARKS
OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. BOWLES. Mr. Speaker, one of the most stimulating and courageous speeches delivered in Washington in recent weeks was given by the distinguished senior Senator from Pennsylvania, JOSEPH S. CLARK, at the George Washington University on March 28. His speech, entitled "Toward National Federalism," was one of a series on the subject "The Federal Government and the Cities." I do not recall reading a more incisive or more challenging analysis anywhere of the central problem of bringing the structure of American government into line with the realities of twentieth century American life.

Going directly to the heart of the fiscal problems now distorting Federal, State, and local relations, Senator CLARK probes behind the cliches and commonplaces of our current political debates. His appeal is directed squarely at all thoughtful Americans who wish to be honest with themselves and with public policy.

Clarity and candor are not in abundant supply in our national life today, but we can all be grateful to this speech and this speaker for giving us both. Under leave to extend my remarks, I include Senator CLARK'S speech as follows:

TOWARD NATIONAL FEDERALISM

When we examine the picture of local governments in America, we see three trends:

First, metropolitan areas are expanding rapidly across city, county, and State lines.

Second, local budgets, tax rates, and bonded debt are shooting steadily skyward.

Third, despite these increases, the level of public services is far from satisfactory, and is in many cases dangerously deteriorating.

From these last two facts, we can draw a fundamental conclusion: That many billions of dollars must come from somewhere to raise the level of public services up to where it ought to be.

I am not going to pause long to argue the case for a higher level of public services. The need is obvious to anyone who looks about him.

Consider education. The White House Conference on Education estimated that the amount spent on education at all levels should be doubled in 10 years—from $20 to $40 billion annually. We are not gaining on the backlog of school construction needs. Teacher salary scales have been declining for years in relation to the rest of the community. The capacity of higher education institutions is not keeping pace with the number of able students who should be admitted.

Or consider housing. The Census Bureau found in 1956 that 13 million urban housing units were substandard—and about half of these are not even fit for rehabilitation. The Rockefeller Bros. Fund puts the urban renewal need at about $3 billion a year, or about seven times the current rate of renewal.

Or consider the losing fight our cities are waging against juvenile delinquency—or the inadequacy of public recreation—or the kind of traffic jams everyone of us encounters in going to work in the morning—or the poison in our streams and rivers. As Senator FULBRIGHT said the other day, we have toilet water at every drugstore and polluted streams in nearly every State.

Of course, there are always those who do not consider the deterioration of public service to be any kind of crisis.

But not all Americans, thank heaven, are indifferent. Some of us are fond of reiterating Mr. Justice Holmes' comment that "taxes are the price we pay for civilization." The mark of a civilized society is its concern for the common good as distinct from the individual good—a shared sense of responsibility for the larger community beyond the family and the tribal boundary.

My remarks today are addressed only to the civilized. Those who feel no distress at the appalling inadequacy of public services—or who think the ultimate purpose of an economy is to produce more consumer goods—may leave the room or permit their minds to wander. I have no message for them.

The first question is, How did the distribution of our resources come to be so distorted that we who boast the highest level of luxury consumption the world has ever known must be ashamed of our public schools, our public playgrounds, and our public welfare services?

I think there are two reasons:

First, the organization of local government is obsolete.

Second, the revenue structure of local government is obsolete.

Our units of local government—our cities, counties, townships—are with a few conspicuous exceptions, essentially the same as when the Nation was established.

And the basic revenue source of local government—the property tax—is fundamentally unchanged from colonial times, even before there was a United States of America.

Meanwhile, of course, we have passed through social and economic revolutions. A rural Nation has become an urban Nation. Metropolitan areas have spread pellmell across city, county, and State lines. A localized economy has become a national economy. The old America with its wealth and income in land has become an expense account, diner's club, charge-a-plate, no down payment, stock option, capital gains economy.

We will solve the problem of providing adequate local public services when we evolve new concepts of federalism in line with the realities of modern life—and not until then.

Let me speak first about finance.

There are some deficiencies in local government that more money alone will not cure—but few that can be cured without money.

Why are local budgets inadequate? Is it a lack of willingness to tax, or a lack of real resources? Undoubtedly some of both, but the latter is more important than the former.

The conservative organs of opinion are full of dire claims that it is Federal spending which is breaking the back of the American taxpayer. Yet the figures indicate otherwise:

Since 1946, Federal revenues have risen by 74 percent, which is considerably less than the economy has grown. But State and local revenues have more than tripled. The Federal Government still collects 63 percent of all tax revenues—but this is down from 77 percent in 1946.

Federal tax rates are high, but State and local tax rates have risen steadily, while Federal taxpayers have enjoyed tax reductions—the last one in 1954.

Since 1946, Federal indebtedness has risen 5 percent. But State and local debt has risen 309 percent—or 62 times as fast.

Clearly it is not the Federal taxpayer but the State and local taxpayer who is under the greatest strain.

Many units of local government have already reached the practical limit of their tax resources. Others would reach that limit long before they could, unaided, lift the level of public services to the point where public needs are truly met. This is especially true in areas of heavy unemployment, where the need for public services is greatest.

Seven of every eight local tax dollars are still collected from the real property tax. That tax was perhaps well suited to colonial America when almost all wealth was in real property and most income came from the land. Land by its nature was spread evenly across the country; each political subdivision had its share. A tax levied on a man's real estate measured quite accurately his relative ability to pay. Only a small fraction of wealth was in intangibles which escaped taxation.

Today, the situation is reversed. Today only a fraction of total wealth is represented by equities in real property. A poor man or a middle-class suburbanite, it is true, may have all his accumulated wealth in his mortgaged home. He will thus be taxed on his entire wealth, at least, and ordinarily on somewhat more property than he actually owns. Indeed, with a VA loan he may begin paying taxes when he has no equity at all. In some of our more modest suburban subdivisions, I suspect, the total property tax base exceeds the net accumulated wealth of everybody in it.

But the man who is better off—who has accumulated additional wealth—will have then additional wealth largely in a safety deposit box, in the form of stock certificates, or bonds, or other intangibles. And the local property tax does not penetrate the secret confines of the safety deposit box.

In short, while the rich man pays local property taxes on what may be a tiny fraction of his accumulated wealth, the average-income man pays on what may be 2 to 10 or more times his accumulated wealth. As

it affects individuals, a more inequitable tax system could hardly be devised. And because the property tax is thus inversely related to ability to pay, its limit is reached early—when it strikes too hard at the resources of the lower-and-middle-income groups who bear the brunt of it.

Corporations, of course, pay their share of property taxes. But with the growth of large concentrated industries, corporate real property is distributed most unevenly across the land. One of the largest industrial plants in the world, located in my Commonwealth, pays property taxes to only one small school district. It does not contribute to the support of the schools to which most of its employees send their children, because they live across the district line.

Faced with the defects and limitations of the property tax, local governments have found two other broad based taxes—the wage tax and the local sales tax. But together they provide less than 10 percent of local tax revenue, and both, like the property tax, are regressive in their effects. The wage tax is levied upon the entire income of the wage earner but only a part of the income of the higher bracket person who has earnings from dividends or rent or interest as well as salary. And the sales tax is ill-suited for local application because of competition between city and suburban merchants.

So much for local taxes. Every State of the Union, by now, has recognized their limits and is providing some State money for the provision of local services. In some States, more than half the State budget consists of local grants. Yet what kind of taxes do the States reply upon?

Over half of all State tax revenue now comes from sales and excise taxes, which, as I have said, are regressive.

In my own Commonwealth, our sales tax has just been raised to 4 percent. It is hard to believe that it can be pushed much higher. Yet we are still forbidden by our constitution from levying a progressive income tax. And every effort to change the constitution has been defeated.

The competition among the States to get and keep industry within their boundaries is so keen—and particularly so as long as we continue to tolerate a less-than-full-employment economy—that no State dares shift the burden to progressive taxes.

Some years ago, Governor Williams, of Michigan, proposed a new corporation tax to pay for education. The following day, General Motors announced that if the tax were passed GM would never build another plant in Michigan. Within a matter of hours, other auto manufacturers had joined in this campaign of blackmail. The reaction of the State legislature was predictable.

In Wichita, Kans., a city election turned on whether an industrial area should be deannexed from the city because of reports that the packing company located there would move elsewhere if it had to pay its share of city taxes. The packing company won.

This year, the State of Mississippi cut the top bracket of its personal income tax from 6 to 3 percent. The announced purpose? To persuade business executives to move their plants and come to live in Mississippi.

Industrial journals these days publish comparisons of the "business climate" in the several States. What this euphemism means is the extent to which the corporations and their executives escape taxation.

I personally doubt that industry would flee wholesale from a State that raised its business or individual income taxes, but it can certainly threaten to—and ordinarily the threat suffices. Certainly the chance of getting new industry is adversely affected if a State develops the reputation of having an adverse "business climate." So State governments, like local governments, are putting greater and greater loads upon limited, regressive, and inequitable tax structures.

The Federal tax system, by contrast, is well adopted to a modern industrial economy. Its corporate and individual income taxes seek out the main earning streams of the economy, wherever they happen to be located. General Motors could conceivably flee from Michigan to escape Governor Williams' tax, but it cannot flee the United States. If the corporation executive is enticed to locate in Mississippi, he may escape New York's heavier income tax but his Federal tax liability goes with him. The industrial plant I spoke of may not pay much property tax to its school districts but it pays half its income to the United States. And the Federal tax system makes no distinction between income invested in property and income invested in paper encased in a safety deposit box.

I hasten to add that, year after year, loopholes and inequities have been written into the Federal tax laws, to favor the same corporations, investors, and executives who have so successfully fought State taxation. Yet these can be corrected. And even with its faults, the Federal tax structure is still highly progressive and adapted in general to the realities of the organization of a modern industrial society.

Let me summarize at this point. I have suggested three conclusions:

First, spending for public services, particularly in metropolitan areas, must continue to increase.

Second, many States and communities have reached or are approaching the practical limit of what can be raised through existing State and local tax structures.

Third, the Federal tax structure is far more productive, far more equitable, and under far less strain.

From these three propositions a fourth flows automatically. The Federal tax system should be used to an increasing degree to finance services which have been heretofore strictly State and local.

You may ask: Isn't there an alternative? Cannot Federal tax sources be relinquished to the States to permit them to finance the functions themselves?

As a former mayor, I can testify that the organized mayors and the organized Governors never ask for Federal aid until they have first demanded that the Federal Government return tax sources which it has usurped so that the States can take care of themselves. Indeed, the Joint Federal-State Action Committee was recently created for the express purpose of identifying taxes and functions that could be returned—or, to use a more accurate word, abandoned—to the States. The utter failure of that committee to find either should be enough to persuade discerning people that it can't be done. Yet I note that Mr. Robert Merriam, who preceded me upon this platform, expects the new Commisison on Intergovernmental Relations to undertake the selfsame mission of futility.

My fourth proposition is, I admit, heretical. The deliberate expansion of Federal aid runs counter to all that all of us learned American federalism. It runs counter to what Mr. John Kenneth Galbraith calls the in school about the concepts underlying "conventional wisdom." Decentralization, home rule, local self-reliance, government close to the people, States rights, "that government is best which governs least"—all of the slogans and symbols of the American tradition are against my proposition.

Of course, we often act in accord with my proposition. But we do not openly acknowledge it.

Thus we disguised our 1958 education act as the National Defense Education Act. Similarly, when the Federal Government took over a 90 percent share of the cost of our major highways, it was also in the guise of national defense—even though the Defense Department just now found out that the bridges on the new highways will not clear its military vehicles.

Another disguise is to call our aid programs temporary emergency measures. Thus the National Defense Education Act carries a 4-year limit. The general aid to education bill the Senate passed this year only received the winning margin of votes when we put a 2-year limit on it. The Airport Act, the Stream Pollution Control Act, the Hill-Burton Hospital Construction Act, the Urban Renewal Act, all carry time limits, on the theory that thus no permanent damage is being done to our traditional concept of federalism.

Any one of you who could spend a day going through a Senator's incoming mail would be surprised at the incessant repetition of the States rights cliches. Writer after writer, particularly those writing under business or professional letterheads and editors of small town newspapers, demands that the Federal Government stay out of education, housing, or what have you, and let the States and cities take care of themselves.

Their views are derived from chamber of commerce bulletins, trade associations or bank newsletters, civic club speeches, and all the newspapers and magazines which collectively may be termed the "organs of plutocratic opinion". And these in turn publicize such authorities as Budget Director Stans, who in his recent widely reprinted speech said, "We carry on massive Federal programs which States and local governments could do better".

You may be wondering, don't these people, all the way from Mr. Stans to the local businessman, understand the stringent limits on State and local taxes and the great superiority of the Federal tax system?

The answer is: Of course they do. Nobody understands it better.

That is what the shouting is all about.

I realize that it is not considered quite nice to refer in America to anything like a "class struggle". That is too Marxian. In America, it is considered nicer to pretend that, "What's good for General Motors is good for the country."

Yet the tax issue is at heart a class issue. The brunt of Federal taxation falls upon the corporations and the upper-income families. State and local taxes fall far more heavily upon the average-and-lower-income families.

My Republican colleague in the Senate from Pennsylvania loves to point out that under Federal aid programs, Pennsylvania taxpayers pay more than Pennsylvania gets back. Hence, he argues, they pay more than they would if the State itself paid for the service. But what he does not point out is that it is not the same taxpayers. The breaking point in our State is about $6,000 in family income. Even though we pay more than we get back, families under $6,000—and that is about two-thirds of our families—pay less when programs are financed through Federal aid. It is only the one-third with incomes above that level who pay more.

This is what the great political issue between the "spenders" and the "savers" really amounts to.

When we passed the aid-to-education bill, the same editorials which attacked the Senate as "reckless" and "extravagant" admitted that the money for education must be spent.

Then why do they hate the Federal Government so and love local governments so? Is it truly a reverence for the ideas of Thomas Jefferson? Is it a genuine affection for the town meeting and government close to home? Is it a sincere belief that city councils and school boards are inherently wiser than the Congress?

Not at all. These are smokescreens. They hate the Federal Government and love local government because the former taxes them heavily and the latter lightly. Federal aid redistributes the wealth downward. A shift of responsibility to the States would redistribute the wealth upward. It is that simple.

The corporations and high-income taxpayers own the journals of opinion; they control the taxpayers' leagues and the business organizations; they finance the civic club lecture circuits; they even influence, I am afraid, some of the colleges and universities which they help finance. Through all these means they create the conventional wisdom about Federal-State-local relations.

Fortunately, there are voices on the other side. The cry of States' rights is not being shouted by progressive Governors concerned about the level of public services. Local self-reliance is not being praised by mayors who have seen that only the Federal Government can make real the vision of urban renewal. Local autonomy is not defended by educator groups and parent-teacher associations who know how local tax limits can limit the horizons of education.

Those who support Federal aid are, I believe, the authentic voices of democracy. And the issue is one older than our country—whether democracy or plutocracy shall govern.

An essential aspect of my proposal for expanded Federal aid is that administration of these programs should, to the maximum extent, remain local.

In this regard, I am a traditionalist. I do not believe that local governments will always make wiser decisions as to how money should be spent. But the reverse is certainly true, also. And I do believe that if the details of local programs are reviewed in Washington the relationship will tend to become unworkable.

In the recent Senate education bill, we wrote in a flat prohibition against Federal control of any kind over curriculum or any other phase of school operations. We were attacked, of course, by those who said that despite this protestation Federal control was inevitable. I was also challenged by a Pennsylvania editor who said school districts should be supervised because otherwise they would waste the Federal money.

I disagree with both points of view.

As long as there is a substantial local financial stake in the total spending, the local share can be designed so as to remove any incentive toward waste.

We do make a mistake, I believe, if we use the equivalent of a cost-plus-percentage contract. The interstate highway program is a case in point. In that program, the effective point of decision on matters affecting costs is in the States, yet the Federal Government pays 90 percent of the total cost. Thus, for every $1,000 that costs are increased, $900 comes into the States from the Federal Government. This positive incentive to higher costs will, I am afraid, embroil the highway program in scandal sooner or later—if indeed it has not done so already.

The urban renewal program has a one-third local share, plus careful Federal review and approval of individual projects. So far, both the Scylla of waste and the Charybdis of onerous Federal review procedures have been avoided—although the accumulation of redtape must constantly be guarded against.

Our education bill proceeds on still another theory. Money is allocated to the States according to a fixed formula, the only requirement being that the States increase their contributions also. Because the Federal share is fixed, the marginal expenditures are financed 100 percent by the States and local school districts. Any savings accrue wholly to them, and any waste comes wholly out of their funds. Under these circumstances, I do not see the need for any Federal control at all, beyond a minimal reporting for accounting purposes. While every program differs, I think we should move in the direction of fixed grants, as in this bill, given without controls.

It is noteworthy, I believe, that of all aid programs the highway program has the largest Federal proportion, while education is scarcely yet accepted as a Federal responsibility. This distinction can be assuredly traced to the fact that major business interests—not mere children—are the direct or indirect beneficiaries of highway building. Principles about States rights yield readily to self-interest, even among the plutocracy.

Perhaps Federal aid must be authorized separately for particular programs—at least for a while—in view of the readier acceptability of some functions of Government. But I believe we might well look toward the eventual development of grants not restricted as to purpose, as is now the case in some foreign countries and in some States.

The essential point in constructing our new federalism—which we might call "national federalism"—is to look separately at taxing and spending. Revenues should be collected preponderantly at the Federal level because a national tax system can best tap an economy that is national in its character. But where decision-making can best be made at the local level and national uniformity is not essential, then the scheme should be so designed that—as in our education bill—the money can safely be distributed to the States and localities for administration. The Swiss system, whereby all taxes are, I believe, collected centrally and then shared among all levels of government, deserves our careful study.

I shall deal more briefly with the second great handicap to the provision of local public services—obsolete organization—because most of its aspects do not come under the heading of federalism.

The problems have been oft-described. Numerous, overlapping governmental units—most of them too tiny to be effective in dealing with metropolitan problems; the irrational pattern of State boundaries, which slice through rivers and valleys and metropolitan areas; the absence of any layer of government coterminous with the metropolitan areas; the proliferation of special purpose authorities; obsolete city charters; outmoded political machines—these defects are generally beyond action at the Federal level, although there may be an occasional avenue through which the Federal Government can exercise influence. We might, for example, borrow the "workable program" idea for urban renewal and make certain grants or loans conditional on the development of a workable program on a metropolitan scale. If this were the case in regard to Federal aid for mass transit, the financial incentive might force the municipalities that comprise a metropolitan area to get together for effective area-wide transit planning. Water development, which can be rationally organized only by river basins, surely demands greater Federal participation, which might be conditioned on new forms of organization among the States and their local governmental units.

The States, likewise, cannot be reformed from Washington. Urban underrepresentation in State legislatures; obsolete State constitutions; limited tax structures—these can only be dealt with by the people of the several States. But there is this safety valve: If the States cannot be made effective participants in dealing with metropolitan problems, they can always be bypassed—as they have been, generally, in such fields as housing and urban renewal.

But what we at the Federal level can do is reorganize the Federal Government itself for purposes of the new federalism. Our structure, too, is obsolete. A visitor from another planet, studying the makeup of our Government, would surely conclude that ours is still a rural nation. We have a Department of Agriculture, with a budget of $6 billion. We have a Department of the Interior concerned with millions of acres of empty land. But we have no department of the Government concerned with the problems of the metropolitan areas where most of our people live and where the need for expansion of public services is so heavily concentrated.

I have prepared and will introduce this week legislation to create a Department of Housing and Metropolitan Affairs, to consist of the present Housing and Home Finance Agency, which would be given, in addition to its operating functions, a general role as spokesman within the Government for urban communities.

I have reviewed the attack which Mr. Merriam made upon proposals for a new department. With all due respect to Mr. Merriam, I must say that he indulged in the old trick of setting up a strawman and then knocking it down. He ridiculed the idea of putting the Federal Aviation Agency, the Bureau of Public Roads, the Bureau of Public Assistance, and the Corps of Engineers in a Department of Urban Affairs. But I know of nobody who has made any such proposal.

Under my conception, these functions of Government which serve the whole population, urban and rural, would remain in their existing departments. Assigned to the new Department would be only functions which relate directly and either exclusively or predominantly to cities and metropolitan areas, and these have already been clustered in an agency which is bigger than several of our existing departments—the Housing and Home Finance Agency. This Agency administers not only the programs to spur homebuilding, but such generalized urban programs as urban renewal, loans for community facilities, and aid to urban and metropolitan planning.

You may ask, why a department? Why not a coordinating committee such as Mr. Merriam advocated?

Frankly, because we need a vital center of thought and action, and—again with all due respect—committees just are not suited to that purpose. A committee is the sum of its members, nothing more. It has no life of its own. What is needed is an executive and a staff with a broad responsibility for studying the problems of metropolitan areas and for thinking creatively about the role of the Federal Government in the solutions. If no member of the committee has such responsibility, then the committee will not have it. A committee can, in Mr. Merriam's illustration, make sure that the highway builders have been introduced to the urban renewal administrators, but it can do little more.

The cities of America need a voice at the summit equal in status to the voice of agriculture. A Department headed by a Secretary is suited to that purpose. A committee, consisting of 20 busy men taking time our periodically for a meeting or a quick luncheon together, is hardly a suitable substitute.

An alternative suggestion, advanced by Louis Brownlow among others, has more merit. That is to create an agency in the Executive Office of the President with staff of its own and with a planning and coordinating responsibility. Yet it is my experience that the most productive planning is that which is closely associated with the vitality of action programs. An agency which daily administers planning grants, urban renewal and slum clearance, public housing, and community facility loans can best nourish the creative thinking that is the missing ingredient.

Let us promote the Housing and Home Finance Agency to Cabinet level and rename it a Department of Housing and Metropolitan Affairs, with a broad charter to concern itself with the problems of metropolitan living and to conduct research, develop ideas, and initiate legislation and program recommendations. If there were still need for Mr. Merriam's committee or for a coordinating unit in the Executive Office of the President, I would see no objection. But I suspect that once the Secretary of Housing and Metropolitan Affairs were seated at the Cabinet table, the demand for additional coordinating mechanisms would quickly disappear.

The great weakness of democracy, and the ever-present threat to its survival, is political lag. A dictatorship can quickly remold its institutions, save only the institution of dictatorship itself; a democracy cannot. A democracy inevitably lumbers along, therefore, with outmoded and creaky machinery. Unfortunately, short of a crisis it rarely modernizes its machinery. But those who see the need cannot do other than keep trying.

Our traditional concept of federalism—outmoded in the last century by the nationalization of our economy and in this century by the urbanization of our society—is a case of political lag which urgently deserves our attention. I hope that university communities such as this one, located here in the Nation's Capital, will assume leadership in rethinking and reshaping our concepts of federalism to accord with the realities of modern life.

Philippine Sugar—Tobacco

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1960

Mr. LEVERING. Mr. Speaker, an examination of the hearings on the 1956 amendments to the Sugar Act of 1948, as amended, will disclose that many Members of the House and Senate representing tobacco-growing States were very critical of the Philippines for their Government's curtailment of the importation of Virginia burley leaf tobacco. During the hearings, the representative of the Philippines explained that the Philippine Government in doing this was following the recommendations of the so-called Bell Economic Mission which was sent to the Philippines in 1950 by the U.S. Government to make, after study, certain recommendations to help the Philippine economy. Among the recommendations of the Mission to the Philippine Government was the curtailment of the importation of luxuries, including Virginia burley leaf tobacco, in order that the fast-dwindling dollar reserves of the young republic would be conserved. It directed the Philippines to foster and promote to the fullest their own tobacco industry.

At the time of the approval of the last extension of the Sugar Act, the only foreign area denied participation then to share in the increased consumption provided for all other foreign countries was the Philippines. This was due to a large measure by the opposition of the representatives of tobacco-processing and growing areas in the United States.

In connection with the extension of the Sugar Act with which we are faced in this session of the Congress, I would like to call to the attention of my colleagues representing tobacco-producing or processing States an article which appeared in the New York Times of Sunday, April 3, 1960, entitled "Smokers of Cuba Miss U.S. Brands." Under leave to extend my remarks, I quote the subject article:

SMOKERS OF CUBA MISS U.S. BRANDS—CASTRO TO EASE IMPORT BAN ON CIGARETTES BUT PLANS TO IMPOSE HIGH TAX

(By Tad Szulc)

HAVANA, April 2.—A Cuban gentleman stared enviously at the table occupied by a U.S. family at a restaurant here one night this week.

As the family got up to leave, the man got up from his table and intercepted them. With an embarrassed smile, he said: "I am terribly sorry to do this, but I noticed you have American cigarettes. It would be a great favor if you could offer me just one to smoke with my coffee."

At the bar of one of Havana's fashionable but now empty tourist hotels, the cigarette girl saw a pack of American cigarettes in front of a visitor. She looked into her tray, filled with many brands of Cuban cigarettes, and sighed: "You are lucky to have such good things to smoke."

Almost everywhere in Cuba U.S. cigarettes have become a badge of distinction and a social asset a bit reminiscent of the days in Europe immediately after World War II.

U.S. CIGARETTES BANNED

The Cuban Government, in its concern to save precious dollars, has banned the imports of U.S. cigarettes, which for generations have come here at the rate of millions of packs annually.

Many Cubans preferred U.S. cigarettes which were one of the many former economic and cultural dependence of Cuba upon its big neighbor. The government picked them as one of its first targets in the curtailing of nonessential imports.

Yet acquired tastes are not easily lost. The regime, as a concession, has decided to authorize the entry of several large shipments of U.S. cigarettes.

A Ministry of Commerce spokesman said that seven foreign exchange permits for cigarettes had been approved by the National Bank.

The cigarettes are expected to retail for about 70 cents a pack as the regime has every intention of taxing them heavily.

Last year, a pack could be purchased here for about 40 cents. Local brands average 10 to 15 cents.

Cigarettes are only one of many items in short supply here as a result of barring most nonessential imports from the United States.

Automobiles and electrical appliances can be imported only with hard-to-get import licenses and are subject to heavy taxes. Spare parts of all types are hard to find and, as a result of growing complaints, the regime has indicated it would soon import shipments of replacement parts.

Wednesdays are chickenless days in Cuba because of shortages of chicken. In the past, chickens were imported from Miami. Butter, formerly imported, is on the list of acute shortages.

This situation indicates the extent to which Cuba under past governments allowed her economy to become dependent on the United States. With her own fine tobacco, she imports cigarettes. With large dairy and cattle herds, she imported powdered milk, cheeses, meat, and fowl. Consumers preferred the imported rice to the local variety.

All this, evidently, had the effect of stunting Cuba's economic development.

It has given weight to charges by Premier Fidel Castro that Cuba has been an economic colony of the United States, using the bulk of her sugar earnings to pay for imports of consumer goods.

For his own reasons, Dr. Castro has declared a war on luxuries, privileges, and wealth. He contends that they have led to these economic distortions and the poverty of the Cuban masses.

White House Conference on Narcotics

SPEECH
OF
HON. GEORGE A. KASEM
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. KASEM. Mr. Speaker, I happen to be both a member of the California Delegation Subcommittee on Narcotics and a member of Subcommittee No. 2 of the Judiciary, which reported out this bill favorably. At first I was not very sympathetic to this approach. I would remind you this is a very serious problem, in California in particular. We approach this problem, because of that fact, through the California delegation. Five of us who sat on that committee did not make an investigation into the proper action that should be taken, but we made that kind of survey directed to what should be the proper approach to the problem. After we had testimony from the U.S. Commissioner of Narcotics and the attorney general of California, and we heard such disparity in the report of the sources, we decided that there certainly had to be some better coordination and centralized direction available to us. The device of the White House Conference was suggested. I have been skeptical as to that device solving much of anything. I think the findings usually go into the files and simply make excellent matter for somebody to write a paper on later.

But this will be a different kind of White House Conference, because it will be composed of people who have special qualifications by virtue of the experience in the office they hold and by the fact that the membership of the Conference and scope of subject matter will not be comparable to the conferences on other subjects. We will be dealing with a limited specific problem. People with special experience to offer in this field will be heard. I think we can expect that out of this kind of a conference we will get some specific recommendations which will have powerful persuasive power. We can get something in the nature of a tacit agreement between the various governmental entities.

Surely we can expect there will be a resolution of differences on very important matters, such as the question of where the narcotics come from. We learned that the Maline process of determining addiction was hardly known outside of California. California has much to offer. Ohio has certainly contributions it can offer to the State of California.

The cost involved in this, as White House Conferences go, are really negligible; and in the light of the magnitude and seriousness of the problem which it is designed to confront it is infinitesimally small. Therefore, I urge, Mr. Speaker, that this House pass this resolution which merely urges the President of the United States to use a device that has been invented for him, is available to him, and which he has used on other occasions for proposals no more serious, and with far less prospect of accomplishing worthy results.

Mr. Speaker, I yield back the balance of my time.

Disturbing Changes in West Berlin

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. COHELAN. Mr. Speaker, still another disturbing aspect of the situation in Germany, specifically West Berlin, is reported in the following article by Joseph C. Harsch from the Christian Science Monitor of March 30, 1960. Mr. Harsch points out that certain changes occurring in West Berlin suggest that it may soon have lost its bargaining value on the diplomatic level.

I submit the article which follows for the RECORD:

AT THE STORM'S CENTER
(By Joseph C. Harsch)

There has been an important change in the Berlin story.

This reporter has gone to Berlin for a visit after a 4-year absence. The change is striking. It can be summed up in the single statement that the vitality of West Berlin, which for a decade has been one of the most stirring and dramatic features of the world scene, is largely gone.

On the surface the old story survives. The contrast between East and West Berlin continues. The Communist side is drab, dusty, and cheerless. The Western side is bright by day with the colors of superb modern buildings and bright by night with neon lights.

In West Berlin the streets are broad and clean and tidy. Shiny modern cars flow virtually everywhere. Old palaces and museums have been superbly restored and await the summer tourist rush. New hotels invite occupancy. New office buildings send their glass facades into the sky. For the tourist weary of overcrowded Western cities, West Berlin is a heaven and haven.

In West Berlin one can find a hotel room, get a table at a restaurant without reserving ahead, always find a taxi waiting outside one's hotel door.

But beneath the shiny surface there has been a significant change. It shows through in many ways. Public buses, streetcars, and trains are less than crowded even at rush hours. Traffic congestion never even approaches New York, London, or Paris density. Schools are less than crowded.

Children and young people are rare. Vibrant teenagers, who dominate the scenery of any other great Western city, are few and far between. Smart cafes and restaurants are full, not of smart young people but of middle aged and older. The architectural face of West Berlin is fresh, young, and modern. The human face of West Berlin is aged.

The population figures tell the story. To this day more people come into West Berlin than leave it. Yet, the total population is shrinking. It grew steadily from the end of the war until it reached its peak in 1957. It shrank by 2,000 in 1958 and by 20,000 in 1959. For the death rate not only exceeds the birth rate but also the excess of immirant over emigrant. It is becoming a city of people with no place else to go—of the older generation living on pensions.

Those who stay constitute the labor force for the great factories plus those who have retired. The retired stay on partly because it is home and partly because housing is more plentiful. Aid from the West has expanded housing facilities for what is now a dwindling population. Those able to work can find work more easily in West Berlin than in more crowded West Germany.

Washington continues to claim stoutly it never will abandon the people of West Berlin. American diplomacy in West Berlin proclaims as loudly as ever, almost more loudly, the doctrine of unceasing devotion.

The phrases are unchanged from the days when West Berlin was a vast bustling advance base for the great crusade against Communist Europe. But the words no longer convince the people. The young and eager have gone west. Those who remain have lost faith.

West Berlin is still a besieged and blockaded city. Most of its people never have left it since the war. The promise by which they have lived has been the promise of release into a reunified Germany. When a siege goes on so long unlifted, those who wait the day of release grow discouraged. The promise has been so long unfulfilled.

The West Berlin of the cold war was vibrant with rising life and vitality. It was a great forward base. It was pervaded by an atmosphere of purpose and positive intent.

West Berlin today is pervaded by declining hope and a declining sense of purpose. The war destroyed its function as a capital city. The cold war gave it the new function of the outpost of the West. The decline dates from the new policy of East-West relaxation.

Moscow once feared the power of West Berlin to infect the Communist world with Western ideas. Moscow once demanded the dismantling of the "forward strategy" elements which based on Berlin. East Germany once looked to Western Berlin for the signal to rise. The signal never came. Like some of our other forward bases its value has been eroded by changing times and conditions. If we intend even to use West Berlin as a bargaining counter in diplomacy, we should use it soon or, like our air bases in Saudi Arabia and Morocco, it, too, will have lost its bargaining value.

Lynn, Mass., Engraving Plant Develops Process for Inspection of Precision Component

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD I include a very interesting article which appeared in the magazine Industry for March 1960:

LYNN ENGRAVING PLANT DEVELOPS PROCESS FOR INSPECTION OF PRECISION COMPONENT
(By Fred Goddard)

Throw a high, hard one at Commerce Engraving, Inc., up in Lynn and they're liable to knock it out of the park. It's really not so unusual—Lynn has developed more than a dozen major leaguers and, as an industrial center, it has hit its share of technical homeruns as well.

What is unusual is that the company should in a matter of only 3 years take a significant place in the concerted drive for knowledge of outer space. The problem, thrown at the parent company's management by an acquaintance in industry was to investigate the possibilities of establishing a local source for the manufacture of precision layouts and optical inspection components.

That was 3 years ago, says Bob Borck, the youthful president of the company. Trained in the engraving field by his father and key company personnel, Borck took to the problem with energy and imagination even though, as he puts it, "we didn't know the first thing about the field."

Now a subsidiary of Commerce Engraving, known as Visual Inspection Products, does business with General Electric, Raytheon, C. B. S. Hytron, Stocker & Yale, Magnesium Casting Co., Sylvania Electric, and scores of others. It is the first and only company of its type in the Bay State.

A relatively new field, the visual inspection of finely machined parts, rather than the longer and less accurate manual inspection, is fast coming into its own. This method of inspection is well known to major industries; it is only recently that its value and simplicity have been recognized by smaller industrial concerns.

In brief, it works like this. A company makes thousands of tiny parts for jet engines, for example. They all have to be painstakingly inspected by hand. With the use of optical inspection techniques the dimensions of the tiny part can be blown up 10, 20, 50, or even 100 times and translated to a glass, plastic, or metal chart. The actual part is fitted to a staging fixture and its silhouette is magnified to compare with the magnified, highly precise enlarged image.

If the silhouette fits correctly, the part is perfect and another part can be inspected. The saving in time as well as the cost of expensive gages is enormous, according to Borck. With proper accurate glass charts almost anyone can use an optical comparator efficiently. When the magnified image of the particular part is thrown on the glass chart or screen, tolerances as close as three-tenths of a thousandth of an inch can be obtained—a necessity in this age of electronics. Special staging fixtures hold the part in place and, not only can an operator of one of the optical comparators accept or reject a part, he can tell where a part is good or bad and how much it varies from the acceptable tolerances.

Error and the human factor are virtually eliminated under the process. Another advantage is that parts too tiny or too irregular to be examined by hand can be held firmly in the staging fixture for careful inspection. Parts too large to be inspected as a single unit can be examined section by section on a multiple-position screen.

With their background in photoengraving, Commerce found the problem of developing its own process a challenge. After several months of experimentation the final process was developed. Most of the work was done at night in a vacant building adjacent to Commerce Engraving. Its success was determined by the combined knowledge of the firm's corps of engravers, the assistance of one of the top design engineers in the area and a tremendous amount of research.

"It was a real moonlight project until we began to get the hang of it," Borck declares.

The demand for even more and more precision in the manufacture of machine tools, jet engines and rocket components, has brought into focus the value and economy of visual inspection. Although comparators have been a valuable tool in the machine shop and inspection room for a number of years as a measuring device, the modern manufacturing technology has created a wide diversity of parts that can only be successfully made and inspected by comparison techniques.

It is in this area that Visual Inspection Products is making such an outstanding contribution to the overall space age program.

Still in its infancy, Visual Inspection Products has already become an institution in the field of optical inspection fixturing and comparator chart creation. All alone on the ground floor of the process in Massachusetts, VIP enjoys more than just its premier advantage.

Location is, and will continue to be, an important factor in the growth of the subsidiary company. "We're only a hop, skip, and a jump from the dozens of research plants along Route 128," Borck points out. "If a company has a problem we can square it away in a matter of hours by personal contact rather than through the mails or over the long distance wire."

Previously, firms had to be dependent on companies located in other sections of the country for visual inspection information and consultation. Then, too, the company is designing and manufacturing the coordinated fixtures demanded by its customers. Although a few are standard, the great majority have to be custom-designed. Visual Inspection Products has the advantage of the great technical labor force in the area and occasionally draws upon it for assistance.

The opportunities facing the new firm are almost limitless. Charts for inspecting radar elements for radios, automotive parts, and aircraft engine and missile components are a few of the orders filled in recent months. Not only large manufacturers, but small machine shop operators are finding the optical inspection process a boon.

Carried by a competent sales force, the name Visual Inspection Products is becoming more and more familiar to Massachusetts industry. "Give us a few more years," states Borck, "and VIP may well outgrow its parent company." If initiative and enterprise count for anything, the prediction looks like a certainty.

Air Service From Pacific Northwest to Hawaii

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1960

Mr. NORBLAD. Mr. Speaker, the decision of the Civil Aeronautics Board to award permanent certificates to Pan American Airways and Northwest Airlines to fly between Hawaii and the Pacific Northwest is sound, logical, and one to be highly praised. The question of whether one airline should enjoy a monopoly on the route or whether the status quo of a 10-year duration should be maintained is now permanently settled with the Board's recognition that competition is, has been, and always will be essential to good service on this route. With an eye toward President Eisenhower's Executive order that the interests of the Pacific area, from the standpoint of traffic growth potential, be carefully considered in decisions affecting air traffic routes, the announcement has been heralded as being in support of the President's directive.

The far-reaching effects of this decision can be instantly realized. Even now Pan American jets are winging across the Pacific to Hawaii cutting in half the time once required by piston aircraft. With the impetus of competition Northwest Airlines expects to add jet equipment next year and both carriers are ever increasing their schedules to accommodate the extensive traffic growth fomented by population expansion in these regions. Hawaii's new statehood, and the interest thus germinated made it, even more than ever, a focal point of travel enthusiasm.

East coast cities, once a formidable distance from Hawaii, are now brought close by the jet age and it is to be hoped this is a forerunner of CAB decisions bringing to reality the dream of one carrier, direct service from the major cities of the East to the Orient beyond. As underscored by the CAB decision, competition generates productive activity with the public as beneficiary, whereas monopolistic certification as still exists on some routes from the East to the Orient tends to stifle our Nation's air supremacy and frustrate planning for future transportation development and expansion. The CAB is to be congratulated for a decision which will maintain for this country a preeminent position in the airlanes of the world.

Pacific Northwest-Hawaii Renewal Case

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1960

Mr. INOUYE. Mr. Speaker, it was my pleasure recently to associate myself with the Governor of Hawaii and the two Senators of the 50th State in protesting the report of a Civil Aeronautics Board examiner which would have drastically curtailed air service between the mainland and Honolulu.

A grateful Hawaii now commends the CAB for its infinite wisdom in voting, unanimously, to continue to have the excellent services of both Pan American World Airways and Northwest Orient Airlines on the route from Seattle and Portland to Honolulu.

Rather than comment on the obvious inequities of the examiner's report I prefer to express myself on the final findings of the CAB. Certainly nothing has excited the imaginative traveler as much as the new accessibility to Hawaii and the Pacific generally. Air service to Samoa, to Tahiti, to the Fiji Islands, and on to the great and beautiful countries of Australia and New Zealand has whetted the appetites of mainland travelers. Fortunately for us in Hawaii, virtually all of these people will be processed through Hawaii. Once there, we believe they will either remain or will immediately make plans to return.

Now that both Pan Am and Northwest will be operating on permanent certificates the travel potentials between Honolulu and the mainland are limitless. Now, from Los Angeles, San Francisco, Portland, and Seattle there exists the best possible air schedules. I am told that there are on drawing boards supersonic aircraft which will be able to operate from the east coast of the United States to Hawaii in 3 hours.

Mr. Speaker, there is often a tendency to criticize the CAB—and other quasi-judicial bodies, I might add—for ultimate decisions which are unpleasant to at least a few of the interested parties. In the current instance, however, there seems to be unanimous feeling that the Board acted with economic and judicial forthrightness.

As far as Hawaii is concerned, Mr. Speaker, we are delighted to learn that the great Pacific Northwest will be only as far from Hawaii as the Pan Am jets of the present and the Northwest jets of the future make us.

United States Should Halt Import of Mexican Labor by 1966

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial by Msgr. George G. Higgins, director, Social Action Department, National Catholic Welfare Conference, which appeared in the Pilot on April 2, 1960:

UNITED STATES SHOULD HALT IMPORT OF MEXICAN LABOR BY 1966

(By Msgr. George G. Higgins)

The Mexican farm labor program, authorized under the terms of Public Law 78, will automatically expire on June 30, 1961 unless it is extended at that time by the Congress. It would appear, however, that certain influential supporters of the program are unwilling to wait until 1961 for Congressional action on Public Law 78.

They wanted the program extended as soon as possible and, for that reason, they welcomed the unexpected decision of a Subcommittee of the House Agriculture Committee to conduct the open hearings, on Public Law 78.

These hearings, incidentally, were so abbreviated and were scheduled on such a short notice that many interested parties (including the present writer) who wanted to testify before the subcommittee were unable to so for lack of time. Consequently they had to resort to the unsatisfactory alternative of presenting their views in writing.

NOT STACKED

This is not to imply that the subcommittee deliberately stacked the cards in favor of the growers. Because of the preparations

necessary for various harvesting seasons, the Congress could justify acting on Public Law 78 this year instead of waiting until June 30, 1961.

I think, however, that the subcommittee should have stayed in session long enough to accommodate all those who wanted to testify either pro or con on the extension of the Mexican farm labor program. After all, there was no good reason for the subcommittee to be in such a hurry about the matter, for, as I have already noted, Public Law 78 doesn't expire until next summer.

Critics of the Mexican farm labor program are fearful—and with good reason—that it may be renewed too hastily and without any constructive amendments. This, I think, would be a disaster.

I am not saying that the program should necessarily be abolished, once and for all, in 1961. I do think, however, that it ought to be phased out as rapidly as possible. I would be willing, however, reluctantly, to have it renewed in 1961 for a stated period of time—with the explicit understanding that at the end of that period it would be terminated.

It should not be renewed, however—even for a limited time—unless and until it is substantially amended along the lines of H.R. 11211 and a number of companion bills introduced within the past 2 or 3 weeks.

H.R. 11211 was introduced by Congressman McGOVERN of South Dakota. This bill would:

1. Put into effect all of the recommendations made by Secretary of Labor Mitchell's Committee of Consultants on Public Law 78.

2. Reduce the number of Mexicans imported as farmworkers by 20 percent each year and permanently terminate the importation program on June 30, 1966.

Some students of the Mexican farm labor program are severely critical of the McGovern bill. One of them in particular—a dedicated individual who has given the better part of his life to achieving a measure of justice for U.S. agricultural workers—has actually gone so far, in a recent circular letter, as to characterize H.R. 11211 as a complete sellout.

I don't happen to feel that way about it. On the contrary, I would be willing to settle for Congressman McGOVERN's bill, with certain reservations, as the lesser of two evils. By that I mean that H.R. 11211 would appear to be our only immediate hope of improving the Mexican farm labor program.

If this bill is rejected by the Congress, the labor program will not be terminated. Contrariwise, it will probably be renewed for an indefinite period of time and without any constructive amendments. This, I repeat, would be a disaster.

MATS Airlift Obsolescent

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Big Slam/Eye Opener," which appeared in the March 28, 1960 issue of the Belleville (Ill.) News Democrat:

BIG SLAM/EYE OPENER

The joint Air Force-Army exercise Big Slam/Puerto Pine, in full swing for the past 2 weeks, officially ended today. The ambitious maneuvers were carried off without a hitch. Indeed, the high coordination of the Military Air Transport Service and the Army far surpassed expectations in this simulated national emergency.

All things considered, Big Slam was well worth the strenuous effort poured into it, for the lessons it clarified might well influence our national survival.

Big Slam demonstrated many things. It revealed some strong points of national defense planning. But it also bared and emphasized certain salient weaknesses. Distressingly, these are of very serious nature—the kind which, unless immediately rectified, could conceivably precipitate disaster.

No chain is stronger than its weakest link. And Big Slam made it abundantly clear that Uncle Sam's ability to put up his dukes fast leaves much to be desired.

Big Slam was a lot like Aesop's mountain that labored so mightily and brought forth a mouse. In the entire 2-weeks, round-the-clock shuttling of huge transport planes between the United States and nearby Puerto Rico, only a little more than one partially equipped division of combat troops was moved.

By today's standards that isn't near quickly enough. Yet the arduous, all-out effort lavished on Big Slam demonstrated that this is the best we can do.

Inevitably, all this reflects adversely on MATS. However, it is Congress, the national administration and Department of Defense—not MATS—which merit full blame for our deplorable and dangerous state of unreadiness. For it is they who have been derelict in providing MATS with the tools it must have to do a first-rate, satisfactory job.

The sad truth is that the bulk of MATS airfleet is woefully obsolete, superannuated junk. The C–124 Globemaster, workhorse and mainstay of the MATS airlift was jim dandy when it was built back in 1948. But since then the weapons of war have changed drastically and time has been compressed by the jets. Bluntly, we've not kept abreast of the times in this respect, much to the detriment of our national security.

Washington has invested billions of dollars to develop and build rockets and ballistic missiles. But it hasn't spent 1 cent to speed their haulage to forward launching pads. Today it takes tedious hours to shoehorn an Atlas missile into an air transport that was old before the Atlas was even conceived.

We've got rockets and missiles galore. And troops and guns, super ammunition and everything else it takes to win—except the ability to put them where they'll do the most good.

Big Slam has slammed home the realization of how extremely vulnerable we really are. It has vindicated the critics and made believers of the scoffers. Now let's have vigorous action on the long overdue modernization of the Military Air Transport Service's flying machines.

Imports Jumping

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. DORN of South Carolina. Mr. Speaker, every Member of this House who supported a 4-year extension of the phony Reciprocal Trade Act should read the following article from the Lancaster Livestock Reporter, Lancaster, Pa.:

ARE YOU JUMPY THESE DAYS? KANGAROO MEAT FOUND IN PENNSYLVANIA

In announcing that the Department of Agriculture has uncovered evidence that Pennsylvania firms have been importing kangaroo meat, Attorney General Anne X. Alpern said:

"The Department of Agriculture had done an outstanding job in ferreting out the use of kangaroo meat in Pennsylvania, in violation of State laws and regulations.

"While kangaroos are intriguing animals in zoos, there is nothing amusing about the use of kangaroos shot in Australian fields and shipped to Pennsylvania without the normal veterinarian examinations made in the case of all other animals."

The Department in its investigation found that kangaroos are killed in the field in southwestern Australia and then are transported from the field under inadequate refrigeration.

Kangaroo meat is not used generally as a food in Australia today.

At least 33,000 pounds were shipped to Pittsburgh in 1958. There were at least 3,000 pounds stored in Pittsburgh in 1959. Over 5,000 pounds were delivered in Philadelphia in 1959 and seized by the Department of Agriculture.

A shipment of 6,360 pounds of kangaroo meat went from Pittsburgh to Wilkes-Barre in late 1959. The Department has received reports that as much as 2 million pounds of kangaroo meat has been imported by a Pennsylvania firm.

There is rigorous inspection in Pennsylvania of meat that is slaughtered for human consumption and careful supervision of meat destined for use by animals.

None of the kangaroo meat has been sold over the counter as kangaroo meat. It has been used without disclosure as to the nature of the meat.

Violators of Pennsylvania meat regulations will be given a hearing by the Department of Agriculture. If no proper explanation of the violation of basic meat regulations is received, action will be taken by the Department of Justice.

Our Fourth Shore

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. FULTON. Mr. Speaker, one of the main subjects which is before the Congress of these United States is the subject of the conservation of our good natural resources, for without them, we might not enjoy the good position that our American people have brought us to with these resources.

I am calling to the attention of my colleagues in the Congress and the people of America an editorial which appeared in the Pittsburgh Post-Gazette on Monday, April 4, 1960. Written in connection with the publication of the report by the Department of the Interior on our shorelines, in this case the Great Lakes. I believe the facts outlined in the editorial deserve further consideration.

The editorial follows:

OUR FOURTH SHORE

As part of a long-range survey of waterfront recreation opportunities in the

United States, the Department of the Interior recently released a study of the shoreline on the American side of the Great Lakes. Aptly titled, "Our Fourth Shore," the new report represents another in a series devoted to shoreline conservation. Reports on the Atlantic, Gulf, and Pacific coasts have already been issued.

The new study, like its predecessors, shows how little of our shoreline is held in public ownership for the benefit of great masses of people who cannot hold title to waterfront property in order to enjoy it; even if they could afford it, there isn't enough such land to go around. The Great Lakes study also notes that this inland shoreline (like the seacoast) is "being threatened by the encroaching rumble of bulldozers; bulldozers designed to level, to scar and to alter forever our national lakeshore heritage."

Among the facts presented in the study are that:

The American portion of the Great Lakes shoreline including that on connecting waters, totals 5,480 miles.

Some 1,480 miles of the total is on offshore islands.

Only 694 miles of lake shoreline (197 miles of it on islands) is now in public ownership.

Of the 4,786 miles of frontage in private ownership, 426 miles possess important remaining opportunities for recreation and other public benefits.

The survey, conducted by the National Park Service with the aid of other agencies, observed that the 426-mile shoreline suitable for recreational use is made up of 66 individual areas: 40 in Michigan, 8 in New York, 7 in Wisconsin, 6 in Ohio, 2 in Minnesota, and 1 each in Illinois, Indiana, and Pennsylvania. The Pennsylvania area is composed of 1.5 miles of Lake Erie frontage at the mouth of Elk Creek.

As used by the report, the term "recreation" envisages scenic, scientific, and historical values as well as those of active recreation. Since State and local governments, in addition to the Federal Government, can help to preserve such values, the new study should be widely helpful. Though only 5 of 66 special areas are mentioned for possible inclusion in the national park system, all or most of the other areas should be acquired for public use by some echelon of government, if the report's recommended minimum of 15 percent in public frontage is to be attained.

Legislation to enable the Interior Department to acquire some coastal and Great Lakes areas as national seashores is now in the Senate Interior Committee.

Brig. Gen. Frank T. Hines

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. VAN ZANDT. Mr. Speaker, the death of April 3 of Brig. Gen. Frank T. Hines, who formerly headed the Veterans' Administration, is a source of personal sorrow and I extend my sincere sympathy to his devoted wife, his son, Frank T. Hines, and to his brother, Brig. Gen. Charles Hines.

General Hines was identified with the affairs of our veteran population beginning with his appointment in 1923 by President Harding as director of the United Veterans' Bureau. From 1930 to 1945 he served with the Veterans' Administration as the Administrator of Veterans' Affairs. It was during his regime as head of the Veterans' Administration that my friendship with General Hines began. In the early 1930's, during the three terms I served as commander in chief of the Veterans of Foreign Wars of the United States, I had frequent contact with General Hines whom I regarded as a mentor and a personal friend. It was my good fortune to be able to rely on the guidance and inspiration he funished in meeting many of the problems that confronted the leaders of organized veterandom during the early days of the Veterans' Administration.

In the death of General Hines the veterans of the Nation lost an old friend who in the years of his activity in solving their problems was always willing to lend an ear and try to provide a means of working out the best possible solution.

In paying tribute to the character and administrative ability of Brig. Gen. Frank T. Hines, I wish to include at this point the following obituary which appeared in the April 4, 1960 issue of the Washington (D.C.) Evening Star which outlines the career of a distinguished American who served his country in many capacities during a long and fruitful life.

GEN. FRANK T. HINES, 81, EX-HEAD OF VA, DIES

Brig. Gen. Frank T. Hines, who was administrator of veterans' affairs from 1930 to 1945 and onetime Ambassador to Panama, died yesterday in Mount Alto Veterans' Administration Hospital.

He was 81.

General Hines had been a patient at the hospital for about a year.

He and Mrs. Hines, the former Nellie Vier of Salt Lake City, whom he married in 1900, lived in the Westchester Apartments. They have one son, Frank T. Hines, Jr., who lives in the Tower apartments.

He also leaves one brother, Brig. Gen. Charles Hines, of 2800 Quebec Street NW.

Services will be at 2 p.m. Wednesday in the Fort Myer Chapel. Burial will be in Arlington National Cemetery.

A SOLDIER'S SOLDIER

A soldier's soldier who rose from National Guard private to brigadier general in 20 years, General Hines had been recommended for the Medal of Honor before he was 21.

His first application for a commission in the Regular Army was rejected because of his youth, although he had 22 engagements in the Philippines in his service record at the time.

At his death, his service record was stalwart testimony to a military man's career in public service—first as the man charged with untangling the logistics of World War I, next as the prime organizer of the present Veterans' Administration; then as the man asked to plan refitting 10 million World War II veterans for civilian life, and, finally, as a diplomat in Panama.

From his action against the Spaniards to his last illness, the dark, trim, undemonstrative general was a busy man.

CAPTAIN BY WORLD WAR I

He was born in Salt Lake City, Utah, on April 11, 1879, the son of Frank L. and Martha (Hollingsworth) Hines, and had just passed his 19th birthday when he enlisted in the Utah Light Artillery.

A battle-tried veteran by the time he obtained his commission in 1901, he was a captain at the outbreak of World War I. He was in Europe for the Bethlehem Steel Corp. as a technical adviser on coast defense to the Greek Government. He was in Athens when the United States declared war on Germany. He started home, but War Department orders caught him in Rome, directing him to take charge of evacuating Americans from Italy. Within 2 months, 3,100 citizens had been returned to the States.

It was in this role that he developed an organization that moved the American Expeditionary Force to France, getting 2 million troops to Europe in 18 months and later bringing them back home in 8 months.

President Harding called him back to public service to direct the United Veterans' Bureau in 1923.

In February of 1944, General Hines was named retraining and reemployment director by Mobilization Director James F. Byrnes. Three days later, President Roosevelt issued an Executive order creating that position within the Office of War Mobilization.

ADMINISTERED GI RIGHTS BILL

The closing days of World War II found the busy general administering a bureau with more than 50,000 employees, scores of hospital facilities, and more than 100,000 claims from veterans of the war awaiting action.

They also found him in charge of administration of the Servicemen's Readjustment Act of 1944—the GI bill of rights. President Truman named Gen. Omar N. Bradley as the man to modernize the Veterans' Administration.

His appointment as envoy to Panama came in August 1945. In December 1947 it was announced he would retire the following February.

ACACIA CO. DIRECTOR

Following his return to the States, he spent a brief period on the west coast. On his return to Washington, he went to the Acacia Mutual Life Insurance Co. as a director, member of the executive committee, and military consultant.

General Hines held the Distinguished Service Medal awarded by the Navy as well as the Army and decorations from five other countries. He was a member of the Military Order of the World War, the American Legion, American Society of Mechanical Engineers, the Veterans of Foreign Wars, United Spanish War Veterans, the Congressional County Club, and the Temple Noyes Lodge, No. 32, of the Masons.

He also was a member of and a vestryman at St. Thomas' Episcopal Church.

A Lady Grand Marshal Will Lead Parade Up Fifth Avenue

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1960

Mr. ANFUSO. Mr. Speaker, for the past several years New Yorkers of Puerto Rican origin have a parade up Fifth Avenue in the spring. The main purpose of this parade is to demonstrate to the people of New York that their Puerto Rican neighbors are no different; that their interests and their loyalties are the same; that they are not second-class citizens. It is an excellent idea and has brought about better understanding of the problems confronting these people

and a better relationship in the community as a whole.

Usually the grand marshal of the parade is a man who is very prominent in the city's civic, political, or economic life. This time a lady was chosen as grand marshal of the Puerto Rican parade, which is taking place on Sunday, April 10, and, as far as I can recall, she is the first woman grand marshal of a New York parade.

She is Mrs. Celia M. Vice, who is from my congressional district, where she and her husband are coowners of a real-estate and insurance business. Mrs. Vice came from Puerto Rico as a child and has lived in Brooklyn ever since. She is widely known for her manifold activities as a social and welfare worker in the community. Her activities extend also into the fields of education, civic affairs, youth, women's groups, and politics.

A woman of her talents and interests is truly a great credit to our fellow citizens of Puerto Rican origin. It is no wonder that they have chosen her as their grand marshal of the parade next Sunday, April 10. I congratulate her upon this distinct honor.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an article from a recent issue of the New York World Telegram and Sun about Mrs. Celia M. Vice:

SHE'LL BE THE FIRST LADY GRAND MARSHAL—PUERTO RICAN PARADE LEADER IS HOUSEWIFE

(By Alma Hart)

When Celia M. Vice, Williamsburgh housewife, steps out as grand marshal of the Puerto Rican parade Sunday, April 10, she may be breaking a 300-year-old precedent.

"They tell me I'll be the first lady grand marshal in the history of New York," she said.

The vivacious blonde, coowner with her husband of the Marcy Real Estate & Insurance Co., was chosen for her extensive civic activities. She is executive director of the Council of Brooklyn Organizations, vice chairman of the Education Committee of Bushwick District Health Committee, chairman of the Inter-Relations Group of the Committee for the Betterment of Williamsburg, and a member of the Leadership Forum League of Women Voters, Seneca Club, Youth Council, and the local school board.

NOT MUCH CREDIT

"This year the parade is dedicated to the women of New York," she said. "Most of them do an awful lot and don't get much credit for it."

Mrs. Vice is looking forward to her duties, April 10. She said that last year's parade brought out 100,000 watchers and this one should be even bigger. Far from merely overseeing the proceedings, she will march right up Fifth Avenue from 62d Street past the reviewing stand at 87th to 96th.

"I did it last year in heels," she recalled. "And I didn't feel a thing."

Basic purpose of the parade is to remind New Yorkers that their Puerto Rican neighbors are not second-class citizens. This is a subject on which Mrs. Vice puts firm though gracious emphasis.

THOSE WHO DON'T

"We are too quick to play up the Rodriguez who go wrong on the city streets. How about all those who don't?"

She doesn't have much sympathy either for the typical New Yorker's ambiguous view of her country—a postcard vision of superresorts overlooking some squalid slums.

"The majority of Puerto Rican towns," she explained, "have beautiful little homes and gardens.

"Economically they are still in trouble, with prices far exceeding wages. But in the past 6 years many new industries have started and eventually this cross-migration of American tourists and Puerto Rican laborers will have to end. Right now you see so many Americans down there and so many Puerto Ricans right here," she laughed.

FIERCELY LOYAL

Mrs. Vice first came here as a child. She attended Brooklyn public schools and met her husband in a Williamsburgh church group. She is fiercely loyal to New York but recent trips to her birthplace have convinced her that it is becoming a paradise.

Back of her desk in her Flushing Avenue office, which is a gathering place for the neighborhood, is a mural of a tropical scene. A tall palm tree, which she says is a cross between a banana and a coconut tree because neither she nor the artist remembered what either really looked like, bends above a cerulean lake.

"I used to sit facing it," she said. "But I had to turn my desk around."

Library Week

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an editorial written by Mr. Parker M. Merrow, publisher and editor of the Carroll County Independent, Center Ossipee, N.H., on Friday, April 1, 1960, entitled "Library Week":

[From the Carroll County Independent, Apr. 1, 1960]

LIBRARY WEEK

As a rule we do not lift either an eyebrow or a little finger when some week is announced. People belonging to this or that group are forever running to the Governor and asking him to proclaim some special week. Since it costs only a few dollars, will do no harm, and prevents the members of the group in question from becoming political enemies, the Governor, no matter what his inclination or party, is always glad to proclaim the week.

So we have, figuratively speaking, weeks in memory of the tomcats that lost their lives in the Chicago fire; a be kind to the birdies week followed by a shoot more crows week; there is a fire prevention week followed by a clean up and burn week; there is a help the farmer and eat more butter week followed by a watch your diet week; there is a help mentally retarded children week followed by a week to accelerate the near-genius child; there is a world peace week followed by a bigger ballistic missile week.

And so it goes.

But we do feel very strongly that the library week is well worth mentioning and well worth considering.

Gone, "where the woodbine twineth and the whangdoodle mourneth not" (as the old-timers used to say) is the town library of yesteryear.

There was a fine file of annual agricultural reports and reports of the State treasurer and an antique set of encyclopedias and rebound books cast off from big city libraries. No matter how conscientious the librarian or how interested in her work, there was just not enough money available to make the library attractive and useful to a good percentage of the community.

Now the picture has changed dramatically. With the enthusiastic cooperation of the State library, with the bookmobile service, with the help of various trust funds, with the newly awakened interest in higher education, the town library is becoming an integral part of community life.

Both grammar school and high school pupils find adequate reference material to help them in their assignments. If the desired material is not at hand, the librarian will secure it. If an adult wishes to study bee keeping, coin collecting, bird watching, amateur carpentry, or soil drainage, the librarian will secure the material through the State library, or if budget permits, buy the books for the local library.

Realization has come that the town library should be a cheerful, stimulating center where all ages from the fourth grader through to the folks in retirement can secure books for reference, instruction, and recreation. A well-managed town library, with adequate funds, has a very strong impact on the life of the community.

Buy American

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. LEVERING. Mr. Speaker, I wish to make reference to certain remarks I made on the floor on March 29 concerning my profound feeling with reference to the protection of our American industry and our people against foreign competition. In my address, I specifically cited the case of the Plymouth Locomotive Works of the Fate-Root-Heath Co., a fine small business located in my congressional district, which is faced with losing an order for 39 towing locomotives for the Panama Canal to the Mitsubishi Co. of Japan.

It seems that on the same day certain remarks were made in the other body which indicate a fundamental misunderstanding of the facts surrounding this procurement. I have reference to the concern expressed lest foreign bidders feel mistreated if their bid be disqualified. In this connection, I feel that a fine American small business has already been mistreated.

It should be noted that the present invitation to bid, issued by the Panama Canal, is the second invitation issued covering the same equipment. The Plymouth Locomotive Works has expressed great concern with respect to the preferential treatment accorded the foreign bidder in the rebidding. This bidder while not technically responsive to the first bid invitation, was permitted to participate in the rebid, thereby receiving nearly 90 additional days in which to prepare a new responsive proposal.

At this point, I feel it is well worth our while to consider the background and surrounding circumstances relative

to this procurement. Approximately 1 year ago the Panama Canal Company had two representatives call at the plant of the Plymouth Locomotive Works in an effort to obtain ideas and proposals regarding their requirements for new modern towing locomotives and locomotive cranes. It would appear that recognition should be given to the technical engineering and consultation provided, without remuneration, by the Plymouth engineering staff. Plymouth sent engineering personnel to the Canal Zone and designed at their own expense a locomotive which meets all requirements. A prebid conference was held in Panama and two of the Plymouth representatives attended this meeting. Prior to this meeting neither the Japanese nor any other prospective bidders had ever been to Panama to study the problem in any detail.

On August 28, 1959, the first bids were opened in Panama. Mitsubishi of Japan was low bidder, but did not meet the technical requirements of the bid invitation and thereby were disqualified. Fairbanks Morse was the next low bidder, but Plymouth was the lowest bidder that met, or exceeded, all significant requirements of the specifications.

After a meeting of the Board of Directors of the Panama Canal Company in the Pentagon in October, the Panama Canal Company officials offered to negotiate with the two low responsive bidders. Plymouth offered a substantial price reduction and allowed an official survey of their plant facilities to be made by a member of the Army Engineers. This gentleman submitted a favorable report to the Panama Canal Company and Plymouth was led to believe that they would be awarded a contract on a negotiated basis, since they were most nearly responsive to the Canal Company's requirements. However, approximately 10 days later all bidders were notified that all bids were rejected "for varying degrees of nonresponsiveness." Plymouth was never given an official explanation of why their first bid was rejected. They were never told on what details their proposal failed to meet specifications.

In December 1959 new invitations to bid were issued by the Panama Canal Company. The locomotive described in the new specification was fundamentally an exact copy of the locomotive offered by Plymouth in their first proposal.

At this point, through some misunderstanding of policy, Panama Canal Company officials in Panama allowed the technical portions of Plymouth's first bid to be opened for inspection by their competitors. This gave the competitors the advantage of studying the Plymouth design in detail. This also put Plymouth at a disadvantage in that they would have to again quote the same locomotive lowering their price to try to compete with a low foreign bidder who had been given over 90 days to prepare a new responsive proposal. We must keep in mind that this foreign bidder also had an opportunity to inspect the Plymouth specifications.

On February 12, 1960, the new bids were opened in Panama. Mitsubishi was low bidder, but had raised their price by approximately $1 million. Plymouth was the low domestic bidder and had lowered their price approximately $1 million by cutting costs and profits to an absolute minimum. After evaluation of the bids, it was determined that both Plymouth and the Japanese were technically responsive.

No mention was made in the other body of the fact that Plymouth is a small business employing less than 250 people, and are bidding in this instance against the Mitsubishi combine of Japan, one of the world's largest monopolies with one of the world's cheapest labor supplies.

A further point which was passed over is the fact that Federal, State, and municipal tax revenue which will be lost if this contract is awarded to a foreign bidder will more than equal the difference between the two bids in question.

It seems to me that one of the most vital factors to be considered in the awarding of this contract should be the availability of and access to an assured source of supply for spare parts, maintenance, and service. This consideration takes on added significance when it is related to the strategic importance of the Panama Canal to our national defense, as well as to the orderly conduct of shipping and commerce.

From my own personal knowledge, I am aware that there is a critical labor situation building up in the Plymouth area. This fine small company desperately needs this order, since it has already found it necessary to cut back to a 35-hour week and to dismiss some of its help.

I think it would be well for our colleagues in the other body and for the administration to first make sure that American industry is being treated fairly and accorded every consideration which it deserves. In keeping with this policy and with the present efforts of our Government to halt outflows of vital gold reserves, it would seem that this contract, amounting to almost $5 million, should be awarded to the low domestic bidder.

Tribute to the National Herald, a Greek-American Newspaper

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1960

Mr. LINDSAY. Mr. Speaker, in the helter-skelter of our daily living we more often than not overlook those who silently help foster unity and understanding among our populace.

One of our "silent" partners in this great endeavor is the National Herald, a Greek-American newspaper in my district, which is celebrating this year its 45th anniversary of publication.

A fitting tribute to the National Herald's management and staff for splendid public service is the message by the President of the United States which, I include in the RECORD, as follows:

THE WHITE HOUSE,
Washington, D.C., March 30, 1960.

Mr. B. J. MARKETOS,
Publisher, the National Herald,
New York, N.Y.:

Through Congressman JOHN V. LINDSAY, I have learned of the 45th anniversary of the National Herald, and it is a pleasure to join in the observance of this event.

Over the years, the National Herald has contributed much to the life of our Greek-American community. In the tradition of democracy, printing the truth with freedom and responsibility, this newspaper has performed a splendid service for its readers.

Congratulations and best wishes.

DWIGHT D. EISENHOWER.

Time To Start

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Baltimore (Md.) Sun of Friday, March 25, 1960. The editorial, entitled "Time To Start," sets forth clearly and succinctly the reasons for a thorough and searching examination of the Federal Power Commission by the Congress of the United States and by the Committee on Interstate and Foreign Commerce of the House and/or one of its subcommittees.

The questions raised by the recent revelations on the Federal Power Commission changing an opinion contemporaneously with calls from an industry representative to and upon members of that quasi-judicial agency have raised the gravest questions of propriety of behavior of members of the Commission. It appears that public confidence in that agency, as well as its usefulness to regulate the industry in the public interest, may well be enormously impaired until such time as the whole matter has been cleared up. Certainly, it is the duty of members of the Commission, both to themselves and to the consumers whom they are supposed to represent, to seek to have the fullest exploration of the matter in order to exonerate them from any question of impropriety so that they may regain full public confidence and do their work without this shadow of doubt hanging over their deliberations.

The editorial is as follows:

TIME TO START

Misbehavior ranging from impropriety to rascality continues to come to light before the congressional committees. A Senate Agriculture Subcommittee has found two Agriculture Department employees who had private interests in conflict with their Government jobs. One of them drew $83,500 out of a grain-storage concern in which he was a silent partner during his employment by the grain-storing branch of the Federal Government. He quit and his boss also quit rather than face charges of "deception" in another matter.

This kind of open-and-shut conflict of interest is nothing new, is covered by pres-

ent law, and raises no puzzles. In an area more uncertain still than it ought to be is the conduct of the Federal commissioners. Only the other day Chairman John C. Doerfer of the Federal Communications Commission was forced out of office because he had accepted some luxurious hospitality from a man with recurrent business before his Commission. Now Chairman Jerome K. Kuykendall of the Federal Power Commission concedes that in a recent case he had out-of-court contacts with Mr. Thomas G. Corcoran, lawyer for a firm petitioning the FPC for authority to build a gas pipeline.

The FPC case differs in detail from the yacht-and-fun episode that disposed of Mr. Doerfer. But the essential impropriety is identical and should merit the same penalty. Federal Commissioners are quasi-judges and they should no more have private contacts with parties at interest in their semicourts than should the real judges in the regular courts.

But can a new statute cure the repeated inability of some of these officials to see this elementary fact? No doubt the pending proposal to bar off-the-record contacts by law would do some good. But surely the longrange remedy is the growth of a sharper fastidiousness among the Commissioners. They must try harder to see in advance the way their private contacts will look on the front pages of all the newspapers after their shabby confessions before the various congressional committees. It took a good many years for the judges to evolve the codes which keep them out of trouble. The Commissioners have simply got to start evolving. The best way to encourage this evolution is to drop them as fast as they are exposed.

Need for a 5-Year Census

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1960

Mr. UDALL. Mr. Speaker, the value to business, industry, community service movements, and all levels of government of the statistics which will be developed from the decennial census now in progress is well-known and uncontroverted. Since the first such census in the then young United States of America in 1790, the information thus gained has been eargerly awaited and rapidly put to use.

The United States of today, however, with its exploding and highly mobile population, is a far cry from the infant Nation of 3 million persons of 1790. Yet we still make this population count only once every 10 years—and within less than half of each decade, the information thus gained is obsolete.

For that reason, I have sponsored during the past two Congresses legislation authorizing a census of population, employment, and housing every 5 years. This 5-year census idea is not new; nor is it original with me. It has attracted considerable support in recent years, however, and I am hopeful that it will receive favorable consideration before 1965.

I would point out for the benefit of my colleagues in the House that it would not change the present method of reapportionment of congressional seats. This would be done every 10 years as presently.

The Yuma Daily Sun, whose editor, Jones Osborn, is an outstanding Arizona newspaperman, discussed the importance of this legislation recently and under unanimous consent I include this editorial in the RECORD at this point:

When the census takes comes to your house next month, it may be the last decennial census in history. For it is apparent that a census only one each 10 years is failing to provide the up-to-date information Americans need.

Since 1790, the Government has taken a population census once every 10 years. But this year a subcommittee of the U.S. House of Representatives plans to consider a new bill. This bill, if enacted, would provide for a 5-year census on population, unemployment, and housing.

Congressman UDALL'S idea is shared by is sponsoring the bill. He maintains that "continuing important and rapids shifts of population" make 10-year census figures outdated long before another census can now be taken.

Congreesman UDALL'S idea is shared by several top Government officials. Both the Budget Bureau and the Commerce Department have suggested that a congressional study be given to the needs "for more up-to-date population data."

Dr. Robert W. Burgess, Director of the Census Bureau, likewise concurs. "We think a 5-year census of population could be very valuable," he said.

Because the 10-year census so obviously fails to keep up with growth and shifts in population, no less than 1,516 cities have had special population censuses taken at their own expense since the 1950 census. They do so to obtain a greater share of State funds to which they are entitled if they can prove their population is larger than the 1950 census figure.

One of the most spectacular gains was made by Garden Grove, Calif. It was a community of about 3,900 persons when the 1950 census was taken. But by 1959, its population and jumped to 68,866.

Arizona has enjoyed its share of population growth during the last 10 years, also. To break out of the 10-year freeze of the decennial census, no less than 14 cities have upped their populations, either by interm census or by annexation.

Yuma for example, had 9,145 in the 1950 census. But it today has an official listing of 12,981. Phoenix jumped from 106,000 to 201,000. Tucson climbed from 45,000 to 68,000.

In addition, Arizona in 1960 can boast of eight incorporated cities which it did not have in 1950. (They are Clarkdale, Fredonia, Hayden, Huachuca City, Mammoth, Peoria, Show Low, and Sierra Vista.)

All of this growth and development in Arizona is but a small part of what has happened on a national scale, during the past 10 years. Clearly, the 10-year census is not doing the job. We hope Representative UDALL'S bill will receive the favorable consideration it deserves.

Alma Mater, 1970

EXTENSION OF REMARKS
OF
HON. ROBERT E. COOK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1960

Mr. COOK. Mr. Speaker, under leave to extend my remarks, I wish to call to the attention of the House of Representatives an address given by Dr. Paul F. Sharp, president of Hiram College, Hiram, Ohio, located in the 11th District which I have the honor to represent.

Dr. Sharp's address, entitled "Alma Mater, 1970," was delivered on February 1, 1960, in Akron, Ohio, at the kickoff dinner for the highly successful fund raising campaign of the Ohio independent colleges. Dr. Sharp is one of the leading educators of the United States and has been a leader in the national efforts to preserve the small colleges of this country. His words should be of great value in bringing to Members of the House the seriousness of the present-day threat to the private colleges.

The address follows:

ALMA MATER, 1970

(Address by Dr. Paul F. Sharp)

"Liberal Arts Colleges Threatened."
"Private Colleges in Trouble."
"Financial Crisis Menaces Colleges."
"College President Warns of Crises in Education."

These or similar headlines greet us almost daily in our newspapers and magazines. From every side we hear dire predictions that higher education in this country faces crises almost too difficult to master. The floodtide of students soon to be upon us, the growing shortage of qualified professors, and the constant need of adequate funds threaten to reduce our standards, to impair our programs, and to send some of our American colleges into limbo before this new decade has run its course.

Contrast this gloomy future in higher education with the buoyant optimism in every other field in our national life. Economists, journalists, and pundits of varying qualifications join to herald the "sizzling sixties" we have just entered. The "fabulous fifties" were only the appetizer preceding the feast that lies ahead. The good life will be ours and our Nation faces a future of unprecedented growth with a dynamically expanding gross national product, with an unparalleled distribution of goods and services and with scientific achievements that leave the prophets somewhat breathless.

All of us are sensitive to the irony underlying these contrasts. But it may also be true that in our zeal to present a strong case we have exaggerated our troubles. Some of our educational Jeremiahs appear to be counseled by their fears and to have lost sight of the opportunities to educate more students, more effetcively. In no area of American life is the shift from optimism to pessimism in this century so apparent as in education. Nineteenth century educators founded our colleges and faced greater problems than ours with fewer resources but with confidence and enthusiasm. There is every reason for us to confront our problems in higher education today in the same spirit.

Sometimes we forget our own past. Like the "hipsters" that the novelist Norman Mailer wants us all to become, or the bearded beatniks of Venice West, we forget the meaning of the past to live entirely in the present. When we do this we deny ourselves a valuable experience. Viewed in historical perspective our problems come into clearer focus. Nor do I mean that we have to return to our Founding Fathers to do this.

Every college represented here this evening is a stronger institution than it was only 10 years ago. A decade from now every college in our Independent College Alumni Association will be stronger; will be more effective in reaching its educational goals; will possess higher academic standards, and will serve our society more usefully and purposefully than it does today.

In the face of so many dark predictions for our future, how can we argue for optimism?

Why do we make such apparently rash predictions? Numerous facts crowd in upon us to argue that our colleges will be stronger not weaker, possess higher not lower standards, and be more capable of fulfilling their tasks rather than flabby or incompetent.

Our Ohio colleges live with a heritage of high standards of academic achievement. We are nationally respected and honored for our role. I am confident that for our "very name's sake" we can and will meet every crisis the future may hold for the liberal arts institutions. Our campuses are a treasury of imagination, energy and skill dedicated to the serious purposes of education.

Indeed, our campuses comprise a kingdom of the mind. Numerous institutions share with us our concern for the enrichment of the personal, emotional, and spiritual lives of young men and women. But only on the campus is the community uniquely dedicated to intellect, to the power and dignity of ideas. Here the life of intellect is made attractive; here our inheritance of candid thinking gets full play—or it is nowhere.

Raymond Fosdick's recent tribute to Woodrow Wilson as teacher reminds us all of the finest traditions on our campuses: "I speak only as a single student at Princeton of over 50 years ago. For me Wilson lit a lamp which has never been put out. All my life I have remembered him as the inspiring teacher who introduced me to the kingdom of the mind, and held up before our eyes what Whitehead later called 'an habitual vision of greatness.' "

Because our colleges emphasize this tradition the future is more than ever favorable to our course. Our alumni and our friends see more clearly than ever the close relationship between our colleges and our national survival. Our standards are a matter of national welfare, not just a cultural nicety or a social advantage to a few favored students.

Our strength will call forth greater strength in the years ahead. Not only because of our seriousness of purpose but because we emphasize the search for knowledge in its basic and fundamental aspects. We believe that fundamental theory better equips students to live in a world of changing techniques. Systematic discipline in pure knowledge lays a foundation on which the student can rest the superstructure of practical skills and professional achievements.

A recent experience of the committee planning the forthcoming world's fair in New York graphically illustrates our case. The theme of the famous 1939 World's Fair, you may remember, was "Tools for Tomorrow" and the exhibits emphasized this by displaying the most modern techniques and tools. Much to their surprise the current committee discovered that 85 percent of the "tools for tomorrow" so proudly displayed in 1939 are now obsolete and already discarded.

II

Last year a curious thing happened. Issues and controversies that for many years were the property of educational specialists became the subject of public discussion and analysis. This we should all welcome, and most especially those of us vitally interested in higher education. We all need to remind ourselves, to paraphrase an old saying, that national surivival is much too serious a matter to leave to specialists.

Yet it is true that our colleges and universities are a treasure store of imaginative, energetic and vital educational leadership. We owe a great debt in this country to the devoted men and women such as yourselves who have looked after, supported and encouraged our private colleges.

One of the great surprises to greet me as I emerged from the shelter of the classroom, I must confess, was the selfless devotion of trustees and alumni to the welfare of our colleges and universities. I am confident in our future because I simply cannot imagine this reservoir of good will and affection unequal to the tasks ahead of us.

Today, as seldom in our history, our colleges and universities are making decisions vitally important to society as well as to particular constituents. Confronted with the prospect of 3 million more young people seeking entry into our colleges and universities during the next decade, higher education may well become, to use a familiar economist's term, a scarce commodity.

Obviously, our private colleges and universities will not and cannot make the major contribution in meeting this challenge of numbers. Rather our role will be to serve our constituents as effectively as we can within the limits of our resources and our determination to improve standards.

Inevitably this means greater selectivity in students and higher standards of academic performance. This is more particularly true when we take into account the improving academic standards of our high schools. In great ferment already, our public schools will be under increasing pressure to elevate their standards and more adequately prepare Johnny for college.

Parents are not only asking whether colleges will be ready for Johnny, they are also increasingly concerned that Johnny will be ready for college. With many students already coming to us with advanced placement and with this number steadily increasing, we will obviously devote less and less time to courses traditionally regarded as part of the freshman curriculum. Thus, pressure from below, as well as our own policy, determines an upgrading of academic quality in our colleges.

We will increasingly be engaged in the education of an educational elite as Chancellor Kimpton recently pointed out. Just what an elite comprises in a democratic society I shall wait with great interest for each college and university to determine. We can agree that our role as private colleges and universities is to identify and educate ability. But we violate both reality and the humility of scholarship if we pose as the only institutions engaged in this task. Prestige and pride of place are ours, but intellectual arrogance is a false facade, as unworthy of our heritage as it is unnecessary to our purposes.

III

In our crisis-ridden educational world the problem attracting most attention is finance. Here the greatest pessimism prevails, but with less reason, in fact, than in other areas. It will be far more difficult for us, for example, to educate a sufficient number of teachers in time to meet the needs of our students than to find economic resources.

America is a wealthy society. Our visitors from overseas are always confused when we speak of a financial crisis in our colleges and universities. It is beyond their understanding. Proudly we hail the greatest accumulation of wealth and the widest distribution of goods and services in history. Somewhat conscience stricken we acknowledge our luxury in a world of poverty and want. It is against this background of affluence that we must consider our problems.

Perhaps what we need at this hour is the fluent pen and eloquent voice of a Henry George. This latter-day George, with the same moral passion and public conscience of his 19th century model, would touch our consciences and sing to our hearts with a message of hope as well as of urgency, of faith as much as of necessity.

What title could be more appropriate to his analysis of higher education than "Progress and Poverty"? His first sentence might well have a familiar ring to it. "Society is wealthy in this great land, but everywhere higher education the creator of wealth and the handmaiden of culture is poor."

This modern Henry George, of course, would avoid the trap of an over-simplified single tax solution. Indeed, if I catch the spirit rightly, he would express genuine fears of the overweening ambitions of governmental power with its red tape, its disclaimer oaths and its well intentioned efforts to do good by stifling local freedoms.

Truly this modern George would invest the dry bones of financial analysis with the flesh of human understandings. Think of his chapter on faculty salaries. I can well imagine the poignancy with which he would describe the economic fate of those most devoted to the welfare of our young during recent years. Those famous charts illustrating the dramatic increases in real income for all professions since 1940 while the real incomes in the academic profession declined would come to life.

Think of the gentle irony this successor to Henry George might use in speaking of the role of sacrifice in teaching. In his traditional expression of Puritanism, of course, he might only refer to it as "foregoing." But, however, he referred to it, our gratitude to those who gave so freely of their thought and lives would place us forever in their debt.

This is not the age for a Henry George of course. Today we speak calmly of the allocation of resources to socially useful goals, but I hear the spirit of Henry George rustling the dry leaves. With impressive charts and graphs we present the economic data clearly, the statistical evidence convincingly, and the quantitative factors of need fully. What then is lacking?

An affluent society such as ours enjoys the rare luxury of a wide latitude of choice. Every wealthy society in the past has had a wider choice than those burdened with poverty. Our real question then is what choices are we going to make for our wealth in the soaring sixties.

Past societies as we all know have often chosen comfort and luxury rather than investment in education, religion, and social welfare. And there have been those historical Khrushchevs ready to bury such societies at the first opportunity.

Society's choices, after all, are those of its individual members. Your presence tonight reassures us that we will indeed underwrite our educational institutions with resources adequate to our tasks. Time, energy, and money are never so honored or rewarded as in their expenditure for the education of the next generation and in the search for truth that enlarges their world of understanding.

We hail your presence as evidence of the growing spirit of cooperation among our colleges and universities. This new spirit promises to solve many of the problems that vexed the past. We welcome it as positive assurance that the parochialism so many of us experienced as undergraduates is fast vanishing from our campuses. We welcome it as a guarantee that the accumulation of wisdom, experience, and vision on our many campuses will increasingly be directed to our mutual service.

Above all, we hail your presence as alma mater's truest friends, her alumni. All of us are familiar with the Hollywood versions of alumni and their role in American society. These caricatures picture our alumni with racoon coat, hip flask and full of free advice for harassed administrators and phony reminiscences for bored undergraduates.

These types exist, of course, and every college president privately thinks he has more than his share. But their numbers are few and their influence limited. Contrast the caricature with the reality.

Your role as alumni is that of linchpin between alma mater and society. You are the tie between things present and things past, between today's plans and tomorrow's realities. Through your good offices we prosper, in your good works we take pride, with

your goodwill we reach our institutional goals.

We welcome you as faithful allies in our current tasks. To fellow alumni you have an exciting story to tell. Your message is a success story of a decade of progress on the campus during the fifties. Your account is of faithful stewardship, not alone to a specific constituency, but to the causes of higher education itself. Your report is a prophecy to follow alumni of growing strength and enlarging services at alma mater during the decade ahead.

In all this we wish you well. In the successes of this campaign in Akron, and through many years ahead, we shall truly sing your praises as we continue to measure our performance against the straightedge of your hopes and our achievements against the altimeter of your dreams.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of April 2, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

Representative Russell Mack, of Washington, dropped dead while answering a quorum call on Monday, and the House adjourned in his memory. Truly, he died with his boots on. We shall miss him. Eleven Members of the 86th Congress have now passed on.

The Health, Education, and Welfare (HEW) appropriation bill passed 362 to 10. Actually, the $4.2 billion bill provided the money to finance two departments—Labor ($542 million) as well as HEW ($361.9 million). This amount exceeded the budget by $184 million, and last year's expenditures by $128 million. I opposed the bill for a number of reasons. (1) $183 million over the $4 billion budget figure which was more than enough. (2) Various programs financed by this bill are subject to criticism, including water pollution, school construction and school payments in lieu of taxes in "impacted areas." I cannot understand the reluctance of many in Congress to say no to any spending for projects which sound good. Take medical research, for example. Of course, we are all for medical research of all kinds, as we are all interested in the welfare, health, and education of our people. It does not follow that recognition of such needs means in every case more Federal law, spending, and control.

Many Members want to protest but wonder how you go about opposing a $4 billion "package", larded with boondoggle, when it also contains worthwhile projects and others that sound equally good—all for the general welfare of the people. How? Simply by voting against it. A vote "against" need not mean a Member is against trying to solve that need—rather that (1) it is not a matter of proper Federal concern, or (2) there is already enough money in the program without adding more, or (3) we can delay here and there until we can afford further spending.

For my part, I intend to remember my pledge of preserving fiscal responsibility by (1) balancing the budget, (2) reducing the debt, and (3) revising and reducing taxes. This course also assures keeping the dollar worth a dollar. True, it may not always be as appealing politically as the proffer of Federal money to constituents. In this cold war year, I suspect most Dallas folks would question, as I did, the urgency, if not the need, for Federal expenditures just now to finance studies on (1) the circulatory physiology of the octopus, (2) biological effects of parental age of mealworm beetles, (3) aging and ovaries of cockroaches, and (4) causes af alcoholism.

The White House Conference on Children and Youth brought to Washington a number of representatives from Dallas, as it did from all over the Nation, to discuss various problems affecting the Nation's youth. Capital newspapers reporting the event abound with suggestions for parents, educators and all levels of government. Federal aid to education, desegregation, birth control, and juvenile delinquency were in the forefront of attention. I couldn't help but wonder at some of the speeches I read—assuming they were reported accurately. It seems to me that in trying to solve some of these problems, action by the Federal Government should be a last resort because Federal action always imperils local initiative. Could it be that some of our trouble stems from too heavy a reliance on government already—that we have tried inappropriately and foolishly to solve all our problems by transferring parental and community responsibility to the Washington bureaucracy? It is well to study our problems in a conference like this. It is my hope, though, that we do not end up expecting more Federal aid and direction to solve them. I wonder, too, if the conference will recognize the spiritual base on which our society and government rests. Will the conference even mention America's greatest strength throughout our history, our spiritual beliefs and the individual responsibility that, by definition, accompanies them? Surely nothing could be more ludicrous than for a people who have all but banished any word of God from our public schools to turn, then, to seek wisdom and guidance from the Federal bureaucracy.

This week's TV feature (WFAA, Sunday, 10:30 a.m.) was Dr. Keith Glennan, head of NASA (National Aeronautics and Space Administration) who discussed our space programs. The United States is making rapid strides in all areas, and concedes only a temporary lead to Russia in but one field, that of "launch vehicles."

Correction of last week's newsletter—Senator BARRY GOLDWATER's speech on foreign affairs was made in Washington, not Dallas where he spoke on labor management before the Public Affairs Luncheon Club.

In Defense of Freedom From Too Much Government

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1960

Mr. DAGUE. Mr. Speaker, as you are probably aware a sizable part of my constituency residing in Lancaster County, Pa., consists of members of the Amish and Mennonite faiths. They are known locally as the plain people and they enjoy the respect of their neighbors because of their industry, their peaceful habits and their unshakable religious faith.

At the request of these dedicated people I have introduced H.R. 1245, presently referred to the House Ways and Means Committee, which would allow anyone to decline social security benefits on conscientious grounds. In urging the enactment of my bill I have always held that if it is right and proper to grant exemption from military service for religious reasons we should accord the same relief to those who refuse to accept handouts from Government because of qualms of faith.

A number of Amish bishops have presented me with a statement of principles which sets forth their conviction that the regulations of the Old-Age and Survivors Insurance Act abridge their faith and doctrine. They further join in a petition to their Government for relief from this onerous edict to which they have set their lawful signatures. It will be noted that the signatories come from many States but since they are all speaking through Bishop David Z. Fisher of my congressional district I am pleased to include their statement as a part of these remarks:

AN APPEAL TO THE ESTEEMED MEMBERS OF THE DIFFERENT BRANCHES OF OUR NATIONAL GOVERNMENT

To Whom It May Concern:

We as a group of humble subjects, do feel obligated to thank God, and to feel thankful toward all who have exercised and endured much to have a Nation on earth wherein a people can live according to the dictates of their consciences.

Now it is clearly evident, that not all people are of the same opinion, but according to the Constitution and its amendments each person has a right to express his opinion, and should give his grounds for it.

In the 16th century our forefathers were living in parts of the old country, and there with great care and much study (by the help and grace of God) they adopted a doctrine based on Jesus Christ and His apostles' teachings.

Early in the 17th century they wrote articles of faith, according to their doctrine and many old bishops signed them, but they soon found out they were not permitted to live up to their doctrine there, so many journeyed to this country.

Here many God-fearing people labored hard and long to establish a government free from other countries, and based it on the grounds of God's word.

Capable men wrote the Declaration of Independence, and one colony after another ratified it. Then the Constitution was written and signed, which was hard for the people to understand how it was to work. It was not perfect so amendments were added, 10 of them, which were called the Bill of Rights.

So the Government was formed, and ever since it took much legislation to keep things (as problems arose) in line with the Constitution.

So we feel the foregoing statements are satisfactory evidence that the Social Security Act (the OASI) is abridging to our faith, and doctrine which is older than this Government, and always has, and does yet prove entirely satisfactory, and we feel grieved that this said act is forced upon us, and we ask you to consider the foregoing as an appeal of deep concern.

Therefore we feel justified to do all in our power, with the guidance of a Supreme Being, and the Holy Ghost, to defend and protect these costly pearls, and not trade them for an old-age and survivors insurance,

Now we hope and trust, there is not a members of this esteemed Government who would ask us to recant on this subject.

David Z. Fisher, Christiana, Pa.; Henry N. Miller, Middlebury, Ind.; Neil J. Hershberger, Burton, Ohio; Aaron Esh, Bird-in-Hand, Pa.; Andrew J. Weaver, Fredericksburg, Ohio; John D. Schmucker, Medford, Wis.; Ben. L. Shetler, Conewango Valley, N.Y.; Emanuel J. Mullet, Fairbanks, Iowa; Eli S. Miller, Dover, Del.; Bishop Leander S. Kevin, Haven, Kans.; Simon M. Yoder, Guthrie, Ky.; Samuel J. Stoltzfus, Charlotte Hall, Md.; W. P. Miller, Centerville, Mich.; Joseph L. Schwartz, Monroe, Ind.; Joni F. Byler, Volant, Pa.; Abe C. Gingercik, Arthur, Ill.; Ira Hissley, Kolona, Iowa.

Preserve the Connally Amendment

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, under permission to extend my remarks I wish to present for the reading of the Congress a copy of the resolution adopted by the department executive committee of the Louisiana department, the American Legion, in support of the Connally amendment to the World Court resolution. This is a most patriotic group which is vitally interested in the welfare of our Nation and I feel the action taken by the committee is most significant.

The resolution follows:

RESOLUTION OPPOSING RESCISSION OF THE CONNALLY AMENDMENT TO THE WORLD COURT RESOLUTION OF THE U.S. SENATE

Whereas in 1945 the Senate of the United States, without adequate debate, ratified the pact known as the Charter of the United Nations; and

Whereas the attendant publicity featured two key points in this charter: (1) To save succeeding generations from the scourge of war; and (2) to deny the right of the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state; without which the charter would not have been accepted by the United States; and

Whereas, on August 2, 1946, the Senate of the United States ratified the United Nations World Court resolution but in so doing, in line with our system of constitutional government, provided that the United States would not accept compulsory jurisdiction of the International Court of Justice in matters which are essentially within the domestic jurisdiction of the United States as determined by the United States, the last six words being known as the Connally amendment.

Whereas, since May 1, 1958, there has been a subtle campaign by internationalists of various types aimed at rescission of the Connally amendment; and

Whereas the rescission of the Connally amendment would expose the United States to serious judicial dangers before an international court of 15 judges, only one of whom can be from the United States.

Whereas Communist nations have judges on the Court but do not and will not accept its juridiction; and

Whereas the damages inherent in such rescission would expose various U.S. domestic issues to judicial interpretation of such international tribunal; and

Whereas the compulsory jurisdiction of such tribunal would endanger not only the constitutional powers of Federal agencies as delegated in the Constitution of the United States but also those powers reserved to the States and to the people; and

Whereas various resolutions now pending in the U.S. Senate would by repealing the Connally amendment, remove that safeguard against usurpations by an international judicial tribunal; and

Whereas the United States is the object of envy of many nations of the world and many peoples. Our Treasury is most attractive to them. Immigration to our shores is something they dream of. We do not favor making it possible for the International Court of Justice to decide whether a question of immigration to our shores is a domestic question or an international question. It is a domestic question, of course; but the Court might contend it is international in character; and

Whereas we oppose submission to the International Court of the question whether we have a right to levy tariffs and duties and to regulate any other matter of that kind such as navigation of the Panama Canal. They are purely domestic questions, and we do not favor the International Court having jurisdiction over them; and

Whereas we believe that the repeal of the amendment which reserves to the United States of America the sovereign right to determine what matters are essentially within the domestic jurisdiction of the United States would be most unwise; Now, therefore, be it

Resolved by the department executive committee, department of Louisiana, the American Legion assembled in New Orleans, La., on this 27th day of March 1960, That (1) rescission of the Connally amendment would jeopardize the Constitution of the United States and impair the powers reserved to the States and to the people; and (2) copies of this resolution shall be sent to the President of the United States, the President of the Senate of the United States, the Speaker of the House of Representatives, all members of the Louisiana delegation in the Congress, to the national commander and national executive committee of the American Legion, and to the Governor of Louisiana, the Lieutenant Governor of Louisiana, and each member of the Louisiana legislature; and be it further

Resolved, That we do hereby urge the Louisiana legislature to adopt a similar resolution.

UNICEF Stops Hunger

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. BOWLES. Mr. Speaker, no organization at work on the day-to-day challenges of world affairs deserves our gratitude and warm-hearted support than does UNICEF, the United Nations Children's Fund. From close personal experience, both inside and outside the United Nations, I have developed the most profound respect for the effective way in which UNICEF pursues its good works.

Last week here in Washington, the Friends of the United Nations Children's Fund held a meeting to illustrate the importance of new foods, including breadstuffs made from peanuts, sesame seed, cottonseed, sunflower seed, dried fish, soybean powdered "milk," and dried buffalo milk. Children from Chile, India, Indonesia, Italy, and Mexico demonstrated the foods.

Of the estimated 1 billion children in the world today, three-quarters, 750 million of them live in economically underdeveloped countries. The Chairman of the UNICEF Executive Board told the meeting: "Of all the staggering problems the children face in these developing countries, the chief one is hunger."

The Children's Fund, in collaboration with other U.N. agencies and with various technological, research, and private bodies in this country, is pressing the discovery, development, and processing of these new foodstuffs, also supplying plants and equipment to countries that are already producing edible peanut flour and soybean powdered "milk."

Among the countries presently developing or producing such foodstuffs as were sampled at this reception were: Brazil, Chile, El Salvador, Guatemala, India, Indonesia, Japan, Mexico, Moroco, Nigeria, Senegal, the Philippines, and the United States.

All these foods, it is found, have a long storage life in heat and humidity, and are regarded by expert nutritionists as "hidden" assets on the lands where they are indigenous because they have never been used to any sizable extent as human food. Some of them are in the final stages of development awaiting only confirming experiments before they can be produced in commercial quantities.

Congressional and Washington sponsors of the occasion included: Mrs. Christian Herter, Senora Dona de Sevilla-Sacasa, Mrs. Avraham Harman, Senator Theodore F. Green, Senator and Mrs. Alexander Wiley, Senator and Mrs. J. William Fulbright, Representative Frances P. Bolton, Mrs. Homer Ferguson, Mrs. Katherine B. Oettinger, Mrs. Harold H. Burton, Mrs. Francis B. Sayre, and Mrs. Bowles and myself.

The reception was held officially to honor Mrs. Guido Pantaleoni, Jr., the gifted and energetic President of the U.S. Committee for UNICEF, and Minister Dr. Felix Schnyder, chief of Switzerland's Permanent Observer Mission at the United Nations, and chairman of the UNICEF Executive Board.

Minister Schnyder's remarks at the Washington meeting last Friday, April 1, deserve a wider audience, and under leave to extend my remarks, I include his speech as follows:

SPEECH BY MINISTER FELIX SCHNYDER, CHIEF OF SWITZERLAND'S PERMANENT OBSERVER MISSION AT THE U.N. AND CHAIRMAN OF UNICEF EXECUTIVE BOARD

Let me tell you first of all how pleased I am to have the opportunity of being present here in this distinguished gathering.

It was certainly a magnificent idea to think of organizing such a meeting in Washington where leading citizens of this great country of yours join their best efforts for fostering the development of international relations.

From the point of view of the United Nations Children's Fund, it is very gratifying indeed because UNICEF needs good friends all over the world, and certainly here in Washington. I am, therefore, very happy to join in this endeavor and to say a few words about the Fund which I presently have the privilege of serving as Chairman of its Executive Board.

By way of a preface I should just like to mention the remarkable proclamation which the last, the 14th session of the General Assembly, unanimously adopted: the Declaration of the Rights of the Child, designed to insure the protection and the well-being of children of the world.

I believe that there is no other international organization which could be more suitable and better equipped than UNICEF to contribute within the framework of its activities to the ideals and aims expressed in that declaration. I am sure, looking around at you, and looking, too, at the list of distinguished friends of UNICEF who are here this afternoon, that there is nothing new that I can tell you about the history or the general work of the Fund.

You probably all know that most of the children of the world face a short life, a sick life, and a hungry life; that of the estimated 1 billion children in the world today, about three-quarters or 750 million live in economically underdeveloped areas. In these countries, in four cases out of five, the parents of these children rarely earn more than $100 a year.

Of all the staggering problems the children face in these developing countries, the chief one is hunger. It is not always because there isn't enough food to go around; it is also because people in those countries either don't produce the right kind of food, or don't know what makes a healthy diet, especially for very young children, even though the ingredients are often readily available right in their very midst, underneath their own feet, in the country's own soil or growing on trees or bushes that they pass by every day.

In addition, traditional beliefs, social or religious taboos seriously restrict the diet in many parts of the world. So does lack of knowledge and education about food, nutrition, and diets. And these restrictions bear heaviest on children. All this is, of course, quite an old situation. But there is something new about it these days—the fact that something is being done to try and remedy this situation.

If you look around this room you will see one of the ways in which UNICEF is trying to help, UNICEF, of course, in collaboration as always with other members of the U.N. family, such as the World Health Organization or the Food and Agriculture Organization, and in particular, with various U.S. technological and private bodies in this country. Before sitting down you all had an opportunity to look at and taste some of the hitherto undeveloped rich ingredients that can be added to children's food. The increasing discovery and development of these foodstuffs such as flour made from peanuts, from cottonseed, from sesame, from sunflower seed, and even from fish, is of tremendous importance. All these new foods that I have mentioned are in a way a form of unmined wealth present in most of the underdeveloped countries whose children are the principal victims of hunger or malnutrition.

But some of this unminded wealth has already been tapped with good results. For instance, soybean milk has been produced in Indonesia for the past couple of years. UNICEF this month allocated more funds to help enlarge the output of a plant to make this soy a product that it helped originally to build. The Board also approved funds to help a plant in India to tun out edible peanut flour. There are laboratories and plants with people busily working to produce and experiment with flours all over the world, and nearly all with help from UNICEF. Places where this work is going on, for instance, include Mexico, Guatemala, El Salvador, and elsewhere in Central America; Brazil, Chile, and other countries of South America; in Africa, Nigeria; Senegal, Morocco, and territories of East Africa; in India; in Indonesia; in Japan; in the Philippines, where they are even experimenting with coconuts—and in other countries in Asia.

It's all very well discovering and producing all these excellent supplementary and substitute foods, but UNICEF also comes into the task of generating individual as well as community interest in better nutrition needs. Of actually getting these things accepted and fed to children. This calls for a carefully thought out program of education to be adapted to different local circumstances and different educational levels. This is an important part of UNICEF's expanded nutrition program. I wanted particularly to say these few words about our work in this field of nutrition because of the special attraction that we have here today. For I cannot stress too much, and I am sure you will agree, that it is in this field that lies very much a solution to some of the problems that must arise from the enormous growth in population in parts of the world.

What UNICEF seeks to do in cooperation with governments is to make certain that when a child is protected in infancy from diseases and from other dangers that can cause it to grow up a weakling, stunted, crippled or in some way unfit, this child can have every chance to develop into a healthy and productive individual able to play his economic part in the development of his community and of his country.

And, of course, it is not only in our nutrition and nutrition education projects that UNICEF is helping to bring this about. For the past 10 years since the UN General Assembly asked us to go in for programs of long-range benefit to children, we have been helping governments build up and extend their network of child care clinics.

In concluding, it is difficult not to refer to the importance of more adequate financing of UNICEF. Our work, as you all know, is basically dependent upon annual voluntary contributions by governments which make up some 90 percent of our income. Many of them, including the United States, which has pledged a contribution of $12 million for 1960, have so far been generous. It is clear, however, that there are far larger opportunities for effective use of aid to children through UNICEF.

UNICEF is still confronted with large unmet needs of children. UNICEF, as a result of the more comprehensive planning which governments are now undertaking for their people, is also confronted with larger opportunities for effective use of its aid.

UNICEF, given increased resources could not only press forward with its present endeavors, but celebrate each successive year with new and better ways of helping the world's children.

The Meaning of Money

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1960

Mr. BOSCH. Mr. Speaker, in 1957 Random House published "Atlas Shrugged," by the noted author, Miss Ayn Rand. In this fine novel is a superb exposition of the values and virtues of the American private enterprise system. This section has been reprinted by permission of Random House, Inc.

Under leave to extend my remarks, I include the section of "Atlas Shrugged," to which I have referred, and commend it to the attention of my colleagues:

"So you think that money is the root of all evil?" said Francisco d'Anconia. "Have you ever asked what is the root of money? Money is a tool of exchange, which can't exist unless there are goods produced and men able to produce them. Money is the material shape of the principle that men who wish to deal with one another must deal by trade and give value for value. Money is not the tool of the moochers, who claim your product by tears, or by the looters, who take it from you by force. Money is made possible only by the men who produce. Is this what you consider evil?

"When you accept money in payment for your effort, you do so only on the conviction that you will exchange it for the product of the effort of others. It is not the moochers or the looters who give value to money. Not an ocean of tears nor all the guns in the world can transform those pieces of paper in your wallet into the bread you will need to survive tomorrow. Those pieces of paper, which should have been gold, are a token of honor—your claim upon the energy of the men who produce. You wallet is your statement of hope that somewhere in the world around you there are men who will not default on that moral principle which is the root of money. Is this what you consider evil?

"Have you ever looked for the root of production? Take a look at an electric generator and dare tell yourself that it was created by the muscular effort of unthinking brutes. Try to grow a seed of wheat without the knowledge left to you by men who had to discover it for the first time. Try to obtain your food by means of nothing by physical motions—and you'll learn that man's mind is the root of all the goods produced and of all the wealth that has ever existed on earth.

"But you say that money is made by the strong at the expense of the weak? What strength do you mean? It is not the strength of guns or muscles. Wealth is the product of man's capacity to think. Then is money made by the man who invents a motor at the expense of those who did not invent it? Is money made by the intelligent at the expense of the fools? By the able at the expense of the incompetent? By the ambitious at the expense of the lazy? Money is made—before it can be looted or mooched—made by the effort of every honest man, each to the extent of his ability. An honest man is one who knows that he can't consume more than he has produced.

"To trade by means of money is the code of the men of good will. Money rests on the axiom that every man is the owner of his mind and his effort. Money allows no power to prescribe the value of your effort except the voluntary choice of the man who is willing to trade you his effort in return. Money permits you to obtain for your goods and your labor that which they are worth to the men who buy them, but no more. Money permits no deals except those to mutual benefit by the unforced judgment of the traders. Money demands of you the recognition that men must work for their own benefit, not for their own injury, for their gain, not their loss—the recognition that they are not beasts of burden, born to carry the weight of your misery—that you must offer them values, not wounds—that the common bond among men is not the ex-

change of suffering, but the exchange of goods. Money demands that you sell, not your weakness to men's stupidity, but your talent to their reason; it demands that you buy, not the shoddist they offer, but the best that your money can find. And when men live by trade—with reason, not force, as their final arbiter—it is the best product that wins, the best performance, the man of best judgment and highest ability—and the degree of a man's productiveness is the degree of his reward. This is the code of existence whose tool and symbol is money. Is this what you consider evil?

"But money is only a tool. It will take you wherever you wish, but it will not replace you as the driver. It will give you the means for the satisfaction of your desires, but it will not provide you with desires. Money is the scourge of the men who attempt to reverse the law of casuality—the men who seek to replace the mind by seizing the products of the mind.

"Money will not purchase happiness for the man who has no concept of what he wants; money will not give him a code of values, if he's evaded the knowledge of what to value, and it will not provide him with a purpose, if he's evaded the choice of what to seek. Money will not buy intelligence for the fool, or admiration for the coward, or respect for the incompetent. The man who attempts to purchase the brains of his superiors to serve him, with his money replacing his judgment, ends up by becoming the victim of his inferiors. The men of intelligence desert him, but the cheats and the frauds come flocking to him, drawn by a law which he has not discovered: that no man may be smaller than his money. Is this the reason why you call it evil?

"Only the man who does not need it, is fit to inherit wealth—the man who would make his own fortune no matter where he started. If an heir is equal to his money, it serves him; if not, it destroys him. But you look on and you cry that money corrupted him. Did it? Or did he corrupt his money? Do not envy a worthless heir; his wealth is not yours and you would have done no better with it. Do not think that it should have been distributed among you; loading the world with 50 parasites instead of 1 would not bring back the dead virtue which was the fortune. Money is a living power that dies without its root. Money will not serve the mind that cannot match it. Is this the reason why you call it evil?

"Money is your means of survival. The verdict you pronounce upon the source of your livelihood is the verdict you pronounce upon your life. If the source is corrupt, you have damned your own existence. Did you get your money by fraud? By pandering to men's vices or men's stupidity? By catering to fools, in the hope of getting more than your ability deserves? By lowering your standards? By doing work you despise for purchasers you scorn? If so, then your money will not give you a moment's or a penny's worth of joy. Then all the things you buy will become, not a tribute to you, but a reproach; not an achievement, but a reminder of shame. Then you'll scream that money is evil. Evil, because it would not pinch-hit for your self-respect? Evil, because it would not let you enjoy your depravity? Is this the root of your hatred of money?

"Money will always remain an effect and refuse to replace you as the cause. Money is the product of virtue, but it will not give you virtue and it will not redeem your vices. Money will not give you the unearned, neither in matter nor in spirit. Is this the root of your hatred of money?

"Or did you say it's the love of money that's the root of all evil? To love a thing is to know and love its nature. To love money is to know and love the fact that money is the creation of the best power within you, and your passkey to trade your effort for the effort of the best among men. It's the person who would sell his soul for a nickel, who is loudest in proclaiming his hatred of money—and he has good reason to hate it. The lovers of money are willing to work for it. They know the are able to deserve it.

"Let me give you a tip on a clue to men's characters: the man who damns money has obtained it dishonorably; the man who respects it has earned it.

"Run for your life from any man who tells you that money is evil. That sentence is the leper's bell of an approaching looter. So long as men live together on earth and need means to deal with one another—their only substitute, if they abandon money, is the muzzle of a gun.

"But money demands of you the highest virtues, if you wish to make it or to keep it. Men who have no courage, pride, or self-esteem, men who have no moral sense of their right to their money and are not willing to defend it as they defend their life, men who apologize for being rich—will not remain rich for long. They are the natural bait for the swarms of looters that stay under rocks for centuries, but come crawling out at the first smell of a man who begs to be forgiven for the guilt of owning wealth. They will hasten to relieve him of the guilt—and of his life, as he deserves.

"Then you will see the rise of the men of the double standard—the men who live by force, yet count on those who live by trade to create the value of their looted money—the men who are the hitchhikers of virtue. In a moral society, there are the criminals, and the statutes are written to protect you against them. But when a society establishes criminals-by-right and looters-by-law—men who use force to seize the wealth of disarmed victims—then money becomes its creators' avenger. Such looters believe it safe to rob defenseless men, once they've passed a law to disarm them. But their loot becomes the magnet for other looters, who get in from them as they got it. Then the race goes not to the ablest at production, but to those most ruthless at brutality. When force is the standard, the murderer wins over the pickpocket. And then that society vanishes, in a spread of ruins and slaughter.

"Do you wish to know whether that day is coming? Watch money. Money is the barometer of a society's virtue. When you see that trading is done, not by consent, but by compulsion—when you see that in order to produce, you need to obtain permission from men who produce nothing—when you see that money is flowing to those who deal, not in goods, but in favors—when you see that men get richer by graft and by pull than by work, and your laws don't protect you against them, but protect them against you—when you see corruption being rewarded and honesty becoming a self-sacrifice—you may know that your society is doomed. Money is so noble a medium that it does not compete with guns and it does not make terms with brutality. It will not permit a country to survive as half property, half loot.

"Whenever destroyers appear among men, they start by destroying money, for money is men's protection and the base of a moral existence. Destroyers seize gold and leave to its owners a counterfeit pile of paper. This kills all objective standards and delivers men into the arbitrary power of an arbitrary setter of values. Gold has an objective value, an equivalent of wealth produced. Paper is a mortgage on wealth that does not exist, backed by a gun aimed at those who are expected to produce it. Paper is a check drawn by legal looters upon an account which is not theirs: upon the virtue of the victims. Watch for the day when it bounces, marked: 'Account overdrawn.'

"When you have made evil the means of survival, do not expect men to remain good. Do not expect them to stay moral and lose their lives for the purpose of becoming the fodder of the immoral. Do not expect them to produce, when production is punished and looting rewarded. Do not ask, 'Who is destroying the world?' You are.

"You stand in the midst of the greatest achievements of the greatest productive civilization and you wonder why it's crumbling around you, while you're damning its life-blood—money. You look upon money as the savages did before you, and you wonder why the jungle is creeping back to the edge of your cities. Throughout men's history, money was always seized by looters of one brand or another, whose names changed, but whose method remained the same: to seize wealth by force and to keep producers bound, demeaned, defamed, deprived of honor. That phrase about the evil of money, which you mouth with such righteous recklessness, comes from a time when wealth was produced by the labor of slaves—slaves who repeated the motions once discovered by somebody's mind and left unimproved for centuries. So long as production was ruled by force, and wealth was obtained by conquest, there was little to conquer. Yet through all the centuries of stagnation and starvation, men exalted the looters, as aristocrats of the sword, as aristocrats of birth, as aristocrats of the bureau, and despised the producers, as slaves, as traders, as shopkeepers—as industrialists.

"To the glory of mankind, there was, for the first and only time in history, a country of money—and I have no higher, more reverent tribute to pay to America, for this means: a country of reason, justice, freedom, production, achievement. For the first time, man's mind and money were set free, and there were no fortunes-by-conquest, but only fortunes-by-work, and instead of swordsmen and slaves, there appeared the real maker of wealth, the greatest worker, the highest type of human being—the self-made man—the American industrialist.

"If you ask me to name the proudest distinction of Americans, I would choose—because it contains all the others—the fact that they were the people who created the phrase 'to make money.' No other language or nation had ever used these words before; men had always thought of wealth as a static quantity—to be seized, begged, inherited, shared, looted, or obtained as a favor. Americans were the first to understand that wealth has to be created. The words 'to make money' hold the essence of human morality.

"Yet these were the words for which Americans were denounced by the rotted cultures of the looters' continents. Now the looters' credo has brought you to regard your proudest achievements as a hallmark of shame, your prosperity as guilt, your greatest men, the industrialists, as blackguards, and your magnificent factories as the product and property of muscular labor, the labor of whip-driven slaves, like the pyramids of Egypt. The rotter who simpers that he sees no difference between the power of the dollar and the power of the whip, ought to learn the difference on his own hide—as, I think, he will.

"Until and unless you discover that money is the root of all good, you ask for your own destruction. When money ceases to be the tool by which men deal with one another, then men become the tools of men. Blood, whips and guns—or dollars. Take your choice—there is no other—and your time is running out."

Vigorous Road Chief: Dwight R. G. Palmer

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1960

Mr. CANFIELD. Mr. Speaker, I have long been impressed by the wholesome philosophy and sincere dedication of our New Jersey State Highway Commissioner, Mr. Dwight R. G. Palmer, and I was pleased immeasurably to read in today's New York Times the following profile story of this great American:

VIGOROUS ROAD CHIEF: DWIGHT R. G. PALMER

TRENTON, April 4.—"My philosophy has always been to play at my work and work at my play," Dwight R. G. Palmer says. He really means that work and play have always been synonymous in his thoughts.

A glimpse at his career provides ample evidence of this. Since the turn of the century, when he was knee deep in water from dawn till dusk snaking cypress and pine logs through Louisiana's swamps with the aide of a mule team, he has found little desire or need for hobbies or holidays.

When called upon to make an exhaustive study of the commuter transit problem and come up with a solution, the 73-year-old State highway commissioner accepted as though it were a minor chore. The result: a report made public today.

He tackled the job the way he had his job in the logging camp. Eighteen months after entering the camp he was its manager. Then with but a diploma from a high school in St. Louis, he went on to become a successful salesman, learned every facet of the cable and wire business and rose to become president and board chairman of the General Cable Corp., largest concern of its type in the world.

Through skillful mergers he made the cable concern predominant in its sphere. He retired after wiping out its $13,500,000 indebtedness, increasing by $16 million its earned surplus and putting its common stock on a dividend basis for the first time.

His vacations had always been brief and far between; his work day, 14 to 18 hours. They still are.

Six feet tall, he weighs 185 pounds. He is a fastidious dresser with a polished, military mien. Though his voice is soft, Mr. Palmer speaks with unmistakable authority and seems able to convince an audience that he must be right even when he isn't.

DEATH ON COFFEE BREAKS

Efficiency is an obsession with him. And State employees have felt his ban on coffee breaks, petty payola, railroad passes and the indiscriminate use of State autos.

Since becoming highway commissioner in 1954 he has conceived and directed one of the most ambitious road building programs in New Jersey's history. He has reorganized the highway department and uncovered malpractices and reorganized the Delaware River Toll Bridge Commission.

At 7:30 a.m. Mr. Palmer is at the wheel of his convertible en route from Short Hills to Trenton. For 9 hours after reaching his desk he is embroiled in conferences, paperwork, poring over maps and making decisions that often involve millions of dollars.

His lunch is usually consumed in the heat of discussion. At home in the evening he is again involved in a maze of paperwork. Weekends he drives about the State to view conditions he may have to deal with in the coming week. He sleeps no longer than 6 hours a night and appears to thrive on the arduous schedule.

His friends know that he delights in improvising humorous, satirical, and philosophical verse and reading it to anyone who will listen.

But none of his friends—or foes—knows what his middle initials stand for.

"They stand for legitimate family names," he says, "but I have never used them, and I will not reveal what they represent."

Mr. Palmer long has been associated with the National Conference of Christians and Jews and the National Urban League. President Harry S. Truman appointed him to the Committee on Equality of Treatment and Opportunity in the Armed Services and named him chairman of the President's Committee on Government Contract Compliance.

Mr. Palmer married the former Helen Banister in 1916. They have a son, 3 daughters, and 13 grandchildren.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

Ike Uninformed? Record Disproves It

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 6, 1960

Mr. MUNDT. Mr. President, the Senate Subcommittee on National Policy Machinery, of which I am the ranking Republican member, has been stimulating public interest and constructive thinking on the problems involved in recruiting and utilizing the best men and the best methods for coordinating the great strengths of America on the all-important business of winning the cold war and maintaining our national defense posture and policies sufficiently well to discourage the likelihood of a shooting war being launched against us by imperialistic communism.

Many editorials and columns have been written about the work of our committee and the evidence accumulating from our public hearings. The discussion has been penetrating and productive. Nothing is ever so good in this world than it cannot stand improvement. Our subcommittee will continue its attempts to be useful in gathering and relaying information which we hope will result in steadily improving methods of employing America's resources and strength to protect the peace and to provide our world leadership with the tools and talents required to encourage other free peoples to hold fast to freedom and to exert themselves to protect it.

An interesting insight on how President Eisenhower handles some of the functions of his office in this whole theater of responsibilities was recently written by Phil G. Goulding of the Cleveland Plain Dealer. For the information of the Congress and the country I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Cleveland Plain Dealer, Mar. 25, 1960]

IKE UNINFORMED? RECORD DISPUTES IT

(By Phil G. Goulding)

WASHINGTON.—At 8:59 yesterday morning President Eisenhower left his desk, crossed through the secretarial office of Ann Whitman and walked into the Cabinet room to the weekly meeting of the National Security Council.

This was the 326th session of the NSC in the present administration.

It was the 296th over which Mr. Eisenhower has presided.

The statistics are without meaning, except as applied to current charges that the Chief Executive is not informed on major policy issues and that he is a captive of a staff system.

Such allegations began in earnest after recent Capitol Hill testimony by Robert A. Lovett—a lifetime Republican, a Wall Street banker, a 30-year friend of the President and a man of national prestige and respect. He was both Under Secretary of State and Secretary of Defense for Harry S. Truman.

PRESIDENT AGGRAVATED

Mr. Eisenhower has been aggravated and his top aides infuriated by what they think were distortions and misinterpretations of the Lovett testimony. The President made one sharp reference to this on his South American trip. He had hoped to discuss the subject more thoroughly at his last news conference, but reporters did not question him about it.

In public and secret testimony, the latter since released in full, Lovett made these points:

The NSC cannot function properly in a mass atmosphere of many members and it should confine itself to few major policy issues.

It is a disservice to the President if these issues are not debated in front of him. The President must be informed by his aides, not protected by them. His load is not lightened if he is offered agreed-upon papers requiring only his approval or rejection.

NOTES 8 YEARS OLD

Lovett was testifying on the subject of national policy machinery. He was not talking about Mr. Eisenhower, Mr. Truman, or Mr. Lincoln. The questions, fairly put by the Democratic chairman of the subcommittee, and Lovett's answers, were geared to the philosophy of Government.

Earlier in his testimony, in fact, Lovett emphasized that he was speaking from notes made 8 years ago. It should therefore be clear, he said, "that none of these observations is intended to be critical of any individuals or of operational decisions."

Yet many accounts of Lovett's appearance applied his generalities to Mr. Eisenhower's particular case. On the floor of the Senate, for example, the chairman of the foreign relations committee said this:

"In executive session, Mr. Lovett indicated his belief that President Eisenhower leads a dangerously sheltered life as Chief Executive of the Nation. For, he said, the National Security Council, 'protects' Mr. Eisenhower from the debates that precede policy decisions."

The record shows that the witness said no such thing.

Completely apart from the Lovett philosophy or the misinterpretations of his remarks, here are the facts on how the NSC has operated under the Eisenhower administration:

Its statutory members are the President, Vice President, Secretaries of State and Defense and Director of Civil and Defense Mobilization. Other participating members usually include the Chairman of the Atomic Energy Commission, the Treasury Secretary and Budget Director, the Chairman of the Joint Chiefs of Staff and the President's Scientific Adviser.

Meetings are attended by 10 to 12 persons, not 75 as has been written. (There are rare exceptions for special briefings rather than routine NSC sessions. One of these was the presentation of the Gaither committee defense report. Sixty-nine were present, including 29 committee members and a second echelon of staff.)

Issues are confined to major policy matters. The NSC does not deal in tactics. It decided, for example, that U.S. policy toward Cuba should be one of "restraint and forbearance." It did not determine the tactics of when the Ambassador should be recalled for consultation.

IKE JOINS IN DEBATES

President Eisenhower is not offered policies which have been agreed upon in advance. Sixty-six percent of all papers prepared by the planning board for the NSC have had "splits," or differences of opinion. These splits are formally presented, all sides are given and each man speaks his piece.

The President joins in these debates. He sometimes hands down a decision on the policy at the meetings, sometimes makes it later after restudying the papers and sometimes suggests that the matter be put on the agenda for the next weekly meeting.

Each session is opened by a report from the Central Intelligence Director.

Mr. Eisenhower has attended 90 percent of NSC meetings during his Presidency. President Truman's participation was 50-odd percent. This comparison is unfair, however, since Mr. Truman was as regular an attendant after the outbreak of the Korean war.

National Library Week

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. BREEDING. Mr. Speaker, I wish to call attention to the fact that the Nation is this week observing National Library Week.

I would like to take this opportunity to express my high regards for the thousands of dedicated men and women throughout the country who are working tirelessly to bring the miracle of the printed word to the American people.

The public library and the librarian has played an outstanding role in the history of our great Nation. The public library has brought within the reach of everyone the great books of the world. It has opened new doors to knowledge for millions of people.

All of us are inclined to take our library system and the men and women who operate them for granted. It is fitting that during this 1 week of the year we all pause to express our deep appreciation for our library system and the many benefits it has brought to the Nation.

During this week, I hope everyone will have an opportunity to visit their library and express to the library staff their appreciation for the fine job they are doing.

Mr. Speaker, I wish to include in my remarks at this point a letter from the Hutchinson, Kans., Library regarding the observance of National Library Week:

HUTCHINSON PUBLIC LIBRARY,
Hutchinson, Kans., March 28, 1960.
Hon. J. FLOYD BREEDING,
Congressman, Fifth District,
House of Representatives,
Washington, D.C.

DEAR SIR: During the week of April 3–9, National Library Week will be observed at your Hutchinson Public Library as a part of a nationwide program sponsored by the National Book Committee, Inc., and the American Library Association.

The aim of National Library Week is a "better-read, better-informed America." It will provide a focal point for many activities designed to promote reading of books, magazines, and newspapers among children, youth, and adults.

In the past years National Library Week succeeded in arousing a sense of personal need as well as a deeper responsibility for the status of reading in the community and in the Nation. The week resulted in new library circulation records, new gains in registration, and many new friends of books, reading, and libraries. More than 5,000 cities, towns, and villages participated, and public officials were a very important part of the success of this observance.

Your Hutchinson Public Library is one of the city's proudest possessions, and especially during National Library Week, or any other occasion, we want to extend a very cordial invitation for you and your family to visit us.

Please remember that we at the library are always at your service, and we want to cooperate fully in the future development of our city, county, and State.

Very sincerely yours,

CARLOS CUITINO.

Tribute to Charles J. Bloch

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 6, 1960

Mr. TALMADGE. Indicative of the high esteem in which the people of Geogia hold Hon. Charles J. Bloch of Macon, Ga., is the editorial carried by the Macon (Ga.) Telegraph and News in its issue of Sunday, April 3, entitled "Mr. Bloch and Senate Committee." Georgians respect and admire Mr. Bloch not only for his outstanding and unselfish public service on the State level but also for the honor and recognition which he has brought to our State as an eloquent champion of States rights and constitutional government on the national level. I ask unanimous consent that the text of this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. BLOCH AND SENATE COMMITTEE

Macon Attorney Charles J. Bloch is no stranger to congressional hearing chambers in Washington. His voice has been heard there many times, speaking out eloquently and with legalistic logic, in support of the principle of States rights.

In his most recent appearance as a witness before the Senate Judiciary Committee, Mr. Bloch has once again impressed his listeners with his incisive knowledge of the Constitution and his rational reasoning against the civil rights bill now before the Senate.

Whether Mr. Bloch changed any senatorial minds remains to be seen, but his authoritative testimony cannot help but bring added understanding for the South's viewpoint.

The remarks of Senator SAM ERVIN of North Carolina, a member of the Judiciary Committee, at the conclusion of Mr. Bloch's argument attest the caliber of advocate the doctrine of States rights has in the Macon attorney.

"I have been living with lawyers all my life," Senator ERVIN said, "because my father was a member of the North Carolina bar, and I can say this without attempting to be flattering, but simply as a matter of truth: I have never been privileged to know a finer lawyer than yourself, and I can count on the fingers of one hand the lawyers, all the lawyers I have known that I think approach you."

Coming from a former justice of the Supreme Court of North Carolina, that's high praise.

Little Emmaus and a Flag Defeat a Left-wing Invasion

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Evening News, March 30, 1960:

LITTLE EMMAUS AND A FLAG DEFEAT A LEFT-WING INVASION

(By Victor Riesel)

Some of the boys rallied around the flag a few Saturdays ago and beat back their left-wing enemies. Just because the battle of the flag was heard only in the Owl's Home Hall in little Emmaus, Pa. (population 7,780), is no reason for it to lose its place in history. Emmaus isn't Valley Forge, but the issue is the same. And let those who think this is flag waving make the most of it.

It all began early on the afternoon of Saturday, February 20, in the Owl's Home Hall to which the pro-Soviet line United Electrical Workers Union (UE) had summoned its people from that section of Pennsylvania and New Jersey and Maryland to a mass rally.

The meeting was called in support of the UE's drive to take the plants of Air Products, Inc., from the union which had the corporation under contract. This latter union is the AFL–CIO International Association of Machinists (IAM).

For 4 peaceful and prosperous years—for management and labor—the IAM has represented the workers in the corporation's plants in Emmaus, Allentown, and Traxlertown.

Now, on the insistence of the UE, which more than once has had some of its important leaders accused by congressional witnesses of being Communists, there was to be an election in these plants. The date was set for February 25. The UE then rented the Owl's Home Hall for a razzle-dazzle windup campaign to convince the workers to vote them in.

About 100 folk attended the monster rally. Of this outpouring, 15 were members of the rival IAM. With the multitude assembled, the left-wing chairman took the platform. He opened the meeting—or at least he thought he did.

But one of the crowd was a machinist who was a comparatively new citizen. His name is Robert (French) Merbah. He had come here from France. There, during the big war, Frenchy had been an underground fighter against the Nazis. They had beaten him and left him for dead. He liked his freedom here. He admired the flag under which he now lived and to which he had sworn allegiance. He got up. He asked the chairman why the meeting had not been opened with a salute to the flag.

The chairman sneered.

He said in this union of his they don't salute the flag. No one can make him salute the flag. He had been saluting the flag under forced draft since he went to public school and it had done no one any good, he asserted. There was to be no saluting of the flag in this district.

The good people of Emmaus couldn't quite understand that. In addition to paying homage to the symbol of their land, they couldn't quite see why their right to an avowal of allegiance could be denied by anyone. Loudly they argued the point for almost an hour.

Finally, the UE chairman retreated. The audience saluted the flag. The meeting was desultory from there on.

The following Monday the Machinists Association issued a leaflet telling the story to their fellow workers in the plants. The throwaway said, "The UE shows its true colors. Air Products, Inc., workers shocked at arrogant outburst. Why not open meeting with pledge of allegiance?"

After that, every piece of IAM literature had a sticker in the corner—a little U.S. flag. When the National Labor Relations Board election count was in, the tally was 326 for the IAM to 93 votes for the UE.

The UE had lost another of its legal efforts to move in on air products and electronic equipment plants. Since these factories already are competently covered by authentic union contracts, the costs to the Government of the IUE campaigns mount up.

But it is all worth it. It's always worth it when the people—as did the good folk of Emmaus—prove they won't let themselves be pushed around.

Standstill at Geneva

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 6, 1960

Mr. WILEY. Mr. President, around the globe, one of the major challenges that continues to confront all peoples and nations is finding a way to reduce tensions and conflicts of interest and prevent—if at all possible—a third world war.

A major task, of course, is to find a way to reduce armaments. The purpose, of course, would be twofold: First, to reduce the risk of war; and, second, to lift the heavy burden of costly armaments programs from the backs of people all over the earth.

At Geneva, the Western Powers have been striving diligently—and realistically, I believe—to get agreement on proposals for step-by-step reductions in armaments.

Unfortunately, the Communists continue to put forward the old ruses—be-

hind deceptive facades—of getting the Western Powers committed to reduction of armaments. At the same time, they, themselves, would be free—if deceptively so—to possibly develop a secret striking power that could be utilized to attempt to intimidate, or overpower, the West.

As we know, the major obstructionist Communist tactic has been that of refusing to agree to any realistic method of inspection. Without such safeguards, the history of Communist treaty-breaking provides sufficient evidence to conclude that any agreement would be worthless and futile—more than that, dangerous.

The Communists also have raised the issue of U.S. bases around the periphery of the Communist bloc.

We can understand, of course, their interest in reducing our capability for preventing Communist aggression—and providing them greater opportunity to play power politics.

However, their demands for evacuating our bases, I believe, would receive more favorable consideration if the Soviets offered to release the so-called satellite nations from the iron grip of Moscow, pull out troops, and allow these nations the right of self-determination; and, in addition, if they offered to encourage their "partner in conspiracy," Red China, to relinquish its tyrannical hold on Tibet.

From long years of experience, however, we have learned that deceptive tactics are part and parcel of the Communist policy designed to make the road to realistic disarmament as difficult as possible. If possible, they would lure the Western Powers into the trap of disarming, while they, themselves, would be free to further develop military prowess to use for support of Communist policy, for blackmail, and for outright aggression.

We can expect, of course, that the Communists will continue to follow these tactics. We must be careful not to fall prey to them.

Realizing the great issues involved, however, we must patiently—but firmly—continue our efforts to find solid grounds for safeguarded agreements that will not only lead toward ultimate reduction of armaments, but also, the lessening of conflicts in other fields of interest.

Yesterday, the New York Times published an informative editorial on the situation entitled "Standstill at Geneva." Reflecting on this very serious world problem, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STANDSTILL AT GENEVA

At Geneva yesterday Soviet Delegate Zorin rejected the Western plan for a balanced and controlled step-by-step approach to general disarmament. He also ruled out any progress at the Conference unless the West first accepts as a basis of negotiation Premier Khrushchev's plan for total disarmament in 4 years—this to be accomplished prior to effective controls and without any international police to keep the peace. Mr. Zorin continued to pay lipservice to controls, but refused to answer Western queries as to what he meant by them; and by accusing the West of trying to avoid disarmament by "endless talk" on control he indicated that once the Soviets obtain a blank check on Western disarmament they would do the "endless talking" on control without making it effective.

The Soviet delegate conceded that even the Khrushchev plan provides for the alternative of partial disarmament measures. But he served notice that he would consent to talk about such measures only if the West first puts itself on record as rejecting total disarmament, envisaged in the Western plan as the final goal.

In keeping with this stand, but also for another propaganda purpose, the Soviet delegate also rejected the American proposal for an immediate and easily controlled ban on nuclear space vehicles unless the United States simultaneously abandons all of its oversea bases—that is, gets out of Europe, Asia, and Africa. He charged that a ban on nuclear space vehicles would deprive the Soviets of weapons in which they were "superior." And he distorted the issue by ignoring the fact that, while the Soviets hold all Eastern Europe as a military base, the American bases abroad are there under collective defense agreements with the host countries, for their own protection as well as ours, and that they are abandoned whenever the host country believes that it can get along without them, as in the case of Morocco.

All this may be merely preparation for the summit meeting. But it has dimmed the hope of any early progress at Geneva.

Importation of Surplus Foreign Military Arms

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. BERRY. Mr. Speaker, I have a letter from a State official in the State of South Dakota which may be of interest to some Members of Congress who are a little bit concerned about the future of the United States and what we are doing by continually putting down tariffs, by continually increasing imports of all kinds, by floating along on cloud 57 and paying no attention to the storm that is blowing up from the rear. That storm, Mr. Speaker, is foreign imports.

The problem of rifle imports and what it is doing to Pittman-Robertson funds is only a drop in the bucket to what imports are doing to the mineral industry, to the farming industry, and to the manufacturing industry in America generally. It is only a drop in the bucket to what imports are doing to undermine employment, but the American people may not wake up until it is too late.

The letter from Harry Woodward, director of the South Dakota Department of Game, Fish, and Parks, reads in part as follows:

I am writing to you in behalf of the South Dakota Game, Fish, and Parks Commission and the sportsmen of South Dakota who are concerned about our important wildlife restoration program which is financed through Pittman-Robertson Federal aid funds. It is important that certain facts concerning the future of the Pittman-Robertson program be brought to your attention, namely the importation of surplus foreign military arms.

When the first quarter of fiscal year 1959 figures on P-R collections were released there was a decrease of 26.87 percent over a comparable period during the past year. However, nationwide figures on hunting license sales indicated only a slight decline. In looking for an explanation, one reason advanced is that the importation of surplus foreign military arms is increasing. As an example, in the first 9 months of 1958, 131,000 foreign rifles were imported. Of the 131,000 rifles imported, 111,000 were valued at less than $5. The ad valorem tax for tariff on these guns is negligible. This tax or tariff is, of course, not an excise tax and thus not credited to the P-R program. The cumulative effects of selling low-priced foreign arms which replace American manufactured products reduces or eliminates the total excise taxes collected. The funds set apart for financing the Federal aid in wildlife restoration programs will therefore be expected to decline as the sale of these surplus foreign arms increases.

More Support for Fort Wood

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Wednesday, April 6, 1960

Mr. HENNINGS. Mr. President, the Rolla Daily News, Rolla, Mo., carried an editorial recently concerning Fort Leonard Wood, Mo. Because of the importance of this military post, I believe this editorial should be brought to the attention of all Members of the Congress. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Rolla Daily News, Mar. 11, 1960]

MORE SUPPORT FOR FORT WOOD

More and more individuals and newspapers are recognizing the growing importance of Fort Leonard Wood in our defense system, and are encouraging the "permanentizing" program underway there.

There are those of us who fought to make Fort Leonard Wood a permanent facility, and now that the multimillion-dollar project is underway, it is good to observe the wide acceptance of that fact.

Hundreds of our families serving the defense program are now housed in comfortable, modern quarters (the Capehart houses) and more are yet to be. Some new barracks have been built and more are to be constructed. The long-sought 300-bed hospital is now an item before Congress.

High military authorities continue to speak highly of Fort Leonard Wood and back up their opinions with action to make the nearby facility the principal engineering establishment in the Nation. The pleadings and predictions of this newspaper seem nearer toward coming true.

An interesting editorial observation was made this week by the St. Louis Globe-Democrat. It read:

"Every month, nearly 6,000 new Army recruits wind up at Fort Leonard Wood to

get their first taste of military life. This huge post is excellent for training purposes, but a rugged experience for the raw recruit.

"Many of the buildings are temporary, wooden relics of World War II. That includes the hospital and the barracks. As Maj. Gen. Lyle E. Seeman, Army Director of Installations, told the House Armed Services Committee, the barracks are unpainted inside, stained with soot from coal stoves and frigid in cold weather.

"'During the winter months, when the temperature falls as low as zero, it is extremely difficult to maintain a reasonable temperature in the barracks,' the general told the committee.

"The Army would like to spend some $9,087,000 to build a new hospital, two new barracks for enlisted men and a new chapel.

"These investments would represent money well spent if only to give a better impression of the Army to incoming recruits.

"The Defense Department can save considerable sums if it cuts down the rapid turnover in enlisted men and persuades more of them to make a career of the Army. The way to do it is provide them with decent living conditions.

"Fort Leonard Wood is one of the best military training centers in the United States. We hope that the House will permit the Army to equip the post in the way its importance deserves."

Saline Water Program Is Progressing Rapidly

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. WESTLAND. Mr. Speaker, as a member of the House Committee on Interior and Insular Affairs, I have watched the progress of the Office of Saline Water with great interest and I am pleased with its efforts. There are, however, those who have expressed disappointment at the progress of the saline water conversion program. This disappointment is based on a misconception of the facts, because the program is progressing rather rapidly.

Public Law 85–883 became effective September 2, 1958. In essence it called for the establishing of five different processes at 3-month intervals beginning March 2, 1960.

The processes have been selected and were announced on or ahead of the schedule established by the Congress. The law further requires that the construction of the demonstration plants were subject to the following conditions:

Three were to be for the conversion of sea water. Two plants so designed must have a capacity of not less than 1 million gallons a day. In addition not less than two plants were required for treatment of brackish water and one of these must have a capacity of not less than 250,000 gallons a day.

Mr. Speaker, bids will be opened for the first plant in May of this year. This plant will be constructed at Freeport, Tex. Bids for the second and third plants in all probability will be opened in July if appropriations are available. The specifications and designs are being studied for the fourth plant at Roswell, N. Mex.

The Site Selection Board will meet April 28 and 29 to determine the location of the fifth plant, which will be a freezing process on the east coast.

Dr. A. L. Miller, Director of the Office of Saline Water, has informed me that a pilot plant at Harbor Island, N.C., has been used to develop the process on sea water. A conference of prospective bidders is scheduled at the test site April 11, 1960, to witness completion of a test. Engineers will be on hand to answer questions that might be posed by the prospective bidders.

Mr. Speaker, these facts indicate that the program is off the ground and is moving forward. I believe Dr. Miller, his staff, and the Office of Saline Water are doing a commendable job.

The Census Form and Family Life

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 6, 1960

Mr. ROBERTSON. Mr. President, the serious debate that has occupied this body for the past several weeks has provided little opportunity for many Members to pause and refresh their spirits by contemplation of the humorous trivia that surround all human activities.

Fortunately, the opportunity to do so has presented itself in the form of a delightful column from the Richmond Times-Dispatch by Charles McDowell, Jr., entitled "The Census Form and Family Life."

The writer, a young man of wit and charm and talent, recently has received the National Headliner's Award for the consistent excellence of his column. I heartily commend his articles to my colleagues, and ask unanimous consent at this time to have printed in the Appendix of the RECORD Mr. McDowell's column from the Times-Dispatch of March 27, 1960.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

THE CENSUS FORM AND FAMILY LIFE

(By Charles McDowell, Jr.)

The census form arrived at our house last week, and we were glad to see that the Government had enclosed an "example" to guide us in filling out the thing. It is a fascinating example and we commend it to anyone interested in the home life of contemporary Americans.

The hypothetical family in the example is named Vernon. The head of the household is Alexander Vernon, 41, and his wife is Estelle Vernon, 34. They have three children, Marcia, 10, Carol, 6, and Alexander, Jr., a baby who was born in January this year. The household also includes a lodger named George Drayer, a single gentleman of 22 years.

On the back of the example we find that the five Vernons and the lodger live in a seven-room house (counting the kitchen but not the bathrooms) that is worth between $12,500 to $14,900. These people live in Larchdale, Ohio, and it is difficult for one familiar only with the Richmond real estate market to speculate on the layout and condition of this seven-room bargain.

If it is a relatively new house, it could conceivably have three bedrooms, living room, dining room and kitchen, and the Vernons are counting the utility room to make seven. If it is relatively old, the house could conceivably have four bedrooms, living room, dining room and kitchen. In any event, the Vernons are fitted rather tightly into their sleeping accommodations.

We can assume that Mr. and Mrs. Vernon have one bedroom and the two girls another, although Marcia is certainly already campaigning to get out of the room with Carol. The lodger has a room, which accounts for three. The baby, Alexander, Jr., might be in the fourth bedroom, if any, or he might still be sleeping in the room with his parents.

So there might be one bedroom left empty for the present. Well, the Vernons need it, for the example discloses under section C that they have a visitor in the house.

The visitor is James T. Wood, of Newberry, Conn. He is 67 years old, and he may well be sleeping on the sofa. Of course, he could be sharing a room with Alexander Jr. or the lodger, or both of them, but none of these situations would be ideal.

Mr. Wood is a widower. Our guess is, and it seems reasonable, that he is Mrs. Vernon's father. No doubt he has come from Connecticut to see his new grandson. Fine. Our point merely is that this is a crowded and probably rather turbulent household, what with the new baby, the visiting grandfather, and the lodger.

But add to all that still another person and a tremendous element of mystery. In section B of the example, question No. 2, is, "Is there anyone left out of section A because you were not sure whether he should be listed—for example, a new baby still in the hospital, or a lodger who also has another home?" Mr. Vernon, who filed out the form, has checked "yes." And on a line provided for the purpose, he has written the name of this person: Susan L. Mills.

Now who in the world is that? Susan L. Mills is not a new baby still in the hospital, obviously, and we already have a lodger. The addition of a female lodger to the household would confuse things thoroughly, to say the least.

But who is she then? Susan Mills' age and relationship to this household are not given. Presumably these details will be straightened out when the census enumerator calls for the form.

The question of Susan Mills' identity and position in all this has disturbed us for several days, and it may be nagging at the minds of literally tens of thousands of people who have studied the example.

Here is a form that has gone into every home in America, showing us how to count our family, evaluate our home, and report on our plumbing, but hidden away in the form is the mystery of Susan Mills to distract us from the business at hand.

Is she a baby nurse or maid, perhaps, who goes home at night? If so, Mr. Vernon shouldn't have listed her, and surely the Census Bureau wouldn't put an error in the example.

Is she a little girl spending the night with Marcia and Carol? It seems unlikely that Mrs. Vernon would have let her daughters invite a friend at this crowded and hectic time.

Does she bear any relationship to the lodger? Let us not even speculate.

Did she arrive with Mr. Wood? We prefer to think not, somehow.

Assuming that the explanation of Susan Mills' presence is simple, why was Mr. Vernon

not sure whether to list this mystery woman?

We trust that the enumerator will check on Susan Mills when the time comes to pick up the form, and that the Census Bureau will be quick to put America's mind at rest.

Questionnaire Results Revealing

EXTENSION OF REMARKS
OF
HON. CATHERINE MAY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mrs. MAY. Mr. Speaker, during the months of January and February of this year, I sent a questionnaire into each of approximately 83,000 homes in the Fourth Congressional District of the State of Washington, so that I might be as fully informed as possible as to the views of my constituents on a number of vital issues which currently face the Congress. Thirteen thousand two hundred and four questionnaires were returned to me in time to be included in the tabulation, made by an independent statistical firm after my study of the individual views of the many persons who are taking an active interest in affairs of their Federal Government.

Because I feel that the views of my constituents are most revealing, I am placing the tabulated results in the CONGRESSIONAL RECORD so that all Members of Congress may have the opportunity to study the answers I received to the eight questions asked.

First, I would like to announce that nearly 9 out of 10 adults who live in the 12 counties of the Fourth Congressional District of the State of Washington agree with President Eisenhower's pay-as-you-go emphasis in balancing the Federal budget. These same residents are nearly as decisive that the Federal Government should stay out of subsidizing teachers' salaries, and have indicated, nearly 2 to 1, that medical expenses should not be included in the Social Security Act.

Other results of my questionnaire show that the vast majority feel that Communist China should not be seated in the United Nations, and that the Federal Government should assume more leadership in the juvenile delinquency problem. The majority of those who returned the questionnaire would rather not see an overall minimum wage of $1.25 an hour.

In a two-part question regarding choice of legislation to help solve the farm surplus problem, the questionnaire reveals that 79.6 percent favor a gradual reduction in Government controls and gradual removal of price supports. In this regard, I feel that it should be pointed out that my district is not a heavily populated urban area, but, rather, an agricultural district of 12 counties heavily dependent upon an agricultural economy.

The complete tabulation is as follows:

Questionnaire results

[In percent]

Questions	Yes	No	No opinion
1. Do you agree with the President's pay-as-you-go emphasis on having a balanced budget?	87.2	6.3	6.5
2. Do you feel the Federal Government should provide grants to States to meet school construction needs?	36.8	56.2	7.0
3. Do you favor continued reliance on local and State support for teachers' salaries, rather than Federal grants for this purpose?	77.8	16.6	5.6
4. Do you favor a Federal minimum wage law making it mandatory to pay workers in all classifications (business, farm, industry, etc.) $1.25 an hour?	42.3	50.1	7.6
5. Do you think that Communist China should be seated in the U.N.?	15.3	72.6	12.1
6. To help solve the farm surplus problem, would you—			
A. Favor strict production controls with price supports fixed at flexible levels from 0 to 90 percent of parity?	13.2	49.5	37.3
B. Favor a gradual reduction in Government controls on farm commodities with a resultant gradual removal of price supports on crops, including wheat?	79.6	7.7	12.7
7. Are you in favor of amending the Social Security Act to include medical expenses, the increased cost to be paid by additional contributions by employees and employers?	33.4	60.1	6.5
8. Do you feel the Federal Government should assume more leadership in the juvenile delinquency problem by urging stronger local and State laws dealing with youthful offenders?	64.1	27.8	8.1

I would also like to point out, Mr. Speaker, that, in addition to providing me with the information just given, three out of five persons who returned the questionnaires took the time to enlarge upon their answers or to give me their thinking on other issues and problems.

I am glad to make the tabulation of results available to all Members of Congress for their personal study.

No Instant Ideas

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Wednesday, April 6, 1960

Mr. HENNINGS. Mr. President, the Hannibal (Mo.) Courier-Post, carried an excellent editorial recently. To make it available to all my colleagues in the Congress, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Hannibal (Mo.) Courier-Post, Mar. 15, 1960]

NO INSTANT IDEAS

The appearance of various so-called instant food products has given rise to a lot of jokes about instant money and the like. The jokes are amusing. Some persons have been so caught up in the spirit of the thing that they believe there might be instant ideas. This is considerably less amusing.

The notion that there could be instant ideas, instant opinions on virtually any subject, is intriguing. It would save so much brainwork if one could simply turn to the proper source, stir in a bit of more or less concentrated attention, and come up with an idea guaranteed to withstand any assault. But this, dolorous as it may seem, is not possible.

Ideas, with the exception of occasional flashes that the average mind is not likely to experience, are the product of reflective thought. Sound opinions are based on a weighing of all the factors concerned. This reflection, this weighing of the evidence, takes time. The more complex the problem, the greater the time and mental effort required for the analytical process.

Information can be digested to a certain extent, though this has its dangers. But no one has ever found a way to substantially reduce the amount of time involved in thinking a problem through. "Instant" may be the word for coffee and whipped potatoes. "Instant" is not the word for ideas.

Courage and Conviction

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. DIXON. Mr. Speaker, when the Secretary of Agriculture was in his home city recently, the Salt Lake City Tribune wrote an excellent editorial praising the courage, conviction, and integrity of the man. This I share fully.

It is interesting to note that this is a case of a prophet being with honor in his own country, contrary to the sentiment of the old proverb.

I offer this editorial of March 9 for submission in the RECORD as an excellent appraisal of a great American and his program:

COURAGE AND CONVICTION

Whatever else his critics say of Secretary of Agriculture Benson, they must acknowledge his superlative courage and conviction. Repeated attacks on this veteran Cabinet member in the Eisenhower administration have left his integrity unblemished.

Mr. Benson is convinced that if farmers could get the Government off their backs,

they would adjust crop production to conform with the law of supply and demand. As a result, he believes, agriculture would be freer and healthier.

He has preached this doctrine for 7 years even while under attack in his own party. He holds to it in the face of reports that, in his quest for the Presidency, Vice President NIXON plans his own farm program.

The Secretary said in a Salt Lake interview he would oppose any person regardless of party affiliation, who advocates an unsound agricultural program for political objectives.

The Cabinet member said that four-fifths of the country's agriculture is free of control, in good balance, and getting along well.

It is unavoidable that the wheat program, said to be costing the taxpayers $1,000 a minute, should monopolize public attention. Technological advances have sent crop yields skyrocketing despite acreage limitations. Another situation supports Mr. Benson's stand against high, rigid support prices; despite the overwhelming surplus, 150,000 new farmers started growing wheat the last 3 years.

Mr. Benson spoke in favor of the administration's plan to relate wheat supports to market prices. Alternatives are tight controls or grower referendums, similar to those of the corn program. He believes public opinion is gaining in favor of a change in the wheat program.

The administration plan may or may not be the solution. We aren't sure there is a complete solution.

Mr. NIXON is said to be seeking the advice of experts with the aim of a new approach to the whole farm dilemma. It may be recalled that, when he took office in 1953, Mr. Benson enlisted the aid of more than 500 persons, in addition to an 18-man bipartisan advisory commission, to help the Agriculture Department formulate a program. Congress has passed only part of that program.

Mr. Benson makes sense when he insists that a support program devised to meet conditions no longer existing is costly and foolish.

Flood Control

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 6, 1960

Mr. HARTKE. Mr. President, I ask unanimous consent that the editorial on flood control published by the Indianapolis Times on March 16, 1960, be printed in the Appendix of the CONGRESSIONAL RECORD. I would like to say that this editorial illustrates the feelings of the people of my State with reference to the necessity of flood control in Indiana. The Times may be forgiven for the tone of the editorial since the citizens of my State have waited a long time for the implementation of their basically excellent flood control plans.

We all fervently hope that there will not be a repeat of the disastrous floods of last year. A perusal of the editorial clearly indicates that this fear is the motivation for it.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LESS TALK AND MORE FLOOD CONTROL

Indianapolis and other central Indiana areas stand to pay an enormous price in human suffering for the political inaction, or ineptitude—or both—which has kept vitally needed flood control projects in the drawing board stage.

The human misery, as well as property loss, is mathematically predictable if nature should repeat her capricious contrivances which last year dumped heavy rains upon the frozen ground of the upper Wabash Valley, producing the most damaging flood of a decade.

An examination of the record discloses, lamentably, that there has been much talk about flood control in Indiana but little, if any, practical extension of this talk.

With this city awaiting apprehensively for thawing snows and the rains that usually come with April, Darrell C. Walton, president of the Indianapolis flood control board, has warned:

If floods strike Indianapolis this year, its victims will find nothing new of a physical nature to protect them.

This is ominous news, coming from the head of an official commission charged with safeguarding a public that can look no other way than to its appointive or elective leaders for its guarantees against disaster.

There is little comfort in the assurances by J. I. Perrey, chief engineer of the Indiana Flood Control and Water Resources Commission, that construction may begin—in the summer of 1961—on a proposed chain of three reservoirs on the Mississinewa River near Peru, the Salamonie River near Wabash, and the Wabash River at Huntington.

There is little comfort in Perrey's assurances that the Monroe Reservoir project on Salt Creek, south of Bloomington, is even closer to reality than the Mississinewa, Salamonie, and Wabash projects.

There is little comfort in the assurances of Walton that a study is now almost complete of the White River-Fall Creek project which would include new levees on both streams, a new channel for a section of Fall Creek, and a new bridge over the creek at Indiana Avenue.

There is little comfort in Walton's hope that construction of the city's Big Eagle Creek flood control project can begin this year and that studies and drawings of this project are about 80 percent complete.

Drawing board plans and talk of appropriations will be of little avail to flood victims, once the flood waters begin to creep through their shoe soles and into their homes.

There has been enough talk of flood control.

The time has come for vigorous, forceful action to protect the residents of this area from a repetition of the disastrous floods of the past with their staggering toll in human misery and property damage.

Waterway to Washington: The C. & O. Canal

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. FOLEY. Mr. Speaker, the March 1960 issue of the National Geographic magazine contains a stimulating and informative pictorial and narrative description of the C. & O. Canal entitled "Waterway to Washington." Because of the timeliness and authority of this copyright article by Jay Johnston of its editorial staff, I requested and gratefully received special permission for the National Geographic Society's board of directors to have the article printed in the CONGRESSIONAL RECORD. It is presented herewith in its entirety to assist the Members of the House to understand the import of H.R. 2331, to establish the Chesapeake and Ohio Canal National Historical Park, which will come before the House for consideration.

WATERWAY TO WASHINGTON: THE C. & O. CANAL

(By Jay Johnston)

One warm evening last summer I climbed aboard a barge in Washington, D.C., and let a team of mules pull me into a bygone era. With each plodding tug, as the glassy canal water rippled below, the neon-lighted world of the Capital slipped farther behind.

I was riding aboard the *Canal Clipper*, a homely, flat-bottomed craft that carries sightseers up a short stretch of a famous waterway, the Chesapeake & Ohio Canal. George Washington himself fathered the first canal here along the Potomac. In its heyday, nearly a century ago, the C. & O. floated millions of tons of coal, grain, lumber, and flour from Cumberland, Md., in the Alleghanies to the tidewater port of Georgetown on the fringe of the Capital.

Today, for most of its 185 meandering miles, the once-proud queen of commerce is dry, weed choked, and tree grown. Abandoned since 1924, the old locks that echoed to the shouts of bargemen are sagging and deserted. The lilacs grown wild and the decaying lockhouses recall the less hurried life of an earlier-day America.

But now new life looms for the derelict canal. As these words are written, legislation pending in the 86th Congress would preserve the waterway as a full-fledged national historical park. The National Park Service would restore many of the lockhouses, rewater additional portions of the canal, and build campgrounds and picnic areas along its length.

"It is a refuge, a place of retreat, a long stretch of quiet and peace at the Capital's back door—a wilderness area where man can be alone with his thoughts, a sanctuary where he can commune with God and with nature, a place not yet marred by the roar of wheels and the sound of horns."

Thus did a distinguished American, Associate Justice William O. Douglas of the U.S. Supreme Court, describe the C. & O. Canal a few years ago. And the pleasures he had found in many a walk along these quiet banks—solitude and serenity and sylvan beauty—are still there in abundance.

WILDLIFE THRIVES ON CANAL BANKS

Strolling the towpath amid fern-clothed cliffs, in the depths of a dark wood, or beside a sun-drenched pasture, one captures the feel of a vanished age.

When the birds in the gaunt pines and towering tulip trees cease their chatter, a haunting silence reigns. Then the wind song rustles the treetops. Winged seeds spiral toward earth and tick like sleet on the dried-leaf floor. A gray squirrel scolds from a sycamore. A turtle plunges off his log solarium into a rainwater pool.

And you think: This is how it was on a soft spring day a century ago.

Barges and boatmen are gone now, but imagination works wonders. Around a distant bend come plodding mules. A barge glides into view. On its bow the skipper cups hands to lips for a singsong cry, the locktender's cue to open the gates.

"Hey-y-y-y-y-y lock."

The mental image turns back time to a year when this waterway teemed with the traffic of some 700 boats.

Their dimensions were standard: 92 feet long, 14½ feet wide, and a draft of 5½ feet

when loaded. Cargo capacity ranged from 100 to 120 tons.

They were alike as boxcars, yet each was a captain's pride. The squat, sluggish boats bore loving names: *Belle, Katie Darling, Jenny Lind, Nanny McGraw, Scow Lion, Cock Robin, Morning Star.*

EXTRA MULES RODE ON BOATS

The captain and his family, or his hired hands, lived aft in the cabin. In a stable forward rode the relief mules, heads craning through tiny windows.

On sunny days the family wash fluttered from lines strung abovedeck. Children, tethered lest they fall overboard, played about the cabin. Dogs and cats dozed on the warm planking as the mules plodded along at a speedy 2 miles an hour between the west and Washington.

What was life like on the canal during its halcyon days?

I asked this question of many people who dwell on the banks or in the nearby villages. For most, memories are secondhand, tales told and retold by their elders. But the oldtimers, men who lived and worked on the stream, vividly recall the vanished era. And their number, if not legion, is surprisingly large.

One was O. P. Matthews, who managed a hotel where I stopped near Cumberland. He grew up on a farm in western Maryland. From his bedroom window he could see the canal, twisting in hairpin turns through the bright-boughed hills and pine-tufted crags.

"I'd lie abed at night," he told me "and watch the barges inch their way up and down. The light from their bow lamps shone on the water and flashed in the trees. I could hear the music of fiddles, and people singing and laughing in the cabins."

Raleigh S. Bender of Sharpsburg, Md., may well have been one of the canallers whom Mr. Matthews watched from his window half a century ago.

"Call me Cap," he directed. "Everybody does; and besides, I like it."

Reminiscing in the cool quiet of his spacious home on Main Street, Cap Bender conjured up a tableau of lazy waters and slow-moving boats, set against a background of bustling coal docks, blacksmiths and boatbuilders, teamsters and wharfworkers.

"Thirty-six years I worked on the boats. They were the hardest, and happiest, days of my life.

"All day long you'd be trying to make time, beat someone else's record for the trip downstream or up. Come dark, you'd put the feed trough out on the banks and let the mules graze and doze. You'd sit around for a spell, smoking and talking, then hit the hay to be up with the dawn for an early start. Sometimes you'd drive the mules through the night."

He lifted a wooden model from the top of a chest and dusted it carefully.

"This is a model of the last boat I skippered. And these were my mules—Jack, Kate, and Rock. No one ever saw a better three mules on the strip."

He joined boat and mules with a simulated towline of thin cord. His eyes shone with remembrance.

"This is the way they'd work. Just like this when we made the record 62-hour run from Georgetown to Cumberland. And when I towed the last load of coal down to Washington in 1923.

"For years the railroad had been running circles around us; business got so poor there were only 60 boats left.

"Then the 1924 flood wrecked the canal, and no one bothered to repair it. It just wasn't a paying proposition any longer."

He sat back and the rush of words slowed.

"So that was the end. For me and all the other canalmen. I came home for good and settled down here with my wife and seven youngsters. I've been mighty content and comfortable here, but I'll never forget those old canal days."

Sunday outings along the canal provide much pleasure to Cap Bender, still robust and active at 87.

Frequently he gets together with canal cronies, and the talk is hearty and spiced with affectionate insults.

"We were a rough-and-ready lot," he recalls, "and there were a lot of practical jokers.

"One of my mates used to tickle my face with a straw every morning to wake me. One day when I wasn't feeling so good, he did it once too often.

"I grabbed him by the seat of his pants and pitched him off the boat, right into the middle of the canal.

"'I can't swim. I can't swim,' he yelled. And turned out he couldn't. Had an awful time making it to the bank, and I nearly fell over the side laughing."

WASHINGTON BUILT EARLY WATERWAY

This was the canal of yesteryear, a busy, boisterous highway linking the tidewater and the Alleghenies.

But for one man, George Washington, it might never have been.

Washington's plan for a water avenue from east to west merits the first chapter in any history of the Cheasapeake and Ohio Canal.

Below the city of Washington the broad Potomac River flows sedately over clay, sand, and gravel as it passes Mount Vernon and gently laps the corn and tobacco fields of tidewater Virginia and Maryland. This part of the river is navigable for seagoing ships that steam up from Chesapeake Bay.

But above the Capital the Potomac runs swiftly over hard crystalline rocks, the eroded remnants of ancient mountains. Its shores change from rolling hills to steep palisades.

At Great Falls, 10 miles above the city, the river is a wild creature, crashing through rugged gorges, roaring over masses of rock. No boat can navigate these furious waters.

Washington's idea was to bypass such dangerous stretches with canals and upon up a new water route to the west. In 1785 the Potowmack Co. was formed, with Washington as president.

A year later 200 men were at work on a system of improvements, building canals around major obstacles and dredging in the Potomac to make the river navigable. The squire of Mount Vernon made numerous trips up from his home to supervise the project.

Writing to Thomas Jefferson in 1788, he reported: "The labourers employed by the Potomack Co. have made very great progress in removing the obstructions at the Shenandoah, Seneca, and Great Falls. * * * This will become the great avenue into the western country; a country which is now settg. [settling] in an extraordinarily rapid manner, under uncommonly favorable circumstances, and which promises to afford a capacious asylum for the poor and persecuted of the earth."

In 1798 the ex-President, back home in Mount Vernon, reaffirmed his belief in the Potomac's potential. Concerning "the many and great advantages which will accrue from completing the navigation of the Potomack," he wrote to a friend, "I have every day additional reason for supporting my former opinion, and new proof of its advantages."

FIRST CANAL FILLED WITH DANGER

But boatmen who ventured downstream on the "improved" river route in the early 1800's found it a harrowing experience. The swift current, treacherous rapids, whirlpools, and shoals challenged even the most skilled navigator. The crude locks around Great Falls were usable only when the river was high enough to fill them.

If a craft survived the journey, and many did not, it was a rare owner who attempted the even more difficult upstream run. Usually he broke up his raftlike boat, sold it for lumber, and walked home.

The hiker today, tramping the Virginia shore, can see the ruins of locks built by the Potomack Co. After more than a century and a half and many floods, the huge-hand-cut blocks of stone still stand in trim alinement, reflecting the precision with which the walls were built.

PRESIDENT ADAMS SHEDS HIS COAT

The Potomack Co. failed, but the idea of a route between the Atlantic and the Ohio River remained alive.[1] The year 1828 witnessed its emphatic revival when the newly organized Chesapeake & Ohio Canal Co. began to build a canal from Washington all the way to Pittsburgh and the Ohio.

Appropriately, the directors chose the Fourth of July as the day to start work. They invited President John Quincy Adams to turn the first spadeful of earth near Little Falls.

During his address, President Adams took up a spade and attempted to drive it into the sod. I struck a root. Undaunted, he tried again, with no success. He threw down the spade, peeled off his coat, and, on the third try, pierced the ground. The assemblage roared approval.

Was the root an ill omen? Perhaps, for on the same day—40 miles away, at Baltimore—another group was laying the foundation stone for the Baltimore & Ohio Railroad.

This enterprise was destined to plague the canal throughout its operation. But the waterway's enthusiastic promoters casually dismissed the rail line as a competitive threat. It would, they reasoned, carry only passengers and light freight in horse-drawn cars.

Within a few months the Potomac Valley hummed with activity as hundreds of laborers, using axes and stump pullers, scrapers and gunpowder, wagons and wheelbarrows, dug the big ditch. Stonemasons started construction of locks and lockhouses.

Yet progress was slow. Legal clashes with property owners brought delays; so did struggles with the railroad over right of way.

FLYING FISTS SETTLE WORKMEN'S FEUDS

But from first lock to last, the major problem was the labor force. The tremendous demand for workmen on the many public works underway in the East precipitated a labor shortage. And the workmen corralled by the C. & O., while competent, were temperamental.

So intense was the animosity between Irish and German immigrants, who performed the bulk of the work, that it was necessary to employ them in separate crews.

Rival factions of Irish battled among themselves. Brawls between Corkmen and Longfordmen turned shanty towns into armed camps.

Each payday witnessed violent fights. Whiskey sold freely, and was undoubtedly a factor, but the meager wages of $10 a month, long hours, poor housing, and worse food were the major causes of dissension.

Every summer there was a noticeable slackening of work and a marked exodus of workmen. This was the annual sickly season in the valley. From July until late September men fell victim to aches and fevers, attributed by them to droughts that lowered the river level, leaving stagnant pools along the banks. In September, 1832, a cholera epidemic swept through the camps.

Yet the canal moved westward. Georgetown saw the tidewater terminal take shape. Past Little Falls and Great Falls, Seneca, and Whites Ferry crept the ditch and its locks.

With only the first segment in use, a 23-mile portion between Georgetown and Sen-

Footnotes at end of speech.

eca, the cost of transporting flour dropped from $1 to 30 cents a barrel. In the first 10 days of operation some 30,000 barrels were shipped downstream.

Rural communities like Point of Rocks, Weverton, and Harpers Ferry blossomed under the influence of railroad and canal. The villages of Snyders Landing and Williamsport took on fresh life, for as the canal advanced, it brought trade and prosperity.

By 1839 the canal had pushed 135 miles, to a point above Hancock.

There today, just east of the town, the battered hulk of a canal barge lies stranded in the waterless ditch. When spring floods lap its rotting timbers, youngsters swarm over the old relic and sail it downstream once more.

TUNNEL GROWS AT SNAIL'S PACE

Farther on above Hancock, across the river from Paw Paw, W. Va., canal engineers cut a mountain tunnel to save 7 miles. Using hand tools and black powder, crews painfully hacked through shale at the rate of 10 to 12 feet a week.[2]

The tunnel, 3,118 feet long, 24 feet wide, and 17 feet high from water surface to crown, ranks as an engineering masterpiece of its day.

I shall always remember the first time I walked through the cool, dark tube. I snapped off my flashlight in the center of the bore. Except for pinpoints of light at each end, it was like a moonless midnight. Water from springs in the mountain overhead dripped through the six layers of brick that line walls and ceiling.

This dark tunnel witnessed many a fight between brawling boatmen. Lacking room for barges to pass inside, boats backed up at the entrances like cars waiting to board a ferry. Fists often decided the right of way.

An oldtimer told me of two boatmen, coming from opposite ends, who met in the middle of the tunnel. When neither would give way, they tied up traffic for 2 days until the superintendent could come up from Georgetown to settle the issue.

DITCH COST $60,000 A MILE

In 1850 the waterway touched Cumberland, and the eastern section—the only part ever completed—was formally opened to trade.

Amid salvos of artillery and the blare of brass bands, five barges laden with coal for eastern markets slipped into the locks at Cumberland and headed toward Washington.

Stretching ahead, along the northern bank of the Potomac, ran a waterway 6 to 8 feet deep, ranging in width from 30 to 80 feet, with a towpath 12 feet wide along the river side.

Included in its works were 74 stone locks 100 feet long, 15 feet wide, and 15 feet deep, with a lift averaging 8 feet; the half-mile-long Paw Paw tunnel; a dozen aqueducts over northern tributaries of the Potomac; scores of culverts to carry smaller streams under the ditch; and seven rubble and masonry dams in the bed of the river to back up its waters and turn them into the canal.

The project had cost $11 million, or about $60,000 a mile, a sum staggeringly higher than the backers had estimated.

The proposed connection of the Atlantic seaboard and the Ohio Valley was never achieved. The ambitious central and western sections, requiring several hundred additional locks and a 4-mile tunnel, failed to advance beyond the planning stage.

George "Hooper" Wolfe, a Williamsport merchant, knows the canal's history almost as well as he knows his customers.

A charter member of the Williamsport C. & O. Canal Club, he has worked ardently toward the restoration of the waterway and its development into a full-fledged national park.

"You know, I love that old gulch," he told me.

"It's a funny thing, but the older I grow, the closer it gets to my heart. As a boy I drove the mule teams 4 years, off and on, but the canal never meant much to me then. Maybe that's just human nature.

"But now I'd give anything to see it as it was in its heyday. And I'd like my children and my grandchildren to be able to see it as I knew it."

Over mugs of steaming coffee in his general store, Mr. Wolfe showed me a treasured album of photographs of 19th century canal life. While I scanned it, he recounted the canal's triumphs and disasters.

"The Civil War caused hit-and-run damage. Lee's invasions and raids by Early, Mosby, and Stuart broke down the banks and knocked out some of the locks.

"At Antietam Creek, within cannon range of the canal, Union and Confederate armies fought the bloodiest single day of battle in Civil War history."

The Battle of Antietam on September 17, 1862, climaxed the first of two attempts by General Lee to carry the war into northern territory. His 41,000 troops clashed with a Federal force of 87,000 led by Gen. George B. McClellan. The Union suffered 12,410 casualties; the Confederacy, 10,700.

Neither side could claim a clear-cut victory, but the battle was highly significant. Lee's failure cost the Confederacy the recognition of Great Britain and gave Lincoln an opportunity to issue the Emancipation Proclamation. Had McClellan won a decisive victory, on the other hand, the war might have ended in a few months, instead of dragging on for another 2 and a half years.

"Did you know," Wolfe continued, "that three times the Federals commandeered barges and held them in Georgetown? If a Confederate fleet had steamed up the river toward Washington, the Union planned to load the boats with rock and sink them in the channel of the Potomac below the city. Fortunately, it never happened."

When the war finally ended, the canal's coal trade boomed. In 1875 more than a million tons rode downstream. A single lock saw more than 100 boats pass through in a day.

At long last, the company began to earn some income. But the canal never really made any money for its owners. It was always too far in debt.

I asked Mr. Wolfe if it was true that steamboats once sailed the canal.

"Yes," he said, "they tried steampower for a dozen or so years on some of the barges, and they also tested tractors for a while. But neither steam nor tractor proved as cheap or as dependable as the mule.

"The canal company even built its own telephone network in 1879. At that time it was claimed to be the longest single phone circuit in the world.

"In the eighties, earnings started dipping," he continued. "Many of the Allegheny coal operators had begun shipping by railroad.

"In May and June of 1889 the famous downpour that flooded Johnstown, Pa., also overwhelmed the upper Potomac."

He passed me a yellowed clipping. A reporter for the Cumberland Daily Times observed on June 5, 1889: "It is the opinion of nearly everyone living along the river that the canal has been irreparably injured."

Hooper smiled. "That just proves you shouldn't believe everything you read in the papers. Actually, the canal's bondholders refused to quit. They dredged up another $400,000, repaired the damage, and kept it operating for 30-odd more years.

"But then came the flood of 1924, and canal operations suspended for the last time."

GOVERNMENT BUYS $2 MILLION BARGAIN

By one of those ironic twists, the canal in 1907 passed into the hands of its arch rival, the Baltimore & Ohio Railroad.

Hard hit by the depression of the early thirties, the railroad applied to the Federal Government for aid. Harold L. Ickes, then Public Works Administrator, offered to buy the canal, and in 1937 secured the 185-mile-long ditch for $2 million. He acquired a right-of-way from 30 to 900 feet wide containing 5,254 acres.

Many critics spoke their contempt for the purchase. "A century-old white elephant," some deemed it. But others, perhaps more farsighted, suggested that "it may turn out to be the biggest bargain since Alaska."

Since acquiring the canal, the National Park Service has restored the 23-mile segment between Washington and Seneca as part of the National Capital parks system. Gliding out of Georgetown, the mule-drawn *Canal Clipper* carries sightseers along a 5-mile stretch during summer months.

Great Falls Tavern, historic hostelry and lockkeeper's home has been refurbished and converted into a museum where thousands of visitors each year view exhibits tracing the history of both the canal and the Potomac Valley.

In Georgetown, eastern terminus of the canal, apartments and homes today crowd the bank beside the lift locks. A flour mill still uses the flow for power.

Maj. Ernest W. Brown, a retired chief of police, remembers the port town as an exciting place at the turn of the century. Barges laden with coal from the Alleghenies and farm produce from fertile Appalachian valleys sometimes lined up for nearly a mile waiting to unload at the terminal. Draymen streamed between the docks and the big wholesale houses on old Bridge Street (now M Street).

BOATMEN KEPT BUSY, AVOIDED TROUBLE

"My first beat in 1896," Major Brown told me, "was the waterfront, and my first arrest, on a bitter winter night, was a man assaulting a canaler.

"Those canal people were a good lot," the major added. "They were honest and worked hard. They stayed to themselves and generally kept out of trouble. I came to know many of the families who lived on the boats, and I liked them.

"Sometimes they would get caught in the freeze-up and have to winter over in Georgetown. They could hardly wait—father, mother and especially the kids in school—for the spring thaw so they could get back on that canal."

In 1954 a dedicated trek focused nationwide attention on the C & O Canal.

A motor parkway had been proposed along the towpath and in some places along the bed of the canal itself. In protest against possible destruction of the waterway's scenic and historic values Justice William O. Douglas led 36 conservationists and newsmen on an 8-day march down the canal.

The much-publicized hike helped defeat the highway proposal. Soon afterward the Park Service recommended that the canal property be preserved as a national historical park.

Each spring members of the 1954 hike hold a 2-day reunion on the banks of the canal and retrace a portion of their long march.

STAGECOACH TRADE PAUSED AT HANCOCK

Last spring I walked alone on the canal's westermost reaches.

I began my trek at Hancock, a quiet mountainside town on the old Cumberland Road. Lying within a 2-mile-wide strip known as Maryland's Neck, Hancock is the market center of an apple-growing and sand-mining region. Its history is tightly interwoven

Footnotes at end of speech.

with that of the canal. Here stood warehouses and shops that serviced the waterway.

Long before canal days Hancock was a busy stopover point for the stagecoach trade. A host of taverns with intriguing names—Sign of the Cross Keys, Sign of the Seven Stars, Sign of the Green Tree—catered to travelers en route from Baltimore to Cumberland, Wheeling, and Indianapolis.

A few minutes west of Hancock I passed the site of Fort Tonoloway, where early settlers had built a blockhouse for refuge against Indian attack.

Here the dry bed of the C. & O. follows the tortuous bends of its neighbor, the Potomac, as it winds through the mountains.

Spring is a season of rare beauty in this bosky region. Each tree in blossom or tender leaf has its own pastel shade, contrasting with the dark greens of pine and cedar.

With the hardwoods sprouting pale green on the ridgetops and redbud splashing color across slopes white with dogwood, it was easy to succumb to the quiet, whispering lure of again by the symphony of birds singing their delight at the sight of the sun after a 2-day rain, or by the wail of a train.

PAW PAW TUNNEL PIERCES A MOUNTAIN

Ducks flapped and wheeled away over the river. I had flushed them with the snap of a dead twig. A cottontail hopped across the trail and vanished amid clumps of bird's-foot violets, their bowing heads as big as half dollars.

As I strolled on, picking my way through the towpath's molasses mud, the thought occurred that I was now following in the footsteps of the "level walkers." These were canal company employees who walked allotted sections, searching for breaks in the banks or the towpath. Defects were repaired immediately, lest barges be delayed or thrown off schedule.

I approached the downstream mouth of the Paw Paw tunnel through a spectacular manmade gorge. The canal courses between great wedges of rock 100 feet high. I saw spikes embedded in the walls to prevent enormous slabs of shale from flaking off and crashing down on the mule teams below.

Westward toward Cumberland, houses grew more numerous. Then, as I passed the mouth of Town Creek, I encountered a 5-mile stretch where the civic-minded people of Oldtown have cleared the canal and the State has stocked it with pan fish.

"You must come back in August for our fish rodeo," Judge George Henderson told me.

"Hundreds of kids drop in their lines," he said, "and when the fish aren't biting the kids are—on hotdogs and fried chicken and all the other picnic makings. It's Oldtown's big day of the year."

Today only a few vestiges of the canal are evident in Cumberland, the rail and manufacturing center at the confluence of the Potomac River and Wills Creek.

A gap in the Allegheny Mountains rising close by provided a gateway for early pioneers who streamed through here their way west. Old Fort Cumberland served as headquarters for British Gen. Edward Braddock during the French and Indian War.

Cumberland houses shops and yards of the Baltimore & Ohio Railroad, and day and night its streets echo the whistling of locomotives and the clank of freight-car wheels. Millions of tons of coal have been mined in the neighboring mountains.

Floods have often ravaged this industrial city. Army Engineers, seeking to safeguard it, have deepened the river and turned the canal into a levee for about half a mile.

The facelifting project, vital though it was, saddened many an observer. But the canal has known and survived countless misfortunes, and always its admirers have refused to let it slip into oblivion. Converting the canal into a national historical park would win hundreds of thousands of new friends for the old strip.

Tomorrow's generations will never see the barge traffic that once graced the lovely canal, but they may follow the old C. & O. from beginning to end and relive its days of glory.

America Forges Ahead in the Race for Space

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 6, 1960

Mr. KEATING. Mr. President, as it has done so often in the past, the calm, clear voice of Columnist Roscoe Drummond this morning dispels many of the misconceptions and misunderstandings about the status of America's efforts in outer space. In his daily syndicated column appearing today Mr. Drummond points out the myriad accomplishments of our space program and emphasizes why the progress we have achieved is so much more significant than that of the Russians.

At a time when armchair critics tend to obfuscate the facts, it is reassuring to have this expert evaluation that the box score on outer space is not one sided. I hope Mr. Drummond's cogent comments will be studied and heeded by all concerned with this subject, and I ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

OUTER SPACE BOX SCORE—NO LONGER IS ONE SIDED

(By Roscoe Drummond)

Now that U.S. Pioneer V is continuing to send back its reports more than 3 million miles toward the sun and U.S. Tiros I is orbiting the earth observing the weather and transmitting its photographs, this is a good time to ask: How do we now stand with the Soviets in the race to outer space?

The factual answer, I think, is this:

In significant scientific results the U.S. space program is clearly outdistancing the Russians.

In spectacular firsts—first Sputnik, first Lunik, first to photograph the unseen side of the moon, first to hit the moon, first to send an animal into space and retrieve it safely—the Soviet record is preeminent.

U.S. space projects are beginning to move more rapidly. More launchings are coming soon and in the development of rocket thrust, where the Soviets have been far in the lead, the new Saturn launching vehicle, capable of 1½-million-pound thrust, can be ready in 1963, ahead of schedule, if Congress approves the funds.

Alongside the Soviet spectacular firsts, the United States is achieving some outstanding scientific firsts.

Tiros I, weighing 270 pounds and containing two long-range cameras and equipment capable of receiving instructions and transmitting data to ground stations, is the world's first weather-eye in space. It circles the earth about every 90 minutes at an attitude averaging 450 miles. This is a marvelous, though elementary beginning. The next weather satellite will contain greatly improved instruments. The time will come when the weather forecaster will no longer be the butt of jokes because of his mistakes. When man can predict the weather scientifically, he may well be able to control it.

Pioneer V is another scientific first. It now appears probable that we shall be able to talk to it and get information back even when it is 50 million miles away.

We are getting data on the temperature inside and outside of the satellite as it continues on its orbit toward the sun. It is also sending valuable information on the magnetic fields in outer space.

Altogether the United States has now launched 15 earth satellites of which six are still in orbit. The Soviets have successfully launched three, all of them much heavier than ours, of which one is still in orbit.

The United States has successfully launched four deep space probes. Two of them—Pioneer IV and V—substantially achieved their orbits. The Soviets have successfully launched three. Each achieved its principal objective, one orbiting the moon and another hitting the moon.

As to failures, ours have been publicized. The Soviets have kept theirs secret.

There are three reasons why our space program has lagged in "spectacular" firsts—and that adjective, spectacular, is used in admiration, not in criticism.

We were late in starting and we started timidly.

We tied our space program to the military missile program and when we found that militarily we did not need as powerful a launching thrust for the Atlas as first believed because we developed much lighter-weight nuclear warheads, then there was no military reason for developing the kind of rocket best suited to explorations of outer space. We didn't develop it. The Soviets did.

For too long the administration tended to look at outer space through the wrong end of the telescope and hence failed to see, until the Soviets were well in the lead, that Moscow would garner incalculable prestige if we allowed them to leap to the front in space exploration. We failed to see early enough that by being first in outer space the Soviets were advancing the cause of communism by demonstrating Soviet superiority on a very visible and dramatic front.

The scientific knowledge we are now gathering from outer space is becoming impressive. More dramatic achievements are in the making. We expect to put a man into nearby outer space this year and we are making solid headway in developing a rocket with a thrust of 6 to 12 million pounds, capable of putting a man on the moon.

No longer is the box score on space one sided.

Sins of Commission

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Wash-

ington (D.C.) Post on Friday, April 1, 1960, entitled "Sins of Commission":

[From the Washington Post, Apr. 1, 1960]

SINS OF COMMISSION

The more the public learns about the ubiquitious activities of Thomas (Tommy the Cork) Corcoran in connection with a natural gas case before the Federal Power Commission, the more apparent become the evils of ex parte contacts with regulatory agencies. It makes small difference whether Mr. Corcoran's contacts with the FPC in behalf of a gas company were a model of rectitude and enlightened espousal of the public interest. The very appearance of a cozy and intimate relationship between a high-paid gas company lawyer and the FPC unavoidably raises suspicions that the agency has become the pliant captive of the industry it is supposed to regulate.

In the case at hand, the FPC changed its position on a regulatory policy after Mr. Corcoran had personal conversations with three of the Commissioners. This change may yield a subsidiary of the Tennessee Gas Transmission Co. an extra $780,000 in annual income, or an estimated total of $15.7 million for the duration of its 20-year contract. This is scarcely pocket money. Mr. Corcoran, although he is not listed as Tennessee's attorney of record, has received $305,907 from the firm for legal services and expenses between 1953 and 1958. Because of his enterprise as a onetime New Deal "brain truster," Mr. Corcoran has a deserved reputation for knowing the ins and outs of government.

Whatever the merits of the FPC's decision in this case, can anyone blame the public for its suspicions? Here, surely, is an especially dramatic example of the evils of informal contacts between industry spokesmen and the Commissions supposed to regulate with a scrupulous concern for the public interest. Although legislated codes of ethics of the kind Representative OREN HARRIS is proposing may help, the ultimate remedy must be a new concept of the Commissioner's role. Frederick W. Ford, the new Chairman of the Federal Communications Commission, has espoused a commendable philosophy without the need of a new law. "I've no problem acting like a judge," Mr. Ford said in a recent interview, "I bet I haven't had a visitor a month—people just don't come to see me."

If the FPC had similarly insisted that Tommy the Cork confine his statements on a pending case to a hearing room, the Commission would not be so beset by troubles today.

History, Greatest Teacher

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, April 6, 1960

Mr. HENNINGS. Mr. President, recently the Sedalia Democrat, Sedalia, Mo., carried an editorial on the need for continued study of history and current events. I ask unanimous consent that it be printed in the Appendix of the RECORD so that all Members of the Congress may have the opportunity to read it.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sedalia Democrat, Mar. 15, 1960]

HISTORY, GREATEST TEACHER

America never has had a great sense of history. As a young, growing optimistic nation it could see little point in dwelling on all its too brief past. And it has always been sure the present and future would somehow "adjust" to American purposes, both personal and national.

For so long we were not only fabulously endowed with natural riches but luckily isolated from many major world currents. We were able to live successfully in our peculiar and special detachment.

That isolation is gone now. Increasingly we find the life of the world, the events of history, closing about us.

We are facing a realization we should have had long ago—that in not attaching ourselves consciously to the stream of history we automatically suffer considerable personal loss and court the danger of much greater loss.

The man or the country which puts itself constantly in the perspective of history gains immeasurably in self-understanding and self-appreciation. How do you really know what you are without knowing what you have been, and how you got to where you are?

In such knowledge there is deep personal spiritual reward. There is also valuable guidance and counsel for all of us as we thread our way through our vital practical affairs today and tomorrow.

But it is not only the past, as we have seen, that holds these lessons. We must see ourselves steadily in the tremendous frame of current world history.

These events do not totally limit what we can do, but they are limiting, governing factors. Russia and India and Argentina will do certain things whether we like it or not, and what they do will have great impact on us.

If we know and understand what they are doing, we will have some chance of influencing their course—and thus our own.

Not to try, in the patently foolish notion that in today's shrunken world we can somehow achieve our private and national destinies without regard to what others do, would be to practice a kind of monumental futility.

Jailing of Bishop James Walsh by Red China Blasted by American Legion

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article which appeared in the Wilkes-Barre Record of Monday, March 28, 1960, reporting that Pennsylvania's 12th district of the American Legion went on record as condemning the action of the Chinese Reds in jailing Bishop James Walsh:

JAILING OF BISHOP JAMES WALSH BY RED CHINA BLASTED BY LEGION

Resolution branding the jailing of Bishop James E. Walsh, MM, former superior general, Maryknoll Fathers, and well-known clergyman of this region, by Red Chinese Communist is a mockery on justice, another demonstration of the unwillingness of Communist Chinese to accept honest standards and live with the rest of the world in peace and in justice, was endorsed unanimously by approximately 150 Legion representatives at sessions held yesterday afternoon at Swoyersville American Legion Post 644 headquarters.

John R. Gallagher, of Freeland, the American Legion's 12th district commander, presided over the highly spirited 4-hour session.

Louis J. Greco, 12th district Legion Americanism coordinator, speaking on the resolution explained "any proof" the Communist Chinese could submit would hardly fall within the category of "fairplay" and "honest jurisprudence" as judged by American standards.

Resolution also calls upon Secretary of State Christian Herter to press the Chinese Communists for the immediate release of Bishop Walsh, being detained in Red China on trumped-up charge of espionage, before his health is injured irreparably. Copies will be forwarded to the President, Senators JOSEPH CLARK and HUGH SCOTT, and Congressman DANIEL J. FLOOD.

Program in Conservation of Natural Resources in Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 6, 1960

Mr. WILEY. Mr. President, the conservation of our natural resources—soil, water, forests, and others—is a challenge with which we must all be concerned if we are to preserve our heritage of rich resources for future generations.

For this reason, I am always particularly gratified to know that constructive programs are underway to preserve this resource.

Today, I was privileged to receive a report from Mr. M. F. Schweers, State conservationist of Wisconsin, on the progress of our conservation programs. In his letter, Mr. Schweers outlined the highlights of accomplishment in 1959 as follows:

New State records were made by Wisconsin farm families, assisted by Soil Conservation Service personnel, in the development of new conservation plans and the revision of old ones. These plans are to the land what blueprints and specifications are to a structure. The number of followup or counseling contacts made by service personnel with SCD cooperators also establish a State record in 1959.

The installation of soil and water conservation practices last year was gratifying. Accomplishments were made in spite of the frustrating, inclement fall season.

About 25 watershed associations are organized. They are in varying activity stages from application development, to detailed planning, to actual operations. All projects in Wisconsin are sponsored by soil conservation district governing bodies.

Consertation needs report were completed in 1959 for all counties in Wisconsin. These reports show anticipated changes in land use between now and 1975. The amounts of needed conservation practices have also been estimated. These figures were decided upon by a county committee which included representatives of the SCD governing body.

More than 440 meetings on soil and water conservation were held during 1959.

Excellent interagency relationships and the fine cooperation with SCD governing bodies and farmers of the districts are listed among the reasons for the success of the soil and water conservation program in Wisconsin. The principal credit for our fine showing belongs, of course, to the people who operate the farms. They make the decisions and install the practices.

We realize, of course, that we face the task of further improving these programs.

Since we, in Congress, are required to act upon legislation relating to the Soil Conservation Service, however, I believe it is important that we also be informed on the progress at the operational levels.

Reflecting the splendid way in which the conservation program is going forward in Wisconsin, I ask unanimous consent to have Mr. Schweers report to Soil Conservation District Supervisors printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Madison, Wis., April 1, 1960.

To: Soil conservation district supervisors.
From: M. F. Schweers, State conservationist.
Subject: Acknowledgement of your 1959 SCD annual reports.

Look at soil and water conservation accomplishments any way you wish and Wisconsin can be proud of its record. Your 1959 annual reports show that real progress is being made. Like all worthwhile developments, this did not just happen. It was achieved through the combined efforts of people on farms, people in watersheds, and people in communities who have the knowledge and the desire and the means to carry on this work. Many governing bodies showed their appreciation for these efforts. This was done through recognition banquets, annual meetings of SCD cooperators, the granting of certificates, and in other ways.

I am acknowledging 1959 annual reports with a single summary letter to all supervisors in Wisconsin. SCS Administrator D. A. Williams has asked that acknowledgment of your fine record also be made in his behalf.

NINETEEN HUNDRED AND FIFTY-NINE REPORTS

As usual, all of your reports are interesting and informative. Many contain photographs and attractive artwork. For distinctive covers we salute the Clark, Dodge, Jackson, Jefferson, Richland, Shawano, Washington, Waushara and Wood County SCD's.

You will be interested in the fine philosophies expressed by supervisors themselves. Here are excerpts taken from a few of the report prefaces.

"The accomplishments in the soil conservation district have not only been on the land, but also in the education of the people living on the farms." (Brown County SCD.)

"As I see it, conservation * * * appeals to many from different angles. There is the hunter, the fisherman, the man who loves wild flowers, wildlife, and untrimmed beauty, and who desires above anything else to have certain sections of land remain in its natural state as God created it. All these desires are good but I have learned here above everything else, that the conservation of soil comes first and foremost." (Walter E. Bock, Columbia County SCD.)

"The soil conservation district supervisors do a good job of coordinating the technical work of the U.S. Soil Conservation Service and the educational work of our county agent's office, our schools, and of various allied agencies. Until I became a member of the agricultural committee, I was not aware of the far-reaching powers and responsibilities of the Agricultural committee when they act in their capacity as supervisors. Theirs is a big job and their responsibilities are heavy ones. I think I can say that both the supervisors and the agencies servicing conservation in this county are doing a conscientious, careful, and adequate job. We owe them a vote of thanks." (George H. Harb, Dane County SCD.)

"Encouraging landowners and operators to develop, apply, and maintain a conservation plan for their unit, through district assistance, is held to be a most satisfactory and democratic approach." (Door County SCD.)

"God has lent us the earth for our life. It is a great entail. It belongs as much to those who are to come after us as to us, and we have no right, in anything we do or neglect, to involve them in unnecessary penalties, or to deprive them of the benefit which was in our power to bequeath." (Shawano County SCD.)

It was nice to learn that most district governing bodies again distributed copies of their annual reports to members of their county boards, SCD cooperators, and other interested and contributing individuals, groups, and agencies.

ACCOMPLISHMENTS

The following table shows 1959 accomplishments made by farm people through their soil conservation districts with assistance provided principally by the Soil Conservation Service. Technical aid on woodland management and tree planting was made available largely through personnel of the Wisconsin conservation department.

Item	Unit	1959	Grand total to Dec. 31, 1959
New cooperators	Number	2,161	40,817
Basic conservation plans	do	2,313	25,602
Plans revised	do	388	
Soil surveys	Acre	628,707	13,086,088
Followup contacts	Number	8,878	
Contour strip cropping	Acre	41,825	998,789
Waterway construction	Mile	240	3,298
Terraces	do	269	4,179
Diversions	do	104	1,960
Land smoothing	Acre	1,004	8,958
Surface ditches	Mile	212	6,322
Tiling	do	813	5,102
Pasture renovation	Acre	29,291	269,822
Woodland protection	do	27,147	327,517
Tree planting	do	15,490	77,163
Field windbreaks	Mile	60	748
Wildlife area improvement	Acre	2,882	25,244
Hedgerow planting	Rod	26,590	172,879
Erosion control structures	Number	289	1,230
Farm ponds	do	314	1,168
ACP referrals serviced	do	13,401	
Public Law 566 projects:			
Work plans	do	1	6
Retarding dams:			
Contracted	do	11	17
Constructed	do	2	6

The installation of soil and water conservation practices last year was gratifying, so your reports indicate. Layout work was very good considering the wet fall season. Records of other years are often hard to beat.

We are, however, pleased to report that new State records were attained in assisting SCD cooperators in developing basic conservation plans, in revising existing plans, and in making followup contacts. As you might surmise, much of the time normally devoted to fall layout was diverted to planning and followup activities because of inclement weather and wet, soggy soil. This condition did provide service technicians with an opportunity to fulfill planning needs.

The service does not maintain records on land use conversions, improved rotations and increased purchases of needed lime and fertilizer. However, these basic factors are considered while assisting farm families in developing their conservation plans.

WATERSHED PROJECTS

Under Public Law 566, the watershed protection and flood prevention act, two major detention dams were completed. Two others were started. This phase of the work was also retarded by unfavorable weather. Contracts were let for 11 structures. These, plus several others contemplated for contract letting this year, should materially step up construction in 1960.

Like the proverbial rolling snowball, interest in Public Law 566 projects is gaining momentum. At year's end, Wisconsin had five watersheds approved for operations and one additional work plan completed. It is now in Washington for review and approval. Three work plans are in the development stage and field surveys have been completed for two other watersheds. Four additional applications for planning assistance have been approved by the State Soil Conservation Committee. At least another dozen watershed groups are organized and are in the process of completing applications for planning assistance.

Thus far, all Public Law 566 projects are sponsored by SCD governing bodies. They are all endorsed by local watershed associations and supported by many local groups such as county boards, town governments, and conservation clubs. Agencies assisting in the development of work plans, in addition to the SCS, are the State Soil Conservation Committee, Agricultural Extension Service, Wisconsin Conservation Department, Agricultural Stabilization and Conservation Service, U.S. Forest Service, and U.S. Fish and Wildlife Service.

AGRICULTURAL CONSERVATION PROGRAM

Your reports indicate—and we thoroughly concur in your appraisal—that the ACP has been a real incentive in getting more farmers to establish increased amounts of practices on the land.

County Agricultural Stabilization and Conservation Committees have been very cooperative to work with. Last year they transferred more than $260,000 to the SCS under ACP-SCS 5-percent agreements. Of this amount, the Service earned $225,000. These funds were used to employ additional permanent and part-time personnel to handle the increased technical workload resulting from the agricultural conservation program.

Layout accomplishments made under this program are included in the accomplishment table.

EDUCATION AND INFORMATION

Periodically we secure data from our work unit conservationists regarding SCS participation in education and information activities. We did this for 1959. The following summary is for the State as a whole.

Activity	Number	Attendance
Extension Service sponsored events:		
General meetings	469	21,800
Demonstrations	116	8,500
Tours	201	11,900
SCD–SCS farm planning meetings	90	1,300
SCD–SCS followup meetings	35	600
PTA, civic groups, etc., meetings	442	14,700

The swell job being done in teacher training and youth education in the field of soil and water conservation deserves special mention here in Wisconsin. The State soil conservation committee is spearheading the teacher training activity under the able direction of Executive Secretary I. O. Hembre. The county superintendents of schools, who also serve as SCD supervisors, have done an outstanding job with our rural youth. It is our firm belief that Wisconsin has one of the best education programs in soil and water conservation in the Nation.

Reports from work unit conservationists indicate that 1,940 SCD-SCS news articles were released during 1959. The number of newspapers carrying the releases totaled 297, an average of 4.2 per district. This makes a total of a little more than 8,000 printed stories for the past calendar year. This is a very good record indeed. More than 9,000 copies of the SCS booklet, "Soil and Water Conservation in Wisconsin," were distributed last year. The department of vocational agriculture requested 4,300 copies.

CONSERVATION NEEDS

A conservation needs inventory for all counties in Wisconsin was completed in 1959 according to schedule. SCD supervisors were represented on every county committee and played a major role in making final decisions.

The tentative State report, a summary of county reports, indicates anticipated changes in land use between 1959 and 1975. There will be a reduction of 3 percent in cropland and 13 percent in permanent pasture. Woodland and all other land show slight increases of less than 1 percent each. New highways, airports, subdivisions, and other developments, will take up most of the land removed from cropland and permanent pasture.

Your county data should help you in planning future programs for your district.

COOPERATION

References have already been made to the excellent cooperation you are receiving from State and Federal agencies. Included in this group are the State soil conservation committee, agricultural extension service, agricultural stabilization and conservation service, Wisconsin Conservation Department, and soil conservation service. A number of reports also mention the Farmers Home Administration.

Most districts are receiving appropriations from their respective county boards ranging from $100 to several hundred dollars.

You commend county highway commissioners, civic organizations, county bankers' associations, and others for direct assistance and sponsorship of events in behalf of soil and water conservation. Naturally, you did not overlook mentioning the fine support received from newspapers and radio and TV stations.

These fine relationships have been a definite influence in making Wisconsin one of the outstanding States, soil and water conservationwise.

MEETINGS

Each year more SCD governing bodies are holding regular monthly or bi-monthly meetings. Only a few hold meetings less often than quarterly. We in the SCS believe that in an active district there are ample reasons for supervisors to get together on a monthly basis.

The five 1-day workshops sponsored by the State soil conservation committee were the best of their kind, so your reports indicate. They dealt with laws under which SCD supervisors operate in their several capacities. Having attended the Shawano session, I agree with you that Attorney Cletus Howard did a masterful job in presenting the subject and answering the numerous questions directed to him.

Each area held two successful association meetings during the past year.

A few supervisors attended the NASCD annual conference held in Houston, Tex., in 1959. Those who were present were impressed with the magnitude of the convention and the sincerity, knowledge, and enthusiasm of the participating supervisors.

STATE ASSOCIATION ACTIVITIES

The board of directors of your State association held three meetings in 1959. I have had the pleasure of participating in most of their sessions and I am always impressed with the manner in which they conduct their business session and with the overall accomplishments of the programs and activities they undertake.

It is not necessary to tell you about the value of and interest in the State association sponsored speaking contest. Projected figures show that in 1959 there were 22 entries in the adult division, 260 in the senior class, and 905 in the junior group. This is a greater number than participated in 1958.

The dealer-district program is getting a good start, particularly in area 1.

The Buffalo Co. SCD governing body won first place in the 1958–59 Goodyear awards program with the Lincoln Co. district taking second place.

Soil Stewardship Week promotion in Wisconsin has been especially good. Each year this project takes on incerased momentum.

The State association also contributed to Farm Progress Days held in the Marinette Co. SCD last year. This was an extremely well organized affair. Unfortunately, rains during the 3-day period curtailed field operations as well as attendance.

LOOKING AHEAD

The past year was a very good one in terms of SCD accomplishments in Wisconsin.

In spite of an abnormally wet fall that interfered with field layout, gains were made in other phases of our joint program, particularly in the planning and followup activities.

Because of reduced earnings under ACP during 1959 as a result of bad weather, we will have to curtail the employment of part time help in each district by about one-third of what was allotted last year. This will call for better planning on your part and more efficient operations on the part of our personnel.

Our challenge now is to attain the ambitious goals you have established for the current calendar year. You say that districts have a good backlog of work ahead as more key individuals—the people who operate our farms—are ready, willing, and able to move forward more rapidly in adopting the conservation way of farming. We are sure that with the fine leadership provided by you and your associate supervisors, and the efforts put forth by personnel of cooperating agencies, 1960 should be another overall record year.

THANK YOU

The many courtesies and fine cooperation you have extended to all of us in the Soil Conservation Service are deeply appreciated. We colse this letter with a heartfelt "thank you."

Sincerely yours,

M. F. SCHWEERS,
State Conservcationist.

Wheat

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. BREEDING. Mr. Speaker, on March 30, I had the pleasure of attending a dinner sponsored by the Great Plains Wheat Marketing Development Association in cooperation with Western Wheat Associates, and at which dinner many Members of Congress were present. I thought all Members of this legislative body should have the opportunity to read the remarks delivered by Mr. Otto Amen, president of Western Wheat Associates, U.S.A., Inc., Portland, Oreg., on this occasion.

The remarks follow:

(By Otto Amen)

Out in the States of Oregon, Washington, and Idaho, a geographic and economic region often referred to as the Pacific Northwest, we've learned to accent the word "Pacific." I would like to visit with you for a few minutes this evening on the importance of that word, and that ocean, to our area.

Wheat is a traditional crop in the Pacific Northwest. It came in covered wagons with the early settlers and has been of major economic importance ever since.

Traditionally, exports have been our major market. The first wheat grown in the region was shipped to the goldfields of California. Later, as flour mills developed, sailing vessels from all parts of Asia and the East came to our ports to load this valuable commodity.

For the past several years we have produced in the neighborhood of 125 million bushels annually. About 25 million of this is Hard wheat, grown principally in southern Idaho; the remaining 100 million bushels is Soft White wheat, which produces an excellent flour for noodles, crackers, cakes, cookies, and other pastry items.

Between 3 and 4 million acres of land in this region are best suited to wheat growing. Much of this land can grow no other crop satisfactorily.

At one time we enjoyed a reasonably good domestic market for our flour; this is all but gone due to percentage freight rate increases that have made it impossible to ship wheat or flour east. Our only remaining domestic market of any consequence is in California, which w eare able to hold only with diligent attention to freight rate matters.

Thus, sealed off from the eastern part of the Nation by a freight wall, and located in an area that has many natural advantages as a gateway to Asia and the Orient, we must look to exports for about 80 percent of our production, and the waterways of the Pacific Ocean for our means.

It was not by accident, then, that Pacific Northwest wheatgrowers began investigating the market potentials of the Orient nearly 12 years ago. When Public Law 480 was passed in mid-1954, our growers were ready to go into action.

The organization I represent—Western Wheat Associates, U.S.A., Inc.—is a regional organization that devotes its full attention to the development of foreign markets. Western Wheat is composed of the State wheat commissions and grower associations of Oregon, Washington, and Idaho, with our home office in Portland.

At this very moment our executive vice president is probably somewhere between Japan and west Pakistan on a 6-week inspection tour of our foreign offices at Tokyo, New Delhi, and Karachi. He is accompanied by the executive secretary of the Great Plains Wheat Market Development Association, which has been a joint cooperator in the India and Pakistan programs, and recently joined with us as cooperators in Japan, Korea, and the Philippines. In addition, the two organizations are now full-time partners in Ceylon, Indonesia, Burma, and Thailand. Thus, the U.S. wheatgrowers are seeking "togetherness" in their market-development activities covering the major wheat- and flour-importing countries of south Asia and the Far East. We have learned that our oversea offices and personnel cannot promote Washington wheat or Kansas wheat—we are considered as representatives of all U.S. wheat.

As most of you are aware, our oversea programs are carried out in participation with local foreign organizations or associa-

tions and in cooperation with the Foreign Agricultural Service of the U.S. Department of Agriculture. Our projects are financed by foreign currency accrued to the U.S. Government through the sale of surplus agricultural commodities under Public Law 480.

Up until the formation of Western Wheat about a year ago, Pacific Northwest wheatgrower associations had spent about $125,000 of their own money on foreign market development. Now that we have pooled our resources we have been able to expand the program and Western Wheat is now annually budgeting about $150,000.

I'd like to outline some of the oversea market development activities that we've carried on. Since time is limited, I'll concern my remarks to only Japan and India.

JAPAN

General: Japan was the first country in which efforts were concentrated since this country offered the greatest immediate potential, and is our area's major dollar market.

One of the significant factors about Japan is that the Central Government has a policy, and a program, to improve the health of the Japanese people through nutrition education. Its objective is to get the Japanese people to eat wheat foods in at least one meal per day. You don't get people to abandon their age-old traditional rice and fish diets by a national proclamation. Some impetus is needed, and this is where we believe market development programs have greatly stimulated wheat consumption.

We've had a number of projects in Japan, each one designed to meet a particular group of consumers. Some projects have been short range, others long range. In the early days we conducted an advertising type promotional program designed to make people aware of wheat foods. Another project saw some 1,700 home economists trained in the nutritional values of wheat.

School lunch expansion

The first major project launched was a program to expand the feeding of schoolchildren. School lunches were not new to the Japanese, but the program needed expansion and further development. Our project was designed to do four things: (1) Train home economists and bakers who were preparing the meals; (2) encourage school officials and parents to add a school lunch program to their school; (3) emphasize the relationship between health subjects taught in the classroom to the meal that was served to the children; and (4) increase the emphasis on a balanced diet.

The year before the expansion program began there had been an increase of 541 schools, representing 308,000 children, added to the school lunch movement. At the end of the first year of our expansion program the number of new schools jumped to 1,460 representing nearly a million children. Increases in the number of schools and children fed have continued until today 60 percent of Japan's schools serve a nutritious lunch—which includes a one-third-pound wheat roll—to more than 10 million schoolchildren.

Schools with existing lunch programs can be influenced also, and a noticeable change can be seen in the total caloric content of the meal served today compared with that served 3 years ago. In its first 2 years of operation, the expansion program contributed to a 35 percent increase in the amount of wheat flour consumed in the feeding of schoolchildren.

The results of improved national nutrition—of which the school lunch is a part—are vivid in the children of the New Japan. The average sixth-grade boy today is 3 inches taller and 8.3 pounds heavier than his counterpart was in 1946.

This program is helping to establish inroads on national eating habits. Many parents have told our representatives that they have been pressured into serving bread and other wheat foods at home because their children insist on them.

Bakers' training school

Through our activities in Japan, we have constantly looked for means that would reach the countless rural villages and small towns. Wheat accounts for 35 percent of the diet in Tokyo compared with 8½ percent in the rural areas. An approach to this matter has been the training of bakers who come from these small villages and towns.

Market development funds have been used to provide advanced technical baking training to rural bakers—bakers who would not otherwise be able to advance in the techniques of their field. This training work is done at the Japan Bakers' Training School, a well-staffed and equipped institution in Tokyo.

The first Bakers' Training School saw 160 rural bakers from all of Japan's 46 prefectures participate in a 3-month intensive training program. Upon completion of their training course, these bakers returned to their villages and conducted classes for other local bakers. It is estimated that a total of 12,000 bakers were reached through this program. The cost of training was about $125 for each of the 160 bakers.

Incidentally, our Canadian friends and competitors have seen the value of this school—last year they donated $35,000 cash for the purchase of new baking equipment.

At present we are conducting another training session for 150 rural bakers. Due to the shortage of market development funds it has been necessary to shorten the training period from 3 months to 30 days.

Kitchen demonstration buses

Perhaps the most novel—and the most popular—market development project has been and is the kitchen demonstration buses. Here again a means was devised to reach into the rural villages. These kitchens-on-wheels staffed by trained home economists travel to villages and conduct demonstrations of balanced meal preparation, stressing wheat foods.

This project started with eight buses in September 1956, and in 1958 four more buses were added.

In the past 3½ years, these 12 buses have traveled a total of 270,000 miles; conducted 15,000 demonstrations to a total audience of 1.4 million Japanese housewives. Or, on a monthly basis, each bus has averaged 640 miles per month to conduct two demonstrations per day to an average attendance of 92 housewives per demonstration.

These people have been reached at a very low cost—the amount of foreign currency spent has amounted to $306,000—or 22 cents per person reached—in a country that today is our leading dollar customer of wheat. The success of these buses and demand for return performances has caused 20 prefectural governments to purchase and operate their own buses. The kitchen bus project has made a lasting and continuing impression in Japan.

Conclusion

When we first began working in Japan we wheat growers were told repeatedly by our fellow Americans that "you just can't get those people to eat wheat—they're rice eaters and always will be." However, pessimism seldom accomplishes anything * * * we didn't take their advice but just forged ahead.

In prewar days, the Japanese consumed about 300 pounds of rice and 30 pounds of wheat per person annually. Today, the per capita consumption of rice has dropped to 264 pounds while wheat has increased 300 percent to 90 pounds per person * * * even with bumper rice crops the past 4 years.

INDIA

General: And now a few remarks about our work in South Asia. There are more people in India today who are not familiar with, nor have been exposed to, wheat foods than populate the entire United States. Possibilities for increasing wheat foods consumption in India are tremendous. Due, however, to a primitive agricultural, economic, and industrial structure, our work will be long and slow. It will require much patience and understanding. I believe our program in India should be assessed with two sets of values: (1) By eliminating mass nutritional deficiency and occasional starvation diets; and (2) by helping to remedy this situation making a physically and morally strong India to ward off a Communist philosophy of life.

Trade teams

To initiate interest and cooperation for our program overseas, one of the most effective means has been to bring Government and industry representatives to the United States to acquaint them first hand with what the American grain industry has to offer. Four Indian Government and private industry representatives visited the United States in June 1958.

A few months later, to evaluate the strengths, weaknesses, needs, and possibilities in India, a return survey and evaluation was made by a team of U.S. Government and industry representatives. I was privileged to be a member of that team. From this has come strong support and understanding of what we hope to do.

To carry the person-to-person exchange one step further, it is now anticipated that, with the cooperation of the private grain trade in this country, two Indians will shortly arrive in the United States where they will become, for 6 months, employees of a country grain growers organization to learn firsthand methods of receipting, storage, and warehousing. Trained personnel in this field are practically nonexistent in India, and are badly needed to manage the rapidly-increasing storage facilities now being constructed.

Bakers' training school

In India it is necessary that elementary aprpoaches be utilized for market development. One of the most basic and perhaps one of the most effective is our Bakers' Training School, whereby 300 commercial bakers are being trained over a 2-year period to produce more tasty, more eye-appealing, and more sanitarily prepared, Western and Indian style wheat foods. In addition, private and Government organizations, such as the Indian Airlines, Indian National Railways, Burma-Shell Oil Co., and others have recognized the benefits of such a school, the only one between Japan and Europe, and are training their canteen staffs at this institute.

Bus demonstrations

In a country where less than 10 percent of the people can read or write, where transportation and communications are occasionally difficult, where many languages and dialects prevail, the only effective way to reach the population is by demonstration. The Foreign Agricultural Service has recently approved the construction and operation of six mobile vans to travel to the village of India giving demonstrations of the necessity for a balanced diet, and again stressing wheat foods where possible * * * this program is aimed at better utilization of foods already available and not at something unobtainable by the poorest villager.

Trade fairs

In cooperation with the U.S. Departments of Agriculture and Commerce, trade fairs and exhibits at four of India's largest cities have introduced wheat foods, including breads, macaroni, and standard household

pastry preparations, to over 3 million urbanites. And this does not include the large international attendance visiting the wheat exhibit at the recent New Delhi World Agricultural Fair opened by President Eisenhower.

Sampling program

To assess our competition, to insure that our wheat meets all quality specifications, and to counteract often misleading statements about the poor quality or high moisture content of U.S. wheat shipped abroad, samples of wheat imported by India and Pakistan, by countries in Europe and South America, are taken at the port of entry. This includes all wheats from whatever source, whether it be United States, Canadian, Russian, or Australian. These samples are sent to a USDA laboratory in Illinois for a complete chemical, milling and baking analysis. The first results of this program are expected shortly.

All of these projects and others have been initiated since the opening of our India office less than 2 years ago.

Conclusion

I could speak at great length on what the American wheat producers are doing all over the world to develop future markets, we hope eventually dollar markets, for our products. To a very large measure the effectiveness, and future, of our program rests with you here this evening.

As growers, Public Law 480 is very important to us. In the past 5 years approximately 45 percent of our Pacific Northwest wheat crop has been exported under title I of this program. But, Public Law 480 is more than a current market for us—it provides us with valuable tools that will enable us to continue to stimulate the development of these future markets. However, continued close cooperation is mandatory between government and industry. By working together, by helping others, we help ourselves.

Subsidies in American Life

EXTENSION OF REMARKS
OF
HON. EARL HOGAN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. HOGAN. Mr. Speaker, one of the little appreciated facts in American history is the role the Federal Government has assumed in providing substantial, tangible assistance to the various productive branches of the American economy assistance that over the years has amounted to many billions of dollars. No part of our economy has been free of such aid. It has taken a multitude of forms. It consists in part of free services provided by the Government, such as basic statistical data, maps, charts, and other navigational aids, weather forecasts, research in agriculture, mining, industry. It includes tariffs, loans at less than the market rate of interest, various kinds of insurance, grants to many forms of business—such as railroads, airlines, shipbuilding, and ship operating companies—surplus disposal programs, stockpile purchase programs, tax concessions, irrigation projects, rural electrification, and price support programs.

How many of these programs should be included within the term subsidy depends, of course, on how narrowly or how broadly the term subsidy is to be defined. The arguments as to what is and what is not to be interpreted as a subsidy need not be of great concern at this point. The economic effects are much the same, regardless of whether a program involves direct payments to particular business, a remission of charges, sales by the Government at less than market prices, loans at less than prevailing interest rates, or price supporting or raising devices such as the tariff or farm price supports. In each case a specific economic individual or class of individuals benefits directly while the cost is borne by the taxpayer or the consumer.

It is futile to approve or condemn subsidies, however defined, as a whole. Each subsidy must be judged on its own merits, in terms of its cost to the Nation, and the benefits derived. There can be no doubt that some subsidies have contributed greatly to the development of our Nation. Without the enormous land grants given to the railroads of our country, the economic expansion of the West, and indeed of the entire Nation, which characterized the latter half of the 19th century would have been impossible. The American merchant marine, essential to the defense of our country, could not survive without a certain subsidy. Subsidies have been used to prevent business failures when such failures would have had disastrous repercussions throughout the economy. They have been used to prevent price declines that would have paralyzed large segments of our economy.

There have, of course, also been subsidies which have been widely criticized as being contrary to the public interest, where the benefits received were not sufficient to justify the cost. In several cases, subsidies to shipping companies and to airlines have been disclosed to have been associated with graft and corruption. Many tariffs are widely considered to have little economic justification. Similarly, for example, depletion allowances to the petroleum and mining industries and low postal rates for second-class mail have been widely criticized as being unwarranted.

In practice we cannot go through our daily round of activities without almost continually being in contact with subsidies. The very house we live in has in all likelihood its mortgage insured by a Government agency; thereby the interest charges are lower than would otherwise be the case. The food on the breakfast table has been safeguarded by the Federal meat inspection program and the Food and Drug Administration. Our children's education is, in part, subsidized, by the taxes paid by childless wage earners of our community. The school lunch program makes it possible for 12 million of our children to get a hot lunch for far less than would otherwise be possible and the special milk program in 78,000 schools benefits millions more. Every time we buy gas, we share in the benefit the petroleum industry gets from the depletion allowance—a depletion allowance which permits the industry to cut its annual operating expense by about $2 billion a year. Every time we read a magazine, we receive some of the benefit of having the post office bring it to us for far less than the cost of carrying it. Magazine publishers are saved millions of dollars as a result of low second-class mail rates. Steel in our cars or refrigerators may well have been produced in a plant very largely paid for at Government expense during the war and then sold to the private operator for a fraction of the original cost.

In short, we live in a world where we are continually affected by subsidies which reach into every phase of the economy.

Since there is no standard definition for subsidy, and since the benefits from subsidies can frequently not be measured with any accuracy, it is not possible to give a total figure for all Government subsidy programs during a given year. It is possible, however, to show what the budget of the United States calls the current expenses for aids and special services to the various segments of our society. These current expenses are defined in the 1961 budget as "expenditures which provide aids or special services to specific economic groups primarily in the current year, including administrative and other operating expenses attributable to investment-type programs and the costs of maintaining the related physical assets. Benefits accruing to various groups through tax provisions or the Government aids which do not call for expenditures are not included." Table 1 shows these expenditures as follows:

Source: Budget of the U.S. Government for the fiscal year ending June 30, 1961, pp. 921–923.

In this classification, it can be seen that the current aids to agriculture, even using the classification of the Bureau of the Budget, accounts for only 20.9 percent of all current aids and special services. Business accounts for 8.9 percent, labor for 4.6 percent, veterans for 29.8 percent, international—primarily grants under the mutual security program—for 22.5 percent, and all other for 13.4 percent. It should be noted that even here, by no means all of the current aids for agriculture are designed exclusively for the benefit of farmers. The largest single item, sale of surplus commodities for foreign currencies, has enabled the United States to acquire substantial amounts of strategic and critical raw materials which are deemed to be essential for national defense. The soil bank programs serve not merely to maintain farm income while curtailing production but also to preserve the fertility of the soil for all future generations. Rural Electrification Administration administrative expenses help a program which has been a great boon to producers of electrical machinery and equipment as well as to farmers themselves. Market research undertaken by the Department of Agriculture benefits the processors, shippers, and distributors of agricultural products fully as much as it benefits farmers. The Federal meat inspection program is designed to assure the public a clean, wholesome supply of meat. It is actually a program of inspection and supervision of the meatpacking industry. The primary purpose of the Department of Agriculture's brucellosis is public health protection. The International Wheat Agreement helps not only farmers, but also helps members of the grain trade expand their export business and profits. The work of the Forest Service benefits all those who use the national forests for recreation, grazing, and other land utilization, as well as all concerned with better forest management and research in the protection and better utilization of the Nation's timber resources.

It should be noted further that the Federal Government provides much assistance to the various segments of the economy that is not included under current aids and special services. In the case of agriculture, this would include CCC price support and grain storage and loans of the Farmers Home Administration and the Rural Electrification Administration, conservation payments, water development projects, the school-lunch program, and various international and other programs not designed primarily for the support of agriculture. For business, not included in current aids and special services are Small Business Administration loans, highway, airport, and other public works projects, ship construction subsidies, and grants to States for building private hospitals and other health facilities. For the homeowner and tenants loans and mortgage purchases provide assistance that is not classified among current aids.

It may be illuminating to consider the extent of subsidies to the two related industries of the United States, the shipbuilding and shipping industry. Under the Merchant Marine Act of 1936, the United States pays both construction-differential and operating-differential subsidies in an effort to maintain an efficient merchant marine on the high seas, a merchant marine that can operate as an important defense auxiliary in times of war or threat of war. The chairman of the Federal Maritime Board and Maritime Administrator, Clarence G. Mores, reported in September 1957 that from 1937 to June 1956 the total amount paid out as subsidy for new construction totaled $437.9 million. Since then, and including estimates through June 1960, an additional $325.1 million has been spent on construction differentials, half of it in the fiscal year 1960. Thus $763 million has been spent since 1937 on construction differentials alone. These include major subsidies on the present giants of the American fleet, the SS *United States*, the SS *Constitution*, and the SS *Independence*. The cost of the *United States* is reported as $76.8 million, including $25.4 million for national defense features. The United States Lines purchased this from the Government for $28.9 million. The American Export Line paid $14 million for the *Independence*, built at a cost of $26.5 million, and $14.4 million for the *Constitution*, built at a cost of $27.2 million.

Related to the construction differential subsidy is the sales program undertaken by the Maritime Administration under the Merchant Ship Sales Act of 1946. Under this program 843 ships, built for the Maritime Commission during World War II, were sold to United States citizens for United States flag operations at a price of from one-fourth to one-fifth of their replacement cost. By December 31, 1956, ship sales under the Merchant Ship Sales Act of 1946 totaled $1,776.3 million. Net sales after vessel trade-in allowances have been deducted were $1,697.4 million. This represented about a 40.1 percent return on the war cost of these ships. The operating differential subsidy has amounted to $1,197 million for the calendar years 1947 through 1959.

Actually each subsidized voyage, including a pro rata construction subsidy is estimated to cost $2.8 million over the typical 20-year contract.

Altogether, as estimated in a study compiled by Representative FRED MARSHALL, and published in the hearings, "Department of Agriculture Appropriations for 1959," of the House Committee on Appropriations (p. 158) subsidies to maritime organizations for the period 1938 through fiscal 1957 amounted to $3.5 billions.

The trend of these subsidies is, if anything, upward. It is reported that Congress may be asked to appropriate about $118 million in 1960 for a sister ship to the U. S. Lines' *United States*, the *America*, which the company will purchase for about $47 million; and about $86 million for a Pacific American President superliner, the *President Wilson*, which will be purchased by the line for about $35 million. A substantial portion of the cost of these vessels to the taxpayer is due to the incorporation of certain national defense features, which do not enter into subsidy calculations. Maritime interests now are urging relaxation of the provision in the Merchant Marine Act of 1936, which states that in no case may a construction-differential subsidy exceed 50 percent of the cost of the vessel—excluding national defense features. These interests point out that the cost differential between construction in a foreign yard and in the U.S. yard is increasing and that even with a subsidy of 50 percent of the cost of a ship (excluding national defense features) shipping companies find it more economical to buy ships built in foreign shipyards.

Certain other major subsidies or subsidylike benefits may also be mentioned. In the 10-year period from July 1, 1948, to June 30, 1958, the postal deficit totalled $5,367 million, $926 million of which was incurred in the most recent of these years, the fiscal year 1958. The largest single factor contributing to this multibillion deficit is the losses incurred in carrying second-class mail—publishers' mailings of magazines and newspapers. These losses on second-class mail totalled $2,324 million over the same 10-year period.

Airlines continue to receive subsidies in connection with carrying mail. The subsidy to certificated air carriers has been estimated by the U.S. Civil Aeronautics Board at $554 million for fiscal years 1951 through 1960. In recent years almost all of this has gone to smaller local service carriers, for helicopter service and for foreign operations. However, it may be noted that in the last week of March 1960, a major trunkline operator, Capital Airlines, Inc., petitioned to the Civil Aeronautics Board for a subsidy that would amount to $12,949,000 for the year ending March 15, 1961, citing "particularly heavy losses," its inability to arrange financing, and a critical cash position.

In addition to direct subsidies, air carriers also benefit from such governmental assistance as airport and airway facilities, other navigation aids, aeronautical research and development conducted under governmental sponsorship, and the sale of surplus aircraft both to new and existing companies engaged in civil transport.

Accelerated amortization on certain facilities built for defense purposes has permitted companies owning such facilities to cut their tax obligations substantially. In 1955 the Joint Committee on Internal Revenue estimated that from 1950 through 1960 tax collections would be reduced by some $5,196 million as a result of certificates of necessity permitting accelerated amortization. However, after 1960, when facilities whose value has already been written off under the accelerated amortization provisions are still operative, the tax collections would be greater than they would have been without accelerated amortization. On the basis of current tax rates, it is estimated that for the period 1961–76 tax collections will be increased by $2,426 million and thereafter by another $2,326 million. Of course, for the period up to 1960, when tax collections were lower, companies benefitting from the accelerated tax amortization provisions were receiving the equivalent of an interest-free loan.

Some students feel that all or part of the depletion allowances permitted as tax deductions should be interpreted as subsidies. The depletion allowances to mining, petroleum, sulfur, and gas interests permit producers to deduct from income for tax purposes a substantial percentage of income earned and are intended to encourage development of these resources. Depletion reported on corporation income tax returns averaged $2.1 billion annually for the 10 years, 1947–56.

To some extent the disposal of Government surplus property involves a subsidy. After World War II about $15.1 billion worth—reported cost—of surplus property was sold by the War Assets Administration with a sales realization of $4.1 billion. The difference between the reported cost and sales realization is not all subsidy, since the reported cost does not take into account such factors as depreciation, deterioration, obsolescence, and so forth. However, some purchasers were undoubtedly able to obtain surplus goods at lower prices than prevailed on the open market for comparable items.

It is sometimes claimed that subsidies tend to reduce the incentives for efficiency and growing productivity. Whatever may be the merits of this argument in other industries, it clearly is not valid in agriculture. Farm productivity has been growing at an astounding rate, much faster than productivity in most other occupations, and substantially more than in industry as a whole. Output per man-hour on the American farm has increased 37 percent from 1950 to 1958. This has made it possible for a single farmer in 1958 to provide food and fiber for 23.5 persons in 1958, compared to 15.9 persons in 1950, 10.6 persons in 1940, and 6.9 persons in 1900. This increase has been due in large measure to extensive mechanization on millions of American farms. The average farm today represents an investment in machinery of about $20,700 per worker, compared to about $15,300 per worker in industry. Further, it has been estimated that farmers have $3 invested in production for every $1 that is invested in the marketing of their products.

With the growing productivity of the individual farmer, total farm population and farm employment have declined. This is continuing to happen. In April 1959 farm population was 21,172,000 or 10 million less than in 1937. Similarly farm employment in 1959 was 7,384,000, down 5 million from the 1936 level.

This decline in farm population and employment has been somewhat offset by increases in employment in the processing, packaging, and distribution of food and fiber. Thus the decline, if any, of the total number of persons engaged in the production and distribution of products from the American farm to the consumers of the Nation, has been much less than the decline in the number of farmers or in farm employment alone.

The mechanization of the American farm has made the farmer an increasingly significant customer for American industry. It is estimated that the investment by farmers in machinery is twice that of the entire steel industry and five times that of the automobile industry. To keep the 12,500,000 farm cars, trucks, and tractors running, the farmers buy some $1,500 million of oil products each year, making them the petroleum industry's largest single customer.

Increased farmer efficiency has unfortunately not been converted into corresponding gains in real income. Farmers still lag behind the rest of the Nation in income received. In 1958, per capita farm income was $1,066 while per capita nonfarm income was $2,066, nearly twice as much. Two hundred and ninety-eight dollars of the farmer's $1,066 was for work done off the farm. During 1958 the hourly income for farm labor and management was 97 cents while workers in manufacturing industries received $2.13. Even excluding the smaller noncommercial farms, in 1956 farm families operating the Nation's 2,213,000 "commercial" farms received an average income of $5,415 while all nonfarm families received incomes averaging $6,900.

A common misconception is that farmers are receiving unfair economic benefits as a result of the price support programs and other so-called subsidies to farmers. However, almost every indicator of farm income and farm prices shows that far from receiving undue economic advantage from subsidies, farmers have consistently lagged behind other groups in the economy. Total realized net farmers' income from agricultural sources—excluding net change in inventory—was $11 billion in 1959, down from 13.1 million in 1958 and the lowest for any year since 1943, except for 1957. The index of prices received by farmers compared to prices paid—including interest, taxes and wage rates—was down to 80 in 1959, the lowest since 1939. Prices paid by farmers have climbed every year since

1955 and bring the index of all items paid to 298—1910–14 equal 100. Prices received by farmers for all farm products in 1959, on the other hand, were down to an index figure of 240—1910–14 equal 100—the lowest for any year since 1947 with the exception of the 3 years 1955, 1956, and 1957.

Food price increases to consumers have brought about many complaints from housewives. Unfortunately, they have usually tended to blame the farmer for this increase. He has actually been receiving an ever small share of the consumer's dollar. In 1947–49, the farmer received, on the average, 50 cents of the consumer's food dollar. By 1958 this had shrunk to 40 cents.

Put another way, between 1947 and 1958 the annual cost of the family's food marketbasket increased by $154. However, the farm value of the food actually dropped by $40. Labor costs increased $100. Transportation costs rose $31. Other business expenses advanced $60. Charges to pay Federal corporate income taxes were up $8. And the profits of marketing corporations decreased $5.

As a matter of fact, whereas wholesale prices have gone up on the average 19.4 percent since 1947–49, the prices of farm products have gone down 11 percent and the prices of processed foods only up 7 percent.

Actually for the housewife, food and clothing prices have risen far less than other items comprising the cost of living since 1947–49. In 1959 the Consumer Price Index as a whole was 24.5 percent above the 1947–49 level. Food had increased by only 18.3 percent and clothing by 7.8 percent. On the other hand, medical care had increased by 50.6 percent, rents by 39.6 percent, and transportation by 46.1 percent.

With the increases in average incomes of nonfarm families, the relative cost of food has actually gone down. The following table shows how much could be bought of certain basic foods in 1929 and again in 1958 with 1 hour's pay of a worker in manufacturing:

	1929	1958
Loaves of bread (in pounds)	6.4	11.0
Steak (in pounds)	1.2	2.0
Milk (in quarts)	3.9	8.4
Butter (in pounds)	1.0	2.7
Bacon (in pounds)	1.3	2.7
Eggs (in dozens)	1.1	3.5
Potatoes (in pounds)	17.7	33.8
Oranges (in dozens)	1.3	2.8

Taking a comparison with a more recent period, between February 1950 and February 1959, the average retail price of a pound of rib roast beef increased from 68.2 cents to 82.4 cents. During the same period weekly earnings of factory workers increased from $56.37 to $88. Thus, beef prices increased 20.8 percent while weekly earnings increased 56 percent, and the amount of working time required to buy a pound of beef dropped from 29 to 22 minutes.

A similar situation exists in milk prices. In 1952, when producer prices were supported at 90 percent of parity, consumers were paying an average of 22.8 cents per quart for milk. In the second quarter of 1959, producer price supports had dropped to 77 percent of parity and consumer prices had advanced to 24.2 cents per quart. Nevertheless, in 1947 it took 9.1 minutes of the average factory worker's time to buy a quart of milk; in 1959 it took only 6.7 minutes of his work time.

This report has been designed to demonstrate the prevalence of subsidies throughout our economy. Too many people tend to associate the term subsidy exclusively or almost exclusively with farmers and maintain that they are, therefore, being unfairly supported by the rest of the people. As has been shown above, not only are farm subsidy programs only a fraction of all governmental subsidy programs, but the farm programs themselves help many persons besides farmers. It is an illusion that subsidy programs have given farmers an enviable economic position in the economy. Despite enormous advances in farm productivity, farmers still lag behind other segments of the population. It is not within the scope of this report to praise, or condemn any specific subsidy program. Its purpose is limited to indicating how subsidies enter into the lives of all Americans and how they relate to practically every business enterprise and to provide related data on farm and nonfarm income, prices, and production which may help to place the facts relating to farm and nonfarm subsidies in a better perspective.

Investigation of the Drug Industry

EXTENSION OF REMARKS

OF

HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 6, 1960

Mr. HICKENLOOPER. Mr. President, some time ago I received a very interesting letter on the question of the investigation of drug prices, from Dr. Oscar Alden, of Red Oak, Iowa. I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

RED OAK, IOWA, *December 9, 1959.*

Senator B. B. HICKENLOOPER,
U.S. Senate, Washington, D.C.

DEAR SIR: The Government is now going to investigate the drug companies. In a quotation from the Wall Street Journal, Senator KEFAUVER said their investigations of other industries had not created much interest but thought this one would create a lot of interest. My immediate reaction was: "Is Senator KEFAUVER conducting these investigations for the good of the people and the industry, or for the good of KEFAUVER." His statement makes me inclined to think the latter is all too true. I have been in practice in Red Oak, Iowa, since July 1936, and during that period we have had the most fantastic growth in knowledge of the care, treatment, and prevention of diseases, accidents, and infirmities of people since the beginning of recorded time. It is interesting to note that this growth occurred among free people of the world. Each succeeding country, to lose that freedom, fell behind in advancing this knowledge. Germany went from the top to near the very bottom. American scientists in medicine have won 36 percent of the Nobel prizes in medicine, in fact 2.7 times more than any other country. Almost all of this advancement has been due to the combined development of technique and new drugs. One impossible without the other.

Commonplace surgery today would be unheard of and impossible without the development of antibiotics, anesthetic materials, (drugs and gases), and knowledge of the basic body needs for vitamins, minerals, caloric requirements and the development by the drug industries of materials and means of replacing these for long periods of time, even to unconscious or anesthesized people.

The development of the miracle drugs, (steroid compounds), for arthritis has been phenomenal both in discovery and improvement, as well as lower cost, which has been consistent since its first discovery. What is the proper reward for the people who developed and improved both the product and the means of producing all these drugs? George Washington died probably due to a strep throat infection; a condition treated routinely in our offices today with very little loss of time and practically no deaths. Calvin Coolidge's son died from an infected blister on his heel from playing tennis; a condition that we treat with complete recovery in a relatively few hours today. What is the cost of these drugs today? Both men could have been saved for the price of a case of beer, a fifth of whisky, or a few cartons of cigarettes.

If Senator KEFAUVER and his subcommittee find that the drug industry as a whole are not shysters or thieves, or vultures preying on old defenseless people, will this committee give them a "Good-Housekeeping Seal of Approval," or will it be up to the President of one of these companies to send letters to all physicians of the country stating that after spending numerous manhours, and thousands of dollars, they were acquitted, leaving the bogeyman picture he created in the minds of our elderly people and those on fixed income.

This will undoubtedly take the time of many qualified men and untold sums of money thus added to the costs of drugs, with no improvement in a single lifesaving or pain-relieving drug.

If the pharmaceutical companies as a whole are found to be crooks and thieves by this investigation, then I would like to be permitted one request, i.e., that I be allowed to stand up and be counted with such thieves and crooks who have made the health and care of the American people the best in the world.

Our public health department is very good. They made the standards for testing polio vaccines, but did they offer to defend Cutter Laboratories in the many lawsuits they had because of live virus in their vaccine, not found by public health standards—I'll take company name and product pride over all Government control.

Small companies sell for less money. It has been said "Nothing has been made but what someone could make it with inferior materials and sell it for less money." One very prominent (not to their desire) small drug company specialized in selling the same drugs for less money to dispensing physicians, and they brought out and sold elixir of sulfanilamide. The rest of that story is history in our time. No thank you. I would not give any cheap drugs from a small company to either my family or my patients. They might be just as good, and again—funerals are so expensive.

Yours very truly,

OSCAR ALDEN, M.D.

Slovak Native Music Master 300 Years Ago

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. John C. Sciranka, an editor from Passaic, N.J., which appeared in the March 1960 issue of Dobry Pastier, the official publication of the Slovak Catholic Federation of America:

SLOVAK NATIVE IRISH MUSIC MASTER 300 YEARS AGO

(By John C. Sciranka)

Music lovers no doubt will be interested that on February 13 was the 300th birthday of Johann Sigismund Kusser, who is known as composer of many operas and especially as master of state music in Ireland.

Kusser was born in Bratislava, capital of Slovakia, in 1660. Records show that he was baptized on February 13, 1660. He is also registered under the name of Cousser, which French spelling he adopted during his stay in Paris. His stay in London is established by Daily Courant of February 9, 1705. All the instrumental and vocal music was composed by Kusser, then already referred to as master for Signoria Guiliana de Celotte, famous Italian opera singer, who gave performance at Etheredge's, "The Man of Mode," in London at Lincoln's Inn Fields Theater. Signoria Celotte also gave a benefit concert at York Building on April 2, 1705. She accompanied Kusser to Ireland, and her name turns up again as singer in one of his serenades at Dublin Castle, February 6, 1712, on a bill of expense made out by the composer and preserved in the Public Record Office, Dublin, and published in the Musical Antiquary, July 1911.

It is not known when Kusser left London for Dublin. Presumably he was still in London in 1706, since, according to Hawkins, he set a poem on the death of Arabella Hunt, who died on December 26, 1705.

While in Dublin he is variously called master of the state music, chapel master at Trinity College and master of the choristers at Christ Church Cathedral.

On November 12, 1716, he was appointed "chief composer and music master at Dublin Castle," which is registered on a document in the Public Record Office in Dublin. This title, however, according to historians appears to be the same as "master of the state music."

In this capacity he provided birthday serenatas for Queen Anne, King George I, and King George II with fair regularity, starting with "The Universal Applause of Mount Parnassus" on February 6, 1771.

Historians confirm that librettos of 11 similar allegorical pieces are found at Trinity College, Dublin, also at Bodleian Library, Oxford, as well as British Museum. Kusser was a close friend and pupil of Lully in Paris and came under his influence. His father was in Stuttgart, Germany, where he settled from Bratislava as a cantor of music. Kusser was at Ansbach in 1682–83, later as kapellmeister for Duke Anton Ulrich of Brunswick Wolfenbuttel. There he wrote and produced between 1690–93 seven German operas and one Italian divertimento. Later in Hamburg he took over the direction of the Opera House with Jakob Kremberg in 1694. Although he stayed there only 2 years, historians claim he left his distinctive mark as composer, conductor and manager and is paid high tribute by Mattheson.

Kusser seemed to love Dublin the best for he settled and died there in November 1727. Shortly before his death he supplied the birthday serenata for King George II, on October 30 of that year. His widow afterward still received a pension sent to her to Brunswick from February 1728 on. As a master of state music in Ireland he was succeded by Matthew Dubourg.

Critics claim that while Kusser's importance as an opera composer is overshadowed by that of Reinhard Kaiser, perhaps his pupil and his immediate successor at Brunswick and Hamburg, he considerably influenced the development of German orchestral music by introducing Lully's style and the forms of the French suite. Kusser's nephew, D. G. Treu, the son of his sister, preserved many of his precious works.

With the approach of St. Patrick's holyday, we should remember Kusser and his contribution to music. He is buried in Dublin, the place he loved best beside his native Bratislava in Slovakia.

The American Slovaks will pay due honor to Kusser on Saturday, April 23 at 8 p.m., Carnegie Recital Hall, in New York City, at the 35th annual concert of Prigoda School of Music. We are happy and proud that Kusser, a native of Bratislava, was a master of state music in Ireland almost 300 years ago.

Pesticides: The Real Peril

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. SHEPPARD. Mr. Speaker, first I want to extend my compliments to the Honorable Arthur S. Flemming, Secretary of Health, Education, and Welfare, for the aggressive and rightful position he has taken in protecting the food-consuming public of this Nation against contamination of our foodstuffs through careless practices of using certain types of pesticides and include the comments of Dr. Robert L. Rudd of the University of California at Davis:

PESTICIDES: THE REAL PERIL

(By Robert L. Rudd)

Contamination of a portion of this year's cranberry crop dramatizes hazards which accompany the growing use of chemical pesticides. Yet the danger revealed by the incident is not, in the long run, the basic one involved in the use of pesticides, and to that extent our alarm is misdirected.

Traditionally, man has resisted the onslaughts of competing animals and plants with the crudest of measures. He has been compelled to pay a certain tariff to these competitors—a portion of his crops, his livestock, his timber, or his person. Occasionally the tax is too great and he fails. But he has never been content to pay the tithe and has followed every path that promises to reduce or to eliminate his competitors. Less than two decades ago, new chemical discoveries revealed a pathway which promised total release from this competition. DDT was and remains the best known of the pesticides along this pathway of promise, but there are dozens of others. Many are quite unlike DDT; some are more toxic; many are widely used.

Although our experience with these chemicals has been brief, it has also been intense, and greatly varied. We are therefore now justified in asking the question: Have chemical controls led to the Eden which earlier experience promised? In spite of short-term gains in crop yields, and localized alleviation of disease, my answer is "No." There use has in fact created as many problems as have been solved. Witness a few: Increasing contamination of our lands, waters, and foodstuffs; increasing billions to support unneeded production; increasing destruction of natural-control agents; increasing misery from overproduction in many areas of the world.

A great deal of publicity has already been given to "kills" of fish and wildlife resulting from widespread use of chemical pesticides; to the omnipresence of chemical residues in our foods, to the possibility of injury to human beings (the cranberry crisis) and livestock. The public debate on these matters has led to a greater awareness of the hazard, a general heightening of responsibility in users, industry, and Government, a greater research effort, and to some corrective legislation.

Most of this emphasis has centered on chemicals alone. A common belief is that solution of hazard problems will also solve pest-control problems. This is by no means true. Following present land-use practices, we must use chemicals—and the frequency with which we use them must increase as our land use continues to intensify. Eliminate pesticides and our plagues and pestilences would be far more severe than they were before the advent of pest control.

Why is chemical pest control now a necessity? Why does one chemical treatment normally lead to another—to repetitive application? An ecologist would answer, "Simplification of the ecosystem." The ecosystem is the total living complex, relatively stable because of the great diversity of actions and kinds of organisms. When something gets out of balance in such a system, corrections occur quickly and the imbalance is corrected. Hawks and owls, for example, congregate in unusual numbers where large numbers of mice occur. Checks to abnormal increase of any species are inherent in most ecosystems. In simplified ecosystems, natural controls are fewer and respond less rapidly. Potential pests become actual pests under this condition, and herein lies the real danger of our present control practices.

All managed crop and timber production deals with simplified ecosystems. The first person to harvest and store natural cereal grain for later sowing started the simplification of agriculture. Until the mechanization and later chemicalization of agriculture, there was little substantial departure from the methods of the first agriculturalists. Acreages were small, landscapes diverse. Ecosystem simplification was relatively slight and was in any event local. Hedgerows, trees, weed patches, seasonal cropping and multipurpose farming combined to form a diversified base for a diversified fauna. Mechanized and chemicalized crop production has resulted in large expanses of single crop species—the destruction of diversity in the landscape.

Simplification of the fauna follows simplification of the landscape. A pest species provided with abundant food and few competing animals to check its increase, may under these conditions become far more numerous than was ever remotely possible before present-day, large-scale simplification. When the pest is introduced from another country, rarely does it bring with it any of the animals which control it in its native land; as a result, great increase in numbers with devastating consequences can be expected. Most of our major insect pests are "introduced" species.

We further simplify the fauna by two means. We remove single species—coyotes, for example—when the methods are avail-

able to do so. When such methods are not available, we do so by nondiscriminating means such as blanket chemicals. The use of parathion in citrus groves, for example, kills most insects nonselectively. Control of a pest species may be temporarily achieved by chemicals, but the resurgence of pest species is almost assuredly more rapid than is that of the predators and parasites normally checking the pest species. Initial chemical control, therefore, creates the later need for more chemicals. Once begun, there is no stopping if the crop is not to be lost.

If repetitive treatment with the same chemical is continued, control of one pest may be achieved in time to herald the arrival of a new one. Shifts in animal balances can well result in the increase of previously harmful species to pest numbers. The emergence of spider mites to pest status followed successive treatments with DDT in orchards throughout the world. As another example, the control of coyotes and to some extent the smaller predatory mammals, may be responsible for the irruptions of rodents in western rangelands. Although this belief is hotly disputed, the fact is that many livestock growers have forbidden the poisoning or trapping of predatory mammals on their properties. Their aim is rodent control; their method—natural check and balance in an ecosystem previously awry.

I have described the conditions under which chemicals may perpetuate pest control by reducing natural checks to population increase, and the particular way in which new pests can be created. It is also apparent, in rodents, that partial reduction of a pest population may actually act as a stimulus to breeding by the pest species. This reaction does not seem to be widely appreciated among pest controllers; yet it is a maxim of livestock growers and managers of game species that reduction in numbers is often necessary to yield maximum vigor and reproduction.

Simplification of the ecosystem is the result of most current production practice in the United States. Clearly, immense biological and economic problems are created by it. Yet, one other characteristic of our age complicates these problems further—transportation. To an unprecedented extent, animals and plants are being moved from one part of the world to another. Relatively few are intentional introductions (certain game birds and the biological-control organisms are exceptions); most introductions are unintentional. The hardier species become established, spread and may well become spectacular pests. The gypsy moth, corn borer, and boll weevil are examples among insects; house rats and mice are excellent examples among mammals. No practical way of defending against unwanted alien introductions has yet been found.

Quarantine measures, now standard practices at ports of entry, consist of prohibitions against certain plants and animals known to be contaminated, and inspections of admissible kinds to intercept contaminated stocks. Valuable as quarantine is, it is only partially effective. Fifteen of our major insect pests appeared in this country after the establishment of Federal quarantine procedures. It is virtually impossible to prevent the entry of major pest species.

The only recourse available when such a pest becomes established is an eradication campaign. A serious belief in the ability to eradicate pest-insect species is very recent: Only the combination of aerial application and new synthetic chemicals make it possible. In only one species—the Mediterranean fruitfly—has such a campaign been successful; the recent eradication of the pest in a few counties in Florida followed just such methods. But the fly had been eradicated previously—30 years ago. The eradication programs against the gypsy moth and the imported fire ant aim at species well established in a number of States. Chlorinated hydrocarbon insecticides distributed by air are the control means. Both campaigns have been bitterly opposed. Eradication of these species is indeed possible, but an informed public will not tolerate the hazards nor the cost necessary for such efforts.

The simplification of ecosystems resulting from the use of nonselective, toxic chemicals creates problems in addition to the loss of, or threat to, desirable species. To illustrate, two pest insects—the rice stinkbug and the sugar-cane borer—in Louisiana last year erupted to economically serious levels following fire-ants control measures. Competent entomologists credit these outbreaks to the nonselective action of a control chemical—the removal of the natural checks on the populations of pest species. Of course, additional chemical means are available to control the insect irruptions caused by the initial chemical treatment. Simplification of the ecosystem followed by unimaginative methods to keep it simple. The total price is much greater than the cost of the first insect-control treatment.

Perhaps I may be forgiven a heretical notion. Our export of American agricultural know-how may be doing the favored countries an ultimate disservice. The extension of simplified crop systems throughout the world cannot fail to magnify pest-control problems. Have we given enough thought to the total results of simplified chemicalized crop systems over vast areas of the world's surface? Possibly a fanciful objection in a period of burgeoning human populations.

If simplification of the ecosystem has produced serious pest problems, the obvious solution to them is to reverse the pattern. Complicate it. The eminent ecologist, Prof. Charles Elton, of Oxford, in a recent book suggests that we both conserve variety and cultivate ecological diversity. He says in fact that we must do so if we are to produce indefinitely from lands now in use. We must do so if our aesthetically satisfying landscapes are to remain. How can we accomplish this "complication"?

We do know how. But before we attempt to do so, we must protect the present. We must conserve variety and prevent more simplification.

The first necessity is to continue quarantine programs to prevent access of the hardy, adaptable organisms that become pests. Experience with such organisms makes clear that our food and fiber production areas are ripe for further invasions. Although the quarantine program cannot be totally successful, it must be counted as necessary until such time as we can make the biological adjustments necessary to minimize pest problems.

In the same light, it becomes necessary to minimize cultivation practices or chemical applications which might lead to further simplification of the fauna. A sizable margin of insurance will be demanded by growers. Such safety margins can in many instances be reduced by utilizing available information on resistant plants, timing of planting, management of water, and so on.

Both of the foregoing are protective measures to be operative while the most important phase is being put into effect. Professor Elton's suggestion—cultivate diversity—must be implemented. Some existing land-use practices already do so; we have a good base from which to proceed. Conservationists and wildlife enthusiasts have already arranged for and continue to speak for refuges, for the legal protection of existing species, for the education of the general public, and for proper utilization of renewable resources. The practices of the Soil Conservation Service have led to diversified landscapes accompanied inevitably by faunal diversity. The efforts of Soil Bank and similar reserve plans will result in this diversity. So also will any change to less intensive land use, such as that now occurring in many parts of the Midwest and South.

But only in the conscious pitting of one living thing against another—biological control—can we directly control pests without the hazards accompanying repetitive chemical applications. Many species of insects and viruses have been introduced into the United States to aid in biological control. Only a few have been truly successful, but these few have repaid the cost of all biological-control efforts to date a thousandfold. Their importance is grossly unappreciated, particularly by industry and government.

To such established controls as the ladybird bettle, University of California entomologists have recently added living insecticides—bacteria and fungi that can be applied when certain pest insects reach damaging numbers. The effect of using biological control agents is, of course, the sought-for complication. Simplification of the ecosystem resulted in the absence of natural checks; we can now complicate the life of a pest without chemical hazard to plants, animals and man and without following the primrose path of ever-increasing simplification of the ecosystem.

Some entomologists, particularly in Canada, have already shown the way to manage complex insect relationships with efficiency and safety. European entomologists now speak of managing the entire plant-insect community. It is called manipulation of the biocenose. The biocenotic environment is varied, complex, and dynamic. Although numbers of individuals will constantly change, no one species will normally reach pest proportions. The special conditions which allow high populations of a single species in a complex ecosystem are rare events. Management of the biocenose or ecosystem should become our goal, challenging as it is.

The way is clear, the conditions ripe, for a shift away from chemical controls and from the oversimplified environments which create the need for them. In many crop environments it is already too late to make the shift. Before the pest-producing, simplified ecosystem becomes so widespread as to insure a constant chemical prophylactic blanket on the all outdoors, we should look to our biological reserves. For the good of us all, chemical techniques must give way to ecological emphasis. The cultivation of ecosystem diversity will yield crop safety, sustained productivity, reduction of chemical hazards, and a landscape much more appealing to the eye.

The Airlift Problem—III

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Hanson W. Baldwin which appeared in the New York Times on March 25, 1960:

THE AIRLIFT PROBLEM—III: MILITARY TRANSPORT STUDIES QUESTIONS OF TACTICS, EQUIPMENT, AND COMMAND

(By Hanson W. Baldwin)

The Military Air Transport Service, which is flying an average of almost 7 million ton-miles daily during the 2 weeks of Exercise Big Slam/Puerto Pine, hopes the maneuver will clarify some of its problems.

The exercise, which includes the transportation of more than 20,000 Army troops to Puerto Rico, ends next Monday. From it the Air Force and Army hope to draw some conclusions about the vexing problems of military airlift.

These problems are numerous; some of the more important ones are discussed here.

ROLE OF COMMERCIAL CARRIERS IN MILITARY AIR TRANSPORT

The Military Air Transport Service, under Lt. Gen. William H. Tunner, operates for the military forces an airways and air communications service, air weather service, air rescue service, air photographic and charting service, and a strategic airlift force.

Some 992 aircraft and 115,000 persons are assigned to MATS, including 4,000 Navy personnel. Of this total, almost 35,000 persons and 483 aircraft are assigned to so-called strategic passenger and cargo airlift.

To meet the war-plan needs of the Joint Chiefs of Staff, MATS is required to maintain a global air transportation system in a state of peacetime readiness that can instantly be expanded to wartime tempo.

This system has long been the target of commercial air carriers and of congressional critics, who maintain that the service is wasteful and completes unfairly with commercial air carriers.

Yet MATS has some convincing answers. Repeated Pentagon and congressional studies indicate that MATS must maintain almost its present level of operations if it is to meet the war-plans requirements of the Joint Chiefs and if it is to be capable of rapid acceleration to wartime tempo.

Operation expanded

MATS normally flies an average of about 5 hours a plane a day. During the current maneuver this has been expanded to about 8 hours a plane a day, which is regarded as the minimum necessary for wartime operations.

Prior to the Korean war, MATS flight hours, programed at 3 hours a plane a day, were actually less than 2.7 hours.

When the Korean war began the Joint Chiefs ordered an accelerated tempo of 10 to 11 hours a day. It took MATS 11 months to build up to less than 7 hours a day, even though its personnel were reinforced with reserves. It never reached the Joint Chiefs' requirement.

MATS does not want to be caught short again; it feels that it must maintain its present tempo and volume of operations on its global air routes if it is to maintain war readiness.

THE MODERNIZATION OF MATS

MATS flies four types of passenger and cargo aircraft—the Lockheed C–121 Super Constellation; the Douglas C–118 Liftmaster, the Douglas C–124 Globemaster and the Douglas C–133 Cargomaster.

These are all propeller-driven planes. The workhorse of the fleet is the C–124; there are 291 of these in MATS. It is a slow and aging plane, with maintenance headaches, although it is still doing yeoman service. The newest heavyweight cargo lifter—a turboprop aircraft—is the C–133. There are only 29 of these; eventually MATS will have 49.

There is rather general agreement that MATS needs modernization, but the unanswered question is whether an entirely new "ultimate" aircraft should be developed, or whether types of aircraft now or soon to be available should be purchased.

MATS is eager to purchase jets; it believes that so-called swing-tailed versions of the Boeing 707 or Douglas DC–8 commercial jet airliners could be modified and developed for military use, capable of using runways 4,000 feet in length or less. A combination of a turbofan engine and leading edge flaps and boundary layer control could permit short takeoffs and landings.

However, the Army points out that the fuselage of the 707 or DC–8 is not large enough for outsize cargoes and that adequate cargo planes are the bottleneck of the military transport problem.

Moreover, paratroopers cannot jump from any available jet; their minimum flying speed is too high. The Army prefers an improved version of the Lockheed Hercules C–130, which is used by the troop carrier wings of the Tactical Air Command.

TACTICAL AND STRATEGIC AIRLIFT

The problems of airlift are complicated by the overlapping functions of the Tactical Air Command and the Military Air Transport Service. Both operate troop carrier and military cargo aircraft.

The Tactical Air Command utilizes the C–130 and the Fairchild C–123 assault transport. These so-called short-legged aircraft are designed for so-called tactical or assault missions, with troops and cargo combat loaded for jumping or for rapid unloading on an improvised airstrip in an enemy zone.

MATS aircraft, on the other hand, have a so-called strategic mission. They are generally bigger, longer range planes. Paratroopers do not jump from them and cargo is not rigged for parachute dropping, nor is it combat loaded.

MATS planes are generally adapted to transporting troops and supplies to a staging area or friendly base, where the troops can be unloaded and then reloaded into Tactical Air Command assault aircraft that would fly them to the enemy objective.

But developing technology has blurred the once-clear distinction between tactical and strategic. So-called tactical aircraft are now achieving longer and longer ranges.

If a two-purpose plane that could combine both strategic and tactical functions could be developed, airborne troops could be combat loaded in the United States and flown directly to the scene of action anywhere in the world without using intermediate staging bases.

MATS does not believe this is possible without great sacrifice of speed or other important characteristics. The Tactical Air Command and the Army think that it might be feasible in the future.

ORGANIZATIONAL AND COMMAND RELATIONSHIPS

The Army requested some time ago, and apparently was granted, a single point of contact between the Army and its Strategic Army Corps and the Air Force. Instead of dealing with two Air Force agencies—MATS for strategic lift, and the Tactical Air Command for tactical or assault lift—the Tactical Air Command was to be the point of contact for both.

The purport of a directive issued by Gen. Thomas D. White, Chief of Staff of the Air Force, initially went further than this. It was understood by both the Tactical Air Command and the Army that after the end of Exercise Big Slam/Puerto Pine next Monday the Tactical Air Command would, in the future, exercise control over all peacetime maneuvers involving both the Army and Military Air Transport aircraft. This would be true whether the craft were drawn from MATS or Tactical Air Command.

However, partly as a result of the current exercise, there has been some restudy of this understanding. The question of command and organizational relationship between MATS and the Tactical Air Command and between them both and the Army is therefore one of a number of unresolved problems that the lessons of the current maneuver may help to solve.

The Medical Future for the Aged

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, Dr. Louis M. Orr, president of the American Medical Association, predicts a substantial increase in private health insurance coverage for America and for the elderly. He also opposes compulsory retirement at any arbitrary age. He recognizes that in doing so, we are "wasting the vast experience and knowledge of our older people." This is the seventh in a series of articles prepared for Ray Henry and which appeared in many newspapers earlier this year. I commend it to the attention of the members:

THE MEDICAL FUTURE FOR THE AGED

(By Louis M. Orr, M.D., president, American Medical Association)

What is ahead for our older citizens during the next decade?

In many ways, this is a difficult question to answer. For these are times of rapid changes—in our technology, our economy, our scientific knowledge, our common attitudes.

As Americans, we have learned the status quo cannot survive for long in our fast changing 20th century.

The very phenomenon of aging illustrates this.

Back in McKinley's day, relatively few men and women ever reached the age of 65. But today we have nearly 16 million Americans who are that old or older—and their numbers are increasing.

They are the result of a healthier Nation.

And the Nation is healthier because medical and public health progress have reduced the incidence and death rates of most communicable diseases; because infant and maternal mortality rates have been lowered; because the physicians, dietician, bacteriologist, biochemist, and the many other collaborators in the vast teamwork of medical research have all contributed substantially to the reduction of disease.

This fruitful cooperation, if allowed to continue without Government restriction, will continue to work its wonders. Ten years from now, or earlier, we might well break through in the fight against cancer, and also develop new drugs and techniques for combating the cardiovascular diseases.

Such dramatic advances as these cannot be predicted, with any degree of certainty, within a convenient time space. But sooner or later they will come about—and when they do, they will further lengthen lives, thereby swelling the ranks of our older citizens.

One thing is certain: In the decade ahead, people will live longer and healthier lives.

And, on that basis, certain predictions can be made with considerable accuracy:

I predict: there will be a substantial increase in private health insurance coverage. Revolutionary progress has been made since World War II in this area. It will continue.

At the end of 1945, only 32 million people were covered by voluntary health insurance. By the end of 1958, the number had soared to 123 million.

We can expect this to go on, for three reasons:

First, most programs today are so written that they can be continued after the age of 65; second, an increasing number of policies are now being made available to those who are presently 65 or older; and third, voluntary health insurance is becoming an increasingly important fringe benefit in labor's collective bargaining with management.

According to the Health Insurance Association of America, 60 percent of our senior citizens who need and want health insurance will have protection by the end of next year.

Further, that percentage will increase until 75 percent will be covered by 1965, and 90 percent in 1970.

Just as private health insurance met the challenges of 15 years ago, I feel they will meet the challenges of the next decade.

I also predict: that the financing of health care for the aged will be immeasurably aided by an action taken more than a year ago by the AMA's house of delegates.

The Nation's doctors proposed, at that time, to set the fee for their services at a level which will encourage the continued development of insurance and prepayment plans at reduced premiums.

Our State and local medical associations have been moving rapidly to make this policy effective.

I predict: that in the next decade we will make great progress in the provision of home care programs. Teams of physicians, nurses, social workers, and others, will help get the patient home from the hospital earlier, and care for his needs during convalescence and afterward. We are already working to bring that about.

I predict: that the public, once it understands the dangers inherent in any program of compulsory Government health insurance, will reject political medicine in unmistakable fashion. Forand-type legislation, for example, proposes a permanent solution to a temporary problem, and it does so in an inflexible, costly manner.

I predict: that within the next decade, Americans will develop a new and realistic attitude toward the older person. We will realize that chronological age has little meaning and that a human being is forever as young as his capabilities.

I predict: an even healthier and more vigorous old age for added millions of Americans, for tomorrow's elderly people will have lived healthier lives during youth and maturity than those of today. They will have benefited more by the comparatively recent developments in science, medicine, and nutrition, most of which have been since the turn of the century.

Finally, I predict: that compulsory retirement at any arbitrary age will soon become a thing of the past. We Americans are too intelligent, I think, to go on wasting the vast experience and knowledge of our older people.

By 1970, through the voluntary effort of private citizens working together at the community level, I believe we shall have attained our goal of making every American's later years the truly golden years of productivity and enjoyment.

Gallaudet College Honors the Late Mrs. Mary L. Thornberry

EXTENSION OF REMARKS
OF
HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. IKARD. Mr. Speaker, Gallaudet College, an outstanding Washington, D.C., institution which is devoted to the education of the deaf and hard of hearing, has paid recognition to the memory of a woman who ceaselessly dedicated her own life to make easier the lives of deaf boys and girls. Gallaudet has named a modern new facility for testing hearing capabilities of students and others the Mary L. Thornberry Hearing and Speech Center. Mrs. Thornberry, the mother of our colleague, HOMER THORNBERRY, was a respected and revered teacher for many years at the Texas School for the Deaf, in Austin. Her dominant desire to help deaf youngsters receive good educations and take a normal place in our society represented more than an academic interest, since she was herself deaf. HOMER THORNBERRY has followed his mother in this mission. He is a member of the board of directors of Gallaudet and gives freely of his time and energy to advance this worthwhile institution. With the facilities provided in the new Mary L. Thornberry Center, where both adults and children are able to have their hearing problems scientifically and carefully analyzed, a significant forward step is being made. Under leave to extend my remarks, I submit for printing in the RECORD the following article from the Lone Star, a publication of the Texas School for the Deaf, which explains more fully the background of the Mary L. Thornberry Center, and tells of the dedication of the woman who gave it its name:

SPEECH-HEARING CENTER HONORS LATE MRS. MARY L. THORNBERRY

An unassuming little lady from Texas, a teacher in the Texas School for the Deaf for many years, would have been overwhelmed at the mere suggestion that a building unique in its conception, purpose, and design—quite unlike any other in the world—and located on the campus of the world's only college for the deaf, Gallaudet College, in Washington, D.C., should have been named in her honor. But in recent time this building was given the name of Mary L. Thornberry Hearing and Speech Center and subsequently put into service.

The Thornberry Building was planned for specific needs and is especially equipped for auditory testing of the deaf. In order that accurate tests of hearing can be accomplished with students and out patients with varying degrees of hearing impairment, appropriate sound treated rooms are necessary. The exclusion of sound other than those used for measuring hearing must be accomplished as completely as possible.

Two sound-proof suites for use with adults have been incorporated into the center; one set of two rooms is used for clinical work related to testing of hearing and hearing aids; another two-room sound-proof suite is used principally for research in hearing and deafness, while a third 2-room facility is used for testing the hearing of children.

Ventilation of the rooms, which are approximately 12 by 15 feet in size, is accomplished with air conditioning. Specially constructed noise reduction boxes and sound treated ducts have been have been installed in the air conditioning system in order that extraneous sounds from the compression be kept at a minimum. This prevents undesirable noises from being picked up and amplified through wearable hearing aids and high-powered auditory training units.

Special consideration has been given to construction and placement of all rooms in the Thornberry building. Diagnostic and evaluation services, undergraduate training courses, postgraduate courses and research in hearing and deafnes sare carried on in the center.

Mary Lillian Thornberry, bother of U.S. Congressman HOMER THORNBERRY from the 10th Congressional District, Texas, and two abiding desires and ambitions in life, to educate her son and to help the deaf boys and girls under her tutelage at the Texas School for the Deaf. She asked no other recognition or reward.

One of these ambitions was fully realized when she saw her son earn two degrees from the University of Texas. She saw him rise from a page boy in the State capitol to be elected to several city and county offices, later to the Texas Legislature, the office of district attorney, and then to the U.S. Congress, which post he still holds. Perhaps the honor betsowed upon him that meant most to Mrs. Thornberry was his appointment to the board of directors of Gallaudet College. Having been deaf herself, she realized the importance of education and was always an ardent exponent of education for the deaf.

With deaf students from all over the world coming to the only college specially set up for them, and receiving their training in the Mary L. Thornberry Center, her name will be spoken or signed in the far reaches of the world. And from this center young men and women will receive training that will bless the deaf worldwide and continuing from generation to generation.

Tribute to Dan Lambert

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. McINTIRE. Mr. Speaker, a great honor was recently bestowed upon Dan Lambert of Orrington, Maine, the fifth district commander of the American Legion. In recognition of this tribute I submit to the RECORD an account of the proceedings related thereto as it appeared in the March 10 issue of the National Tribune:

[From the National Tribune, Mar. 10, 1960]

MAINE LEGIONNAIRES TURN OUT EN MASSE IN TRIBUTE TO DAN LAMBERT

Over 200 members of the American Legion and Auxiliary in Maine, Gold Star Mothers and veterans' representatives joined on Washington's Birthday evening to pay tribute to Daniel E. "Dan" Lambert, Orring-

ton, fifth district commander of the American Legion at a special testimonial banquet and reception held at the Brewer Legion Hall. The program was cosponsored by the Daniel E. Geagan Post, American Legion and Auxiliary of Brewer and witnessed one of the largest turnouts of veterans to honor a Legion officer in northeastern Maine in many years.

Charles C. Campbell, Orrington, post commander, and Mrs. Kathryn M. Campbell, unit president, served as cohosts to the program with the banquet being served by the Easter Rebecca Lodge of Brewer under the direction of Mrs. Inez Little, chairman.

MANY MESSAGES OF PRAISE

J. William Rogers, Bangor, served as the toastmaster of the event and read messages of warm congratulations from Vice President Richard M. Nixon, Congressman Clifford G. McIntire, Congressman Frank M. Coffin, Congresswoman Edith Nourse Rogers, Massachusetts; Gov. John H. Reed of Maine, Sumner G. Whittier, Washington, D.C., Veterans' Administrator; Leonard L. Stevens, Portland, national executive committeeman of the DAV; Dominic Bruno, Togus, VA chief of recreation; John H. Levinsky, Stonington, past State vice commander who was vacation-bound for Florida; William J. Rogers, Auburn, alternate national executive committeeman; Senator Margaret Chase Smith of Maine, former U.S. Senator Owen Brewster of Dexter; James L. Boyle and Nathaniel T. Cobb, Waterville, State adjutant and finance officer, respectively, and Bill H. Fribley, national commander of the DAV.

Distinguished guests included Col. Roger J. Averill, Maine National Guard; M. Sgt. Talcott B. Hull, USAF Public Information Office; Joseph P. Dinsmore, Bangor postmaster; Sumner G. Marshall, Wells, state vice commander; Maurice Parisien, Portland, first district commander; Donald Stone, Portland, first district adjutant; Benjamin Brookman, Bangor, DAV Americanism officer; Mrs. Ruth Jucius, Bar Harbor, State auxiliary membership chairman; Dean S. Reynolds, Jr., Etna, Penobscot County commander; LeRoy Knowlton, Dexter, Piscataquis County commander; William Owen, Blue Hill, Hancock County commander; Mrs. Louise Falkingham, Hampden, State president, American Gold Star Mothers; Arthur P. Ambrose, Dexter, State child welfare chairman; Mrs. Elvenia Magee, Veazie, Penobscot County auxiliary president; O. Sylvester McNally, Bangor, retarded children's group: Mrs. Lottie Parker, Orrington, State community service chairman; Mrs. Donna Fogg, Guilford, junior activities chairman; Anthony J. Rumo, South Portland, national executive committeeman; John M. Robertson, Lewiston, past State commander and chaplain; Roland J. Shanks, Freeport, department sergeant at arms; Lucien Bussiere, Lewiston, post adjutant; John Appleby, Lubec, State vice commander; Mrs. Telma Johns, Carmel, alternate vice president; Theodore A. Johns, Carmel, past district commander; Donald Carr, Belfast, fourth district commander; Mrs. Vera Danforth, Bangor, district civil defense chairman; Ralph M. Merrow, Newport, past State commander.

CITATIONS PRESENTED

A citation was presented by Maine State Civil Defense and Public Safety Director Col. Walter Kennett, who represented Governor Reed. Kennett paid warm tribute to Lambert's efforts in the field of public relations and information in assisting the civil defense program in Maine. Colonel Kennett referred to the Orrington Legion official as a "most dedicated public servant who has given much in the promotion of sound national defense both in the military and civilian fields."

The Reverend John H. Miller, pastor of the Second Congregational Church of South Brewer and chaplain of the Maine National Guard, presented Lambert with a national award of merit from the American National Red Cross. The Reverend Miller termed the guest of honor "a fine Christian gentleman who has consistently done much to promote the full observance of religious and patriotic holidays, and the full heritage of America."

A letter of appreciation was read from the Maine Friends of Retarded Children in appreciation for the support given to the program by District Commander Lambert. He was also cited for his legislative action on behalf of retarded and handicapped children.

After presenting the honored guest's family, which includes Mrs. Elise C. Lambert, R.N., and daughters Cynthia Mildred,, Maureen Patricia, and Margaret Marie with corsages, Cynthia Lambert sang "Galway Bay," and "I Passed by Your Window," as part of the program.

Many gifts from all parts of the fifth district organization were presented and the Daniel E. Geagan post and unit presented Lambert with a leather briefcase.

Fank McDonald, Rockport, State commander of the Veterans of World War I, was presented as well as Arthur Ingersoll, Thomaston, Knox County commander.

GOLD STAR MOTHERS TRIBUTE

Members of the American Gold Star Mothers chapter in the area were in a body during the program and presented District Commander Lambert with a gift in appreciation for his many kindnesses to Gold Star mothers and fathers in the area.

Robert C. MacFarland, Thomaston, State Legion commander, paid the department tribute to the Orrington Legion official for his unselfish work on behalf of the State and National organization and presented him with a personal gift.

AUXILIARY PRESIDENT SPEAKS

Mr. Ruby Tapley, Blaine, State auxiliary president, joined in the program with a few remarks in tribute to the four-time wounded veteran of the famed "Darby's Rangers" of World War II and thanked Lambert for his efforts in support of the Legion program.

The Reverend Maurice Venno, Damariscotta, State Legion chaplain, called attention to the fact that the fifth district organization was one of the top groups in the field of religious emphasis and urged other groups to keep pace with the district leadership. He recited Kipling's "If" in tribute to Lambert.

Mrs. Louise Swan, Dexter, district auxiliary president, was introduced and expressed the thanks to the district auxiliary organization for the many kindnesses shown by the district commander and the warm spirit of cooperation existing between the two district groups.

CALLS FOR STRONG LEADERSHIP

Responding to the tribute, District Commander Lambert called for a strong leadership program on all levels of veterans' affairs and called for an end to the attacks against the Legion by some misinformed groups on the national scene. He told his audience that the testimonial program was not a tribute to Dan Lambert, but rather evidence that solid, good comradeship and brotherhood exists in the ranks of the American Legion for all to see.

Following this, Cynthia Lambert closed the program with the rendition of the song "Bless This House." The Reverend John H. Miller pronounced the invocation and the Reverend Maurice Venno gave the benediction.

Serving as hostesses were Mrs. Marguarite Rice, Mrs. F. Katherine Hay, Mrs. Elsie Wilson, and Miss Bonita Campbell. Eva Frost had charge of the guest book and Elizabeth Rogers was in charge of the gift table.

J. William Rogers served as general chairman of the event, assisted by Robert C. Reed, Elias Ferris, Ralph C. Ham, Henry F. King, William F. Lawlor, Ralph Winslow, Earl Parker, J. Elmer Hay, James G. Hachey, Sr., and Mrs. Kathryn M. Campbell, unit president, and Charles C. Campbell, post c ommander.

The Aged, Poor, and Sick

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. BETTS. Mr. Speaker, any measure as controversial as the Forand bill, unfortunately, brings forth arguments on both sides which tend to be extreme. It is, therefore, encouraging to find a statement on this subject which is temperate and represents a calm and objective review of the situation. Such a statement is represented in the following thoughtful editorial appearing in a recent edition of the Washington Daily News:

[From the Washington Daily News, Apr. 4, 1960]

THE AGED, POOR, AND SICK

Congress is under heavy pressure to provide hospital, nursing and medical care for people over 65.

President Eisenhower is resisting this compulsory plan and for this he is being accused of a heartless attitude toward the aged, sick, and poor.

Now nobody will deny the obligation of our society to care for those who cannot care for themselves, especially among the elderly.

But the plan chiefly at issue before Congress goes far beyond this. It takes in everybody covered by the present social security system—rich or poor or neither. By the same token, it excludes an estimated 4 million who are on the outside merely because Congress never included them in the social security system.

The money to pay for this would come from a higher tax on everyone now under social security, even those wage earners who might be poor or burdened themselves with heavy family medical and hospital bills. Moreover there is grave doubt that the proposed tax would be adequate to foot the costs.

These and other proposals for broadening the social security system may be highly desirable. But it hardly is necessary, in providing for those in serious need, also to offer handouts to the vast majority who already have provided for themselves, or are capable of taking care of themselves.

Millions of Americans have a stake in the social security system. Anything that jeopardizes its soundness jeopardizes their investment and their retirement security. Brash spending by the Government already has depreciated savings, insurance, and pensions by more than 50 percent since 1939.

Before Congress acts, it should know that it has a plan fair to all, soundly finnaced and one which won't defeat the purposes for which it is intended. An election year seldom is the best time to get that kind of legislation.

The End of an Era

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. LAIRD. Mr. Speaker, this past week one of Wisconsin's leading citizens passed on.

Mr. Hamilton Roddis, chairman of the board of the Roddis Plywood Corp. of my home city of Marshfield, Wis., died on Sunday, March 27, after an illness of several months. During his 84 years, he made a tremendous contribution not only to the city of Marshfield but to our State.

The March 29, 1960, edition of the Marshfield News-Herald carried a very fine tribute to this outstanding American. The editorial reads a follows:

THE END OF AN ERA

With the passing of Hamilton Roddis, Marshfield has come to end of an era—an era in which the individual was able to build a great industry as a result of his own innate ability and personality and without benefit of corporate surroundings and all their modern trappings.

This community witnessed the passing of other industrial giants, for really such they were, in the person of the Uphams and the Connors. Their time ran out about the same period as the timber resources on which they thrived gave out.

This was not true of Hamilton Roddis. After piloting the Roddis firm through economic seas which wrecked other companies, he adopted modern methods to expand the firm's holdings until, at his death, they reached into Canada and to most of the States of the Union. He surrounded himself with capable assistants who pushed production to coincide with sales of the company's nationally and internationally accepted forest products. Even though outside capital helped to finance and develop the Roddis company, and despite the weight of added years, Hamilton Roddis continued until his death to be the real director and leader of this most important Marshfield industry.

His engrossment in the affairs of his company never prevented him from taking an active interest in his community and his church. A Christian gentleman, his religious and educational philanthropies were noteworthy, even though never acclaimed by him or his family. A family of five daughters and a son bear the imprint of their rearing by parents whom they will ever respect and revere, just as this community has always paid respectful homage to them.

And so Marshfield parts most reluctantly and sorrowfully with this man who gave a half century of his life to the community's largest employer of labor and an industry that has given the city wide and favorable publicity. We have, as a community, wondered what Marshfield would be like without Hamilton Roddis. We have hoped and believed those who succeed him will carry on in the fine tradition he established, even to continue to expand and develop the nucleus which he and his father, ahead of him, nurtured from the days of the Hatteburgs, into the trying depression and war years, and until this moment when the Roddis Plywood Corp. has become internationally known.

H. R.'s heart always was in Marshfield. He expanded his energies here to bring about expansion of his plant both in point of production and sales. It is the earnest hope and prayer of this community that his successors will continue the policy to which he held so steadfastly.

A Postal Pay Raise Is in Order

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. FINO. Mr. Speaker, I am privileged to insert in the Appendix of this RECORD a statement made by Andrew T. Walker, president of Branch 1, United National Association of Post Office Craftsmen, in support of its fight for a postal pay raise. Although this statement was submitted to the House Post Office and Civil Service Committee in connection with its current hearings, I believe it is of sufficient interest and importance to warrant the attention of the Members of Congress:

A POSTAL PAY RAISE IS IN ORDER—"MOONLIGHTING" COMMON AMONG POSTAL EMPLOYEES

(By Andrew T. Walker, president, Branch 1, United National Association of Post Office Craftsmen)

(A presentation before the House Post Office and Civil Service Committee hearing on Federal and postal employees salary increase.)

Mr. Chairman, my name is Andrew T. Walker, president of Branch 1 of the United National Association of Post Office Craftsmen, the oldest active postal employee union in America. I am nearing the 80-year mark, having completed 50 years of service in the Post Office Department, and continued on as president by a change in the association constitution for the past 10 years.

I am indeed grateful to have this opportunity of presenting this statement to you for the record in behalf of such a vastly important subject as is being considered before this group.

There are at least 40 varied industries granting its employees wage increases in 1959. Leading the group is the airlines and coal mining sections with 15-percent increases. Others include steel, trucking, utilities, wholesale and retail trade, cement, food and beverage, printing and publishing, textile, clerical units in manufacturing industries, combined services, electrical, stone, clay, and glass; shipping, furniture, and others.

Postal employees cannot strike in an effort to secure an equitable salary increase from their employer, the U.S. Government. Without a doubt the tightfisted fiscal approach of the administration toward its 2½ million employees' appeal for a pay hike is endangering the related functions of the Nation's civil agencies by sharply reducing the employees' morale and spirit to do more than a required day's work. That once proud feeling of belonging to the governmental family of workers, particularly in the postal service, is quickly fading away; that feeling of dignity and importance associated with Federal employment has been replaced with an attitude that Congress and the executive branch of Government does not care or concern itself with him other than he is a statistic on an employment chart.

Nearly half of our postal workers are "moonlighters" (second jobholders) and perhaps the figure is quite higher here in the East, particularly in New York City, Philadelphia, Brooklyn, and other adjacent cities.

Turnover of young, desirable employees from low-salaried civil service jobs is alarming. Particularly in the light when many municipal and State governments grant their employees some sort of relief in salary or reduced pension contributions, in either case permitting more take-home pay. False economy that denies a living wage is forcing experienced employees out of the postal service and from other Federal agencies as well, to be replaced by new men who must be trained at the expense of the Government.

POSTAL MEN AND WOMEN ARE TRAINED

It is true to say that in but few trades is it more difficult to gain perfection for advancement than in postal work. The clerk must qualify on two or three and sometimes four of the several aspects of mail distribution. These operations include schemes of separation necessitating months of study at home and then qualifying by examinations. The postal schemes involve separations of mail to all cities served by certain railroads and all other railroads connected through transfer points; separation of mail for an entire city to respective delivery stations; separation of mail for all carrier routes out of a given carrier station and other distribution patterns. A clerk's knowledge must also include, depending on his assignment, mail classification, rates of postage, amounts of fees, serving the public with courtesy and patience, assuming financial responsibility for sums of money and registered mail. I am also mindful of the letter carrier who is also doing an excellent and outstanding job. In addition to knowing his route thoroughly, he must start his day at an early hour and in any kind of good or miserable weather and represent to the public the good will ambassador of the postal service. The mail handler, the custodial employee all the way down the line is doing a faithful job.

Civil service examinations are constantly being held throughout the Nation and in most instances on a continual filing basis—no closing date. This points up sharply the lack of applicants. A few years ago Mr. James P. Googe, the Regional Director of the Second Civil Service Region, admitted that: "Postmasters frequently report increased difference in securing enough eligibles to fill subclerks and subcarrier vacancies. In some areas, big wage scales and fringe benefits offered by private industry make it almost impossible to fill positions in the local post offices." I do believe that that situation is true today. Some improvement in fringe benefits has taken place in Federal employment, I will admit, but such improvement does not put meat and potatoes before the employee's wife and children.

PUBLIC SERVICE

The salary crisis in the postal service must be faced and solved with equivocation, gentlemen, and the simple facts are that the postal workers have earned the pay raise. True, it costs the taxpayers, and incidentally that includes the 2½ million Federal employees as well, money to operate the postal service but we should be mindful that it also represents an outlay of expenditures by the Congress for the operations of the White House, the Judiciary System, the Commerce Department, the Army and the Navy and other agencies. Also that very little direct revenue comes into the Treasury coffers from the functions of many of the other agencies. It is a basic understanding that the costs and operations of these public services are taken for granted. Yet, with the income of about $2.5 million a year from the Post Office Department there is current talk of this so-

called postal deficit. It is obvious that such revenue as is produced by the postal service is not duplicated by any other agency.

POSTAL RATES

The issue of increased postage rates is not related with the pressing problem of postal wages—no more than the operational costs of running the Department of Interior or the Navy Yard with the salaries of its employees. Yet, it is an important subject and one to be deliberated upon by the committee at a later date, as I understand will happen. The citizenry of our Republic have always looked upon the postal service as a function created by our Constitution and for the people. Whether or not it pays for itself in terminology of time, cost, and production is a matter for the Congress.

MECHANIZATION

We do not in the least have any objection against modernizing the mail and the allocation of funds for such equipment if it makes for improved service and provides for ample mail provisions but we do not subscribe to any counting system which will place a daily hardship upon the individual mail distributor. Electronic research must go forward in keeping with the times to prepare the way for the avalanche of mail of tomorrow. It is said that within the next score of years the annual volume of mail is expected to double the 66 billion pieces of mail calculated for the fiscal year ending this June 30. The massive mechanization is on the road and the Department is expected to keep it rolling. It began 11 years ago with the cost of $49 million in 1949. This year the research spending is expected to total $11.5 million. An idea of how advanced this modern postal program is and will be is a statement by Mr. Rollin Barnard, Assistant Postmaster General for Facilities. He said, "In Project Gateway almost all the equipment to go into Gateway has got to be invented." Gateway is a plan to build at Oakland, Calif., the most modern postal facility possible.

MAIL FIRMS GLAD TO HAVE POSTAL EMPLOYEES FOR SECOND JOB

Many of the mail order firms, and mail rooms of large concerns in the east particularly in the metropolitan area of New York have come to appreciate the mail distribution abilities of our postal clerks. Here is a readymade corps of men and women trained by the post office on city and State mail schemes available at hourly rates anywhere from $1 an hour upward. The firm not alone knows a good bargain when it sees one but is getting an experienced and honest employee at half his worth, and at hours in the evening as well. In some of these firms thousands of contest letters are handled which contain money. Sometimes mailings of valuable certificates are handled by these part-time postal employees and the firms do not worry because they know the postal employee is trustworthy. I hope in time that dual job work by postal employees will be eliminated. It is as you know, gentlemen, occasioned by the aftermath of a substandard wage in Government employment. Records will show that bank and loan companies show an all record high in loans to postal and Federal employees. Also, records will further show that many employees have borrowed on their insurance policies. Federal and State credit unions in various postal employee unions have taxed themselves in extending loans. I can cite my own Federal credit union in Branch 1 of the United National Association of Post Office Craftsmen. Up to today we have borrowed out in loans every single dollar and there is a waiting list. It is a healthy sign for the credit union not to have any idle cash but a sad commentary indeed that our postal employees have to borrow so heavily.

I do not believe it relevant here to speak of the billions for foreign relief but it sometimes rings an unfair note when we think of our loyal governmental family getting inadequate salaries and have to exist below the American standard of living, while billions of dollars are sent overseas.

FRIENDS IN CONGRESS

The postal worker has, I believe, a tremendous range of friendship in the Congress for the reason that he is and always has been one of the loyal and hard working of all public servants. Also, that when he appeals to Congress he is reasonable in his requests for equitable treatment. We stand today, united within all postal and Federal groups asking you, the members of this committee, to meet reasonableness with reasonableness. Our request to you to support the deserving Morrison pay bill is in keeping with the times. I thank you.

Seats in the House

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. TABER. Mr. Speaker, 2 days after his 99th birthday, the following letter of Mr. Walter F. Willcox, of Ithaca, N.Y., appeared in the Ithaca Journal of March 24, 1960:

SEATS IN THE HOUSE

EDITOR, THE JOURNAL:

This letter will argue that Congress went astray some 20 years ago when it changed from Daniel Webster's method of redistributing seats in the House of Representatives after a census to the present one. The change was made in order to enable the State of Arkansas to retain a seat which otherwise would go to Michigan and also enable the party in power to retain a seat which otherwise it would probably lose.

The present method was devised by Dr. J. A. Hill, who succeeded me at the Bureau of the Census in 1902, and was turned down by the Director of the Census because he thought its mathematics too hard for Congress. Thereupon Hill listed the support of mathematicians at his alma mater; they improved his method and, when Congress learned that it would give a seat to Arkansas and the majority party, which the old one would give to Michigan and probably to the minority party, it adopted the new method by a strictly party vote except for the Michigan representatives.

The present method allots about one seat after each census to a small State to which a large State has a stronger claim. For example, after 1950 it gave to Kansas a seat, to which California was entitled. Either method would have given the two States together 36 seats. The question was whether Kansas should have 5 and California 31, as the Webster method would have divided them, or Kansas 6 and California 30, as the new method did divide them.

The Constitution requires seats to be distributed among the States "according to their respective numbers" or population. If the population of these two States in 1950 is divided into 36th's, Kansas had 5.49 and California 30.51, so the large State had the better claim to the disputed seat and the Webster-Willcox method gives better results than the Hill-Harrington one.

The method which Congress had adopted after the census of 1910, and rejected later, was devised by Senator Daniel Webster. His rule was: "The population of each State shall be divided by a common divisor, and, in addition to the number of members resulting from such division, a member shall be allowed to each State whose fraction exceeds a moiety of the divisor."

The difficulty with this rule lies in the key words, common divisor, which neither Webster nor anyone else for 80 years told Congress how to find. Then I found the common divisor needed for the figures of 1910, prepared, with the help of my students in statistics at Cornell, apportionment tables based on it, and took them to Washington. Congress at once accepted them as better than anything the Bureau of the Census had to offer.

After the census of 1920, Congress was deadlocked and no apportionment bill passed, but if the deadlock had been broken and Congress had used the present method, New Mexico, Rhode Island, and Vermont would each have received a seat to which New York, North Carolina, and Virginia had a better claim. After no other census, I believe, would the difference between the results of the two methods have been as great.

WALTER F. WILLCOX.

ITHACA, N.Y.

Who Needs the Interest Rate Ceiling?

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. UTT. Mr. Speaker, in June 1959 the Congress received a message from the President of the United States urging the adoption of legislation repealing the archaic 4¼ percent interest rate ceiling on marketable bonds issued by the Federal Government. During the time that this legislative recommendation was pending before the Committee on Ways and Means it was made abundantly clear that the interest rate ceiling itself did not keep interest rates down, that without a ceiling the Secretary of the Treasury would still endeavor to borrow at the lowest possible rate, and that retention of the ceiling is inflationary in that the Government is compelled to borrow in the short-term market in competition with the borrowing needs of small business and the American consumer.

In Newsweek magazine for April 11, 1960, the distinguished economist and political analyst, Mr. Henry Hazlitt, has written a perceptive commentary on the failure of Congress to act on this important legislation. He raises the question: What sense is there in retaining the interest rate ceiling? He goes on to point out that the adverse implications of its retention are:

First, administrative, in that the Federal Government is not able to properly manage the public debt; and, second, economic in that the only way in which the artificial ceiling could be made effective is by having the Federal Reserve pursue the inflationary course of pegging the Federal bond market.

TYING ITS OWN HANDS

(By Henry Hazlitt)

In the last 2 or 3 months there has been a sharp fall in interest rates. As a result it is being frequently said in Washington and in the press that the U.S. Treasury's efforts to get Congress to remove the statutory limit of 4¼ percent on long-term Government bonds have become altogether futile; that the proposed legislation is in indefinite eclipse, and that the whole dispute has become pointless. But before we so hastily bury the issue it might be wise to ask if it is really dead.

It is true that a few months ago some long-term Treasury issues were selling at prices to yield about 5 percent and that within recent weeks some have been selling to yield less than 4¼ percent. It is true that the Government's 91-day bills, which sold at rates to yield 4.75 percent in early January, have recently been put out at yields of only 2.79 percent.

The need for congressional action looks less urgent than it did a few months ago. But it remains no less important. It would be, in fact, dangerous for Congress to postpone it. In the recent high interest rates Congress got an unmistakable warning. It will have to bear full responsibility for the consequences if it ignores that warning. President Eisenhower raised the issue in a message as early as last June. It became more urgent after he raised it. If interest rates can fall unexpectedly they can also rise unexpectedly. The latest issue of long-term bonds that the Treasury attempted—the 4 percents of 1969, put out in 1957—rose to 110 to yield about 2.94 within a year of their sale. Less than 2 years after that they had declined to about 94, at which their yield was 4.71 percent.

WHY KEEP IT?

Instead of asking what need or point there is in removing the statutory interest-rate ceiling, we should be asking what need or point there is in keeping it. If the ceiling were repealed, no harm whatever would follow. It would not in the least increase the interest rates the Government would have to pay. The Secretary of the Treasury, as now, would not try to borrow at the highest rates possible but at the lowest rates possible, in accordance with his plain duty.

But though the statutory ceiling does no good, it retains great possibilities for harm. Last week the Treasury felt obliged to offer the 4¼-percent ceiling rate for new bonds. When interest rates on Government long-term bonds are above 4¼ percent, it forces the Treasury to borrow at short term (less than 5 years). This leads to congestion in the market for short-term securities, forces up interest rates on such securities, tends to raise the average rate at which the Government can borrow, and prevents the Treasury from achieving a manageable balance in maturities.

PRESCRIBING INFLATION

Two issues are involved here—the administrative and the economic. The administrative issue is whether the terms, maturities, balance, timing, and interest rates of 50 or more different issues of Government securities should be determined by Treasury experts, in daily touch with the money market, or whether these decisions should be prescribed blindly and far in advance by a lay Congress concerned with a hundred other matters. The 4¼-percent ceiling on long-term Government bonds was written into the law more than 40 years ago. Fortunately for us now, that ceiling was not imposed, as it consistently might have been, on short-term as well as long-term borrowing. Fortunately, also, by historic accident, the statutory ceiling we now have is the 4¼ percent imposed in 1918, and not the 3½ percent earlier fixed by Congress in 1917.

Administratively, it is folly for the Government to tie its own hands. But the economic case against the ceiling is even more serious. The only way interest rates can be arbitrarily held down to the ceiling (even temporarily) is by an increase in the money supply, either directly, or indirectly by forcing the Federal Reserve banks to return to the pegging of interest rates by buying Government bonds and monetizing the national debt. In effect, this is what Senator DOUGLAS and his congressional committee have been proposing. The failure of Congress to remove the ceiling now can only undermine confidence in the dollar both at home and abroad.

Need for Funds To Implement the Poultry Products Inspection Act

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following letter sent to me by my constituent, Mr. Peter F. Manos, of the Morton Frozen Foods Division of the Continental Baking Co., at Rye, N.Y., concerning the need for appropriating adequate funds to implement the Poultry Products Inspection Act:

MORTON FROZEN FOODS,
Rye, N.Y., April 4, 1960.

Re Poultry Products Inspection Act.

The Honorable EDWIN B. DOOLEY,
House Office Building,
Washington, D.C.

DEAR MR. DOOLEY: I am a resident of your congressional district residing at 24 County Road, Mamaroneck, N.Y. and a products marketing manager for the Morton Frozen Foods division of Continental Baking Co. We process and sell frozen chicken and turkey pot pies and dinners.

I understand the House Appropriations Committee is currently holding hearings on appropriations as presented in the President's budget. These include appropriations to the U.S. Department of Agriculture for administration of the Poultry Products Inspection Act. The President's budget included an amount approximately the same as was appropriated last year for carrying out the Poultry Products Inspection Act.

Unfortunately, the amount that was appropriated last year was not sufficient to provide inspection as provided by that act. Because of lack of funds the Department took administrative action to limit its inspection to the slaughtering process and denied inspection to those operations which are classified as further processing.

Both the Meat Inspection Act and the Poultry Inspection Act require products to be inspected before they can be moved in interstate commerce. The meat inspection division provided such inspectors at the processing plants as well as at the slaughtering operations.

This appears to me to be discriminatory and unrealistic. Furthermore, the American consumer is not afforded the protection that is provided by the Poultry Products Inspection Act.

I believe the only reasonable solution is an adequate appropriation to carry out inspection as authorized and directed by the Congress in the Poultry Products Inspection Act. I understand that only about $500,000 or $600,000 in addition to that requested in the budget would be required.

I would consider it a personal favor if you will urge members of the Appropriation Committee to grant an adequate appropriation for this purpose. I believe this will be a real public service.

Very truly yours,

PETER F. MANOS.

The Angel of Marye's Heights

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. HEMPHILL. Mr. Speaker, South Carolina has produced many famous and illustrious sons, some of whom have received the acclaim of the world during their own time, and achieved their place in the history of this Nation. I could name many, including President Andrew Jackson, who were born in my own congressional district in Lancaster County, S.C., and who always claimed to be born in Lancaster County. But aside from those who have been acclaimed either for military achievement or leadership in the field of government, there are others whose deeds, not hitherto well publicized to the world, inspire the greatest admiration, and whose contributions are forever written in the sacred pages listing the good deeds of mankind.

I speak particularly of a Confederate soldier by the name of Richard Kirkland, born in the upper part of Kershaw County, S.C., and who enlisted as a private in the South Carolina Volunteers, Army of the Confederate States of America, when he was merely a boy. I would not use my own words to account his heroism, but plagiarize with his permission, on an account of his deeds sited by a great Virginian and a dedicated historian, Dr. Richard N. Lanier of Fredericksburg, Va. Dr. Lanier's devotion to the promotion or remembrances of brave men and great events, and his knowledge of history, is inspiring to all of us. He is presently engaged in a most worthy undertaking, organizing and spearheading a drive to promote a monument to be erected to Richard Kirkland on the battlefields of Fredericksburg, for his heroic acts at the battle of Fredericksburg on December 13, 1862.

I include here as part of my remarks a speech given by Dr. Lanier at Camden, S.C., and other places entitled "The Angel of Marye's Heights," and also include a poem about Richard Kirkland:

THE ANGEL OF MARYE'S HEIGHTS

(By Dr. Richard N. Lanier)

The story of one of the most heroic and humane acts ever to be displayed on a field of battle will be portrayed in granite and bronze on December 13, 1962.

This message will be in the form of a memorial to be erected to Richard Kirkland, "Angel of Marye's Heights," for his heroic

acts at the Battle of Fredericksburg, December 13, 1862.

The Civil War Centennial Committee has decided not to attempt to reenact any part of the battle in its program commemorating the 100th anniversary of the Battle of Fredericksburg to be held on December 13, 1962. But rather would the committee and the People of Virginia and South Carolina expend their energies in giving to their fellow countrymen and the world the story of Richard Kirkland who fought here and hallowed the ground upon which this bloody battle was fought.

Richard Kirkland's commanding officer on that day was Gen. Joseph B. Kershaw of Camden, S.C.

At the foot of Marye's Heights, west of Fredericksburg, Va., is a road known as the Sunken Road. It derived its name from the fact that it was flanked on both sides by a stone wall. The wall on the west side of the road is a retaining wall, while the wall on the east side is a property wall.

General Lee at once saw the value of this road as a natural fortification of almost impregnable proportions. Lee's plan was to place Gen. T. R. R. Cobb with 2,500 seasoned troops from Georgia to hold this position.

General Cobb placed his riflemen four deep behind the stone wall facing the Federals. When the troops in the front line fired their muskets they would drop back to reload and another soldier with loaded musket would take his place. Later in the afternoon when the charges of the Federals became more intense, more fire power was needed, the depth of Cobb's riflemen was extended to six deep.

The battlefield extended eastward from the stone wall to "Federal Hill," a colonial estate on the outskirts of the city of Fredericksburg,, one quarter mile distance from the Sunken Road. This was the battleline on which the troops of Hooker and Summer formed. At noon the Federal troops moved on the left wing of Lee's army under General Longstreet which was heavily entrenched on Marye's Heights. The Federals knew nothing about the fortifications on the Sunken Road until Cobb's men opened fire on them at pointblank range.

You know the story of the six courageous charges made by the Army of the Potomac, and how the ranks of the Northern army were so decimated that it has been estimated that 40 percent of the troops under Sumner and Hooker who participated in this battle lay dead or wounded on this field. General Longstreet was moved to remark to General Lee, "Such bravery is worth of success." General Lee said "our men I fear cannot stand the pressure of these charges much longer. I fear the Federals might break through."

General Cobb fell mortally wounded early in the afternoon. His troops were exhausted and low on ammunition. General Longstreet ordered the South Carolina troops to reinforce the Georgia troops. It was then General Kershaw moved in and assumed command of the troops on the Sunken Road. The South Carolina and Georgia troops continued the fight through the 13th and 14th. It was at this time, on the afternoon of December 14, that a young lad of 19 years, Sgt. Richard Kirkland, performed his heroic deed, beyond the line of duty.

Richard Kirkland was the son of a farmer in the upper part of Kershaw County, S.C. He enlisted as a private in the South Carolina Volunteers when merely a boy. In 1862 he was made a sergeant. It is here our story begins.

On the enemy side of the stone wall in this sector, Sike's division of U.S. regulars lay. All day on December 14 the skirmishing was incessant. The temperature was 8 degrees below zero. Between the lines and the wall the dead and wounded Federals lay.

The agonizing moans and cries of the wounded and dying calling for "Water" had lasted all night and night. Dick, probably more sensitive than his comrades, stood it until he could do so no longer. He went to his company commander, Capt. John D. Kennedy, Company E of the 2d South Carolina Volunteers. Captain Kennedy advised the young sergeant that he would have to get permission from General Kershaw. General Kershaw was in the north room, on the second floor of the Stevens house surveying the field of battle when young Kirkland approached him. "General," he said, "I can't stand it any longer, I want your permission to go and give those poor men out there some water." General Kershaw regarded him for a moment with a feeling of profound admiration and said, "Kirkland, don't you know you would get a bullet through your head the moment you stepped over that wall"? "Yes, sir," he said, "I know that, but if you will me go, I am willing to try it." After a pause the general said: "Kirkland, I ought not to allow you to run such a risk, but the sentiment which actuates you is so noble, that I will not refuse your request, trusting that God may protect you; you may go." General Kershaw afterwards said, "I felt when I gave young Kirkland permission to go over the wall, that I was signing his death warrant."

The young sergeant's eyes lighted up with pleasure. He said, "Thank you, sir," and ran rapidly down the stairs. The general heard him pause for a moment and then return up the stairs. He thought that Kirkland's heart had failed him. But he was mistaken. The sergeant stopped at the door. "General, can I show a white handkerchief?" The general slowly shook his head, saying emphatically: "No, Kirkland, you can't do that." "All right, sir," he said, "I'll take the chance." Dick without further hesitation, gathered all the canteens he could carry, hastily filled them with water, and without rifle, side arms or a white flag, went over the top of the stone wall. With bated breath and profound anxiety General Kershaw watched as Richard Kirkland sprinted to the nearest wounded soldier. He knelt down, tenderly lifted the drooping head to his own noble breast, placed the canteen to the parched lips of the soldier, pouring the cooling life-giving water down the fevered throat. Dick gently lowered the wounded soldier to the ground, placed his knapsack under his head for a pillow, straightened out the shattered leg, and after covering the soldier with his overcoat, replaced his empty canteen with a full one, then turned to another sufferer.

By this time Dick's mission of mercy was well understood by the Federal troops whose comrades were lying wounded and dying in front of the stone wall. The young Confederate was not filching their dead but bringing succor to the wounded and dying.

All firing stopped on both sides. A mighty cheer rent the air. From all parts of the field arose fresh cries, "water, water; for God sake water." More piteous still the mute appeal of some who could only feebly lift a hand to say, here too, is life and suffering.

When Dick exhausted his supply of water, he went back over the stone wall, refilling his canteens. At this point firing was resumed on both sides. But when the lad in gray uniform appeared again on top of the wall all firing was stopped and the cheering was resumed.

For an hour and a half did this ministering angel pursue his labor of mercy, nor did he cease to go and return until he had relieved all the suffering and the wounded in front of the stone wall.

Greater love hath no man than he risk his life to relieve the suffering of a fellowman.

Thus the Christlike deed that Sgt. Richard Kirkland performed on that afternoon in December 1862 saved many a life and his name became legend on the lips of the soldiers of both the North and the South.

Little remains to be told. The next spring Richard Kirkland was with Lee and Jackson at Chancellorsville. Then Gettysburg. Here again he distinguished himself in battle and was promoted to a lieutenant. At Chickamauga he fell mortally wounded in the hour of victory. Shot through the heart and with blood pouring from the wound in his side and mouth, his last thoughts and words were for the safety of his men. "Save yourselves men, let me be. I am done for. Tell my folks I died right."

He was but a youth when called away and had never formed those ties from which might have resulted in a posterity to enjoy his fame and bless his country. But he has bequeathed to the American youth, yea to the world, an example which dignified our common country.

When the monument is erected to Richard Kirkland on the field of battle in front of the stone wall at the foot of Marye's Heights in Fredericksburg, Va., where more than 8,000 soldiers in blue were killed or wounded, it will be unique in the annals of battlefields. Monuments have been erected to thousands of fighters. Hundreds of soldiers in bronze stand with uplifted swords or raised rifles with fixed bayonets as though going into the fray, but the monument to Richard Kirkland will honor the rarest and noblest quality that a man may possess, that quality called sympathy which will uplift a man so that he is ready to lay down his life that his fellowman may not suffer.

It is this heritage that Richard Kirkland has left to the people of all ages.

The words of the British military historian Henderson, written at the death of "Stonewall" Jackson, are equally appropriate in the eulogy of Richard Kirkland. "The fame of Richard Kirkland is no longer the exclusive property of South Carolina, Virginia, or the South, but has become the birthright of every man privileged to call himself an American."

THE ANGEL OF MARYE'S HEIGHTS

(By Walter A. Clarke of Georgia)

A sunken road and a wall of stone
And Cobb's grim line of gray
Lay still at the base of Marye's Heights
On the morn of a winter's day.

On the plains below, the blue lines glow,
And the bugle rings out clear,
As with bated breath they march to death
And a soldier's honored bier.

And then from out of the battle smoke
There falls on the lead-swept air,
From the whitening lips that are ready to die
The pietous moan and the plaintive cry,
For "water" everywhere.

And into the presence of Kershaw brave
There comes a fair-faced lad,
With quivering lips,
As his cap he tips,
"I can't stand this," he said.

"Stand what?" the general sternly said,
As he looked on the field of slaughter;
"To see those poor boys dying out there,
With no one to help them, no one to care
And crying for "water! water!"

If you'll let me go, I'll give them some";
"Why boy, you're simply mad;
They'll kill you as soon as you scale the wall
In this terrible storm of shell and ball,"
The general kindly said.

"Please let me go," the lad replied;
"May the Lord protect you, then,"
And over the wall in the hissing air,
He carried comfort to grim despair,
And balm to the stricken men.

Like Daniel of old in the lion's den,
He walked through the murderous air,
With never a breath of the leaden storm
To touch or to tear his gray-clad form,
For the hand of God was there.

And I am sure in the Book of Gold,
Where the blessed Angel writes,
The names that are blest of God and men,
He wrote that day with his shining pen,
Then smiled and lovingly wrote again
"The Angel of Marye's Heights."

Panama Continues Tension Over Canal

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Richard Fryklund as it appeared in the Washington Evening Star of March 30, 1960. Mr. Fryklund is military affairs reporter for the Star and has just returned from Panama where he talked to American officials and Panamanian leaders.

The article follows:

THE CHANGING HEMISPHERE—PANAMA CONTINUES TENSION OVER CANAL

(By Richard Fryklund)

Almost all Panamanians will tell you that the slim shape of their country is their greatest natural resource—and that they ought to profit from it, just as Arab countries profit from their oil.

And they also will tell you that the Canal Zone treaty was imposed on them unfairly in 1903 and that it should be revised completely.

These two national convictions run counter to firm beliefs of the U.S. Government. The opposing points of view already have been translated into several rock-throwing incidents on the Canal Zone borders, and more demonstrations are expected the first week in May.

DIFFERENCES ON BOTH SIDES

American and Panamanian officials are split on the best way to handle the dispute. The State Department suggests some modest compromise. The Panama Canal Co., for all practical purposes an independent Federal agency, recommends standing firm on the existing contract with Panama.

Panama's "first families," who run the government, toyed with violence last fall but now counsel legal pressure. But the rabble-rousers, Panamanian, Cuban, Egyptian and Communist say demonstrations have paid off and urge more of the same.

Most people concerned predict trouble ahead. Almost all the military power is on the side of the United States, of course; but demonstrators and saboteurs could interrupt use of the vital canal, and "anti-colonial" demonstrations could undercut American policy elsewhere in the world. The incidents already have hurt, American diplomats say.

At stake are: Low-cost passage from ocean to ocean by the world's shippers; America's standing as a moral leader in the cold war; and a contract.

NONPROFIT SERVICE

This country and the Panamanians look at the canal in different ways. The company runs it, by American law, as a nonprofit service to the world. About 60 percent of the canal traffic is American, but the whole world benefits from low tolls.

Tolls have not been raised in a half-century. And as long as the company can remain in the black and continue slowly to retire its original debt they won't be raised.

But the Panamanians see the canal as an exploitation of their country's geography. Extremists say Panama should share 50–50 in the canal's gross, just as Middle Eastern countries split the take with Western companies pumping oil from beneath the deserts. Panamanian moderates don't talk 50–50, but they do say payments to Panama should be increased.

Exactly what the extremists mean by 50–50 is not clear. Is it 50 percent of the tolls, which run about $45 million a year? Or of gross profits, which in the peculiar canal setup would be impossible to measure? No one knows.

In any case, it would be many times the roughly $2 million a year Panama is now paid for the concession.

Any such increase would boost tolls or would come directly from American taxpayers.

ISSUE IN POLITICS

If the United States says, "No," Panamanians say there will be trouble. All three candidates for president in the May elections are running on a platform of "Get more from Uncle Sam." These candidates all represent the country's business interests. The businessmen have run Panama for generations in traditional strong-arm Latin American style.

But even if they should lose in a quick revolution or gradual evolution to broader democracy, the alternative national leaders are even wilder in their demands that Panama should get more out of the canal.

To compound the problem, the extremists have combined nationalism with profits. They not only want 50–50 but they want Panamanian sovereignty over the Canal Zone to be recognized.

Some veteran American observers in Panama and the Canal Zone say the extremists are only saying what the moderates are thinking. Every Panamanian leader, it is said, has a step-by-step program which calls for a greater and greater share of the canal profits, token recognition of sovereignty, then real exercise of sovereignty, then participation in the running of the canal and finally full ownership of the canal and abolition of the Canal Zone.

CONCESSIONS MADE IN PAST

This country already has made some compromise gestures. Concessions have been economic. For example, Panamanian merchants have been given a greater share of company business. And some State Department people believe more concessions may be desirable—perhaps an increase in the payments to Panama and the flying of the Panamanian flag somewhere in the Canal Zone.

These concessions, in the best guess of many Americans in Panama, could keep reasonable peace through the term of the next President. But canal company employees, who are organized in a strong and effective Washington lobby, say concessions will only tempt the Panamanians into more demonstrations. They say the existing treaty should be enforced in the same way as any other valid contract.

The company, in general, recommends a firm policy.

Even the compromisers see a day coming when reasonable concessions will not be enough. The Panamanian people are becoming more aroused by agitators from the Castro Government of Cuba, by the Egyptian Minister in Panama who has been so active in urging Panamanian control of the canal that he recently was rebuked by the Panamanian Foreign Minister, by the handful of Communists active out in the provinces and by Aquilino Boyd and Ernesto Castillero, two violently anti-American politicians.

GOT OUT OF HAND

One faction of the "oligarchy," as Panamanians call their ruling families, supported Mr. Boyd and Mr. Castillero during their agitations last fall. But the resulting demonstrations apparently convinced the oligarchy that mob action can get out of hand. Mr. Boyd and Mr. Castillero seem to have lost their high-level backing.

Strictly speaking the masses are without a present leader. No one has come along, as in other Latin American countries, to use—and fan—national discontent. When one does come, the Americans here say, demonstrations could become a national policy.

The next troubled period is expected to come in May. The first of May is Labor Day and a day for demonstrations by Communists and sympathizers. On May 3 the students—an important and irresponsible element in Panamanian politics—will commemorate the student demonstrations of 1958. May 8 is election day. And the University of Panama resumes classes during the week.

If serious demonstrations can be avoided during that week and if one presidential candidate wins by a big enough margin to convince everyone it was honest, then Panama might be in for a period of calm, American diplomats say.

But if major demonstrations start or if there is a political revolution in Panama, the United States is in for a lot of trouble.

Two Hundred and Fiftieth Anniversary

EXTENSION OF REMARKS
OF
HON. MILTON W. GLENN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. GLENN. Mr. Speaker, the settlement of Mays Landing in Hamilton Township, Atlantic County, N.J., having been founded in the year 1710, is this year celebrating its 250th anniversary. The occasion has been made official by the following:

PROCLAMATION

Whereas in the early days of the colonization of New Jersey there came into the valley of the Great Egg Harbor certain hardy pioneers determined to carve out of the wilderness homes for themselves and for those who were to follow them; and

Whereas in the year 1710 A.D. certain of these settlers arriving at "the forks" and seeing the beauty and the utility of this area remained to found here a settlement called Great Egg Harbor, later to be named Mays Landing; and

Whereas those who built and those who followed after them with great pride and confidence wrought so well that, in January 1837 when the new county of Atlantic was formed this village became the county capital; and

Whereas throughout the intervening years with reverence toward the Almighty and with faith in themselves its citizens have upheld the finest traditions of America; and

Whereas our present generation remembering the past, now desire by word and deed to commemorate the 250 years of existence of our well-beloved community: Now, therefore, be it

Resolved, That I, William Davies, mayor of Hamilton Township, do proclaim this year 1960 as "Celebration Year," and desire all who dwell here and all those whose origin was here and now live apart from us to join with us in this gala occasion as we celebrate the 250 years of our community.

WILLIAM DAVIES, *Mayor*.

I take this occasion to extend my good wishes to this typical American community on its 250th birthday.

Spending for Public Needs

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Post-Gazette, March 10, 1960:

TODAY AND TOMORROW—SPENDING FOR PUBLIC NEEDS

(By Walter Lippmann)

WASHINGTON.—Here at home the overriding question is how to pay for the public needs of our growing population in an era when our social order is relentlessly challenged. These public needs include not only the rising costs of the race of armaments and the competition among the underdeveloped nations. They include also the rising costs of scientific research, of better public schools, of more adequate hospitals and public health services, public works, roads, water supply and sewage disposal, slum clearance and urban renewal.

There are some who will say that we cannot meet all our public needs without abandoning the freedom of our society. There are others of us who say that we must meet these needs, that we can meet them without sacrificing our liberty, and indeed that by meeting them we shall strengthen our liberty. This is the central issue of our time, and no one who is interested in public life can ignore it.

An excellent newspaper, which I read regularly and greatly respect, the Wall Street Journal, said recently in an editorial that to argue, as I have done, that our public needs have to be met is to invite us to start surrendering our liberties in panic. For to meet the needs will cost a lot of money, and this will put us on the dready road of statism and when the individual must face the faceless state, he has only as much free choice as the state chooses to grant.

This would indeed be monstrous if it were allowed to happen. How are we to make up our minds whether it will happen if we decide to devote to defense and to other public needs enough of our wealth to pay for them? One way to go about deciding is to look at the problem quantitatively and concretely, and not abstractly and in generalities. Let us then look at some figures.

I am taking my figures from the fourth report of the Rockefeller Bros. Fund which was issued in 1958. It covers all government expenditures, Federal, State, and local, which are for the purchase of goods and services. It omits transfer payments which, like the interest on public debts, do not make a direct claim on our production of goods and services. The report contains figures for the year 1957 and estimates for the year 1967. The report is, by common consent I believe, expert, disinterested, and obviously it is not partisan.

In 1957 all Government purchases of goods and services came to 86.4 billions. In 1967, if we meet the public needs for defense and other things which the authors of the report are agreed upon, the cost will be 153 billions (in 1957 dollars). This gives us an idea of the dimensions of the problem. The question then is whether the expenditure for public purposes of 153 billions in 1967 would revolutionize our society.

In 1957, when we spent 86.4 publicly, we were taking 20 percent of our national production, leaving 80 percent in private hands. What would be the situation in 1967 if we carry out the programs to meet public needs which are recommended in the Rockefeller Report? The answer to that question will depend on our rate of growth in the next 10 years.

The Rockefeller estimates show that on the feasible assumption that our gross national product can grow at a rate of 4 percent per year, the share taken for public purposes in 1967, if their recommendations as to what is desirable are followed, would be only 24 percent and the share left in private hands would be 76 percent. This would mean that the rise in private consumption, which on the average has been 2 percent per year, would drop to 1.4 percent. We would not be raising our private standard of life quite so fast as we are now. But we would be raising our public standard and we would be doing it with three-quarters of our product still in private hands. No one can say that on these fairly conservative assumptions we would not still be a free society.

These figures make the assumption that we can grow only at the rate of 4 percent. If, however, we could raise the rate of growth to 5 percent, the position would be changed substantially. We would then be spending for public purposes 22 percent, which is not much more than the present share of our spending, and there would still be left in private hands 78 percent. At the sametime consumption would be rising at 2.8 percent which is above the average.

It is evident then, that the argument of the Wall Street Journal is based on an assumption which is not stated. The assumption is that the U.S. economy, in this stage of automation, cannot increase its productivity fast enough to support our growing public needs. The figures I have cited indicate that if we can now achieve a growth rate equal to that of the years 1947 to 1953, that is to say an annual rate of growth of 4.7 percent, instead of the 2.3 percent rate of the years since then, we shall be able to provide the needed public services while maintaining approximately the same ratio of public to private spending as we have today.

I am sorry to use so many figures. But they are necessary in order to put in its true perspective the size of the great problem of our era. When we look at this problem quantitatively, comparing our growing needs with what can be our economic growth, we may conclude that our tasks are big, which makes them interesting, but that they are quite within our capacity.

Dollar Gaining Strength

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Sylvia Porter as it appeared in the Washington Evening Star of March 30, 1960:

YOUR MONEY'S WORTH—DOLLAR GAINING STRENGTH

(By Sylvia Porter)

The U.S. dollar is among the most stable currencies in the world.

Its reputation is far better than a year ago, particularly in the principal money centers of Zurich, London, and Frankfurt.

Its present position is a reflection of changes in the economy and reappraisal by other countries of these changes.

FACTS ARE LISTED

The facts back up the changes.

So far this year the dollar hasn't lost a fraction of a cent in buying power. We measure the depreciation in a currency by the rise in the country's consumer price level or its official cost-of-living index. Against this yardstick the U.S. dollar actually has gained a bit in buying power in the last few months.

True, if you compare the March, 1960, dollar with that of 1939, it's worth only about 47½ cents. More than half of the dollar's buying power has been wiped out by the steep inflations of the first post-World War II period, the Korean conflict, 1956–58.

But if you compare the March 1960 dollar with the dollar of a year ago this spring, it's worth only about a penny less. While this is not absolute stability and over a generation a loss of a penny or so a year compounded does add up to real depreciation, this is relative, reasonable stability of a great currency.

And if you compare the March, 1960, dollar with the dollar of last fall, it's actually worth a fraction more.

Few countries can boast records as good as this.

Traditionally neutral Switzerland—the capital of the international bankers—has kept the buying power of its franc virtually unchanged. Also the values of the West German mark and the British pound were held throughout 1959. With wage demands and costs rising in both Germany and Britain now, though, I'll wager the record of the U.S. dollar this year is superior to the mark and pound.

OTHER CURRENCIES SLIDE

As for other currencies, a measure of their depreciation is that last year the cost of living in Canada rose 6 percent; in France, 3 percent; in Holland, about 2¼ percent; in Finland, about 10 percent; in India, about 7 percent.

Why the shift in the dollar's position? Primarily, it reflects control of inflation. Inflations simply do not thrive in a country with a balanced budget, credit restraints, ample plant capacity, plentiful supplies of goods, fierce competition. All these conditions exist in the United States today.

Why the change in the dollar's reputation? Primarily, this reflects the mounting belief of financiers in other lands that we can and

we soon will get our foreign trade back into balance by increasing our efficiency, our exports and other commonsense moves.

Our dollar remains the leading currency of the world today.

Johnson Is Strongest Possible Candidate, Congress Democrats Believe

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1960

Mr. ANFUSO. Mr. Speaker, Congressional Quarterly, which is regarded as one of the most authoritative references on Congress and politics, recently conducted a special poll of Members of both Houses of Congress as to their judgment of the strongest possible ticket the two major political parties could present to the voters in November.

The results were subsequently released to the press for publication last January 31. According to the results, the Democrats were of the belief that the strongest ticket their party could nominate this year would consist of Senator LYNDON B. JOHNSON as candidate for President and Senator JOHN F. KENNEDY for Vice President.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the full text of the story as released by Congressional Quarterly and I urge all my colleagues to read it and to analyze it as to its full meaning:

[From Congressional Quarterly]

CONGRESSMEN RATE JOHNSON, NIXON STRONGEST CANDIDATES

Congressional Democrats think Senator LYNDON B. JOHNSON, Democrat, of Texas, is the strongest presidential candidate their party can field in November, according to a Congressional Quarterly poll released today.

Republican Members of Congress overwhelmingly chose RICHARD M. NIXON as their presidential candidate. But they gave the vice presidential slot to New York Gov. Nelson A. Rockefeller with less unanimity.

More than half the voting Democrats, from all regions of the country, said Senator JOHN F. KENNEDY, Democrat, of Massachusetts, would be the strongest vice presidential nominee their party could select.

The poll, distributed January 12, asked every Member to give "your judgment on your party's strongest possible ticket." Replies came from 53 percent of the Representatives and Senators. (While delegations to the national conventions are often controlled by State Governors or others active primarily in local politics, many of the Members who answered the Congressional Quarterly poll will have large influence on the way their delegations vote in the conventions.)

JOHNSON, KENNEDY, and NIXON all gained in percentage support in comparison with a similar Congressional Quarterly poll taken last July. Rockefeller, leading a 24-man vice presidential field, lost 15 percentage points as compared with the July poll.

In the interval between the two polls, Rockefeller took himself out of the Republican presidential race, leaving Nixon the sole apparent contender; and both Kennedy and Senator Hubert H. Humphrey, Democrat, of Minnesota, openly declared themselves candidates for the Democratic presidential nomination. All three men said they would not accept vice presidential nominations.

DEMOCRATIC RESULTS

JOHNSON had placed third in a January 1959 Congressional Quarterly poll with 14 percent of the vote and then took first place in July with 32 percent. Leading the field behind Johnson in the present polling was Senator Stuart Symington, Democrat, of Missouri, who had finished first in January 1959 but dropped to a second-place tie with Adlai E. Stevenson in July. Behind Symington in the current poll came Kennedy, Stevenson, and Humphrey.

Democratic President

[Percent]

	January 1960	July 1959	January 1959
Johnson	37	32	14
Symington	21	18	33
Kennedy	16	17	17
Stevenson	10	18	12
Humphrey	8	6	13
Others	6	7	8
No choice	2	2	3

JOHNSON'S strength rested primarily on his southern support. Almost three-quarters of his votes came from southern Members. JOHNSON also had more western votes than any other candidate, while KENNEDY led in presidential votes from eastern Members. SYMINGTON led in the Midwest and was second in strength in both the South and the East.

Other Democrats who received votes for President were Representative Chester Bowles, Democrat, of Connecticut, five; Michigan Gov. G. Mennen Williams, Democrat, two; Kansas Gov. George Docking, Democrat, Senator John L. McClellan, Democrat, of Arkansas, and Representative James Roosevelt, Democrat, of California, one each.

These results were based on replies from 170 Democratic Members of Congress, constituting 49 percent of the total Democratic membership of House and Senate.

REPUBLICAN RESULTS

NIXON received virtually all the votes for the presidential nomination, gaining the support of all the southern and western Members who returned ballots. Rockefeller received five votes, all from eastern Members, and one midwesterner voted for Secretary of the Treasury Robert B. Anderson.

Republican President

[Percent]

	January 1960	July 1959	January 1959
Nixon	95	84	78
Rockefeller	4	14	17
Anderson	1	----------	----------

These results were based on replies from 112 Republican Members of Congress, constituting 60 percent of all GOP membership.

VICE-PRESIDENTIAL RESULTS

KENNEDY received the Democratic Vice-Presidential designation on more than half the ballots. He was strong in all regions of the country, particularly in the South where he received 42 of his 91 votes. Most of those who supported Johnson, Symington and Stevenson for the Presidency named Kennedy at or near the top for the second place on the ticket. Leading the 24-man field after Kennedy were California Gov. Edmund G. "Pat" Brown, Democrat, Symington, Johnson, and Humphrey.

Democratic Vice President

[Percent]

	January 1960	July 1959	January 1959
Kennedy	53	49	41
Brown	7	12	5
Symington	5	6	12
Johnson	5	4	6
Humphrey	3	4	5
Others	16	14	22
No choice	11	11	9

While Rockefeller's strength dropped from 53 percent of those voting for the Republican vice-presidential candidate to 38 percent, House Minority Leader Charles A. Halleck, Republican, of Indiana, took 12 percent of the votes compared with 4 percent in July 1959. Those with some strength behind Halleck were Secretary of Labor James P. Mitchell and Senators Kenneth B. Keating, Republican, of New York, and Thruston B. Morton, Republican, of Kentucky. Nineteen others each got some support.

Republican Vice President

[Percent]

	January 1960	July 1959	January 1959
Rockefeller	38	53	21
Halleck	12	4	8
Mitchell	6	3	5
Keating	5	----------	3
Morton	4	1	----------
Others	30	25	37
No choice	4	14	26

Airline Competition

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. CELLER. Mr. Speaker, historically, my interest has been focused on business activities or Government flats which lead to the creation of a monopoly. Except in the case of certain public utilities, where the best interests of the subscriber are served by having a single company provide a service, I am militantly against procedures and practices which offer no competition.

As a consequence I registered my opposition several months ago when an examiner for the Civil Aeronautics Board came forth with the shocking suggestion that one airline be given a monopoly between the Pacific Northwest and Hawaii.

At a time when New York and other east coast cities are seeking direct air routes to the Orient it seemed inconceivable that the CAB would consider curtailing an existing service that had been operational for 12 years and which was being flown for the first time by long-range jet aircraft.

New York and the east coast are now within 14 hours of Tokyo. New jet aircraft, already operating and on order, can whisk a traveler from Idlewild Airport nonstop to one of a couple of Alaskan cities and, after refueling, again nonstop to Tokyo.

The CAB's overwhelming reversal of the examiner's recommendations is very gratifying. Every Board member participating concluded that public convenience and necessity, plus continuing the CAB's historic concept of competition, are best served by continuing both Pan American and Northwest on the route between Seattle and Portland and Honolulu. And by putting each carrier on a permanent instead of temporary basis, the Board supplied them with additional incentive to invest in new equipment and to make long-range plans for making their respective services even more attractive to the traveling public.

Report to the People

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. IRWIN. Mr. Speaker, it is my firm conviction that one of the most important services a Member of Congress can perform for his constituents is to keep them informed of his activities through publication of a regular newsletter "Report to the People."

Because I feel it may be of equal importance to keep my fellow Members of Congress similarly informed of my activities, I am introducing into the RECORD today the latest issue of my own "Report to the People":

A VISIT TO PUERTO RICO AND CUBA

Partly responsible for the delay in issuing this first newsletter of the second session of the 86th Congress was my absence from the country as a delegate to the Caribbean Assembly on the United States and Latin America, which was held in San Juan, P.R., early in March. There were some 60 participants—30 Latin Americans and 30 North Americans—representing a variety of professions and occupations and varying points of view. President Eisenhower addressed the delegates in Puerto Rico en route home from his recent Latin American good-will tour.

I took advantage of my attendance at the Assembly conference to make a personally financed side trip to troublesome Cuba. I want to emphasize this trip was at my own expense and that I took it, brief though it was, so that I could get firsthand, on-the-spot impressions of the situation in Cuba. While I spent but 24 hours in Havana and another 24 hours on an American-owned ranch in eastern Cuba, my fluency in Spanish helped tremendously in my efforts to find out what the controversy between Cuba and our own country is all about.

I came away with several impressions and, with the understanding that a weekend is a brief time to probe into a problem as involved and delicate as United States-Cuban relations, I want to pass them on to you.

For one thing, I failed to notice any spontaneous anti-Americanism during my entire visit. There was no evidence of it certainly on the part of the Cubans I encountered on the streets who couldn't mistake me for anything but an American. Nor was there evidence of anti-Americanism displayed elsewhere.

I also was especially impressed by the fact that no one in Cuba, no matter how his interests were being affected by the Castro government, appeared to want a return of the Batista regime.

Yet I left Cuba convinced that a poor job of administering the country by the Castro government will in itself bring serious economic troubles to Cuba in the near future.

WHAT MUST WE DO CONCERNING CUBA?

It is important, I think, that we respond with vigor to unfavorable and unwarranted attacks upon us by the Castro government. We must do so, I feel, with the idea in mind of protecting our interests in the rest of Latin America. At the same time, we must take every step to prevent any untoward incident that will give Castro an opportunity to attack us further. Specifically, we must halt unauthorized flights by American planes over Cuba, for such flights only weaken our position at home and abroad.

I am very much opposed, incidentally, to proposals for broadcasting directly from the United States to Cuba. Such plans, it seems to me, would be repeating a fatal mistake made during the days of Peron in Argentina when our Ambassador tried to interfere. If we broadcast anti-Cuban programs, then we will be identified as the only anti-Castro force in Cuba and all Cubans will rally behind Castro. This suggestion only underlines the need for a full-blown Voice of America program for all of Latin America which would bring to the Latin Americans a clear idea of what the long-range U.S. objectives are. The VOA would spell out specifically what our programs and hopes are for the free people of Latin America.

President Eisenhower's recent trip aroused all kinds of hopes for the roles we are to play in the future development of Latin American and we must be ready to help meet these expectations. I disagree with Mr. Eisenhower's claim upon his return from his recent good-will tour, however. The President maintained that our prestige was never higher in Latin America. In my opinion, our position in Latin America has never been more perilous.

It is of vital importance, I believe, that we explain our democratic system of government and outline the role that private enterprise can play in the development of Latin American countries. Private American capital invested abroad can do much to help Latin America meet its needs.

THE BATTLE FOR CIVIL RIGHTS

Another reason for the delay in issuing this newsletter was my desire to wait until I could report to you about the battle for civil rights legislation in Congress. At this writing, the House had passed a civil rights bill and the Senate, a record filibuster behind it, was struggling to do likewise. It seemed virtually certain, however, that civil rights legislation would be enacted by this session of Congress despite many obstacles to be overcome.

I supported the House civil rights bill and would have voted for the strongest possible bill which could be proposed. As you may know, I have been a strong advocate of civil rights for a long time. I was the 23d Member of the House to sign a discharge petition which ultimately gathered more than 215 signatures and was instrumental in getting the Rules Committee to bring a civil rights bill to the floor for action. Then, too, I was a signer of a discharge petition designed to bring home rule legislation for the District of Columbia to the House floor. This legislation, of course, is closely linked with civil rights legislation.

Unquestionably, the House-passed bill could be improved upon, but under the circumstances I think it is of greater importance to get an adequate bill out now than to spend endless time arguing about every phrase or provision it should contain.

Richard H. Rovere, writing in New Yorker magazine, summed up rather well, I think, the task still before us in this problem of civil rights. "It may take two or three more bills, in two or three more Congresses," he wrote, "to achieve anything like complete protection of the franchise, but scarcely anyone doubts that in time the protection will be achieved and that it will be seen as the one civil right that can, if it is put to use, achieve most of the others."

I would like to express my pride in the House of Representatives, incidentally, for the sobriety and dignity with which it approached the civil rights problem, finally passing what I thought essentially was a good bill. It made me glad to be a Member of this great body.

THE COMMUTER CRISIS

Since my last newsletter, there have been many developments in the New Haven railroad commuter crisis. These developments included:

A personal on-the-spot survey of the New Haven's commuter operations.

My introduction of legislation to provide $500 million in long-term, low-interest Federal loans to local or regional agencies for the purchase of equipment which would be leased to railroads or other transit systems.

An Interstate Commerce Commission-ordered investigation of the New Haven.

When I inspected the New Haven's operations in late December, I found that poorly kept trains, stations, and working areas were depressing employee morale and detracting from passenger comfort. I found that admittedly improper maintenance was causing breakdowns jeopardizing passenger and train crew safety.

My bill, introduced in February, got much early support, particularly from members of the House Banking and Currency Committee which would be charged with holding hearings on it. Unfortunately, due to the pressure of other legislative matters, the measure received a setback when Committee Chairman SPENCE advised me it would be impossible to promise hearings on the bill. Meanwhile, Senator WILLIAMS of New Jersey proposed legislation similar to mine but providing for a smaller amount of funds and for the loans to be administered differently. My bill, I feel, represents a sounder approach but I will support Senator WILLIAMS' legislation if it appears it will get a quicker response. The main purpose is to get the job done as soon as possible.

I was heartened when the ICC announced it would investigate the New Haven, for this is an action I had been demanding for many months. I wrote ICC Commissioner Charles A. Webb urging him to make his probe a broad one, covering all aspects of the New Haven's operations over the past 15 years. The fact that the New Haven has demanded a 70-percent increase in fares indicates to me that something is radically wrong with the carrier's management policies. Obviously, the New Haven's abrupt financial crisis stems from developments over a long period of time and isn't something recent.

It is especially important, I think, to keep in mind that the problems created by the poor service on the New Haven must not be looked upon as problems that are irritating and frustrating to the commuters, but in terms of the tremendous economic importance it has on real estate values, on the building industry, on retailers, on the entire economy of Fairfield County and the whole State of Connecticut.

BETTER AIR SERVICE ASSURED

There have been two vastly important developments recently that assure Fairfield County of greatly improved air service. One was approval by the Civil Aeronautics Board of better and more frequent airliner service between Washington and Bridgeport. The other was CAB authorization for helicopter service to Danbury via New York Airways, Inc.

The new direct air service via Allegheny Airlines was scheduled to get underway April 12 with one-stop flights to Washington via Baltimore leaving Bridgeport at 9:40 a.m., 2 p.m., and 6:24 p.m. daily. Flights from Washington via Baltimore to Bridgeport will leave at 7:50 a.m., 1 p.m., and 5:30 p.m. This direct service will be fast and timesaving for many residents of Fairfield County and I hope the people of my district will use and encourage this new air link between Bridgeport and Washington and Bridgeport and New England points to the north. Inauguration of this improved service will be important to me personally in commuting between Washington and my district. Last year many of my trips were made by car whereas as of April 12 I am going to be able to fly quickly right from Washington to Bridgeport.

AND SPEAKING OF PROGRESS

I was delighted over action of the Urban Renewal Administration in earmarking more than $9 million in Federal funds for Bridgeport's redevelopment program. Another welcome announcement from Urban Renewal concerned the Southeast Quadrant redevelopment project in Stamford. The agency approved an advance of $130,490 for planning purposes for the project, which eventually will involve an estimated total Federal grant exceeding $6 million. Additionally, $750,000 is included in the 1961 public works appropriation for development of Bridgeport Harbor for navigational purposes, representing an allocation of Federal funds toward a project that will cost some $3.5 million to complete. Pending, too, is the Stamford hurricane protecting project, now under consideration by the Senate Public Works Committee, with hearings expected shortly.

AVAILABLE FOR THE ASKING

By dropping me a postal card at my Washington office, 1319 House Office Building, you can obtain while the supply lasts:

"The Family Fallout Shelter," a booklet outlining how to go about building your own fallout shelter. I have proposed legislation, incidentally, that would allow income-tax deductions for the cost of civil-defense-approved fallout shelters.

"The Capitol," a pictorial story of the Capitol in general and the House of Representatives in particular.

THE WATER POLLUTION PROBLEM

In the next decade, one of the really critical problems that will confront our Nation will be that of water pollution.

This is a problem that will stem directly from our exploding population with its accompanying swift industrial expansion.

Numerous communities, especially smaller ones, have already been aided through the Federal antipollution program which provides funds to help finance sewage-treatment plants.

Westport, for example, got such a grant in the amount of $250,000. Bethel just recently received one of more than $60,000.

The importance of helping smaller communities, in particular, to solve their increasing water pollution problems makes it all the more unfortunate that legislation passed by the 86th Congress to increase the amount of funds available was vetoed by the President.

I supported this legislation and will support similar proposals when they are brought up.

He's a Proud Legionnaire

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following feature story by Mr. Lou Rauscher which appeared in the Wilkes-Barre Sunday Independent of April 3, 1960, the subject of his story being Mr. Walter Kasian, commander of Warrior-Run American Legion Post 176:

WALTER KASIAN REMEMBERS LIFE IN NATIVE LAND—ASKAM RESIDENT SAYS GI'S JOB ISN'T FINISHED

(By Lou Rauscher)

If Walter Kasian had his way, there'd be a 50-star flag in every home in the valley. The deep-seated love and respect which this modern-day patriot holds for our national symbol are of a type which would put most of his fellow citizens to shame.

Walter's story is simple, yet full of meaning. It spans from his early years in Poland, then already feeling the approaching harassment of the Red Star, to his settling in the Warrior Run-Askam area where he now serves as commander of an American Legion post and spearheads one of the most unique programs in the entire Legion ranks.

It was largely through Walter's efforts that members of Warrior Run American Legion Post 176 took it upon themselves to place a 50-star flag in every home in Warrior Run and Askam. At last count, 262 homes in that area have already purchased the flags.

Walter Kasian's background serves to arm him with an appreciation of freedom which many native Americans have never attained.

He was born in Uscieczko, a town in the southeastern part of Poland, noted for its closeness to Russia. He is of Ukrainian stock and relates that his birthplace has long been a trouble spot with both Poland and Russia seeking allegiance of the 7 million Ukrainians making up the population there.

Walter, who operates a grocery store at 45 Center Street, in Askam, and who talks with a charming accent, still has a sister living in Poland. The area, he says, has long been referred to as Galicia.

EACH VETERAN'S DUTY

Why this great devotion to the flag? "Well," says Walter, "I feel it's the duty of every veteran of the Armed Forces to do what he can to keep patriotism at a high level. Too many of us become lax when we are once discharged from service."

Walter served for 4 years with the Air Force, having enlisted right after Pearl Harbor. He came to this country when he was 19 in 1934. His mother had died when he was only 1 year old in a tragic aftermath to a plan for the future which his father had fostered before he was born.

The idea was for Walter's dad to come to this country, which he did, and once settled to send for Mrs. Kasian and the newborn child. All in readiness shortly after Walter reached his first birthday but his mother's death intervened.

Walter saw his dad for the first time when he came to the United States to join him in Mahanoy City. From there he went to Hanover Township to join an uncle in the grocery business. A stint in the Nanticoke bakery preceded his Air Force career and after discharge he settled in Askam and opened a grocery business.

He met Helen Kapral, they were married, and now have a son, Eugene, 13. The couple recently celebrated their 18th wedding anniversary.

URGE TO BELONG

"I joined the Legion immediately after discharge. I guess I had an urge to belong, more so than the guys who were born here. When you come from a foreign country you want to be accepted by your neighbors and joining such an organization certainly helps.

"Once a GI is discharged his job isn't finished. We just can't quit fighting for our freedom, even though actual combat is over. I have long felt puzzled by the lack of appreciation for our flag."

Walter points out that the Warrior Run Legion Post which he heads is the third oldest in the county. "We'd like to build our own home some day and all proceeds from our flag sales are going toward that goal."

The post has about 34 members and needs 2 more to go over the top in new memberships for this year. Meetings are held in Lincoln's Hall on Front Street in Warrior Run, and "if we get many more we'll have to get a shoehorn to fit them in," according to Walter.

This is Walter's first year as commander. He formerly belonged to Lee Park Post 609. Early this year is when he and a fellow legionnaire, Joe Lenkiewicz, made the first calls in the Askam-Warrior Run area in conjunction with their flag-selling project.

MOST HOMES REACHED

From a humble beginning, the drive mushroomed so that now there are 12 men making the rounds with the job nearly completed. Walter points out that those homes which were missed, due mainly because no one was home, will be contacted.

"I sure appreciated the cooperation that the post members have been giving me since I became commander," says Walter who is also full of praise for Lou Greco, district 12 Americanism coordinator. "He's one fellow who's devoted to the Legion cause. The country could use more like him."

Walter recalls the time his post was to install new members. The team which was to do the installing didn't show up, leaving the Warrior Run candidates confused and a bit disheartened. "We called up Mr. Greco even though it was late. He had just returned from Harrisburg where he took part in a Legion ceremony and was already in his pajamas. But he rounded up another local official and came out to install us members and save the night."

CALLS FOR NEW MEMBERS

Walt appeals to all ex-servicemen who don't belong to a veteran's organization to join the ranks. "Too many guys wait to be coaxed or join just for the social advantages. We've got a drive on in the district now and we're looking for new faces."

One of Walt's neighbors relates that the first thing he did after acquiring his present home was to purchase a flag. Walt himself is pretty fond of telling about the Askam widow who bought a flag on the installment plan.

"She's up against it but still felt compelled to get a flag."

Asked whether he had any apprehension about being called a "flag-waver," Walt replied:

"I'm thankful that we have a flag to wave."

Fantastic San Fernando Valley

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 8, 1960

Mr. HIESTAND. Mr. Speaker, the almost unbelievable growth of the great San Fernando Valley, a portion of which I have the honor to represent, is well depicted in detail in the attached article, published in the San Fernando Valley Times of March 26. I am sure it will astonish most Members of the House:

(By Mark de Villers)

Valley population has pushed up to 850,000, according to city, State, and county estimates. These were made as blank census forms were being sent out through 22 post offices in the valley to many of the 260,000 households.

Matching the boost in population this week was the revelation that the northwestern section classified phone books (4 in all) have 2,352 pages, 160 ahead of the 2,192 pages for Los Angeles Central Directory, generally considered the Nation's third largest. The 2,600-acre Warner Studio Ranch beside Calabasas and Woodland Hills was sold for a reported $10 million to a Southern California Edison Co. subsidiary which plans to develop an all-electric city and campus-type research and development center.

Valley building for February reached $26,140,729, a new record for the three incorporated areas for the period.

Mutually acceptable postal boundaries are being worked out to enable the city's new community freeway, street and traffic "sign" program to go into effect swiftly. Plans for May Co.-Sears Shopping Center indicate that the Warner Ranch area there may hold a third department store, and can be in the midst of a West Valley population that can move from 210,000 today to 550,000 in 15 years.

Two plans for developing the vast southern stretch of the valley along the Santa Monica Mountains were presented to the city's planning committee.

NEW FREEWAY FLYER

MTA inaugurates its Central Valley Freeway Flyer bus service April 6, day after the Ventura Freeway will open, promises to cut 14 to 20 minutes off travel time from Panorama City to downtown.

Southern Pacific closes its station April 22 in Burbank, up to now a "conditional stop" only; the stop was built in 1929. Van Nuys is investigating raising meter time prices from pennies and nickels to nickels and dimes on its 1,354 parking meters. Parking discussions continued between Fulton Avenue residents and Valley College officials, while the city laid plans for widening Burbank Boulevard to five lanes and Fulton Avenue to six lanes.

Salvation Army's Men's Social Service Center at Van Nuys will be dedicated Sunday. Deauville Country Club's planned 90-hole club greens at Tarzana are being seeded, will be ready for play in June. San Fernando Valley Science Fair, to take place April 9 and 10 at North Hollywood High School, is getting Army help. Heart Association meets Wednesday at Valley College. A mental health clinic for the West Valley, to be interfaith and nondenominational, is in the planning stage.

Mrs. Dolores Hope, wife of comedian Bob Hope, and a valley resident, is now serving on the board of library commissioners. With receipt of provisional accreditation, Valley College is ready to open a school of nursing this fall. Pierce College listed enrollment of 7,525 students, 1,825 in day classes. Valley State College proposed promoting 17 professors. Seven valley residents are to attend the decennial White House Conference on Children and Youth opening Sunday in Washington, D.C.

PERILS U.S. LEADERSHIP

Dr. Margaret Mead, world-renowned anthropologist, called Americans most married people in history, said we have produced a new style of marrying so young that we are endangering the education of young men needed to help retain the U.S. position of world leadership.

New building height districts for Studio City, Sherman Oaks, and Encino, were approved. A fire station opened in Tarzana. Sunset International Petroleum Corp. is surveying North Hollywood as part of a development program. Construction of a power station (to cost $439,000) in Sunland begins April 15.

NEW BANK NAME

Valley National Bank will be the new name for Glendale National Bank when it opens at Toluca Lake April 1. City National Bank's Canoga Park branch opens Friday. William F. Boyd will manage Bank of America's newest branch, at Victory Boulevard and Tampa Avenue. Work to complete Sherman Oaks Savings & Loan Association's new headquarters by June 1 is being rushed. Shopping Bag Food Stores merges into Von's Grocery Co., name and all, as of March 28.

Industrial Products Division of I.T. & T. got a new president, Frederick H. Juterman. The 360,000-pound-thrust Air Force Atlas missile can be seen before the Rocketdyne main plant next Monday through Wednesday.

AIRPORT LIGHTING

Full lighting of San Fernando Airport is expected by April 1 and construction of 20 new hangars is underway. Bledsoe Properties Co., of Van Nuys, bought 15 acres of industrial land for $300,000. Thompson-Ramo-Wooldridge income reached $9,743,918 last year, an 8.5-percent rise. King Pools opened an Encino office. Big Do-Nut Drive-In No. 10 opened in Reseda and shared honors with a Big Tacos Drive-In. Packard-Bell was awarded a Navy contract of $1,250,000.

Industrial Association went into its 11th year, noting that the valley had become a major industrial center. Tip of the week: Government economists look for a 6-percent increase in business in 1960.

Prayer for the Nation

EXTENSION OF REMARKS
OF
HON. WILLIAM J. GREEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. GREEN of Pennsylvania. Mr. Speaker, I have recently received a letter from the Reverend O. H. Bertram, pastor of the Redeemer Lutheran Church in my district, enclosing a prayer written by a 13-year-old youngster in his confirmation class. The prayer is a sincere and earnest expression of a devout young lady that so impressed me that I feel it should be placed in the CONGRESSIONAL RECORD. May I, therefore, under leave to extend my remarks, call your attention to the prayer of Miss Linda Cartin of Philadelphia:

PRAYER FOR THE NATION

Dear Heavenly Father, who wants all men to be saved, help us to bring the message of salvation to all people and nations. We pray that you would deliver the world from all sin, and give health to all the sick. We pray that Thou wouldst give inspiration to those in power of our Government. Help us to pray for our enemies that they may be led to true repentance and to the knowledge of the true God. We pray for all who rule and have authority in the kingdom of the world that there may be world unity and peace. All these things we ask in Jesus' precious name. Amen.

Nuclear Power

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. FULTON. Mr. Speaker, one of the fields which has recently opened up for man's efforts to delve into is that of nuclear power. It has rapidly, through initiative and endeavor, developed to meet many of the needs of modern society.

At the 1960 American Nuclear Congress, held in New York City, John W. Simpson, vice president of the Atomic Power Division of Westinghouse Electric Corp., a fine, outstanding administrator in the scientific and research field, made a speech which I am now calling to the attention of my colleagues in the Congress and the American people:

REMARKS BY JOHN W. SIMPSON, VICE PRESIDENT, ATOMIC POWER DIVISION, WESTINGHOUSE ELECTRIC CORP., AT THE 1960 AMERICAN NUCLEAR CONGRESS, NEW YORK, N.Y., APRIL 4, 1960

Mr. Chairman, ladies and gentlemen, in this morning's discussion of "What Will Future Development of Nuclear Energy Demand of Engineers?" our first topic, "Outer Space Exploration and the Nuclear Engineer" is most appropriate. In the years ahead atomic power will play a major role in outer space exploration, and the nuclear engineer will show the astronaut vistas he hardly dreams of today.

The nuclear engineer will develop nuclear rocket engines and the internal electric power equipment so necessary for space exploration.

For over 4 years now, the Atomic Energy Commission has sponsored the development of a prototype nuclear rocket engine in the Rover project as well as the development of increasingly larger nuclear space auxiliary power units in the Snap program. The results to date have more than demonstrated that atomic power has practical applications. The merits of these applications are essentially proven. Much of the information we need to assess this future role of the nuclear engineer is now available and we can make some pretty good projections.

Project Rover is being carried forward by the Commission's Los Alamos Scientific Laboratory. It is a joint program of the National Aeronautics and Space Agency and the Atomic Energy Commission.

We are familiar with the concept of a nuclear rocket engine with its compact, high temperature reactor over which hydrogen gas passes, is heated and expelled to produce thrust. This reactor eliminates the combus-

tion process of the traditional chemical engines and the specific impulse—the performance factor—is high. We have heard these specific impulse numbers but it seems better to use a ready rule of thumb. Allowing some variation for size, the nuclear rocket engine has more than twice the efficiency of its chemical counterpart for a given rocket frame. In addition there will be considerable margin for improvement in nuclear rockets long after the chemical engines have passed their performance zenith. The zenith of the nuclear engine is so far out, one could hardly make a good prediction as to time. This developmental work will probably contine during the lifetime of the youngest nuclear engineer in this room.

If nuclear engineers were to announce that they could now offer an engine with twice the efficiency of today's best ship or locomotive engines, the announcement would receive much attention. Probably, because space exploration seems somewhat remote, the potential we will speak of today appears less significant. But space exploration is going to take place and the world is going to beat a path to the more efficient engine. The nuclear engine will dominate space propulsion and the nuclear scientist and engineer will make this possible.

Our double efficiency rule of thumb is somewhat deceptive in terms of describing what nuclear rocket propulsion can offer. It is only when we analyze the long missions that the payoff comes into perspective.

For example, to put a 50-ton payload in orbit around Venus and have it return to orbit around Earth, a high energy chemical propulsion system would require five to six stages and a thrust unit capable of lifting 18 million pounds from the Earth. On the other hand, the same mission could be accomplished with only a two stage nuclear powered system capable of lifting only 2.4 million pounds.

In more difficult missions as one involving a soft landing on Mars there is even a larger ratio in favor of nuclear propulsion.

Of course, there are many complex factors in rocketry and in applications like intercontinental ballistic missiles and close-in satellites, the existing chemical rockets can do the job so well that there would be limited purpose in developing an alternate system. It is in the long range and big missions where nuclear rockets will probably first show their advantage. This is a pragmatic approach to phasing the nuclear rocket into the scheme of things and does not account for the international prestige factor which could dictate earlier demonstration regardless of mission.

The important factor is this:

The nuclear engines will supplant chemical systems only if the nuclear engineer can make them safe, reliable, and practical equipment like our ship and utility reactors today. There is no reason why this can't be done but it is going to take development.

In the atomic energy industry we have learned from experience that nature places more than a few roadblocks in the way of our most promising applications. There is no exception here and we will sweat before promise becomes reality. We might review a few of the technical problems.

Materials must be found which have adequate properties under extreme conditions like high reactor temperatures and large temperature variances from one part of the reactor to the other. The materials of construction must not only have adequate high temperature strength, but also be able to resist corrosion and erosion.

Research and development since World War II produced the so-called high temperature alloys culminating in the development of useful nickel-base and cobalt-base alloys. Even these alloys which took so many years and so much effort to develop have little strength above about 1,800° F. and we must look elsewhere for materials.

Interest is naturally directed to the refractory metals tungsten, rhenium, osmium, tantalum, molybdenum, and niobium. The melting points of these metals range from 6,170° F. for tungsten to 4,380° F. for niobium. The pure refractory metals themselves have little strength at temperature above about 50 to 60 percent of their absolute melting points. By suitable alloying one might hope to get adequate strength at 80 percent of the melting point of the base metal—perhaps 5,300° F. for a tungsten base alloy. However, even though the refractory metals have been known for a long time, the development of their alloys is still in its infancy and a great deal remains to be done.

High temperature requirements also suggest the use of refractory compounds such as oxides, carbides, and the like. Development of these ceramic materials for the particular demands of space powerplants has only begun.

The application of refractory metals at very high temperatures also poses some serious metallurgical problems. Achieving high temperature strength while avoiding low temperature brittleness while providing adequate fabricability and weldability is a large order. It is made even more difficult by considerations of resistance to corrosion and irradiation damage. The solution of such problems will require the concentrated application of the most advanced metallurgical and solid state science as well as the utilization of a wide spectrum of specialized equipment and facilities ranging from large scale fabricating equipment under inert atmosphere to nuclear testing reactors and hot laboratories.

The road from the first conception of a relatively exotic material to the ultimate and successful application is strewn with difficulties. One is reminded of the experience with zirconium.

In 1949 it was first suspected that zirconium should be a good material for reactor core construction, for about this time it was realized that the hafnium content of zirconium was responsible for adverse nuclear properties. Hafnium free zirconium had a low thermal neutron cross section and good corrosion resistance to high temperature water. A large effort was required to learn how to remove hafnium and to produce the zirconium in useable form. Corrosion resistance proved to be highly variable, depending upon the presence or absence of a variety of impurities. The solution of that problem required several years of concentrated effort until a suitable zirconium base alloy (zircaloy 2) was developed in 1952. Since then, a series of difficulties, for the most part unexpected, have required considerable effort to improve upon corrosion resistance and strength. At present, we are looking for zircaloy 4.

Materials development for nuclear space engines will require a similar long and concentrated effort.

Another typical problem in the development of nuclear rocket engines involves the heat transfer and fluid flow properties of hydrogen at high speeds and temperatures. Even understanding the mechanisms of heat transfer to a rapidly moving stream of hydrogen is a real challenge. With nuclear reactors the available temperatures introduce the problem of dissociation of the gas into monatomic hydrogen which affects the impulse which can be obtained from the rocket nozzle. The basic data on dissociation and recombination of hydrogen as it passes through the reactor and the nozzle must be accurately determined and analyzed. Work has been done in this field (in the analysis of high temperature gas phenomena. There are others. This is only one small field.) But many avenues of exploration are open.

And there are the usual problems associated with hardware. The valves, pumps, and mechanisms for the nuclear rocket propulsion system will be intricate.

We need only look at the problems encountered with chemical missiles to realize the high reliability which must be assured in a rocket system. Pumps and valves should be simplified and if possible eliminated. Fortunately, the system opens avenues to simplification and hopefully much elimination.

The safety aspects of nuclear rocket firings will demand high reliability and quality control.

We will hear more on this matter of safety as the months pass—I would think there is less likelihood of a nuclear rocket blowing up than a chemical rocket. Even in the unlikely event of the reactor meltdown the contamination would be many orders of magnitude less than weapons contamination. Nevertheless reliability and safety will be a priority problem. There is also the safety problem of failure in flight and return to earth, but this again accents reliability.

Today's chemical rockets offer essentially a one way trip to the planets. Some day, after the first demonstration of a nuclear propulsion system, we will have to look to stopping and starting engines for cruise considerations and return trips. This will require improvements in the technology of fuel packaging and storing, raising the temperature of the reactor systems, and controlling the propulsion system so that it can be turned on or off—providing spurts of energy. These problems will be formidable.

To wind things up on the rocket, we can say that to make nuclear space propulsion fulfill today's promise, much needs to be done—and like everything else the job never really ends.

If a satellite or space vehicle is to be anything more than novelty, it must have an internal power supply. This power can come from several practical sources, but high levels of power for long periods of time can best come from the atom.

Batteries, fuel cells and solar energy systems are the competition, but for electric power requirements in excess of one kilowatt to be provided continuously for more than 6 months we must look to atomic power.

The space electrical propulsion engine which promises continuous but low thrust over long periods of time will be a big consumer of space electrical power. The ion, plasma, thermal arc or MHD engines of which you hear so much need atomic electric powerplants to supply their power and plants in the range of hundreds of kilowatts are needed. Advanced reactor systems in this power range will have to be developed.

Space vehicles also need power for communications, reconnaissance capability, exploration (perhaps using television) and a myriad of other uses.

If we talk about manned space flight of any duration, we must look to human requirements—air regeneration for respiration, water regeneration, food regeneration and to the environmental needs of heating, cooling and simulation of life on earth. These will require significant quantities of electrical power.

We can see at a glance that the space electrical power we are talking about for the years ahead is closer to megawatts than to watts. This is a job for atomic power.

The AEC has been developing space nuclear auxiliary power systems in the Snap Program. They have focused on the development of lightweight, long lived systems. The Snap effort followed two avenues—the development of small compact reactor systems and the development of systems using energy from the decay of radioisotopes.

Radioisotopes will produce up to several hundred watts of electric power but they have obvious power limitations. Surely they will have their place in the scheme of things but not in the big efforts.

Last November the Atomic Energy Commission revealed the details of the Snap II

reactor, a compact 200-pound plant with a turboelectric generator developed by Atomics International Co. I am sure many of you saw the reactor at the American Rocket Society meeting. Within this same AEC program there are other reactors under development which promise significantly more power. Systems with more power than those under development today are quite feasible.

I believe that by 1965 one megawatt of electricity can be generated in outer space from a nuclear powered auxiliary system. By 1967, 10 megawatts are possible and by 1970—60 megawatts.

These predictions are based on the belief that with today's technology we could generate a kilowatt of electric energy with 8 pounds of payload—8 pounds per kilowatt. I believe that by 1970 it is reasonable to expect 4 pounds per kilowatt. Thus, 120 tons of payload would give you a 60-megawatt output.

Of course, we would need boosters powerful enough to put such weights into orbit, but such boosters are programed and with the development of nuclear rockets, far more will be possible.

At first blush you might ask what possible use power in these ranges could have in outer space. Probably nothing close to these quantities will be needed but it is stimulating to speculate on what you could accomplish if it were available. Think of all of the electrical propulsion you could supply and what this would mean for interplanetary travel.

Consider that in the more hostile environments on earth—our deserts and seas—the limiting factor of human survival is power. If you supply enough power and conversion equipment, you can support human life in any type of environment. This will be true in outer space—the most hostile environment for man which we can anticipate. As more and more power can be supplied manned flights, lunar landings and interplanetary explorations could become quite supportable.

I think demands are forthcoming and we will be lucky to stay close to them let alone ahead of them. Fortunately, we have now learned not to undersell the future—we did too poor a job in other years of forecasting its demands.

One of the most difficult problems facing the nuclear engineer is the development of auxiliary space electrical equipment which assures a very high degree of reliability. This equipment must operate relatively unattended for years with only a negligible probability of failure.

Experience has shown that reliability is an inverse function of complexity, therefore, these systems must be simple. It may not be possible, as in terrestrial systems, to make manual adjustments. Even in manned space vehicles the attendant will probably be able to perform only operations as complicated as working a mechanism like a throttle.

Years of experience has taught us the intrinsic stability of nuclear reactors in the power ranges. It will be the nuclear engineer's job to take advantage of this inherent stability of reactors to design self-regulating, self-controlling systems.

As we once again speak of reliability we must look to materials.

Materials problems will be as formidable as those I described in rocket development, but they are similar and the one program should assist the other.

The environmental problems in space present some unique problems, but the environment is not always hostile. For example, the vacuum in space allows use of high temperature materials which would oxidize in the atmosphere. Examples of these materials are molybdenum, graphite, and tungsten.

The lack of gravity seriously affects ones ability to pump liquids since it is not easy to obtain a sufficient inlet pressure on a pump to prevent cavitation. Therefore, the transfer of liquids from one vessel to another introduces some more complexities.

Another environmental problem is radiative waste heat in a vacuum. How do you get heat out of a thermos bottle?

In order to radiate appreciable amounts of energy, high temperatures must exist at the heat sink. The amount of heat that can be radiated is proportional to the fourth power of the absolute temperature. For temperatures less than approximately 1,000° F. very little heat is radiated per unit area, but as the heat sink temperature rises, the quantity that can be transferred increases rapidly. For example, at 1,000° F. 2¼ kilowatts per square foot can be radiated and at 2,000° F. 18.4 kilowatts per square foot can be radiated. It is evident, therefore, that to have a small heat sink any nuclear powerplant in space must operate at extremely high temperatures. While much work has been done on high temperature apparatus like aircraft jet engines, we have not been accustomed to operating equipment for periods in excess of 100 to 500 hours. In the case of a space powerplant the equipment must operate for 1, 2, or more years at even higher temperatures.

On the other hand the nuclear industry is no infant and we have passed our first decade of actually developing and building plants. Much of what we have learned is directly applicable. We can make direct use of things like our calculational methods, digital computer codes, testing methods, materials research and a multitude of other things.

Some new areas of professional specialization will emerge in our industry and a broad spectrum of engineering talent will be required. The technologies of nuclear engineering, heat transfer, fluid flow, aerodynamics, stress analysis, materials engineering, control, and communications are involved.

If we accept that there will be a major research and development effort for nuclear space applications, the nuclear engineer should be pleased. He can welcome a new challenge and the opportunity to participate in one of the most exciting technical adventures of our time.

He should also welcome the fallout of basic information which will help us immeasurably in our other nuclear power work. The atomic energy industry was born from a major defense effort. A big part of our power technology grew out of other defense work. A major effort to apply nuclear power for outer space, while not labeled as defense, has similar connotation. It should have an equally healthy effect on our industry.

Speaking to you this morning posed a rather difficult problem. Some of the things I prepared are rather elementary for men of your training and experience, yet it seemed important to cover the field in broad perspective.

There is a challenge ahead—there is a new frontier. The nuclear engineer is entering a new era which will probably demand more of him than anything in the past. I may lack precision in describing the problems, but I speak with sincere personal belief when I say that we in the nuclear sciences are going to make outer space exploration a reality. Judging from your past accomplishments I am confident success is assured.

And with success will come great satisfaction, but it would be a mistake to think of the satisfaction of technical accomplishment alone. There is the incomparable satisfaction of providing the means for a better understanding of our universe. When all people have this understanding, they may learn to live together peacefully. We could ask little more.

Nixon Keeps Calm

EXTENSION OF REMARKS
OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. MICHEL. Mr. Speaker, last night I had the pleasure of attending the jumbo jamboree which was presented in connection with the Eight Annual Republican Women's Conference. It was a big old-fashioned Republican rally, complete with box supper, band top entertainment and plenty of Republican enthusiasm.

As a switch, President Eisenhower reviewed DICK NIXON'S record as Vice President and emphasized the record speaks for itself. The President went on to point out that Vice President NIXON was "uniquely knowledgeable" when compared to the many aspirants who have launched themselves into "oratorical orbit" in their quest for the White House.

It is, therefore, not difficult to see why there has been a slight fluctuation in the polls as a result of a blaze of national publicity directed to the Democratic presidential hopefuls who have been beating each other over the heads for headlines. It is also not difficult to see, in evaluating the President's remarks, why Vice President NIXON remains calm and keeps his mind on his business.

Mr. Speaker, the following editorial in last night's Washington Star by William S. White brings out the reasons why DICK NIXON is not the kind to panic:

NIXON KEEPS CALM AMIDST DOUBTS—VICE PRESIDENT IS SEEN FUNCTIONING AS GOOD CAMPAIGNING CARD PLAYER

(By William S. White)

Vice President RICHARD NIXON is settling back with wry calm to last out what he knows is likely to be a series of dips in the graph of his presidential ambitions.

He is like a good poker player who finds the cards suddenly running against him. He figures his luck is bound to turn and so he is by no means desperate. And he knows that you can't ever win a pot unless you keep staying in. But he also knows that when your luck is momentarily out you play your hands with great care. This is definitely not the kind of night on which you try to fill inside straights.

The Vice President does not for a moment delude himself. He is fully aware that he has had some poor to bad breaks lately and that there probably will be more before the turn comes.

Ironically, he is to some extent the victim of his own earlier good fortune. The fact that he is—officially at least—unopposed for the GOP presidential nomination is a mixed blessing. It would be dangerous to act as though it already was in the bag. So he must walk softly.

He is having to keep all openly political activity to the absolute minimum. This means that the national spotlight, for now and for some weeks ahead, is nowhere near his vicinity. It has been playing hotly on the man the NIXON people now believe will be his Democratic antagonist for the Presidency, Senator JOHN F. KENNEDY of Massachusetts. It may well stay beamed in that direction for a while to come.

For example, the latest Gallup poll presents KENNEDY as leading NIXON in the Nation by 53 percent to 47 percent—a reflection, the Vice President thinks, of KENNEDY'S rarely rivaled blaze of national publicity.

Again, NIXON'S status as the more-or-less designated successor to President Eisenhower puts other restraints on the Vice President. Mr. Eisenhower is going to be out of the country a good while in his summit diplomacy. This means NIXON must stay here to mind the store. And while he will be doing important things in this period, they will not be of the big-headline variety.

Finally, President Eisenhower has much diluted his earlier seeming all-out endorsement of NIXON. The President's subsequent comment that he would not have given such an endorsement in the first place if the Vice President had not been the only Republican candidate in sight has not been helpful—to NIXON.

Obviously and unarguably it has given some encouragement to those Republicans who still hope to bring off a presidential draft for Gov. Nelson Rockefeller, of New York. (This one estimate is strictly this correspondent's; it should not be attributed to NIXON.)

Actually, the Nixon people's worry is not so much that the current polls will be hurtful in the election itself. Before this the Vice President has gone down in the polls only to climb high again. What really bothers them is that every time the smallest Nixon weakness is indicated before the GOP convention the Rockefeller partisans will seize on it to renew the chant "NIXON can't win."

The Vice President, in a word, is not so much afraid of the Democrats in the election. He is more concerned about what may be done by other Republicans to exploit against him anything unfavorable that may happen from now to convention time.

There is nothing remotely approaching panic here. NIXON is a cool and steady handed gambler politically. He is, rightly or wrongly, perfectly confident that he will come through in the end. But in the meantime he has problems, not with his own morale but with that of his workers. They clamor to him: "You must get out and get busy." He replies in effect: "It's just the way the ball bounces—now. Take it easy. I'll be 'out there'—and plenty 'busy'—when the time comes."

A Good Salesman Needed

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MOORHEAD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. MOORHEAD. Mr. Speaker, business is becoming more international. The company and the country recognizing this will prosper just as the company or country which does not will be left poorer in material wealth as well as in terms of world influence.

Greater American exports are vitally important in our competition with the Communist world. They could also offer a great new job market for Americans who, in many cases, are finding automation displacing jobs which men have performed for generations. Greater exports with their related jobs for citizens of the trading nation in production, management, the professions, and services can make the transition to a new job pattern much less painful. In the long term future greater exports can help insure that our standard of living and gross national product rise to new heights.

Markets for such trade, however, will not be brought to us on a silver platter while we sprawl in the shade of the old backyard. We will have to go after them with all the salesmanship, marketing and production genius our Nation has made legendary.

I mention these things, Mr. Speaker, because of an article which appeared recently in the Pittsburgh Post-Gazette. The article indicates that, at least in the potential markets of an Africa emerging in new nationalism and freedom and with strong desires for material as well as political advancement, American business and government may be resting on their oars.

Here, under leave heretofore granted to extend my remarks in the Appendix of the RECORD, I include that article and commend its reading to my colleagues:

EXPORTER-INVESTIGATOR REPORTS U.S. BUSINESS MISSING BET IN AFRICA—DEPARTMENT OF COMMERCE TO RECIEVE FINDINGS OF FOUR-MAN MISSION SOON; EMBASSIES' PERSONNEL TO BE CRITICIZED

Pittsburgh Exporter Alfred Teshen is just back from West Africa, where he found the natives restless not only for independence but also for American business.

That disturbed him because he hadn't known before his 2-month trip that we aren't doing much business there now.

"American business has failed miserably," he said.

And if he were asked why anybody would want to do business in places such as Liberia, Ghana, Guinea, and Sierra Leone, he would answer in the terms of a mountain climber—because it's there.

"The possibilities are tremendous and I'm not a man who says possibilities are tremendous when they are only good."

SEES NEED FOR CHANGES

Mr. Teshen is a burley man, who speaks in an accent that is thickly German, even after 34 years in this country, but his words curiously are those of a go-get-'em Rotary Club member—which he is.

"We need a lot of changes in our embassies. We need a whole new set of commercial attachés. They ought to be sparkplugs, seasoned businessmen, who know what they're talking about—instead of, as in many cases now, the take it easy, feet on the desk, when-is-the-next-party type of people."

That indictment, he said will be phrased in just those words in a report to the U.S. Commerce Department, which sent him to West Africa with three other businessmen on a mission of finding out why we aren't getting much trade there.

Aside from a few firms such as Firestone Rubber, Republic Steel, and Kaiser, he said, American business has shown no interest in the area, or the interests it has shown has been lackadaisical or crooked.

"We talked to Africans who bought textiles from well-known American firms and were asked for evidence of their reputability. Then, when they ordered 2,000 yards, they got 1,600 yards—or they bought from samples and what they got was cheaper materials."

Saddest of all, he said, was their finding that there are no American exporters in any of the four countries. There were many from Europe and in Guinea, newly independent from France "we were surrounded by Russians."

"Guinea is going to be a springboard for the Communist gospel," he said. "The day before we got there 150 Russian trucks were delivered. We were driven around in two Russian cars."

FRANCS PRINTED IN RUSSIA

Mr. Teshen said he asked one Guinea Government leader whether he would guarantee their currency. The leader flatly said he would, and then was on the radio the next day announcing the French franc would no longer be valid there.

The insult was rubbed in, as far as Mr. Teshen was concerned, by the fact that the following day a Guinea franc was newly issued—and had been printed in the Soviet Union in 1958 and 1959, which indicates the Russians were alert.

Racial discrimination takes some odd twists, Mr. Teshen observed. In Liberia the white European businessmen and the African national businessmen maintain separate chambers of commerce.

STUDY IN CONTRAST

"Then, the well-to-do Africans don't seem to give a damn for their own poor. We went to a reception given by the President of Ghana. The champagne was flowing, the men wore black ties and the women had gowns, the latest from Paris, some of them must have cost $1,000.

"And yet, across the street, you could see the greatest filth, poverty, starvation and most backward living conditions."

Possibly what bothered the Pittsburgh exporter (who has offices in the Bessemer Building) most of all was finding American-made goods being sold in West Africa—by European firms.

Civil Defense Is a National Problem as Well as a State Problem

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. MULTER. Mr. Speaker, I have long contended that defense is a national problem and not a State problem. The Constitution places the responsibility and the burden of defense upon the National Government. That responsibility cannot be evaded by delegation to the States in whole or in part.

That is not to say that the States should not cooperate to the fullest in a proper civil defense program. The cost of civil defense is as much a charge upon the national budget as is the maintenance of our Armed Forces.

In this connection, I commend to the attention of our colleagues the following joint resolution of the New York State Senate and Assembly, No. 139, memorializing the Congress and the President of the United States to initiate a program for radioactive fallout protection for all citizens of the United States, which was adopted by the New York State Senate on March 28, 1960, and concurred in by the assembly on March 29, 1960.

While we may not be in agreement with all that is urged in the resolution,

we cannot find fault with their justification of my position that civil defense is a national problem to be dealt with on the national level for the benefit of all of our citizens. While the States have a definite responsibility, the initiative must be taken on the Federal level.

The resolution follows:

RESOLUTION 139

Joint resolution of the senate and assembly memorializing the Congress and the President of the United States to initiate a program for radioactive fallout protection for all citizens of the United States

Whereas the people of the State of New York feel deep concern for the international situation and its effect upon the safety and future of each citizen; and

Whereas they know the freedom of the people of this State and Nation to be fatefully bound to the fate of free peoples throughout the world; and

Whereas they realize that the future of freedom everywhere depends on the willingness of the American people to defend the right of peoples to determine their own fate; and

Whereas all free peoples today confront, in the form of the steadily growing force and resources of Soviet communism, a threat without parallel in their history; and

Whereas the simultaneous evolution of science and weaponry makes this threat a menace of such proportions as has been confronted by no other generation; and

Whereas the success of diplomatic negotiations with the Soviet Union, involving both the safeguarding of the freedom of Berlin and progress toward disarmament, depends critically upon our national strength and our national resolve; and

Whereas all levels of concern—moral, political, and military—dictate the need for Government to assure adequate defenses for our population, not only to sustain possible hostile attack, but also to deter and to discourage the attempt of such attack; and

Whereas both the lives and the liberties of all Americans are thus at stake in the military and political decisions of this time; and

Whereas the President of the United States has declared that "our total defense is incomplete and meaningless without reliable and responsible home defense" and the Joint Chiefs of Staff have stated that a fallout shelter program is "essential" both to our military defense and to our policy of seeking peace through deterrence of nuclear attack; and

Whereas the Secretary of State has made it emphatically clear that there is a direct relationship between a fallout shelter program and the effective conduct of foreign policy; and

Whereas the Director of the Central Intelligence Agency has indicated that fallout protection for our people is essential to withstand nuclear blackmail; and

Whereas the health, the safety, and the survival of the individual citizen is a matter of paramount State and National concern; and

Whereas the fallout protection essential to the survival of tens of millions of Americans, in the event of a nuclear attack upon our country, is readily obtainable; and

Whereas it is a matter of utmost gravity and urgency that protective steps be taken by and for the people of every State in our Union and to make these steps effective that further supporting action be taken by the Federal Government: Now, therefore, be it

Resolved (*if the assembly concur*), That the Congress and the President of the United States be and hereby are respectfully memorialized to—

1. Declare it to be the policy of the United States that every American citizen have effective fallout protection as promptly as possible.

2. Provide affirmative additional support to State, local, and individual initiative in obtaining essential fallout protection by, among other things, (a) authorizing a Federal income tax deduction for the cost of fallout shelters (up to a maximum of $100 per planned shelter occupant); (b) making the provision of fallout protection mandatory in all construction built with Federal funds or financed with Federal loans or guarantees; and (c) providing fallout protection for the executive, legislative, and judicial branches of the Federal Government and for the Armed Forces of the United States to assure the continuity of their functioning in the event of nuclear war.

3. Direct the promulgation of a comprehensive nationwide program of nuclear protection, warning, and training.

4. Accelerate the establishment with Federal funds of the nationwide, fully automatic system of monitoring for radioactive fallout, using modern computer techniques, supplemented with an improved attack-proof system of radio communication with shelter occupants.

5. Direct that an immediate and intensive program of research be undertaken looking to action which will make possible national recovery following a nuclear attack, including vigorous new steps for decontamination, for the prepositioning, preservation, and distribution of food supplies, for the purification of water, for the prepositioning, rationing, and distribution of fuel, clothing, medicines, building materials, and other supplies, and for most effective employment of the surviving population for the national recovery; and be it further

Resolved (*if the assembly concur*), That copies of this resolution be transmitted to the President of the United States, to the Secretary of the U.S. Senate, to the Clerk of the House of Representatives of the United States and to each Member of Congress duly elected from the State of New York and that the latter be urged to assert their best efforts to the task of accomplishing the purposes of this resolution.

Phenomenal Growth in Air Traffic Between Pacific Northwest and Hawaii

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1960

Mr. PELLY. Mr. Speaker, the Pacific Northwest congratulates the Civil Aeronautics Board for its unanimous decision of last Friday in which it made the Northwest-Hawaii certificates of Northwest Airlines and Pan American World Airways permanent.

This order by the CAB is particularly significant inasmuch as the States of Washington, Oregon, and Hawaii were indignantly unanimous in their insistence that they were right and the CAB examiner was wrong when he proposed to cut the air service in half.

The Board did not react to pressure; it reacted to logic. When the whole economic picture was spelled out before the Board by Government officials, business and civic organizations from Hawaii and the Pacific Northwest, the CAB lost little time registering its sharp disagreement with the recommendations of its examiner.

There are few sections of this country growing more rapidly than the Pacific Northwest. Addition of Hawaii to our Union of States necessarily means greater travel and commerce between Honolulu and the mainland. You can imagine the stunned reaction of the people in my area, Mr. Speaker, when we learned the CAB examiner proposed that a pattern of competition which had been operating for 12 years suddenly be abandoned and a monopoly substituted in its place.

The growth of Washington and Oregon demands more air service than heretofore. It does not necessarily mean a third carrier on this route, because new jet equipment, flying greater frequencies, will be adequate to meet accelerated travel demands.

Competition itself made this route successful, Mr. Speaker. Starting in 1949 as a first full year of operations, Northwest and Pan American together carried a total of 6,825 passengers. During 1959, a decade later, these 2 fine airlines carried 57,000 passengers. Those of us with confidence in the Pacific Northwest feel that this is only a beginning, and that another 10-year period will witness a phenomenal growth in air traffic between our area and Hawaii.

The CAB did itself proud in maintaining the status quo.

The Juvenile Court Fiasco

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1960

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks, I wish to again call attention to the juvenile court situation here in the District of Columbia, as I believe I have done each year in Congress. Ten years ago I was astounded to learn that but one juvenile judge was trying to cope with the situation when there was obviously enough work for a half-dozen judges. The predicament of the juvenile court then bordered on the ridiculous, but it has worsened each year in alarming proportions as evidenced by recent headlines, which I will include herein.

Does the majority leadership feel that we can continue to ignore the crying need for attention to the source of the deplorable crime rate here in the Federal city?

The articles follow:

[From the Washington Post, Mar. 16, 1960]

JUVENILE COURT CASES SET NEW BACKLOG MARK

A record backlog of cases, mostly involving adults was built up in Juvenile Court dur-

ing the first half of the current fiscal year, court officials disclosed yesterday.

The court was 1,390 cases behind schedule on December 31. This compares with 948 the previous quarter ending September 30, according to quarterly reports released at a meeting of the Juvenile Court Advisory Committee.

Most of the backlog, or 989 cases, involved adults while 401 were juvenile actions, the report reveals. This compares with 662 adults and 226 juvenile cases the first quarter.

Juvenile Court Judge Orm W. Ketcham said that there was no single reason for the steadily increasing backlog but said it was cumulative. The judge said again that the court needs more judges.

BLOCKED IN CONGRESS

The Senate during the last session of Congress passed a bill giving the court two more judges. The House version, however, not yet been reported out of Representative DAVIS' House District Subcommittee.

[From the Washington Star, Mar. 17, 1960]

RECORD CRIME RISE IS REPORTED IN DISTRICT OF COLUMBIA—SERIOUS OFFENSES INCREASE 21.7 PERCENT IN 1959, FBI SAYS

(By Miriam Ottenberg)

Serious crime in Washington during 1959 soared to a 21.7 percent increase over the previous year, the FBI's Uniform Crime Records showed today.

It was the biggest increase in any year since Washington adopted its present crime reporting system a dozen years ago.

The increase, reflected in all major crime categories except murder, came at a time when city crime throughout the Nation showed only a 1-percent increase.

While Washington was recording its biggest annual increase, the other four cities in the same 750,000 to 1 million population group—Baltimore, Cleveland, St. Louis, and Houston—showed an overall decrease of 4 percent.

The Clouds of the World

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. McDONOUGH. Mr. Speaker, the launching of Tiros I, which is the most remarkable scientific feat in photographing the cloud covering of the earth to date, is evidence that our space program is progressing rapidly, and is an indication that the United States is second to none in the exploration and use of outer space. Tiros I is the first weather satellite which by further development and perfecting will be a means of predicting immediate weather conditions which would be of extensive value to the people of the United States and the rest of the world.

Since we have proved that it is possible to photograph the earth from 450 miles away, and with the further perfecting of the camera lens on such a satellite, we can obtain photographs of military installations of foreign nations which could not otherwise be detected.

I submit herewith with my remarks an editorial from the Los Angeles Times which includes some of the pertinent and specific benefits that this type of satellite can be to us:

[From the Los Angeles Times, Apr. 2, 1960]

THE CLOUDS OF THE WORLD

Some people have had great difficulty in adjusting themselves to the costs of space programs. They have curiosity, but as taxpayers they are not overeager to know about the mountains of the moon or the thin-aired deserts of Mars; they are willing to leave the topography and biology of the solar system to science fiction at a dollar a copy in paperback.

FICTION VERSUS FACT

Tiros may persuade them to reexamine their position. Tiros—it reads like the name of a Greek hero—stands for "television and infrared observation satellite." Tiros I was blasted into arbit around the earth early Friday by a combination Thor-Able rocket to revolve indefinitely, squinting through its manmade eyes at the world's low-cut, suggestive apparel and reporting back, with manmade voice and pictures, what it saw.

Tiros is, to be frank, a Peeping Tom. It will tell its collaborators here, 400 miles or so below, how Mother Earth dresses and undresses herself in cloudy raiment and the collaborators will define the terrestrial notions of what to wear in terms of weather. Every festoon of cloud will have a meaning for the psychologists of Mother Earth's moods.

Tiros is the first (repeat, the first) meteorological satellite. It is a 270-pound package of instruments shaped like a box for a very large feminine hat, 42 inches in diameter and 19 inches high. Outside it looks like an ancient monster, plated with solar cells which transform sunlight into electric power for its TV cameras and radio controls and with feelers like an insect, four transmitting antennas on one flat side and one on the other.

NOT ONLY TALK

This first Tiros will not picture or mumble its way to the position of world weather arbiter, and its sponsors do not expect it to perform astonishing things. But it has shown already that it can see and talk and its creators know what to do to make its successor—Tiros II—a complete weather gossip. Mark Twain's observation—that everybody talks about the weather but nobody does anything about it—will still be true, but to know is to be prepared. Tiros' studies of cloud patterns will not be definitive, and nobody expects them to be, but as the result of its peeping its first descendant will be equipped to report more usefully.

Tiros races around the earth in 4½ hours, which ought to give it a glimpse of almost anything that is likely to happen cloudwise and therefore weatherwise. Its equipment, however, is not the best its sponsors are capable of producing; moreover, its circle prevents it from seeing some parts of the world where weather is brewed. It flies a slanting circle which allows it to survey clouds in a belt from lower Canada to the bottom of Argentina. So there are parts of the world—or its cloud formations—which it will never see, or televise, and some of these lands, with their clouds, which belong to the enemy.

ACROSS THE POLES

But the next Tiros will be launched in a polar orbit. This means that it will circle over both poles and scan the whole world, for as the earth turns it will see everything once every 24 hours.

Tiros does not take us, taxpayers and all, into a universe that may already have learned the pitfalls of deficit financing, inflation, the welfare state, and juvenile delinquency, but it will teach us—and its own successors—how to know the world through predicting its weather. Weather is really more important to most people than anything, for it holds the answer very often to their whole living. They are captives of weather because they do not know they are.

To this day, even in the United States, enlightened as it is by television commentators, there are farmers who believe that the best crop of potatoes is planted in the dark of the moon. Solid weather knowledge will change their views and ofttimes get them better potatoes.

Over their favorite oracle at Delphi the Greeks posted a notice: "Know thyself." It went farther in Greek philosophy than other precepts; in fact it went farthest of all. Tiros and its successors extend this precept beyond dreaming. The new injunction will be, "Know thy world," and television pictures and radio signals presently will make the knowledge universal.

AMVETS Give Senator Johnson Defense Award

EXTENSION OF REMARKS

OF

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. IKARD. Mr. Speaker, one of the great current national debates centers on our Nation's defense capabilities; there is little doubt of the legitimacy of this discussion or of its importance to the Nation. Some of the most outstanding contributions to this debate have been made by the distinguished Senate majority leader, Senator LYNDON B. JOHNSON of Texas. I believe it is significant that one of our great veterans' organizations, the American Veterans of World War II, has recognized Senator JOHNSON's achievements in the field of national defense and has honored him for his exceptional participation in this vital debate. As the AMVETS pointed out, Senator JOHNSON steadfastly refuses to concede to any other nation America's ranking in the field of military preparedness, scientific education and space exploration. Under leave to extend my remarks, I submit for publication in the RECORD the following account of the award to Senator JOHNSON as it appeared in the Wichita Falls (Tex.) Times:

[From the Wichita Falls Times, Mar. 13, 1960]

AMVETS GIVE SENATOR JOHNSON DEFENSE AWARD

WASHINGTON, D.C.—Senate Majority Leader LYNDON JOHNSON of Texas was hailed here Saturday as a man who stands for complete military preparedness "with obeisance to no other nation in scientific education and space exploration."

JOHNSON was honored at a luncheon of the American Veterans of World War II (AMVETS) where he was presented the 1960 award for exceptional contributions to national defense.

In presenting the award, Senator EDMUND S. MUSKIE, Democrat, of Maine, former national executive director of AMVETS, said of JOHNSON:

"By word and deed he has unwaveringly led us toward strength and, with God's help, through strength and scientific prowess toward lasting peace."

Also honored was Vice President RICHARD NIXON who was given the AMVETS' 1960 World Peace Award.

In accepting the award JOHNSON said America's defense posture today is adequate but programs for the future may involve a considerable degree of risk.

"If we step up our defenses, and they are not needed, all we lose is money," he emphasized. "If we fail to step up our defenses, and they are needed, we could lose our country."

HEADS TOP COMMITTEES

JOHNSON, chairman of both the Senate Military Preparedness Subcommittee and Senate Space Committee, made it clear he did not mean that the Nation faces the endless and dreary prospect of producing military hardware forever.

"Instead, our defense strength must be regarded as a shield, behind which we can—and indeed, must—take positive steps toward a peaceful future," JOHNSON asserted.

"Weapons will bring us a truce—a truce which is preferable to the destruction of our way of life. But we will meet our responsibilities only if we use that truce to build toward a world in which men can live together in understanding and the weapons become merely dusty museum relics."

UNITED STATES MUST LEAD

JOHNSON said the advent of the space age makes it imperative that this country marshal its resources to solve not only the problems on earth but those in outer space as well.

"America must take the lead in meeting this challenge," he declared. "We have concentrated too long on stop-gap measures. Even our foreign-aid program has been essentially a stop-gap reaction."

JOHNSON told the AMVETS we cannot simply buy peace at the marketplace.

"Rather, we must develop all reasonable avenues through which the people of the world can work together," he said.

H.R. 3000 and H.R. 3001

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to present for the reading of the Congress a copy of the resolution adopted by the Bossier Chamber of Commerce, Bossier City, La., in support of H.R. 3000 and H.R. 3001, bills to provide basic reform of Federal tax rates and measures:

RESOLUTION—URGING THE PASSAGE OF H.R. 3000 AND H.R. 3001, BILLS TO PROVIDE BASIC REFORM OF FEDERAL TAX RATES AND MEASURES

Whereas the present Federal tax structure stunts economic growth since it both prohibits adequate capital accumulation and destroys capital once accumulated; and

Whereas among the taxes which are causing the greatest harm in this connection are (1) the personal income tax with its heavy progressive and confiscatory rates, extending from a beginning rate of 20 percent to a top rate of 91 percent, and (2) the tax on corporate incomes with combined normal surtax of 52 percent; and

Whereas on January 21, 1959, Representative HERLONG, Democrat, of Florida, and Representative BAKER, Republican, of Tennessee, introduced in the House of Representatives in Congress companion bills (H.R. 3000 and H.R. 3001) providing for "basic reform to Federal tax rates and methods in five major areas" and providing for "removal of tax blocks to progress"; and

Whereas the provisions of these bills would:

(a) Moderate personal and corporate income taxes, over a 5-year period, to a top rate of 47 percent;

(b) establish more realistic depreciation rules;

(c) defer taxes for individuals on long-term capital gains until such time as the taxpayer "disinvests";

(d) reduce the rate of tax on estates and gifts; and

Whereas it is our opinion that the Herlong-Baker bills would contribute more than any other possible Government action to our economic well-being and national security: Now, therefore, be it

Resolved by the Bossier Chamber of Commerce, That Congress be urged to enact the Herlong-Baker bills into law.

Latin Diplomats Urge U.S. Economic Steps Against Castro Actions

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal:

LATIN DIPLOMATS URGE U.S. ECONOMIC STEPS AGAINST CASTRO ACTIONS—THEY DISCOUNT FEAR OF LATIN REACTION; SEE CUBA'S ACTS GIVING THEM A BLACK EYE

(By Cal Brumley)

HAVANA.—Most foreign diplomats here, including those from other Latin American lands, believe the United States should invoke economic reprisals in response to Cuban Premier Fidel Castro's anti-American tirades and actions.

This may come as a surprise to the U.S. State Department, which has been reluctant to urge any action against Dr. Castro, partly in fear of stirring up anti-U.S. sentiment in other Latin nations. In fact, just yesterday Secretary of State Herter reasserted at his news conference that the United States will not retaliate against Dr. Castro's actions. Mr. Herter said that during their trip to four South American countries over the past 2 weeks he and President Eisenhower had found that, although many Latin officials are worried about the direction in which the Castro regime seems to be headed, they oppose U.S. intervention in the affairs of any Latin American nation.

But talks with emissaries to Cuba from many countries disclose that most of them favor a cut in the price the U.S. pays for Cuban sugar; this price is about 2 cents above the world market level. Moreover, most diplomats think the United States could take this action without risking serious criticism from other lands.

"If the United States reduced its sugar premium, only the leftists in other Latin American nations would react unfavorably," one South American ambassador here asserts. Another diplomat adds: "The United States is under no obligation, moral or otherwise, to hand Cubans extra money for sugar."

CONCERN FOR U.S. INVESTMENTS

An oft-expressed worry among Latin American diplomats is that Dr. Castro's apparently successful seizure of some U.S. property may frighten away U.S. capital from other Latin countries. "Americans may get the idea Dr. Castro will set the pattern for other places in Latin America," one envoy declares.

So far, Secretary Herter's rebuke to Cuba on Monday is the sharpest official protest the United States has lodged against Dr. Castro's anti-American statements. Mr. Herter was replying specifically to charges by Dr. Castro that "U.S. interests" had been responsible for the explosion in Havana harbor of a French ship that had been carrying munitions to Cuba. When Dr. Castro called Mr. Herter's rebuke "insulting," the Secretary spoke out again yesterday, declaring that the Castro regime seems to "go out of its way" to make difficulties. Mr. Herter said the United States hasn't considered breaking diplomatic relations with the Castro government, but he conceded circumstances could arise which would make such a step necessary.

If the United States did eliminate or cut its premium for Cuban sugar—and the current Congress is due to consider such a measure in an overall study of sugar imports—the economy of Dr. Castro's government would be seriously impaired. Last year U.S. purchases of Cuban sugar amounted to nearly $345 million out of total Cuban sugar sales of $500 million. Sugar sales account for about 25 percent of Cuba's total national income and about 80 percent of its export income, which it must have to pay for imports it needs.

SOME CUBANS WANT CUT

There is no doubt a cut in the sugar premium would hurt the Cuban people, at least temporarily, and President Eisenhower says this is one thing the United States hopes to avoid. But there are some anti-Castro Cubans who would welcome the premium cut if it would help get rid of the present Cuban Government.

"You'd be surprised how many Cubans are ready to suffer through something that would help get rid of this dictatorship," says one Cuban businessman. Declares another: "Anything that would help establish a democratic government here would be an act of friendship, not economic aggression toward the Cuban people. What can be worse than being controlled by a radical dictatorship?"

Most foreign diplomats here have been hoping for a change in the Cuban Government's attitude, as has the United States. But recent events have convinced most of the envoys the United States has no choice but to take action that will point up the concern it and other nations feel toward the trend of Cuban policy. These diplomats believe a cut in the sugar premium is the least risky warning the United States can issue. One ambassador suggests the United States should cut the amount of sugar it buys from Cuba and allot the amount among such friendly sugar-producing nations as Brazil, Mexico, Peru and others. But most envoys believe this would require tedious negotiations with too many other countries.

Though cutting the sugar premium perhaps would be less dangerous than some other reprisals, there still would be risks involved. Foremost would be the safety of the approximately 5,000 U.S. citizens who live on this tropical island. "Their safety is a real concern and you just can't tell what Castro's people might do if the United States took some definite action," one American official here says.

Another consideration is American property here. U.S. investments in Cuba total about $800 million; the Cuban Government already has seized U.S. property worth about $5 million to $6 million, promising payment

in 20-year government bonds. "If the United States cuts the sugar premium it's a good bet Dr. Castro will take over other American interests," a U.S. official says. But other Americans here believe Dr. Castro eventually will take over all U.S. interests anyway.

Still another point to consider is that Dr. Castro's anti-U.S. tirades almost certainly would become even more virulent if there is any cut in the sugar premium. Dr. Castro and the Cuban government-directed press probably would scream "economic aggression," "big stick," and "Yankee imperialism." Echoes of such cries might be heard, too, from Russia, which recently signed a trade agreement with Cuba, and from leftist elements in other countries. But this possibility is shrugged off, too, by some observers. "The United States gets blamed for everything that goes wrong in Cuba anyway," is the way one foreign diplomat puts it.

LOSING FRIENDS?

Many ambassadors believe Dr. Castro's outbursts against the United States have lost him friends in other Latin American nations. One diplomat says he believes the Cuban premier "has lost the sympathy of 75 percent of South America." This diplomat notes that Peru, Brazil, Argentina, Uruguay, Chile, and Ecuador have declined to attend Cuba's proposed fall conference of underdeveloped nations. "I think this shows what we think of him," this Latin American emissary declares.

Most diplomats appear puzzled by Dr. Castro's anti-Americanism and believe the explanation goes beyond such Castro charges as U.S. support of the deposed Batista government and American exploitation of Cuba. One envoy believes Dr. Castro's attitude "stems from the Communist influence." Another believes it is impossible to fathom Dr. Castro's motives because "he is not a logical man according to the way we understand the term."

"The bitterness may be self-justification for the seizure of private property, both American and Cuban," another Ambassador speculates. At least one diplomat thinks Dr. Castro is deliberately trying to provoke U.S. reprisals for propaganda purposes.

DISAGREEMENT ON TIMING

While most Ambassadors here believe the United States should act to curb Dr. Castro's power, there is considerable disagreement on timing. One diplomat says he "still has hopes the Cuban people will react against this government and give the United States a chance to help them." Another declares the United States "probably shouldn't change the sugar price for at least a year; the policy of tolerance has been the best so far."

But a Cuban businessman asserts that every day Dr. Castro is in power more private property is being taken over by the government. "This means that much more that will have to be straightened out eventually," he says.

Many Ambassadors express the belief that the revolutionary Cuban Government is Communist-dominated and poses a serious menace to the rest of North and South America. "I'm fully convinced the top men are 100 percent Communist," says one diplomatic observer. Another emissary believes that "Cuba may become a center of Communist imperialism in Latin America because Castro has a Simon Bolivar complex." This is a reference to the 19th century revolutionist who led uprisings that resulted in the independence from Spain of what is now Venezuela, Colombia, Ecuador, Panama, Peru, and Bolivia.

Almost all diplomats here agree that if the United States cuts the premium for Cuban sugar, it should explain its action fully and should follow it up with policies of friendship and aid to other Latin American lands. One Ambassador suggests: "You don't have to say the premium is being cut because of Cuba; do it because you're revamping farm policies or something." Another says: "Perhaps the best way to explain any action you take would be to bring it before the Organization of American States."

Imports: They're Much More Than Just a Management Problem

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement on the subject of textile imports issued by the Textile Workers Union of America, AFL–CIO, which appeared March 21, 1960, in the form of an advertisement in the Daily News Record, a textile trade publication:

A STATEMENT TO THE TEXTILE INDUSTRY—IMPORTS: THEY'RE MUCH MORE THAN JUST A MANAGEMENT PROBLEM—THE SITUATION CALLS FOR JOINT ACTION

The issue of textile imports is prominent in the news of late, and we are glad this is so. It's good, indeed, to see management bestirring itself before congressional committees in behalf of a solution to this vexing problem.

Better yet is the fact that management, through advertisements in the press, is attempting to enlist public support of measures to remove one ill which plagues our industry.

But is this enough?

We say no, for the basic flaw in management's case for relief from imports lies in the fact that textile management does not speak for the million workers in its employ; nor does it speak for the many hundreds of communities which depend upon it for its economic well-being. The sad fact is that management speaks only for itself.

As a result, an industry which paints a picture of disaster only in terms of yardage, looms, and spindles cannot hope to catch the imagination and sympathy of the public, which is essential to a solution. It can't even catch the imagination of people who ought to know better.

Want proof?

We refer you to the New York Times of March 6, 1960. It is a sad commentary, indeed, on the quality of the industry's presentation when the Nation's leading newspaper, editorially reviewing the testimony heard by the U.S. Tariff Commission, has only this to say:

"If this is the best 'disaster' the protectionists can produce, then we can all relax and go about the profitable business of lowering our tariffs further."

The industry's testimony, of course, is not the best case that can be made to demonstrate the true extent of the disaster which textile imports are wreaking upon our industry. This case can best be told in terms of several hundred thousand textile workers who have been liquidated out of their jobs, and of several hundred textile communities which have become depressed because of the steady and unrelenting decline of our industry.

As long as the textile industry regards imports as largely a management problem, it will not win the ear of the public and, through it, the help of Congress and the administration. This is because textile imports are much more than a management problem. They are a worker's problem and a community problem, too.

The situation demands joint action by representatives of management and of textile workers. And the most influential voice in behalf of the worker is the Textile Workers Union of America. Unlike most management spokesmen, we are not Johnny-Come-Latelys to the cause of relief from textile imports.

For the last 15 years we have appeared before congressional committees in an attempt to alert the Nation to the dangers which unrestricted imports pose to our industry and to its workers.

More than any other single force, we were instrumental in securing the passage of peril-point legislation to safeguard the woolen and worsted industry.

The Pastore hearings were prompted in great measure by our mobilization of sentiment in behalf of such a study. And the measures it has produced are in great part patterned after the proposals we have made during the course of those hearings. In fact, there is not a single approach to the creation of new textile markets and the development of new products and new uses for textiles which does not bear, to some degree, the imprint of TWUA.

But enough of this. We're not out to pin any medals on our chests.

We simply want to call attention to the fact that the industry's frustrations stem from its failure to enlist the textile worker in its cause. The union's frustrations stem from the fact that its efforts have lacked the support of the industry.

The way out is clear. If management and the union got together, a rational approach to the problems of the textile industry could be devised.

As always, we are prepared to give it a try. Only one question remains:

How much longer is the industry going to close its eyes to this basic need?

WM. POLLOCK,
General President, Textile Workers Union of America, AFL–CIO.
NEW YORK, N.Y.

Hoover Commission's Recommendations Bogged Down After 5 Years

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1960

Mr. BOW. Mr. Speaker, 5 years have elapsed since the second Hoover Commission completed its monumental research and laid out prudent, sensible guidelines for reorganization of the executive branch.

Many Members of Congress will recall that one of the Hoover Commission's primary fields of interest was Government competition with private enterprise. Former President Hoover and his colleagues on the bipartisan Commission urged prompt, effective steps to curtail and eliminate many Federal activities competing unfairly with taxpaying private business. I was happy to support this recommendation and introduced legislation to implement it.

Over the years the administration has restated many times its policy on this issue—a policy squarely in line with the recommendations of the Hoover Commission.

Yet, somewhere in the lower echelons of the executive branch, this policy seems to have bogged down. Five years have passed since the Hoover Commission posted unmistakable signals to steer the executive branch to those areas where unjustified Federal competition was concentrated. But from all I have been able to gather, these signs have been largely ignored, or somebody missed a turn somewhere.

Now we find that the Bureau of the Budget, which was assigned responsibility to implement the administration's policy and keep track of its progress, has polled the various executive agencies to find out just where the program stands.

Until this survey is completed, therefore, nobody really knows how many of the Government's unnecessary business-type activities have been closed down or curtailed. Nor, for that matter, does anyone know how many new enterprises have sprung up.

All we do know is that 5 years should allow plenty of time for considerable progress, and there are few, if any, signs that such progress has been made.

Fortunately, one of our eminent colleagues, the gentleman from Ohio [Mr. BROWN], the legislative sponsor and member of the Hoover Commission, is making it his business to find out. He is alarmed, as others of us are, by the apparent lack of interest and achievement in this program and by evidence that 5 valuable years may have been wasted. I invite the attention of all Members of Congress to the following pertinent correspondence:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 22, 1960.

The Honorable MAURICE H. STANS,
Director, Bureau of the Budget, Executive Office Building, Washington, D.C.

DEAR MR. STANS: As I am sure you know, as the legislative father and a member of the two Hoover Commissions, I joined in preparing the Commissions' recommendations to the Federal Government out of business competition with taxpaying private enterprise, and I have written you a number of letters on this subject.

As a result of the Commission's recommendations, some action has been taken and the President has shown a great interest in the elimination of Government competition with private enterprise.

Over 5 years ago, on January 15, 1955, the Bureau of the Budget issued a directive (Bulletin No. 55–4) setting forth a phased program to curtail certain business-type activities conducted by the executive branch in competition with taxpaying private enterprise.

One noteworthy result of this directive was an inventory of those activities that provided products or services for the Government's own use. This inventory, you may recall, listed 19,771 such activities with 266,521 Federal employees and capital assets totaling $11,863,990,569.

I am writing now to inquire as to what important results in reducing these Government activities have been accomplished over the past 5 years.

Bulletin No. 60–2, issued by the Bureau of the Budget at the direction of the President in 1959, requires a thorough inventory of all commercial-industrial-type activities within the Department of Defense. I am interested in learning the outcome of this inventory and, more importantly, the expected action to result from it.

I would like to particularly invite your attention to a passage from a report issued by the Joint Economic Committee:

"The administration appears to have lost some of its earlier enthusiasm for this program. When the program was initiated in January of 1955 it called for the phased evaluation of all commercial-industrial type activities as quickly as possible. The Director of the Bureau of the Budget testified before the Senate Select Committee on Small Business on April 16, 1957, that the Government agencies had completed the evaluation of manufacturing and service-type activities and stated that 'subsequent reviews of other classifications of commercial activities, such as construction, transportation, communications, etc., will be scheduled.' Yet it was about 2½ years after this testimony that the Bureau of the Budget got around to requesting agencies to conduct the next series of its phased evaluations program of governmentally conducted commercial-type activities. As pointed out, the administration's program has been inactive for over 2 years. As a result of this delay certain competitive Government activities have not yet been evaluated under this program."

In view of the concern expressed by a great many businessmen and their State and national organizations, as well as critical comments such as have been made by the Joint Economic Committee, I believe it is urgently important for the Bureau of the Budget to act promptly when it has evaluated the pertinent data from its current summary. A period of 5 years should have allowed time for considerable progress on this program.

As I understood the Bureau's Bulletin No. 55–4, there were to be four phases of the program to curtail unnecessary competitive activities producing goods or services for the Government's own use. These phases were as follows:

1. The inventory. As I noted earlier, this research survey disclosed the vast dimensions of the Government's commercial-type enterprises.
2. Evaluation of these enterprises.
3. Action to close or curtail these enterprises, on the basis of the evaluation process.
4. Action to limit starting new enterprises.

It would seem to me that whatever progress report the Bureau compiles should cite specific instances of progress in each of these phases of the program. This would permit a more meaningful appraisal of the results achieved, thus far, by pinpointing areas where progress may have lagged.

Illustrative of the type of comment I am receiving from business organizations on this important problem, I am taking the liberty of enclosing a letter I have just received from Elton Kile, president of National Associated Businessmen, Inc. So your consideration of this matter and the request I have made will be deeply appreciated.

If there is any further information you desire, please advise me.

Respectfully submitted.

CLARENCE J. BROWN,
Member of Congress,
Seventh Ohio District.

NATIONAL ASSOCIATED BUSINESSMEN, INC.,
Washington, D.C., March 18, 1960.

The Honorable CLARENCE J. BROWN,
House of Representatives, Washington, D.C.

DEAR MR. BROWN: National Associated Businessmen, Inc., a coalition of 700 independent businessmen, is gravely concerned about the apparent lack of progress in reducing the number of Government commercial activities that compete with taxpaying private enterprise.

Recalling your own consistent interest in this matter, both as a Member of Congress and as legislative sponsor and member of both Hoover Commissions, our organization respectfully asks your assistance in our efforts to revive governmental interest in this matter.

As you know, the Bureau of the Budget, by direction of the President, specifically called for curtailment of certain commercial-industrial activities of the various agencies in Bulletin No. 55–4 of January 15, 1955.

This bulletin declared, in part, that "It is the general policy of the administration that the Federal Government will not start or carry on any commercial activity to provide a service or product for its own use if such product or service can be procured from private enterprise through ordinary business channels. Exceptions to this policy shall be made by the head of an agency only where it is clearly demonstrated in each case that it is not in the public interest to procure such product or service from private enterprise."

Elsewhere in the bulletin, the Director of the Budget stipulated that "Except where such congressional action would be required, activities should be discontinued as soon as the agency head determines that it is reasonably possible to do so. Where congressional action would be necessary to permit discontinuance, the agency head shall seek such action promptly."

Five years have passed since this program was initiated. In that period the Bureau of the Budget has issued two other bulletins dealing with this same general problem. As you are aware, the Bureau of the Budget in September of 1959 issued its directive 60–2 by order of the President requesting the Defense Department to conduct an inventory on all commercial-industrial-type activities within their organization. This inventory is scheduled to be completed within a month. National Associated Businessmen is profoundly interested in the results of this inventory and hope that strong efforts will be made in the implementation of the administration policy when the facts are made public.

This audit, we are sure, will show that relatively little has been accomplished, even in the rather narrow area of Government competition covered in Bulletin No. 55–4.

This bulletin only dealt with those business-type activities which provide products or services for the use of the Federal Government itself. It did not deal with those activities which provide products or services for the general public, such as public power projects, or those activities which serve Federal employees, such as military commissaries.

Yet, even though Bulletin No. 55–4 covered only one of the three broad classes of Federal business-type activities, it still resulted in an inventory that listed 19,771 commercial-industrial activities which capital assets of $11.9 billion and 266,000 employees.

National Associated Businessmen believe that prompt and vigorous action to remove the Federal Government from unjustified and unnecessary competition with private enterprise is essential to our Nation's economic progress. Failure to do so, in direct contradiction of repeated pledges by the administration, constitutes a tragic drain of public funds and contributes to the inflationary pressures that threaten our prosperity and growth.

We hope you will see fit to make such inquiries as you deem necessary in order, first, to determine precisely the extent of compliance with the 1955 and subsequent directives of the Bureau of the Budget, and secondly, to recall to the attention of the

Congress and the executive branch the need for strong action when the audit required by directive 60-2 is completed.

Respectfully,

ELTON KILE,
President.

Mr. Speaker, I commend the National Associated Businessmen for once again drawing attention to this problem, and I hope that all Members of Congress will take it upon themselves to examine carefully the forthcoming report of the Bureau of the Budget.

If it confirms the signs of disinterest and inaction, as I suspect it will, Congress would be well advised to place this entire matter under severe scrutiny.

I am also delighted that my distinguished friend and colleague, the gentleman from Ohio [Mr. BROWN], has again taken an interest in this matter. His action in the past has no doubt saved hundreds of millions, yes, perhaps billions, of dollars for the taxpayers of this Nation.

Joseph M. Healey, Mayor of Kearny

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. RODINO. Mr. Speaker, on Saturday, April 9, the Wilson-Gugelman Post No. 1302, Veterans of Foreign Wars, will award the VFW citizenship medal to an outstanding citizen of the community. This is the first time in its 35-year history that the Wilson-Gugelman Post has made such an award, and they have chosen as the first recipient, Joseph W. Healey, mayor of Kearny.

In announcing their award to Mayor Healey the post wrote:

The example you have set to all men has been the inspiration of this award. With your energy, high morality, and sense of neighborhood and public responsibility, you have brought to Kearny, the State, and the Nation a new kind of citizenship. Times like these require men of strong minds, stout hearts, true faith, and ready hands. These you have provided and we of the Veterans of Foreign Wars honor you for this.

I can personally attest that this is a well deserved tribute. Mayor Healey's background as a public servant, his outstanding and unselfish contributions to civic and community affairs, and his significant record of personal accomplishment make him a most worthy candidate for this high commendation. Indeed, I can think of no one who is more worthy, or more deserving; Mayor Healey has been aptly named as the outstanding citizen in the community.

As a close and personal friend of Joe Healey, and as one who has been in close association with him in community affairs, I well know his dedication and devotion to public service. I know how deeply interested he is in the welfare of the people—all of the people and each of them individually. I do not believe there is anyone in public office who has a better or more dedicated understanding of his community's needs and problems. He has given of himself unsparingly and tirelessly for the good of the people.

I therefore join in this salute to Joseph M. Healey, a great mayor and an outstanding public servant and citizen. In my opinion the Wilson-Gugelman Post made an inspired choice by designating Joe Healey as the outstanding citizen in the community.

Library Funds

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. THOMPSON of Louisiana. Mr. Speaker, under leave to extend my remarks I wish to include a letter sent to me merely to express gratitude for Federal funds, appropriated under the Library Services Act, which made possible the extension of library service in an area so badly damaged by Hurricane Audrey in 1957. Even though this experience, I am sure, can be duplicated many times in all parts of our country, I believe my colleagues will find this letter most interesting:

LOUISIANA STATE LIBRARY,
Cameron, La., March 22, 1960.

Hon. T. A. THOMPSON,
Member of the House of Representatives,
House Office Building,
Washington, D.C.

DEAR MR. THOMPSON: Speaking for the Library Board of Control of the Cameron Parish Library Demonstration, I should like to acknowledge with gratitude Federal funds used so effectively—we think—in bringing permanent library service to Cameron.

After using the sample library placed in the parish for the past 20 months—financed entirely by Federal and State funds, under the statewide library development plan of the Louisiana State Library—property holders of Cameron Parish went to the polls last week and voted overwhelmingly to continue their library.

We are very proud of this record vote for a public library, and in a parish to which Hurricane Audrey brought widespread devastation less than 3 years ago. Voters supported enthusiastically a 2-mill special library tax, which will yield the library an annual income of $28,000 or more for the next 10 years. The vote for the tax carried by more than four to one in number (395 votes for, 83 against) and more than five to one in property assessment ($667,269 for, $130,404 against).

And this in Louisiana's smallest parish, with an estimated population of little more than 5,000 people.

We believe people will read books if books are given to them in plenty. Cameron people read 68,000 books since the library opened on June 27, 1958; and more than 2,000 of them are registered library users. We believe that people will support libraries from local funds, once the joys and benefits coming from reading are demonstrated to them.

So, thank you for your support which helped to make possible the financing of a successful library demonstration in Cameron Parish.

Sincerely,

Mrs. Charles W. Hebert, President, Library Board; Eraste Hebert, President, Cameron Police Jury and Ex Officio Board Member; Members of the Board: Mrs. Chas. Precht, Bell City, Donald Broussard, Creole; Mrs. Virgie LeBleu, Cameron; Mrs. Lee Nunez, Grand Chenier; Mrs. A. F. Sanner, Hackberry.

Democrats or Campocrats in Puerto Rico?

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. ANFUSO. Mr. Speaker, in the RECORD of March 30, page A2801, I had a statement pertaining to the Democratic Party of Puerto Rico. That statement was prompted by the fact that on March 19 that party had been officially registered for the first time in the history of Puerto Rico and that it would actively participate in local elections next November. The chairman of the Democratic Party there is my good friend Jose A. Benitez.

It seems that certain powerful elements in Puerto Rico are not particularly anxious to have a growing and active Democratic Party on the island, particularly one that advocates strong ties with the Democratic Party on the mainland. The result is that a controversy has been cooked up and a splinter group formed under the leadership of one Enrique Campos del Toro, and his followers are now known as Campocrats. It is no secret, however, throughout Puerto Rico that the real force behind Campos is Gov. Luis Muñoz-Marin, who is not very anxious to have a live and vibrant Democratic Party there which supports statehood.

In its issue of March 29, 1960, the San Juan Star published an article under the title "Democratic Birthright Sold?" The last two paragraphs of that article read as follows:

A Democratic withdrawal from insular elections leaves a clear field for the GOP, and Governor Moñoz frantically claims that the Republican White House is intervening here already.

If Puerto Rico wins statehood, on the shoulders of the GOP, island Congressmen will be Republicans despite the normal Democratic preference of Puerto Ricans.

The significance of the views expressed in the above Puerto Rican newspaper should not escape the Democratic Party and Democratic leaders in the United States. Governor Muñoz, Mr. Campos, and their followers, in their blind opposition to statehood for Puerto Rico, will drive the overwhelming majority of the Puerto Rican people into the arms of the Republican Party. Despite all that the Democratic Party and past Democratic administrations in Washington have done for Puerto Rico, it should be clearly

understood that if statehood ever comes to the island it will be the Republican Party that will receive all the credit for achieving it. And for that we shall later have to thank Governor Muñoz and his friends.

The efforts of the Democratic Party to aid the people of Puerto Rico achieve self-government is a matter of record, which dates from the 1930's during the administration of President Franklin D. Roosevelt. These efforts were continued under the administration of President Harry S. Truman who in 1946 appointed Jesus T. Pinero as Governor of the island, the first Puerto Rican to be named to this office. Various reforms followed in subsequent years, culminating in the adoption of Public Law 600 by the U.S. Congress on June 4, 1951, establishing the Commonwealth of Puerto Rico. I vividly recall that action in Congress for I was then a freshman Member of the House and I voted for that act.

All that good will that had been built up over the years by the Democratic Party is now in danger of being dissipated, because of the divisive and frustrating action taken by the Campos group. Their convention was illegal since it was not officially called by the Democratic Party of Puerto Rico. They are only a rump group which is not interested in building a Democratic Party on the island. They will function on paper only, and their primary purpose will be to maintain status quo and to keep others from doing anything worthwhile.

The ones who will suffer will be the Democratic Party, in Puerto Rico and on the mainland. But not only will the Democrats be hurt, the Republican Party too will suffer because the Muñoz tactics are actually antistatehood maneuvers and the perpetuation of the present system and leadership of government.

Furthermore, the real aim behind this movement called Campocrats, which is supported by Governor Muñoz, is to eliminate the influence of any party in Puerto Rico which is attached to the mainland.

The Democratic Party in the United States should not overlook these maneuvers and their true significance in the future. If we do, our party and our country will be greatly hurt in Puerto Rico for many years to come.

In the meantime, the people of Puerto Rico may rest assured that the Democratic Party of the island, which is headed by the very able and energetic Jose A. Benitez, will continue to maintain close ties with the Democratic Party of the mainland as in the past and that it will exert all efforts to build up a strong and influential party in the interests of the people.

Mr. Speaker, under leave to extend my remarks, I insert into the RECORD the article referred to above from the San Juan Star:

[From the San Juan Star, Mar. 29, 1960]

DEMOCRATIC BIRTHRIGHT SOLD?

(By Harold J. Lidin)

Once upon a time, many, many, many years ago, a young idealist named Luis Muñoz Marín weaned the jibaros from their vice of vote selling with the slogan "Verguenza Contra Dinero" (Self-respect versus money).

The ballot is every man's birthright. Muñoz taught them, and is not to be sold, slighted, or bartered.

But last Sunday in the Ateneo Puertorriqueño, the minions of Muñoz took a step that smacks of birthright barter.

MAXIMUM ECONOMIC CONTRIBUTION

Assembled to reorganize the "Democratic Party," the delegates pledged to deliver the "maximum" economic contribution to the Democratic 1960 presidential campaign.

In a second motion, the delegates voted not to enter the Democratic Party in island elections.

Purpose of this second motion was to repudiate the drive of rival Democratic Leader Jose A. Benitez to register the Democratic Party here for elections—in other words, to use his party's birthright.

Prominent Popular Victor Gutierrez Franqui, who handled Sunday's meeting with the same finesse he formerly demonstrated as Muñoz' senate floor leader, says the promised campaign contribution will be "at least" $25,000.

Whatever the goal, it will be reached.

RATTLE THAT TINCUP

For the treasurer of the new "Democratic" state committee is Teodoro Moscoso, a stanch Popular who happens to head Fomento. If by any chance Moscoso needs help, he can turn to Max Goldman, another prominent Popular present at the "Democratic" reorganization. As former chief of the tax-exemption office, Goldman also knows where to rattle that tincup.

To pick up the smaller gifts, the Muñoz-backed Democratic committee can use for legmen the same pack of Popular Party ward leaders and city hall employees who crowded Sunday's "Democratic" assembly.

National Democratic Chairman Paul Butler need lose no time wondering whose contribution will be larger, that of the Muñoz-backed Democrats or the Benicrats who favor elections and statehood.

For nobody in Puerto Rico can match the Popular Party fundraising apparatus.

HIGH PRICE OF BIRTHRIGHT

But Butler, and other Democratic chieftains, should take time to assure themselves that acceptance of the Muñoz-Moscoso contribution does not cost the party its birthright.

A Democratic withdrawal from insular elections leaves a clear field for the GOP, and Gov. Muñoz frantically claims that the Republican White House is "intervening" here already.

If Puerto Rico wins statehood, on the shoulders of the GOP, island Congressmen will be Republicans despite the normal Democratic preference of Puerto Ricans.

Influence Peddling

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. SANTANGELO. Mr. Speaker, the bill to eliminate influence peddling in the granting of defense contracts has aroused this Nation. The people refuse to spend their hard-earned money on excessive costs and waste brought about by influence peddling in the obtaining of procurement contracts.

One of the great fighters in exposing this situation which plagues our Nation is Drew Pearson. On March 31, 1960, and on April 4, 1960, in the Washington Post, Drew Pearson wrote two articles which crystallize the issue with telling effect.

I believe that these articles are timely and will prove informative to the readers:

VOTE ON INFLUENCE TO COST MILLIONS

(By Drew Pearson)

A vote took place in the House Armed Services Committee the other day which will probably cost the taxpayers several million dollars. It was a vote to give more leeway to the brass-hat lobby.

This lobby is composed of a long list of retired admirals and generals who jump from the Pentagon almost immediately into drawing lush salaries from big defense contractors. Their chummy relationship with the active admirals and generals who remain behind, some of whom they recommended for promotion, led to a full-scale investigation by a House subcommittee last summer headed by Congressman EDWARD HÉBERT, of New Orleans.

Some of the facts revealed by HÉBERT were shocking. Yet when the full House Armed Services Committee was called upon to vote on a bill which would provide criminal penalties for brass-hat lobbying, the full committee bowed to brass-hat defender CARL VINSON, of Georgia, the all-powerful committee chairman.

It removed the criminal penalties. This puts retired brass hats in an entirely different category from retired civilians. A civilian who retires from the Treasury or Justice Departments cannot take a case involving any matter which he handled for the Government for 2 years without going to jail for doing so.

But for a retired officer Chairman VINSON, sometimes called "admiral" because of his championship of the military, removed the criminal penalties urged by Congressman HÉBERT.

One of the biggest defense contractors today is the Glenn Martin Co., of Baltimore. It is manufacturing some of the most vital missiles in the Pentagon's arsenal—the Matador, the Mace, the Bullpup, and the Titan.

ENTERTAINMENT ZOOMED

There was a time when Martin was limping along with few Government contracts. But in recent years its business simultaneously with its entertainment of brass hats has zoomed and its hiring of former brass hats has increased.

Testifying before Congressman HÉBERT, George Bunker, head of Martin, admitted, reluctantly, to taking a long list of admirals and Air Force generals down to the swank Cotton Club in the British Bahamas for some of the fanciest entertainment given by any defense contractor. Bunker also admitted, reluctantly, that Martin had tried to deduct this entertainment from taxes as a legitimate expense but that it didn't get away with it.

Arguing with HÉBERT over Martin's right to entertain the brass hats and deduct it as a business expense, Bunker said: "But Mr. Chairman, we are a private industry."

"Totally a Government product," countered HÉBERT.

"Yes, but a private industry, sir."

"But totally subsidized by the Government," insisted the Congressman.

"I don't like the word subsidized," protested Bunker.

"I know," shot back HÉBERT, "but if the Government withdrew its contracts from the Martin Co., you would be out of business."

GOLFING LOBBYING

Bunker had no comeback.

At first Bunker denied that the Martin Co. had any memberships at Chevy Chase,

Burning Tree, or other nearby golfing clubs but HÉBERT wasn't satisfied.

"Well, then," he asked, "does the company or individuals connected with the company entertain the military in golf games over the weekend, or during the week, at Burning Tree?"

"We do play golf at Burning Tree with military people," admitted Bunker. "My answer is yes."

Martin also hired an Air Force major general, Dudley D. Hale, a few weeks after he retired, to be a glorified lobbyist in Washington.

"What was the compensation?" Bunker was asked.

"His base compensation was $20,000."

This is just a small part of the amazing confessions of some of the companies which hired brass-hat lobbyists and entertained the brass hats. Despite this, the vote against criminal penalties in the bill to prevent brass-hat lobbying was 28 to 4. Here are some of the Congressmen who bowed to Chairman Vinson to protect the brass hats: Democrats Price, of Illinois, a fine Congressman who gets nervous over Vinson's opposition; Lankford, of Maryland, another good Congressman who fears the Vinson whiplash; Stratton, of New York, close friend of Adm. Arleigh Burke; Rivers, of South Carolina; Philbin, of Massachusetts; Fisher of Texas; Hardy, of Virginia; Bennett, of Florida; Huddleston, of Alabama; Doyle, of California; Byrne, of Pennsylvania; Cohelan, of California; Morris, of Oklahoma, who represents the district in which Fort Sill is located; Wampler, of Indiana.

The Republicans voting with the brass hats included ARENDS, of Illinois; BATES, of Massachusetts; GAVIN and VAN ZANDT, of Pennsylvania; NORBLAD, of Oregon; BRAY, of Indiana; OSMERS, of New Jersey; ST. GEORGE and BECKER, of New York; WILSON and GUBSER, of California; CHAMBERLAIN, of Michigan.

BRASS-HAT LOBBYING BILL UP TODAY

(By Drew Pearson)

The question of brass-hat lobbying which has cost the taxpayers millions of dollars on defense contracts comes before the House of Representatives for an important vote today.

The House will attempt to fix penalties for the admirals and generals who have become "influence peddlers" for the big munitions companies in such numbers that it has caused President Eisenhower to speak out against the evils of the "munitions lobby."

The retired generals and admirals are paid fancy salaries—far more than their retirement pensions, which they draw simultaneously—to lobby with their old friends in the Pentagon. These fancy salaries also are paid, indirectly, by the taxpayers, because they are added to the cost of missiles, airplanes, tanks, and other weapons which make up the biggest part of the national budget. Even the cost of lavish entertainment for the brass hats on active duty is added onto the tab which the taxpayer has to pay—if Internal Revenue isn't alert enough to stop it.

DOUBLE STANDARD

However, both President Eisenhower and congressional Democrats now want to set up two standards of ethics for lobbying—one for civilians and the other for the military. Ike has fired FCC Chairman John Doerfer for going fishing with a big broadcaster but has condoned lavish fishing-golfing trips by the Air Force and Navy to the British Bahamas Cotton Club arranged by the Martin Company, one of the biggest missile manufactures.

Likewise, Chairman CARL VINSON of Georgia, omnipotent defender of the brass hats, pushed through his armed services committee a powder puff bill providing no criminal penalties for retired officers who lobby on defense contracts within 2 years after retirement. He would only have them forfeit retired pensions. These mean little.

In contrast civilians retired from Government usually get no pensions anyway, and face a jail term if they handle Government cases within 2 years after retirement.

Powerful Chairman VINSON urged northern Democrats and Republicans to fall into line for this mild slap-on-the-wrist bill in his committee. Today, however, he faces a lot of southern opposition. Significantly some of it comes from his equally potent friend, HOWARD SMITH of Virginia, leader of the Dixiecrat-GOP coalition.

"This bill doesn't do anything," Smith told VINSON when he reported the brasshat-lobbying bill out for full debate. "We are granting you a rule, but you are likely to get one your rare lickings on the floor of the House."

VINSON CRACKS WHIP

Louisiana's Congressman EDDIE HÉBERT, former news editor of the New Orleans States, was much blunter inside the Armed Services Committee. He called attention to the fact that VINSON himself had sponsored a tougher bill with criminal penalties, then changed his mind. He did not mention the fact that the military had come to VINSON privately and persuaded the chairman, whom they call Admiral, to change his mind.

"These are your amendments, Mr. Chairman," needled HÉBERT, referring to VINSON's previous stand for criminal penalties.

"All right," blustered VINSON impatiently. "I am offering them to give the committee an opportunity to vote," slyly continued HÉBERT. "I will stand by you, Mr. Chairman, I won't run away from you. I won't repudiate you. You can repudiate yourself."

The crusty Congressman from Georgia ignored HÉBERT's dig.

"I trust everybody will vote correctly this morning, like they did the other day when the committee adopted my viewpoint," said VINSON, cracking the whip. "I am satisfied that the committee is going to continue that same viewpoint."

"I——," HÉBERT tried to speak.

"Let's vote," interrupted VINSON.

"I admit, Mr. Chairman, that the committee will sustain you," HÉBERT finally got in his word. "But I want to give you an opportunity to sustain yourself."

"Call the roll," thundered VINSON.

As almost always happens when Chairman VINSON makes it a personal issue, his committee bowed. The vote was 28 to 4 in his favor. Only votes against him were two southerners and two Republicans—HÉBERT, of Louisiana, WINSTEAD, of Mississippi; with Republicans ALVIN O'KONSKI, of Wisconsin and WILLIAM HESS, of Ohio.

The vote today before the full House will attempt to reverse VINSON and put the same criminal penalties into the brass-hat lobbying bill which apply to civilians.

Foreign Aid

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. FULTON. Mr. Speaker, I have received a thoughtful letter from the Right Reverend Msgr. Edward E. Swanstrom, executive director of the Catholic Relief Services, National Catholic Welfare Conference.

As the mutual security bill of 1960 will soon be coming to the floor for consideration, I am calling these views to the attention of my colleagues in the Congress and the people of America.

The letter follows:

CATHOLIC RELIEF SERVICES—NATIONAL CATHOLIC WELFARE CONFERENCE.
New York, N.Y., March 30, 1960.

Hon. JAMES G. FULTON,
House of Representatives Office Building, Washintgon, D.C.

DEAR CONGRESSMAN FULTON: The problem of mounting stores of surplus farm commodities is one that I know is of great concern to all the Members of Congress and the officials of various departments of our Government.

Through Public Law 480 you have given the American voluntary relief agencies a wonderful opportunity to accomplish great good among the poor and distressed in all quarters of need throughout the world. All of us have made an effort to make the fullest and most effective use of this opportunity.

From time to time the directors of the other voluntary agencies and myself are asked for suggestions for the better use and distribution of these commodities.

We have found by years of experience that there are various factors that seriously impair the efficiency and extent of the programs that our agencies are carrying on overseas on behalf of the needy in which we use title III, U.S. Goverment food supplies. It seems that some of this could be resolved through proper action on the part of Congress.

The purpose of this letter is to lay these problems before you and the members of congressional committees concerned in the hope that all or some may be resolved.

They are as follows:

1. The problem of landlocked countries. Such countries as Laos, Paraguay, and Bolivia, among others have no seaports to which our food supplies can be shipped. These countries are, of course, very poor ones and in great need of the supplies that we could make available to them under a title III program in larger quantities were ocean freight funds utilizable to the point of entry of these countries. At the present time we can only ship these supplies to a seaport in a neighboring country. The problem of overland transportation of the supplies from such a port to the point of entry of the countries concerned might be resolved by an expression of intent of Congress concerning the use of the ocean freight funds. Government lawyers have already decided that their interpretation of the use of these funds limits them to what is strictly ocean freight. This, of course, works a hardship both on the agencies carrying out programs in landlocked countries and on the landlocked countries themselves.

2. According to present understanding of Public Law 480, all food supplies used by voluntary agencies under title III must be distributed to the needy without exacting any form of recompense from them. This in effect means that these foods cannot be used to pay workers who might be engaged in community effort activities. Many agencies are interested in projects of public interest nature such as the building of schools, small roads, drainage ditches, dikes, bridges, etc. Very often the people of underdeveloped countries could be induced to engage in community efforts of this kind if title III foodstuffs could be used as a recompense for their labors in behalf of a community project. Such a use of these foods would have important social, as well as economic, benefits since community spirit would be fostered thereby and the value of copoerative effort for social betterment would be made known.

3. According to the present regulations under which we operate, food must be distributed as it is received, or its conversion into other end products must be paid for by some source other than the recipient. The food itself cannot be used in any case to pay for its own conversion into other end products. In effect this means that the lack of adequate resources on the part of the voluntary agency operating the program or on the part of local groups cooperating with the program limits the amount of wheat flour that could be converted into bread or noodles, for example. This in turn limits the usefulness of the supplies. In occupied areas around the world after the last war the Army used a part of these supplies to pay for their conversion. Also title I and title II supplies are sold in a variety of manners. It would be a great help to the efficiency of the operations of title III programs if the actual work of converting the supplies into other end use products could be paid for with a part of the supplies themselves. Specifically, bakers could be paid in flour for the baking of bread or the making of noodles. The end result of such a possibility would be to give the poor items that could be used immediately and to familiarize them with new types of food that would be much more beneficial to them than some of those that they are presently using.

4. The use of corn for animal fodder. The people of Asia need meat and are particularly fond of pork in most countries. If corn could be used as food for animals it would be possible to convert large quantities of our surpluses into meat. The details of this would have to be worked out very carefully, of course, in order that the meat go to needy people. Something that might be considered would be, for example, the supplying of corn to people who would raise pigs under contract with us to return to us a pound of pork for a set quantity of corn delivered to them. This may seem like an almost impossible thing to attain, but we should remember that at one time it was illegal to purchase American surplus in the United States for use as animal fodder. At a later date this procedure was made legal. If it could be made legal overseas also, I am sure that we could do a great deal of good in many countries with the resultant product.

Over the past few years representatives of some of the other agencies and myself have offered these suggestions in whole or in part at various hearings on the mutual aid and agricultural bills. I hope that by presenting them to you and some of the other leaders of Congress in this form they may be of some further help to Congress in its deliberations on these matters.

With a word of kindest personal regard, I am,

Sincerely yours,

Rt. Rev. Msgr. EDWARD E. SWANSTROM,
Executive Director.

A Publisher's Eulogy for Russell V. Mack

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1960

Mr. PELLY. Mr. Speaker, we Members of the House of Representatives knew our late colleague, RUSSELL MACK, as a Congressman and servant of the people in the Third Congressional District of Washington. Other persons knew him in other ways. For example, many knew him as a newspaper publisher.

I believe it is fitting, Mr. Speaker, that the eulogy presented by Edwin J. Alexander, publisher of the Olympia News, be included in the permanent RECORD at a point following the other tributes to our colleague prior to adjournment of the House on March 28 out of respect to his memory.

This eulogy is as follows:

EULOGY FOR CONGRESSMAN RUSSELL V. MACK

(By Edwin J. Alexander, publisher, the Olympia News, funeral services, First Methodist Church, Aberdeen, Wash., Apr. 2, 1960)

"The other day a friend of mine died. Into my throat came a strange dry lump, and to my heart a depressing weight. Something had gone out of my life. I felt a sense of personal loss and sadness." From a booklet written and published by RUSSELL V. MACK in 1946.

Now our noble friend has fallen—pierced by the arrow of death. The places that have known him shall know him no more, but his virtues are written on tablets of love and memory.

RUSSELL V. MACK was truly one of nature's noblemen—a good man, a true friend, and honored citizen.

Many of you here in this church this morning remember RUSSELL as a boy and as a young man and in the years that followed—know full well that he had won his crown in Heaven ere he had reached the middle period of his good life.

From cub reporter to business manager on the Aberdeen Daily World to publisher of the Grays Harbor Daily Washingtonian—from publisher to Congressman—RUSSELL was a constant exemplar of the cardinal principles that constitute the highest order of the brotherhood of man.

RUSSELL was intensely patriotic. He loved his country with great passion and enthusiasm. RUSSELL linked his personal destiny with the destiny of his country and its flag.

RUSSELL was a powerful champion and defender of our American faith and our American way of life. He went back and forth across this district—yes, this State and our Nation—teaching and preaching and practicing the gospel of Americanism and quickening the spirit of American patriotism in the hearts and minds of our people everywhere.

RUSSELL loved his Grays Harbor and these nine counties and our great State of Washington in such a zealous and ardent manner that it verily excited the local pride within all of us to nearly a bursting point.

People liked RUSSELL because RUSSELL liked people. He enjoyed being with his friends, making new friends and meeting strangers. No one was a stranger for long in Russell's warm and friendly presence.

A great newspaperman, editor, and publisher, many of us in this place this morning knew him as a kindly, considerate, and generous employer, counselor, and friend.

As a fraternalist we knew him as one sincerely devoted to the principles of brotherly love and fidelity whose outstretched hands were ever ready to assist those in need.

As a citizen we knew him as a dedicated public servant, a dynamic leader, and honored Member of the U.S. House of Representatives, where his brilliant record of service and devotion to country will stand as a lasting monument and tribute to the true patriot that he was.

RUSSELL died as he would have wanted—standing on the floor of the Congress voting for his beloved country.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

Dodge County, Wis., Owes Fame to Cow

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 7, 1960

Mr. WILEY. Mr. President, in the Washington aura of broad scope programs, multi-billion-dollar budgets, far-flung policies, and conquest of outer space ideas, there may be an inclination, from time to time, to overlook the grass-roots human and natural forces that make communities "tick" in this great country.

As a nation, however, we are dependent upon our local communities linked together in a strong chain of economic, cultural, patriotic, spiritual ideals and principles, for the key to progress for the future.

Today, I would like to refer specifically to an outstanding community in Wisconsin—Dodge County—one of the leading 100 in the Nation.

Dodge produces more cheese than any other county in Wisconsin; it is No. 2 in the State in total cash income; and No. 3 in milk production.

Recently, the Milwaukee Journal published two informative articles—one by Robert W. Wells, entitled "Busy Dodge County Owes Fame to Cow," and the other, by a staff correspondent, "Dodge Tops State in Cheesemaking"—on the historical and present significance of the economy of this particular community.

As a splendid review of the significant way in which the people of Dodge County are moving ahead and contributing to progress in the State and Nation, I ask unanimous consent to have these articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Mar. 31, 1960]

BUSY DODGE COUNTY OWES FAME TO COW—THE HOLSTEIN MADE IT A FARM LEADER IN UNITED STATES—IF COWS, CALVES, BULLS, AND HEIFERS STOOD NOSE TO TAIL IN A STRAIGHT LINE, IT WOULD REACH 270 MILES; BEAVER DAM IS THE BIGGEST CITY AND JUNEAU IS THE COUNTY SEAT

(By Robert W. Wells)

JUNEAU, WIS.—Dodge County residents are too busy with the milking to erect a statue to their leading resident, but the Holstein cow deserves one. She's made the county what it is today.

And what is it today? Well, Dodge is one of the Nation's 100 leading farm counties. It produces more cheese than any other county in Wisconsin. It is No. 2 in the State (behind Dane) in total cash income to farmers. It is No. 3 (behind Dane and Marathon) in milk production.

If you could persuade Dodge County's cows, calves, bulls, and heifers to stand nose to tail in a straight line it would stretch for 270 miles. If you added the county's 79,000 pigs and its 565,000 chickens to those 137,000 cattle, you could stretch the line all the way from Hustisford to Ashtabula, Ohio, and cause a lot of comment.

MILK IS PLENTIFUL

If Dodge citizens were required to consume all the milk produced in their county, each would have to drink 10,387 pounds a year.

Actually, the Dodge County populace is willing to share its lacteal bounty with paying customers elsewhere. Most of it goes to Wisconsin and Illinois consumers, but some of the fluid milk is trucked to points as far away as Florida. And residents of practically anywhere in the Nation are apt to find themselves eating Dodge County cheese.

The county is second in the State in egg production—about 100 million a year—and is among the top five counties in the United States in the sale of green peas and sweet corn.

INCOME IS HIGH

Cash income for the county's 3,700 farms averages over $10,000 a year. The annual total of about $38 million includes over $20 million from milk and $33 million from all livestock and livestock products. County Agent Edwin A. Bergstrom estimates that more than three-fourths of the county's farmers primarily are dairymen.

As you may have surmised from those statistics, agriculture is the county's biggest industry by any standard, including employment. About one-third of the county's breadwinners are farmers. About 20,000 of the county's 60,000 residents are farm families.

It should not be supposed that Dodge County is entirely rural, however. It has 11 villages and 7 cities. Of these, Watertown and Waupun are divided between Dodge and adjoining counties.

BEAVER DAM IS BIGGEST CITY

Manufacturing employs 28 percent of the workers, mainly in the Beaver Dam, Horicon, Mayville, Watertown, and Waupun areas. The county's biggest city is Beaver Dam, with an estimated 12,800 people. (Watertown is about the same size, but most of its residents live in Jefferson County.)

Wages are somewhat lower in Dodge County plants than in those around Milwaukee or Madison, but living costs also are lower. The county is about midway between those two cities, but a little too far for commuting to be popular. What commuting there is in Dodge County mostly is from the country to the small nearby cities, such as Beaver Dam.

Juneau, with about 1,500 residents, is the county seat. The 69-member county board meets here. The biggest development in town at the moment is a $275,000 addition to the county jail. The facilities are said to be quite an improvement and if you have to go to jail, you could do worse than Juneau County.

BUILDING IS BRISK

Buildings are going up at a lively pace in Beaver Dam, too. A new city hall is being built at a cost of $550,000, and the YMCA has a fine new building under construction. Since the addition of a new wing at St. Joseph's Hospital recently, it's now possible for 210 persons to occupy beds in the city's two hospitals at the same moment.

Beaver Dam Lake, formed by a dam not built by beavers, is at the city's doorstep. It especially is popular with bullhead fishermen, some of whom come all the way from Milwaukee for the purpose. Fox Lake, a few miles to the north, is a popular summer resort, lined with cottages whose owners claim it's the best fishing lake in the county. They come from Milwaukee, Chicago, and elsewhere to prove it.

The third large lake in the county—there are about 20 all told—in Sinissippi, formed by damming the Rock River at Hustisford. Year-round homes gradually are replacing the summer cottages around it.

HOMES ARE MOVED

Milwaukeeans whose houses have been bought to make way for expressways might be surprised at what's happening in the towns of Ashippun and Rubicon, in the southeast corner of Dodge County. The thrifty residents of those communities, who know a bargain when they see one, have been busily bidding at auctions held in Milwaukee to dispose of the houses on expressway land. County Agent Bergstrom estimated that close to 100 of the dwellings from Milwaukee had been moved out to that part of Dodge County.

An earlier move from Milwaukee occurred at Theresa. Solomon Juneau came there to get away from the horse-drawn traffic jams and founded the place in 1847. His house still is a Theresa landmark.

STATE PRISON IS LANDMARK

Another landmark in the county was begun only 4 years after Juneau's homestead and has been growing ever since. It's the State prison located on the Dodge County side of Waupun. It has about 1,200 prisoners at the moment, plus 400 who are on the 9 outlying farms, for a total of 1,620. That's almost four times the population of Theresa, which would have suited old Solomon just fine.

A medium security correctional institution is planned for the northwestern corner of the county, north of Fox Lake. It will have about 400 prisoners, some of them from the prison and some from the State reformatory at Green Bay.

The history of the county begins in 1836 when the first territorial legislature established it and named it for Henry Dodge, the territorial governor. At the time, it was a county with no permanent residents. But 2 years later Jacob P. Brower and his family set up housekeeping on the north side of Fox Lake.

POPULATION SOARS

By 1850, the county's population had increased to 19,000. The next decade was the time of Dodge County's greatest growth. The population more than doubled in the 10 years. The increase between 1850 and 1860 was larger than that during the next century.

Dodge County was settled mainly by Germans, although Irish, Poles, Dutch and Welsh also came along with the east coast Yankees. German is still spoken extensively in some parts of the county, but only 2,000 of the present residents were born abroad.

Like the farmers of many other areas of Wisconsin, those in Dodge County specialized in wheat at first. But various factors, including the chinch bug, discouraged them and many went into dairying.

Along with farming, the Dodge County residents developed a diversity of industry.

Beaver Dam, for example, has 21 plants that turn out such things as stoves, silos, canned vegetables, shoes, metal products, and, of course, cheese.

Dodge County's urban population, like its rural variety, is inclined to be stable and thrifty. The executive secretary of Beaver Dam's Chamber of Commerce, George J. White, reports that 80 percent of the houses in that city are owner occupied, which is a pretty good indication of how things are around Dodge County.

[From the Milwaukee Journal, Mar. 31, 1960]

DODGE TOPS STATE IN CHEESEMAKING—69 FACTORIES LOCATED IN COUNTY; MUNSTER, BRICK ARE THE MOST POPULAR TYPES

THERESA, WIS.—The three sons were busily at work at the John A. Widmer & Sons cheese plant. The bottom of one stainless steel vat was covered with what looked like cottage cheese, but wasn't. In a second vat were shredded chunks of what would be Cheddar when the Widmers got through with it.

The stuff that looked like cottage cheese turned out to be one stage in the production of Dodge County's best known product, brick cheese. This variety was originated in the county and Dodge still leads in its production in the State. It also leads in the production of munster (or, if you prefer, muenster) and in the total output of all types of cheese—close to 50 millions pounds a year.

EIGHTEEN HUNDRED POUNDS A DAY

Like most of the founders of the county's 69 cheese factories, the elder Widmer came from Switzerland. He has been making cheese for 53 years, he said, and has been at the present location for 38. His three sons, John, Jr., James, and Ralph, help run the family enterprise.

The Widmer plant is midway between the giants like Kraft and the small operations. It turns out about 1,800 pounds a day, some of which is sold over the counter. The rest is marketed through distributors, and winds up in markets in Milwaukee and elsewhere.

Ralph Widmer undertook to explain what was going on.

"We get the entire milk production from 29 farms in this area," he said. "When the milk comes in, we pasteurize it and then fill the vats. Rennet is added to the milk to coagulate it. In a half hour, it becomes as thick as gelatin.

HEATED TO 100°

"The stainless steel vats have double sides. Steampipes run inside them. Once the milk is coagulated, the steam heats the mixture to about 100°. That's the cooking process, and it takes about a half hour.

"It requires 100 pounds of milk to make less than 10 pounds of cheese. The rest is whey. You remember little Miss Muffit? The whey is drawn off—most of it goes back to the farmers for hog feed—and what's left is the curds.

Wire cutters—a rectangular device with numerous small, tightly drawn wires—are drawn through the curds to break them into small pieces. Then they are dipped into wooden forms.

"At this point, Ralph said 'the stuff looks like cottage cheese and tastes like rubber."

SALTED FROM OUTSIDE

After the curds are dipped into the forms, a wooden top is put on the cheese and a brick is placed on the top to weigh it down. That's how brick cheese got its name, Widmer said.

The brick cheese is turned several times. Then the next day it is put in a vat of brine.

"Brick cheese is salted from the outside," Widmer explained, "and Cheddar from the inside—that is, the salt is mixed in."

The other brothers were busy with this latter process while the conversation was going on. One sprinkled handfuls of salt into the vat, while another took a curd fork and mixed it in. The instrument resembled a pitchfork, except that the tines were turned back on themselves at the ends.

After the brick cheese has spent 12 hours in the brine vat, it goes to the curing room, where it is kept 7 to 10 days, Widmer said. The Cheddar takes longer. It is cured about a month before it is ready for sale.

START AT 3 A.M. MONDAY

John Widmer, Jr., took time off from his chores to mention that times had changed in cheese making. In the old days, everyone worked 7 days a week because, as soon as the milk arrived from the farms, it had to be made into cheese.

Now the plant has a storage tank where excess milk can be kept cool and the family no longer has to work on Sunday.

"But we have to be here at 3 a.m. Monday to take care of Sunday's milk and get it out of the way in time to handle Monday's milk," Widmer said.

The elder Widmer bought the Theresa plant in 1922. His son John said the history of cheesemaking in the building probably dated back to 1900 or so. The building has been enlarged and modernized in recent years.

HAD DOZEN PLANTS

The first brick cheese made anywhere was produced by John Jossie, a Swiss immigrant who came to Wisconsin in 1865 and operated a farmer-owned limburger cheese plant at Richwood. It was in 1875 that Jossie observed that when the curds used in making limburger were drier than usual a different texture and flavor resulted.

He began to experiment and, first thing he knew, he had become the world's first maker of brick cheese. In 1877, he built a plant 8 miles northeast of Watertown and made it the first factory for brick cheese. It remained in operation until 1943.

At one time, Jossie had about a dozen brick-cheese plants in Dodge and Jefferson Counties. He switched to farming in 1883 and turned the cheesemaking over to his brother Jacob, who joined in partnership with John Habbeger and set up operations in Watertown. Their interests were eventually acquired by Kraft Foods.

Many other kinds of cheese are made in Dodge County. Since pizza became the fashion, Italian types have been growing in importance and Dodge is now third-ranking county in Wisconsin in their manufacture.

Family Farm Act of 1960

EXTENSION OF REMARKS

OF

HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. SMITH of Iowa. Mr. Speaker, to say merely that there is a difference of opinion between the Eisenhower-Benson-Nixon administration and the majority in Congress concerning farm legislation is a gross understatement. Congress has passed five farm bills outlining their preferred approach which have been voted. When the legislation on the books was expiring, Congress had to accept the administration's proposals or there would be no legislation and under these circumstances, Congress was bludgeoned into passing the flexible price support law and granting the authority requested by the administration. Experience has shown this Eisenhower-Benson-Nixon approach of low prices and no controls to be a miserable failure based upon economic theories applicable only to countries with food and fiber shortages. I do not feel disrespectful toward those who, with intellectual honesty, cling to these old, thoroughly discredited theories, but Members of Congress who are seeking solutions in good faith and are even willing to make reasonable compromises become somewhat disgusted when those who are apparently barren of constructive ideas, make statements based upon false interpretations of proposed legislation rather than offer any constructive alternative. The National Republican chairman, Senator MORTON, in a speech in the district I have the privilege to represent, followed this negative approach. Instead of coming forth with some constructive and reasonable alternative, Mr. MORTON embarked upon a negative intemperate and irresponsible tirade against the possibility of various approaches possible under the Poage bill.

It is obvious that the farmers and all taxpayers lose under the administration's approach of producing for Government bins. The only ones who gain from this are the newcomer, fly-by-night grain storage operator who was never in the grain merchandising business and the processor who now has his normal inventory carried by the Government. The Morton speech places the "new team" of Nixon and Morton squarely behind the Benson approach and repudiates the President's apparent offer to start working toward a compromise bill. It is disappointing and discouraging to taxpayers, farmers, and those in farm related industries, and in fact to everyone except those few fly-by-night storage cronies of the administration who don't want their playhouse wrecked.

The Des Moines Register on Friday, April 1, 1960, published a short, temperate and constructive analysis and summary of the situation which I commend to the attention of the Members of the House. It is as follows:

GOP ON FARM POLICY

Senator THRUSTON B. MORTON, national Republican chairman, employed three main arguments in his speech at the Iowa GOP finance dinner appealing to farmers to vote Republican in 1960:

1. "Since the 1954 elections, the Democratic Party has controlled Congress—and it is Congress alone which can write farm legislation."

2. The farm problem exists in some other countries, too, and it "is much bigger and broader and far more complicated than the people with quick and easy solutions are willing to admit."

3. The Democratic farm bills in Congress are "all-out regimentation"; they are "an alleged family farm income program" but they would "cut farm income, drastically reduce jobs both on and off the farm and sharply increase food prices and other living costs to consumers."

Senator MORTON's first two points are true enough as they stand. But it is also true that until 1959 Congress followed the recommendations of President Eisenhower and Secretary Benson to a considerable extent, especially in lowering price supports. Congress passed farm legislation in the last 2 years which the President vetoed.

The way farm programs are administered has a great deal to do with their effects.

For example, the Government's corn surplus would not be so large if Benson had not made price support available to farmers who did not comply with acreage allotments.

So we doubt that MORTON's attempt to pin the blame on the opposition for the farm program mess and the decline in farm income will be successful. The administration has to take responsibility for leadership in farm policy and for carrying out the Government programs.

As for the current Democratic bills, which provide authority for strict production controls, there may be plenty of things wrong with them. But just to label them "regimentation" is not a constructive criticism.

The bills provide for 90 percent of parity price support for a commodity if two-thirds of the producers of the commodity vote in favor of production control. This may be regimentation, but it is regimentation voted upon themselves by the farmers. If the programs reduced farm income, as Senator MORTON predicts, then farmers could throw them out.

A wide variety of methods of controlling supply, including quotas in bushels or pounds, is available in this proposed legislation, and a wide variety of price support methods, including deficiency payments. There would be room for considerable experimentation to see what would work best for each commodity.

Whatever else may be said about these farm bills, at least they represent a flexible approach to what everyone realizes is a "complicated" problem which cannot be solved by any one-shot, "quick and easy" method. They are an attempt to end the pile-up of surpluses and reduce Government costs, while raising farm income.

Senator MORTON could hardly be expected to outline a new farm policy for his party at this time. But the Republicans badly need a new farm policy if they hope to gain strength in farming areas.

It will not be enough to ditch Ezra Benson (MORTON did not even mention his name) while continuing the same policy. The GOP will have to come up with practical proposals for dealing with the crushing surpluses which are bearing down on farm prices and incomes.

Changing the Mixture

EXTENSION OF REMARKS
OF
HON. HOWARD W. CANNON
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Thursday, April 7, 1960

Mr. CANNON. Mr. President, there appeared in the April 4, 1960, issue of Aviation Week one of the best editorials on the defense budget that I have seen in recent months, entitled "Changing the Mixture."

I believe this will shed new light on the great defense debate that has been underway here for many weeks. Additionally, it raises grave doubts as to whether we have an adequate defense and traces the steps that have become necessary to assure this defense upon the urging of many of our colleagues in the Senate.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHANGING THE MIXTURE

The fiscal 1961 defense budget has not stood the test of 3 months of public debate very well. Public debate and legislative scrutiny have disclosed that this budget fails to meet the vital defense requirements in a number of critical areas. There are hopeful signs that the three military services, with tacit administration approval, are already taking action to remedy the most obvious of these defects.

The number of changes that are already in the mill for the fiscal 1961 defense budget, even before the key debates over it have begun in the Congress, must stir many questions in the minds of the taxpaying public as to the adequacy of the military budgeting process. It seems difficult to believe that a budget that was so stoutly defended as adequate on its presentation to Congress in January should require so many major changes only a few months later. It suggests that there is something radically wrong with the procedures and policies by which this budget was prepared.

Looking for the moment only at the Air Force aspects of the defense budget, we find an astonishing number of major deficiencies that have been spotlighted by legislative scrutiny and public debate. Among them are:

Lack of any modern military airlift and little action to develop any for the forseeable future.

Lack of a top priority program to develop a mach 3-plus replacement for the current fleet of subsonic B–52's and mach 2 B–58's.

Lack of sufficient urgency and scope for the interim Atlas and Titan ICBM programs during the critical years of the missile gap.

Lack of sufficient funds and priority for developing an airborne alert capability for the B–52 fleet of Strategic Air Command in this same critical period.

Lack of urgency, funding and priority for developing military space systems, both for the warning and reconnaissance satellites already under development and for advanced manned space vehicles.

Lack of sufficient technical effort devoted to the increasingly important problem of monitoring and detecting nuclear explosions required for any realistic program of nuclear arms control.—Robert Hotz.

Mrs. Anna Harmon

EXTENSION OF REMARKS
OF
HON. RANDALL S. HARMON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. HARMON. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD, an editorial from the North Vernon Sun of April 5, 1960, by Mr. Richard Mayer, Jr., editor:

MRS. ANNA HARMON

The odds are that we would have never known Mrs. Anna Harmon if it hadn't been for the fact that her son, RANDALL, a North Vernon native, had been elected to Congress in the 1958 election. It's our good fortune—for whether her son was elected to anything or not, we would have been the loser in life if we hadn't met her and had the distinct pleasure of talking to her a number of times.

She was a fine and wonderful woman, devoted to her church. We suspect that she had worked hard throughout most of her life, and had known, perhaps, more than her share of the hardships that go with life. The good things came to her late, but happily, not too late.

Somehow, in our conversations with her, she always reminded us of that wonderful story about the Roman noblewoman, who when asked where her jewels were, drew her sons closely around her and said: "These are my jewels."

The elevation of her son to nationwide prominence left Mrs. Harmon with mixed feelings. She was most proud of her son, as only a mother, who had borne him, who had nurtured him, who had hoped for him, could be, and yet motherlike, she was terribly upset by some of the unkind words that the press wrote about her son. "He can handle himself; don't worry about it," we once told her. But it didn't stop her from worrying. Many a mother, had wished along with her that the world could view her son through a mother's eyes.

RANDALL HARMON may run last in the 1960 election. The big city press may affix the unhappy sobriquet, "Front Porch," on him. But the memory of the deep love that his mother bore for him makes him a most fortunate man, whatever his destiny may be.

To write an editorial is nothing. To be elected Congressman or even President is not much more. But to be a successful mother like Mrs. Harmon was. Ah, there is the rich and the true achievement of life.

Competitive Bids

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, April 7, 1960

Mr. KEFAUVER. Mr. President, the Senate Antitrust and Monopoly Subcommittee conducted hearings last September, in Knoxville, on the peculiar behavior of certain manufacturers who consistently submitted identical bids to the Tennessee Valley Authority, in what appeared to be a bypassing of competitive bidding at the expense of the TVA.

Following those hearings, a Federal grand jury in Philadelphia indicted 18 equipment manufacturers for alleged antitrust violations.

It also should be recalled that last year the Tennessee Valley Authority purchased heavy electrical equipment abroad, because of a considerably favorable price differential between the bid by a British manufacturer and the bids by the major U.S. companies.

On the basis of information received since then, it would appear that a certain amount of price competition has been revived by the major American manufacturers of electrical equipment.

Mr. President, I ask unanimous consent that an editorial entitled "This Price Cut Caused by an Electrical Shock," which appeared in the Nashville Tennessean be printed in the RECORD as a significant commentary on the subject.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

THIS PRICE CUT CAUSED BY AN ELECTRICAL SHOCK

It may be, as General Electric says, that the Tennessee Valley Authority's decision

last year to purchase heavy electrical equipment abroad had nothing to do with GE's price cut this week on the same sort of equipment.

But that is somewhat difficult to believe.

Particularly is this true when one traces the history of events since TVA announced last February it was going overseas to purchase a large turbogenerator for the Colbert steamplant at Tuscumbia, Ala.

The squawk that followed this announcement created quite a stir at the time. The big electrical manufacturing firms accused the Government agency of everything but treason.

They insisted they could not compete with foreign firms because of the high cost of American labor. They insisted only a domestic firm could provide proper maintenance. They predicted all sorts of catastrophes in the event of nuclear attack if a foreign-made product was on the power production line.

These firms demanded an investigation and flooded the press with unsubstantiated releases purporting to show how unfairly this massive public agency was treating them. They prepared a march on Congress to get themselves a law that would cut out foreign competition and, of course, give themselves something of a cartel-type monopoly.

Into this fray, naturally, jumped the private power companies. For they have developed conditioned reflexes which leap to reaction when the initials TVA are used. The manufacturers were exactly right, they chimed, and this was just another example of what socialism will do.

Some citizens were inclined to sympathize with General Electric, Westinghouse, et al., until TVA, in a lengthy statement, debunked every argument the manufacturers offered, point by point, and in cold, hard figures.

But the electrical companies were not really quieted until the authority, in a second statement, calmly laid out the identical bids these great competitors had been submitting for years.

One upshot of the identical bidding disclosure was a so-called shakeup at GE. Mr. Ralph J. Cordiner, chairman of the board, admitted that some of his firm's executives had indeed been discussing prices with competitors before bidding on big Government contracts. As a result, the executives were sort of being shifted around, as we got it.

And now, close on the heels of another debunking job turned in at Pittsburgh by TVA Board Chairman Herbert D. Vogel, GE announces that its better and more efficient production has made it possible to cut prices on heavy electrical equipment.

It is ironic that among the beneficiaries of this whole affair are the private power companies. For they, too, can now expect to pay less for equipment they buy from the abused manufacturers.

This fits a familiar pattern as old as TVA itself. In showing the way to cheaper power production, this efficient agency (made up of dedicated men instead of wasteful bureaucrats) has made it possible for private power companies to increase their profits.

Now—for a while anyway—perhaps we shall see some real down-to-earth competition among the domestic firms. Maybe there will be some old-fashioned price competition instead of the phony type that talks of free enterprise for public consumption and gets together—behind the scenes—in the interest of guaranteed profits which are also guaranteed to be high.

Once again, TVA has saved American power users—both public and private—a considerable wad of money. Once again it has demonstrated that an organization is not necessarily cursed because it bears the name "public." And that the suffix "private," is not invariably sacred.

Why I Am Proud To Be an American

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. HENDERSON. Mr. Speaker, I wish to call the attention of the House of Representatives to an essay by John Matthews of Marietta, Ohio, which is one of the winners in Ohio of the American Legion essay contest this year.

There are many aspects of daily life which are illustrative of our freedoms that too often go unnoticed. In this refreshing statement by an 11th grader, we have a perceptive reminder of the deeper meanings of so much which we take for granted in our activities each day. John Matthews' essay is as follows:

WHY I AM PROUD TO BE AN AMERICAN

(By John Matthews)

When I walk down the street in a typical American town or city, I can see things that make me proud to be an American. As I enter the business district, I catch sight of people hurrying from place to place. On the corner I may see two old men telling of the good old days and relating events that should make the country and every person in the country proud.

As I proceed, I watch as a storekeeper and customer conduct business without fear of being interrupted and maybe thrown into jail by the police. The storekeeper cannot be told what to sell, how to sell it, or at what price it is to be sold. If he wants to make his prices lower than the prices of the store across the street, he can do so. This competition keeps one person from getting a hold on any product and selling it at very high prices. On down the street is a court where I can go and be assured of having a fair trial by impartial people. Close by may be the police station and on down the street the fire department. The men who are employed at these places are there to help and not hinder me.

By this time I have reached the river and pause to watch the boats carrying goods, up and down, stopping and going, in an almost continuous process. This sight is symoblic of our wealth and great trading ability.

Along the side of the river is a quiet little park. As I enter it, I see statues commemorating famous happenings and famous people. I look at these monuments with pride, knowing that these happenings and people helped make the United States what it is today. Then, as I leave the park, I look down and remind myself that George Washington or maybe Thomas Jefferson may have stood upon the exact spot on which I am standing. This should remind me that the early Americans fought and died so that I might have a country in which all men are created equal. They did not stop after securing independence. They set up a system of government which is one of the best, if not the best, in the world.

Continuing down the street, I see a small common church. In this church I can worship God without interference from anyone. But this is not the only church; there are many others, each having its own beliefs. This shows that the United States is surely a country with complete freedom of religion.

As I proceed back toward the center of town, I am passed by a young boy selling newspapers. In our country I have the freedom of writing and printing for everyone to read what I believe. Focusing my eyes down the street, I see the figure of a man. He is standing on the steps of a building telling everyone what he believes is wrong with the mayor of the city. He will not be arrested for what he says against the officials of the city, the State, or the Federal Government. The freedom of speaking when and how you want is an important privilege in the United States.

A few blocks down the street is a building with a flag in front of it. Through the window at the front of the building, I can see people receiving a ballot and going into a booth to vote. In the United States the citizens can nominate and vote for the person who they think could fill the office best.

Our liberties and freedoms are not just things we have; they are things we use every day. This is why I am proud to be an American.

The Importation of Brass Mill Products

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Thursday, April 7, 1960

Mr. BUSH. Mr. President, the domestic brass industry is facing increasing competition from imports of brass mill products.

The situation facing the industry was clearly outlined by Mr. Joseph O'Brien, president of the Bristol Brass Corp., of Bristol, Conn., in a letter distributed to all employees of the company along with the annual report.

Mr. O'Brien points out that nearly 95 million pounds of brass mill products were imported in 1959, representing about 1,300 American brass mill jobs—jobs that have been taken away by low-priced, foreign-made brass.

Mr. President, this is a serious problem, of mounting concern to thoughtful American working men and women, and deserves the careful attention of the Congress.

I ask unanimous consent that the letter to which I have referred may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE BRISTOL BRASS CORP.,
Bristol, Conn., March 18, 1960.

To Bristol Brass Men and Women:

Here is your copy of our annual report for the year 1959.

It was a good year for Bristol Brass, with operations at a satisfactory level for most of the period. But, as pointed out in the report, it was also a good year for importers of foreign-made brass mill goods.

The U.S. Bureau of the Census figures show that imports of brass mill products totaled 94,660,000 pounds in 1959—an increase of 25 million pounds over 1958. Put another way, that nearly 95 million pounds of brass represents about 1,300 American brass mill jobs—jobs that have been taken away by low-priced foreign-made brass.

One of our most important customers recently told us they had made a thorough study of the possibility of using imported brass strip instead of U.S. made. Their

analysis showed they could buy imported strip of good quality—just as good as ours—for considerably less than we have to charge for our strip.

This customer eventually decided not to buy imported brass, and I think you will be interested to know why. There were two reasons: First, they want good service and felt that Bristol Brass and other U.S. mills could be depended on to provide that service. On the other hand, they were doubtful about service on imported brass. Secondly, this customer believes that it is good business policy to buy from U.S. sources. They know that the American people are their best customers and that you and I will not be able to buy cars, refrigerators, and watches if we do not have jobs. That's why one customer decided to buy American. It is obvious from that 95 million pounds of imported brass that other customers made different decisions.

Last year, imports of brass mill goods increased by 37½ percent—the largest increase in recent years. This shows how important it is for us to provide top quality and the best of service, while keeping our costs as low as possible. Quality and service are the best weapons we have to keep imports from increasing more and thus to protect our own jobs.

Sincerely,

JOSEPH O'BRIEN,
President.

So You Want To Be a Republican

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. SCHERER. Mr. Speaker, Judge George F. Eyrich, Jr., of Cincinnati has been the capable and dynamic chairman of the Hamilton County, Ohio, Republican organization for 18 years. Under his leadership, the Republican Party in the Cincinnati area has been a tremendous force for good and effective government.

An article written by Judge Eyrich appearing in the April 3 issue of the Cincinnati Enquirer is a fine and comprehensive analysis of basic Republican Party principles. It has been the adherence to these fundamental principles over many years that enabled the Republican Party in Hamilton County to maintain its position of leadership.

The article follows:

SO YOU WANT TO BE A REPUBLICAN

(By George F. Eyrich, Jr.)

The young men and women of America in increasing numbers are answering with a resounding "Yes," to the statement, "So you want to be a Republican."

This is pleasing and encouraging, but it is by no means surprising.

It is to the young people of today that the future belongs. What could be more natural than that thinking young people, concerned about the future, should turn to the political party that is dedicated to the kind of government on which the future can rest securely?

Any comparison of the policies of the two major national political parties on the national, State or local level makes it obvious that the Republican Party is that party.

A prime precept of Republicanism has always been a refusal to barter the resources of the future for immediate political advantage. It calls for each political and governmental decision to be carefully weighed against the effect it will have on the future.

For example, Republicans have never subscribed to the idea that the cure for every problem is an appropriation of Government money. Republicans know that such appropriations are advances drawn on the earnings of future generations and must be used only when they will contribute to a lasting solution to the problem. In other words, we Republicans demand a full value for the taxpayers' dollars that we spend.

It has always been the policy of the Republican Party to find a lasting solution to the problems of the day rather than sweep them under the rug with temporary compromises. This has been true since its birth in 1854.

The Republican Party was born in the consciences of Americans those 106 years ago, when the dispute over whether one human being should be the property of another threatened to tear our Republic apart. Some men of that day wanted to postpone a decision by further compromise with the institution of slavery.

But the Republican Party, led by the first Republican President, Abraham Lincoln, demonstrating the concern for the dignity of all men that is still a characteristic of the party, knew that the situation could be met only by dramatic action. The slavery question meant that it was inevitable that the United States would face a civil war. Those early Republicans chose to fight that war during their own generation rather than leave it for their children to face.

Republicans in the years since have continued to demonstrate such concern for the future. In those years, they have come to be recognized as the party that stands for the dignity of the individual and have earned the title of the "Grand Old Party."

Of course, the facts stick in the craw of some of the partisans of the other party. In their desperate attempts to distort the facts, they treat the American public to such bland doubletalk that it is actually funny when the emotion is stripped away and their statements are left stranded completely void of logic or truth. For example:

We see the candidates of the other party, multimillionaire would-be Presidents, charging that the Republican Party is the party of the rich man.

We hear the cry from the opposition that the lack of congressional action on important legislation is the fault of the Republican Party when the other party has a majority in both Houses of Congress.

We see the Democratic Senator, who was Secretary of the Air Force in 1947, now singing hysterical soprano in the chorus of his Democratic Party, trying to say that the Republicans have caused the missile lag.

Whereas the facts are as follows: On February 19, 1947, Dwight D. Eisenhower, then Chief of Staff, appeared before the Appropriations Committee of the Congress and pleaded for more money for research and development of missiles. He said, "In the field of guided missiles * * * we have no more than scratched the surface of possibilities which we must explore in order to keep abreast of the rest of the world. Neglect to do so could bring our country to ruin and defeat in an appallingly few hours."

Congress granted the money but President Truman impounded $75 million of it. The contract with Convair for intercontinental missiles was canceled and not renewed until 1951 after we got into Korea. From 1945 to 1952 only $3.5 million was expended on intercontinental missiles (during that period we spent $117 million supporting the price of peanuts).

And among the most ridiculous we find prophets of gloom parroting the other party's line that depression is just around the corner, whereas under the Republican administration our Nation has reached its greatest prosperity.

Of course, the fact that can be learned from any history book is that throughout its entire history the Republican Party has brought both peace and prosperity to America when it was in power.

This matter of peace is certainly one that should be of interest to young people. After all, it is young men who must fight wars. And young women have their share of heartbreak from wars. The fact is that during no Republican administration in the 20th century has America gone to war. Conversely, under each and every administration of the other party during the same period America has seen its boys march away to war. And frequently after the other party's President was elected on a promise to keep us out of war.

All of these add up to the reasons that young people are placing their trust in the Republican Party.

As a young person, you would find a ready welcome in the Republican Party. The Young Republican movement is an important factor in the party and offers young people, from teenagers to young adults, an opportunity to try their political wings in the company of their contemporaries.

Organized on a structure that parallels that of the senior party, the Young Republicans have their own national committee, State committee, and local officers. They hold conventions that blend social activity with mature concern for good government, while giving the participants a basic education in political practice.

Out of the Young Republican movement have come many of the programs that have been adopted as administration and legislative aims of the party as a whole. The Republican Party is always receptive to vigorous young ideas.

Here in Hamilton County our Young Republican organization is one of the mainstays of our party. From it we draw our leaders of the future and from it we receive help and direction that translates into ballots for good government in Washington, Columbus, the courthouse, and city hall.

In addition to the Hamilton County Young Republican Club, there are in the county a number of ward and township Young Republican clubs as well as an active organization at the University of Cincinnati. Any reader of the Enquirer's Saturday Youth Page will find a warm welcome awaiting him in any of them.

He will also find that Republican political activity can be fun. The thrill of trying to influence one's fellow citizens to vote for a good candidate running on a sound plaform, is one that has captured the lasting imagination of many a young man or young woman. It offers an opportunity for young people to put into practice their own fresh new ideas, for a vigorous party is always looking for new ideas and better ways of getting results.

The excitement of election day and watching the results come in that night, proving the effectiveness of your efforts, can be tremendous indeed. But even more important, with the thrill and excitement goes the satisfaction of knowing that one is contributing to the kind of government that will make America a better place in the future.

That the Republican Party is the party of youth can be readily seen from its slate of candidates as they shape up for the fall elections. All the way from the presidential ticket with RICHARD NIXON, to our slate of candidates for office here in Hamilton County, is a preponderance of young people.

They are young people who, a few years ago, found their way into Republican ranks through the Young Republican movement because they recognized the Republican Party as the one interested in America's future.

You can be one of them.

Unused Plant Facilities

EXTENSION OF REMARKS
OF
HON. GALE W. McGEE
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Thursday, April 7, 1960

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Democrats Hit Unused Plant, Men," written by Frank C. Porter and published in the Washington Post of April 7, 1960. The article discusses the economic philosophy as espoused by eminent Democrats.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEMOCRATS HIT UNUSED PLANT, MEN—"INFLATION CRY" MASK FOR INACTION, KEYSERLING SAYS

(By Frank C. Porter)

When electioneering for the Presidency begins in earnest later this year, the Republicans can expect a barrage of charges that their "second-class economic performance" has let the national growth rate slip precariously.

Already the controversial issue has cropped up more and more in Democratic speeches. Through inability to put unused plant and manpower to work, runs the argument, the annual growth rate has fallen to 2.3 percent during the Eisenhower tenure. Democrats insist it can and should be maintained at 4.5 percent or better.

Thus far there has been little clear-cut Republican reaction to the Democratic jibes on growth. It fell to Fortune magazine last week to map what may be the first cohesive GOP counterattack. In an article by Max Ways, it took note of Republican embarrassment over the issue and urged party leaders to attack Democratic proposals for specific growth targets as a "mask for big government."

To Leon H. Keyserling, Chairman of President Truman's Council of Economic Advisors, and who for many years has been considered one of the chief architects of Democratic economic policy, the "big government" warning is pure nonsense.

He considers his proposal for a national prosperity budget, whereby the President would include in his annual economic message specific goals for public efforts, and also general goals to improve the perspectives of private industry after consultation among business, labor, and farm leaders, educative rather than coercive.

It is, he insists, no more than is called for by the Employment Act of 1946, passed overwhelmingly by both parties but "honored by Eisenhower only in the breach thereof." The act specifically requires the President to set forth maximum goals for employment, production, and purchasing power and the policies needed to achieve these goals.

Had the President observed both the letter and the spirit of the act, Keyserling argues, the United States might not find itself hobbled with such gigantic waste in unused manpower and plant today. He estimates that if the economy had grown at an annual rate of 4.7 percent he ascribes to the Democratic period 1947–53, rather than at the 2.3 percent rate he claims for the Eisenhower years 1953–59, we would have been $200 billion richer in gross national product, would have received about 65 billion more in public revenues at all levels at the same tax rates and would have avoided 15 million man years of unnecessary unemployment.

Keyserling projects a 5 percent growth rate through 1964 to show that the Nation would realize $400 billion more in gross national product than the 2.3 percent 1953–59 rate, 19 million man-years more employment, and $100 billion more in public revenues at all levels at the same rate, of which about $70 billion would accrue to the Federal Government.

He quotes these estimates to drive home his point that our economy is total and indivisive, that the public and private sectors are mutually supportive. The Republicans, Keyserling charges, on the one hand isolate the national budget from the general economy, tying the great national priorities such as defense and education to fiscal shortages, while inhibiting the private economy (whence come public revenues) with repressive monetary policy on the other hand.

Keyserling also rejects the mature economy theory of a fellow Democratic economist. In "The Affluent Society," John Kenneth Galbraith suggests that a high rate of growth is no longer of prime importance, and that resources from the private economy must be transferred to the public sector to improve the quality of American life.

To Keyserling, this is "unnecessary heroism" and a "redistribution of scarcity." He contends that our private economy can sustain great further growth, that public projects cannot be augmented by stunting the private sector, and that the latter is far from affluent today.

"Why should you mortify the flesh by rationing scarcity when you have the technological capabilities to satisfy all needs?" Keyserling asks.

Keyserling would use all the tools of Government, but particularly monetary and fiscal policy, to lead a "symphony of nationwide effort" toward three goals: Optimum and steady economic growth, the use of this growth to "service the great priorities of our needs and aspirations as a people, and the extirpation of economic injustice."

Keyserling contends that the administration's "inflation cry has been a mask for not doing the things we should have done." By concentrating single mindedly on a tight money policy, the Federal Reserve Board, in his opinion, has failed in its three major missions: Establishing priorities of need, promoting growth, and controlling inflation itself. To Keyserling, "inefficient slack" in an economy is just as inflationary as "inefficient tautness."

What about Russia? Keyserling is alarmed by what he considers a vastly superior Soviet growth rate but not obsessed by it. His main concern is the unity of Soviet economic purpose. The Russians have established priorities: "Now that they've built their industrial base and educational system, they'll begin improving their standard of living."

But he wants no part of authoritarian techniques, Keyserling insists. He emphatically rejects the price and wage controls gingerly suggested by a few Democratic economists. And he argues that what is needed is "leadership, not totalitarianism * * *. What we should seek is the middle educative way."

What Do They Mean—Lagging?

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. RIEHLMAN. Mr. Speaker, the world is witnessing today two of the most significant achievements in the history of this youthful field of space exploration. I refer of course to the Pioneer V sun satellite and the Tiros I weather satellite. Every one of us can be proud that these two scientific marvels were launched into the heavens from American soil. They are the fruits of American ingenuity and American effort. They represent no more than has been expected by those of us who have maintained confidence in the space program of the Eisenhower administration. They come as no great surprise to those of us who have been able to look at our space program in an objective manner.

These achievements further substantiate my consistent contention that the United States is clearly equal or superior to the Soviet Union in every field of space exploration save that of propulsion. And we will soon remedy this deficiency in thrust capability that was willed us by the previous Democrat administration.

I should also like to include, for the edification of many of my colleagues, an editorial written by Mr. Alexander Jones in the April 4 Syracuse (N.Y.) Herald-Journal. It serves notice that the people back home have not been taken in by the Washington prophets of doom. They are clearly able to separate the wheat from the chaff.

The editorial follows:

WHAT DO THEY MEAN—LAGGING?

(By Alexander F. Jones)

There is an expression of the native fishing guides in the Caribbean when a shark or barracuda moves into a bonefish feeding grounds, causing them to dart about nervously.

"Something is spooking the fish," the guide will say.

Something is spooking me in outer space.

It is that picture taking, tape recording, tub-shaped satellite named Tiros I which is whirling around the world 450 miles up snapping shots of this revolving globe and sending them back to earth for Ike and the rest of us to marvel over.

And there is another camera in that tub that is taking pictures of cloud formations that are regarded as so confidential the Space Administration is not putting them out. They are said to reveal weather secrets.

In addition, while this miraculous experiment is causing the scientific world, including Moscow, to look our way again, the satellite, Pioneer V, is orbiting the sun and sending back messages that it is now 2,588,056 miles away from the earth and still traveling.

In talking about our space efforts, the man who is head of this space business, Dr. T. Keith Glennan, says we may put a man up 120 miles in a rocket this year and will put another astronaut into orbit in 1961.

And there will be an American on the moon within 10 years, Dr. Glennan says, adding that this is a conservative estimate.

He calmly reports the U.S. space program is going along very well and the only advantage the Soviet Union holds at this time is having a rocket engine with a greater thrust. With the completion of our giant Saturn missile this deficiency will be eliminated, Dr. Glennan said.

Here is a man who knows what he is talking about. He is top administrator of the National Aeronautics and Space Administration and has been since its inception. He is president of Case Institute of Technology of Cleveland and a former Atomic Energy Commissioner.

He now has many more satellites of various types whirling around in space than the Soviet Union.

What I like about Dr. Glennan is his modesty in success and his determination to overcome obstacles in failure.

He was simply purring as he happily took the outerspace pictures to President Eisenhower but his only comment was that Ike thought the Tiros I coup "a magnificent thing."

So it is and it is as good an answer to the people who are charging Ike with lagging behind in space and missile efforts.

Just about the time folks start saying your Uncle Samuel is dragging his feet, scientifically, he puts on a breathtaking sprint that startles the world.

Any time a 270-pound tub filled with cameras and weather checking apparatus can send back pictures from 450 miles up, and another satellite can send coded messages from 2½ million miles away, the lagging laments of some of our politically minded critics sound pretty silly.

The fellow who gets the biggest charge from accomplishments is the man in the White House.

Ike is grinning from ear to ear.

The TV Crisis

EXTENSION OF REMARKS

OF

HON. GALE W. McGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, April 7, 1960

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Forgotten Clues to the TV Crisis," written by Jack Gould, and published in the New York Times magazine of December 13, 1959. The article is an excellent analysis of and a positive and constructive approach to the great problem of TV in the communications world.

Associated with that article, and I also ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "FCC Study of Payola Is Far From Conclusive," written by Lawrence Laurent, and published in the Washington Post and Times Herald of April 7, 1960.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times magazine, Dec. 13, 1959]

FORGOTTEN CLUES TO THE TV CRISIS—THE AIRWAVES ARE PUBLIC AND THE BROADCASTERS WHO USE THEM HAVE A DUTY TO THE PUBLIC, WHICH THE FEDERAL COMMUNICATIONS COMMISSION CAN AND SHOULD REQUIRE THEM TO PERFORM

(By Jack Gould)

Television is at a crossroads. The sighs of disappointment over the fall of Charles Van Doren in a rigged quiz game have given way to a rising clamor for fundamental changes in the medium that enters 45 million homes.

For the moment, video has a full-time job in merely tabulating the diversified indictments of its behavior. The aftermath of the hanky-panky in the isolation booth has taken on the proportions of a coast-to-coast morality play, involving the ethics of big business, the efficacy of American education and the solubility of aspirin.

Two governmental agencies, one branch of the executive department, innumerable congressional committees, pedagogues, economists, industrialists and salesmen are examining the TV medium in varying depths. Moreover, the TV world itself is split over the most becoming posture to assume in its moment of crisis. The chaos of TV, in short, cannot be pictured in black and white; it comes in living color.

But there are two fundamental conditions governing television that have tended to become obscured in the welter of words over the future of an industry on which everyone is an expert.

First, the broadcaster receives free of charge, a publicly owned channel that can be a veritable gold mine—a source of gross income running into millions of dollars a year. In exchange for this grant it is his responsibility to use that facility in the best interests of the people. Yet that responsibility has not been properly accepted.

Second, the Government, through the instrumentality of the Federal Communications Commission, should assure that television channels actually are employed as broadcasters, in order to obtain their licenses, promise they will be used. To give away a public treasure and then be indifferent to how it may be abused amounts to an abdication of government. Yet this is what has happened in TV.

Much of the growing argument over television's shortcomings and accomplishments suffers from a common weakness: too many people are speaking from prepared positions. The defenders of the status quo are erecting a wall of publicity handouts to conceal the problems which traditionally they have been loath to face; the reformers are convinced that a living room poll of their intellectual acquaintances provides the answers for the medium's future. Not until the hard facts are spelled out dispassionately can one achieve a realistic assessment of television as it is and as it might be.

At the outset it should be noted that, while television is a business, it is not like any other business. Of course, video must make money but at the same time it must perform a public service. Unless television rests on a firm and realistic economic foundation, it simply will be unable to offer the alternative types of programs that should accompany the more popular mass wares.

Inherent in an appraisal of television is the role of the American public. In this respect TV shares a problem common to all media catering to large segments of the population. Many people—a large majority—do not see the need for keeping abreast of the vital issues facing the world; unfortunate and undesirable as it may be socially, there are millions who do not yearn for education or uplift. Broadcasters often have been accused of underestimating the American intelligence; but reformers often have been just as guilty in overestimating it.

American television is not unusual in this respect. For many years in Great Britain there was only one television service—the noncommercial British Broadcasting Corp. In terms of cultural objectives its performance was unique; free from the competitive pressures of the marketplace, it could pursue the loftiest of goals. Three years ago there was inaugurated a commercial, advertising-sponsored TV network with a high proportion of typically American offerings. The popular wares have run away with the majority audience in the British Isles.

It is the same story in many another country—Japan, Canada, Italy, Australia. Most people most of the time do want to be entertained.

But where the television industry became sidetracked was in its decision to allow the doctrine of "giving the public what it wants" to obscure its companion duties and obligations to the viewing public.

Surely, television should be free to entertain and sell goods or the big shows enjoyed by many will become impossible. But, as part of its pledge in accepting a license, the television station must accept its share of the awesome job of elevating the public's awareness of major issues, of slowly inching forward toward a higher cultural level, of making sure neither the medium nor its audience succumbs to a state of stagnation.

In television's case this obligation to pursue balance is not theoretical. One of the engineering shortcomings of television has been that its place in the spectrum was restricted to a limited number of channels. There is not enough room on the air for all who might wish to try their hand at broadcasting; this explains, for instance, why New York does not have an educational channel. In short, the active broadcaster occupies space that is in scarce supply and may be sought by others.

Despite the uproar over quiz deceits, dubious commercials and the need for reforms, it should be recognized that TV has done good things. Edward R. Murrow's famed program on the late Senator Joseph R. McCarthy was a major aid in restoring national perspective in an era of hysteria; the Columbia Broadcasting System's recent study of birth control was a first-class illustration of arousing the public to think about a touchy issue.

One of the great services performed by television in the public affairs area, of course, is the medium's ability to provide a graphic and personalized view of major events, such as the recent trip of Premier Khrushchev to the United States. The power of the medium to make constructive contributions should not be minimized.

The criticism of television is that this power has not been used as it should be. The TV networks have not fully realized that their influence can be negative as easily as affirmative. To shield 100 million people from the harsh realities of contemporary existence night after night can be a major cause of a most dangerous trend—national apathy.

As salesmen, sponsors may wish to bask in the warming radiance of happy programing that makes for coast-to-coast contentment. But if network broadcasters are to make their full contribution to the country's future, they must disturb, awaken and excite viewers to think for themselves. That is the acid test of citizenship in broadcasting. The current crisis of TV involves not so much what is on the air as what is not.

Responsibility for maintenance of balance rests in the first instance with the Federal Communications Commission, the agency established by Congress to license stations and see that the airwaves are used in the public interest.

In entertaining an application for a license, which runs 3 years, the FCC examines the character and financial qualifications of the would-be broadcaster. Detailed data on stock holdings in the station also must be listed. But when such factors are roughly equal for two applicants competing for a single license, the Commission may give primary consideration to broad promises in programing.

In the broadcasting world the matter of promises is rather cynically regarded. A station owner can swear that he is going to flood his viewing area with nothing but cultural treats and news in unlimited volume and do a fine job reflecting local interests and problems. Once he receives his license, however, he can stop worrying, insert multiple commercials at every opportunity and just flick a switch and run movies, network quizzes or whatever makes the most money. Not all individual broadcasters do, of course; some station owners are conscien-

tious community leaders. But the FCC is notorious for not asking a broadcaster whether his performance matched his promise.

The caliber of the members of the FCC admittedly is not as high as it should be. Few have the background—or have displayed much searching interest—in the broad social and philosophical aspects of administering a medium of enormous influence. The Commission is overworked and undermanned, but Congress canont escape its share of responsibility for encouraging the existence of a weak commission. There has been too much political hanky-panky surrounding the FCC.

In the absence of minimum standards, the broadcasting industry has largely functioned in a vacuum where the strongest economic forces could make the ground rules. These forces have been the sponsors and their advertising agencies. By the power of their buying dollars, they have assumed control over the content of programing, even to dictating the types of plays that could be done, actively censoring scripts and avoiding the slightest hint of controversy. All too often their concept of competition has merely meant imitation.

With a weak Government agency and strong sponsor influence the wonder is that TV did not encounter disaster long before now. Indeed, the joke is making the rounds of Madison Avenue that in generations to come Charles Van Doren may emerge as a historic figure. It was he, after all, who initiated the reform era in TV.

Plans for the improvement of television are a dime a dozen, most of them concerned with form rather than substance. Much has been made of the issue of control in TV, whether it rests with sponsors or networks. But in the last analysis the man who pays the bills always is going to exercise a high degree of control, whether he himself produces a show or someone else seeks to satisfy his taste.

Also in the present crisis of TV there has been the usual flurry of suggestions that either the White House or the broadcasting industry should appoint a citizens' committee to review TV, a neat way of using a bit of window dressing to defer action on serious problems. Advertising-sponsored television in London also has been suggested as a model (but even the British have not elected to do away with the middle commercial).

It must be recognized that there always will be certain types of programs essential to a well-rounded schedule that may not appeal to advertisers. It is in this area that the networks have been primarily remiss. If sponsors are reluctant to offer penetrating news shows, plays of controversy and discussions that may offend, then it becomes the task of the broadcaster to take up the slack and assure the social validity of television's output.

The job confronting both the networks and the FCC is to preserve what is good in the present system while laying the groundwork for continuing improvements.

Surely, the FCC already has the legal authority to ask a broadcaster to demonstrate that he did on the air what he said he was going to do. If there is a wide gap between promise and performance, then renewal of his license should be held in abeyance until the situation is clarified. Once it was established that a broadcaster really risked his franchise if he did not keep his pledge to the Government, there would be a basis on which meaningful self-regulation could function.

Such a policy of weighing performance against promise would not involve censorship or dictation of television content. Programing needs never can be put in a bureaucratic straitjacket. All the FCC would do is demand that a broadcaster actually meet those standards that he set up for himself.

The second step is to require the networks, as the primary sources of programing, to set forth in advance what they think is a desirable diversity of programs for their evening schedules. In other words, they should take it upon themselves to draw up a blueprint of programing intent that would be known and understood by sponsors, station affiliates and viewers.

It is a tradition of advertisers that, once they know what a medium's regulations are, they will conform. If the networks can summon up enough courage to let the world know who is boss, in fact as well as publicity release, then sponsor dominance will begin to ebb.

But the networks at the same time must face up to an unpleasant yet important fact. If they are to perform a public service within the true meaning of the Federal Communications Act, then at some point there is going to be a limitation on how much profit they can make.

Actually, the future of television constitutes a genuine challenge to the resiliency of the free-enterprise system. The test that lies ahead is whether the profit motive can survive without compromising cultural values that are just as vital to a well-rounded society. What appears tomorrow on television's 21-inch screen is not a narrow matter of electronics or show business; it also will be a reflection of democracy in action, one way or another.

[From the Washington Post, Apr. 7, 1960]

FCC STUDY OF PAYOLA IS FAR FROM CONCLUSIVE

(By Lawrence Laurent)

One thing about the preliminary results of the Federal Communications Commission's study of "payola": It will please and it will sadden just about everyone. "Payola" figures were released this week, for the first time, by FCC Chairman Frederick W. Ford in a speech before the National Association of Broadcasters.

Now, the image merchants can go to work. Both sides can make an effective argument. It all depends on how one chooses to interpret the figures.

The broadcasters can proclaim that most of the stations are blameless. Chairman Ford said that 2575 (59 percent) stations claimed that "no payola in any form was found in connection with the station's operation."

Ford also gladdened broadcasters by summarizing:

"Thus, 4,131 or 88 percent of the radio and television stations on the air stated in effect that they either received no 'payola' or it was limited to free records."

Before any cheering begins, however, there is the other side to Ford's report: "This leaves 515, or 11 percent of the stations on the air, in which the station or its employees had received cash or other consideration for broadcasting material without the required sponsorship announcement having been made."

You may be certain that many will be shocked to learn that 515 stations have been a party to violations of section 317 of the Communications Act. The number (515) is large even if the percentage (11) is small.

For many years, it has been the practice of the FCC chairman to go to the broadcasters' conventions and to assure each licensee that the future will be happier. Ford observed the custom at the close of his speech:

"In summary, the public can be assured that 'fixed' quiz shows are a thing of the past, and actions are in process which will prevent their recurrence.

"'Payola,' or as it is more technically known in broadcasting, the failure to announce the sponsorship of material being broadcast, has been symptomatic of a certain degree of laxity of licensee responsibility. There is reason to believe that the exposure of this practice by the Harris committee (the Committee on Legislative Oversight), and the proposed actions now underway, can give the public assurance that it will no longer be a part of the broadcasting scene."

Taking Another Look at Grain Storage Costs

EXTENSION OF REMARKS

OF

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. SHORT. Mr. Speaker, Members of Congress who have been carrying on grain storage investigations during the last few months, it seems to me, have been more interested in making headlines, and in uncovering a few spectacular instances of profits, rather than trying to dig up the true facts of our entire commodity storage program. It seems rather peculiar that in the carrying out of the so-called investigations, those in charge never saw fit to call in representatives of the grain storage industry.

It seems to me that if not direct, at least implied criticism was leveled at the Department of Agriculture for the grain storage rates that were in effect. The Department has carried out a very comprehensive investigation into the question of the cost of providing grain storage and has recently announced that it is their intention to reduce rates on future grain storage agreements. It seems real interesting to me that some of the first ones criticizing the Department for considering rate reductions are some of the very people who implied that rates were too high only a very short time ago.

Mr. Speaker, I ask unanimous consent that I be allowed to place in the Appendix of the RECORD, a news release I prepared on the subject of grain storage, and released from my office on April 4.

WASHINGTON, D.C.—Recent developments indicate that some Democrats interested in making headlines have stirred up a hornets nest among farmers and grain dealers that will unquestionably have political repercussions.

One presidential aspirant and one Congressman thought they saw an opportunity to make some political hay by carrying on an investigation of the Commodity Credit Corporation grain storage program. They had discovered some instances of generous profits and hoped to point an accusing finger at the administration of the CCC which is the Government Corporation charged with the responsibility of safely storing the huge stacks of grain surpluses now accumulated under the grain price support program. So sure were they that all was not well with CCC that they went ahead with their investigations, making headlines, and thinking that the American public would be favorably impressed. It's fair to assume that most citizens were disturbed at what the limited investigations uncovered. What was not dis-

closed was that there are thousands of elevator operators who are not necessarily reaping undue profits from storing Government-owned grain. No attempt was ever made by the investigators to meet with representatives of the grain storage industry. No evidence has been uncovered that the vast rank and file of storage people are enjoying undue profits at the expense of Uncle Sam.

It must be remembered that storage rates have of necessity been set at a rate to encourage construction of grain storage facilities. Faced with the responsibility of preserving the quality of all grain falling into Government ownership under the working of the price-support program, CCC has had no choice about setting rates and occupancy agreements that would assure adequate storage facilities. Since 1956, the Government has put up no storage facilities of its own due to a mandate from Congress that commercial facilities rather than Government owned should be used. There has been a natural reluctance on the part of grain handling people to make large investments in grain storage facilities when no one knew for sure how long our present price-support program would last. Presently almost every proposed revision of farm legislation contains features that would reduce surpluses rather than allow further increases. I believe it is a true statement that most country elevators in North Dakota somewhat reluctantly got in the business of storing grain for the Government.

In the normal course of their business, but later under a spotlight from the Democrat-inspired grain-storage investigations, the CCC set out in March 1959 to reevaluate the storage rates and agreements in effect. This is their responsibility and a part of the job of taking a new look from time to time at the uniform grain-storage agreement entered into between the USDA and the storage people.

After a comprehensive investigation of the cost of providing or constructing grain-storage facilities and their maintenance and operation, CCC decided to reduce the present rate of 16 cents per bushel per year to 13 cents. Country elevator people were immediately up in arms, as well as farmers who reseal some grain in their own granaries. The 16-cent rate is not a windfall either to farmers or small elevators even if it does happen to be rather profitable to some large storage companies. The USDA, however, hesitated to establish different rates for different facilities or different areas because the cheapest storage would have to be given preference at all times, as required by the General Accounting Office. This would channel grain out of small elevators or farm storage any time a terminal had space available.

Democrats are now trying to place the blame for all this on USDA. In an attempt to discredit the United States they got themselves in the position of criticizing CCC storage rates. Now when CCC attempts to revise rates downward in accordance with pretty general feeling about storage costs and a thorough survey of the industry, the Democrats are attempting to reverse themselves. One Congressman has even gone so far as to introduce legislation that would prevent CCC from lowering storage rates. The farmer's interest seems to have become secondary since he would benefit from reduced rates on grain he stores in his local elevator and puts under CCC loan. Grain-storage representatives will meet with USDA officials shortly to iron out final details of a new grain-storage agreement.

American Slovaks Request That Slovakia Be Included in U.S. Public Law 86–90

EXTENSION OF REMARKS
OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. FRELINGHUYSEN. Mr. Speaker, the following speech appeared on March 23, 1960, in the Katolicky Sokol, official organ of the Slovak Catholic Sokol:

AMERICAN SLOVAKS REQUEST THAT SLOVAKIA BE INCLUDED IN U.S. PUBLIC LAW 86–90

(The following keynote address of Joseph G. Prusa, president of the Slovak Newspapermen's Association of America and supreme secretary of the Slovak Catholic Sokol was delivered on Sunday, March 20, 1960, at the 21st anniversary celebration of Slovak Independence Day at the Holy Trinity Parish Auditorium in Perth Amboy, N.J.)

We are gathered here today to celebrate the 21st anniversary of Slovak Independence Day. In order to fully understand the significance of this day, let us examine the historical facts. March 14 is known as the Day of Slovak National Resurrection. The Slovak Parliament was elected on December 18, 1938, according to the laws of the Czechoslovak Republic as a representative body of political sovereignty with legitimate rights to execute the will of the people in a federated republic.

On March 14, 1939, Dr. Emil Hacha, then President of Czechoslovakia, called the Slovak Parliament—which Parliament unanimously proclaimed the Slovak independence.

It should be noted that Slovakia had several political parties and that their duly elected representatives to the Parliament unanimously voted for an independent Slovak Republic.

Let us not forget that the Slovak Republic was not the creation of World War II, because when this war started, the Slovak Republic was already in existence.

The Slovak nation, with its many struggles and sacrifices in the past thousand years, proved to the world that it is worthy of freedom and independence.

On Monday, March 14 at 12 o'clock noon, one of the most significant events took place in Washington, D.C., which in my opinion is the turning point in the crusade for the liberation of Slovakia and its long desired independence.

Upon the suggestion of Mr. Philip A. Hrobak, president of the Slovak League of America, and the cooperation of Congressman MICHAEL FEIGHAN, the Chaplain of the House of Representatives invited Rt. Rev. Abbot Theodore Kojis, O.S.B., of Cleveland, Ohio, to open the deliberations of the Lower House of Congress with a prayer.

In this opening prayer, Abbot Kojis beseeched the Heavenly Father, the God of mercy, to mitigate the sufferings of all enslaved victims of brutal communism, and in particular, on this solemn occasion of the 21st anniversary of the proclamation of Slovak independence. He implored Almighty God to grant the same blessings of freedom to the Slovak nation as He bestowed upon the United States of America, so that Slovakia, likewise, could have a government of the people, by the people, and for the people. This invocation appeared on page 5037 of the March 14, 1960, CONGRESSIONAL RECORD.

I was very happy to read that among the first Members of Congress to respond to this invocation of Abbot Kojis was his own Congressman, the Honorable CHARLES A. VANIK, an American of Czech descent from Cleveland, Ohio, who made the following declaration:

"Mr. Speaker, I am pleased to inform you and my colleagues that the prayer opening today's session of the House was delivered by a distinguished resident and religious leader of the congressional district which it is my honor to represent. Serving as today's guest chaplain, the Right Reverend Theodore G. Kojis, O.S.B., abbot of St. Andrew's Abbey in Cleveland, Ohio., represents the Slovak community of America, which today commemorates the 21st anniversary of the proclamation of Slovak independence.

"Abbot Kojis' prayer was offered as an inspiration of hope and courage to Slovaks behind the Iron Curtain whose misfortune and enslavement are a constant reminder to freedom-loving people everywhere of how precious is our liberty.

"We cannot take our democracy for granted. We need only look around the world and those regrettable instances where sovereign peoples embraced an ideology only to find that they surrendered their freedom and lost their national integrity."

It was indeed a wonderful moment and a great historical day, when we could read in the CONGRESSIONAL RECORD on page A2221 words of praise from our American Congressman of Czech descent, who is acknowledging the commemoration of the 21st anniversary of the proclamation of Slovak independence.

This should give us an impetus to take cognizance of what our friend, the Honorable Congressman MICHAEL A. FEIGHAN, of Cleveland, Ohio, said at the commemoration of Slovak Independence Day last Sunday, which is registered on page A2262 in the CONGRESSIONAL RECORD of March 14.

I wish to quote especially the paragraph in which Congressman FEIGHAN stated: "The 86th Congress enacted the Captive Nations Week resolution which is known as Public Law 86–90. This Public Law 86–90 is a public declaration of American foreign policy and intention toward all the nations and people held in Communist bondage. This declaration of intention states simply and clearly that the United States recognizes the right of all these submerged nations to their national independence. It is imperative that President Eisenhower make certain that the Russians understand that we mean business by the terms of this resolution. He can do this best by challenging the Russians to permit free and independent elections in all the captive nations, but such elections to be under United Nations' supervision. Such action on the part of President Eisenhower will put into sharp focus the basic and fundamental cause of world tension."

We agree wholeheartedly on this 21st anniversary of Slovak Independence Day with the firm stand of Congressman FEIGHAN. However, in all due respect to Public Law 86–90, which he mentions as a public declaration of American foreign policy and intention toward all nations and people held in Communist bondage, it is time that we raise our voices and ask our President and the Members of Congress, why the Captive Nations Week resolution did not include the Slovak nation as a separate and distinct nation, as Congressman FEIGHAN stated on March 14.

It is an established fact that the Slovaks are a separate nation and have their distinct ethnic origin in the family of Slavonic nations, which is recognized even by the present Communist government of Czechoslovakia. We should, therefore, raise this important issue especially now, just before the 1960 census, which also recognizes the Slovaks since 1910 as a separate and distinct nation.

A few years ago the Honorable Congressman MELVIN PRICE, of Illinois, presented a

House resolution to the Foreign Relations Committee in which it was requested that Slovakia be granted a right to free elections under the supervision of the United Nations. I wonder what happened with this important resolution?

I feel it is time that we as American citizens of Slovak descent should take immediate steps to forward a resolution to President Eisenhower and to the Members of the U.S. Congress asking that Slovakia be recognized as an independent and distinct nation, and be placed on the roster of the Assembly of Captive Nations.

Permit me to state further the fact that U.S. Senator THURSTON M. MORTON, of Kentucky, on the occasion of this 21st anniversary of the commemoration of Slovak Independence Day, as chairman of the Republican National Committee, issued the following statement:

"The inherent right of all people of every nation for freedom and independence has been endowed to civilized human beings by God since time immemorial.

"It is according to this right that the Slovak nation commemorates this date which is an important day in their struggle for freedom and independence. The Republican administration wholeheartedly supports the desire for freedom and self-determination of all nations now deprived of this most cherished ideal; the freedom which separates the civilized from the slave.

"The ultimate objective of our administration is, and will be to continue to uphold this determination that the Slovaks shall once again take their rightful place among the society of free nations in a free world."

After reading these important statements, I believe it would be more than proper at this time to petition the two Congressmen from our State of New Jersey, namely, Hon. PETER FRELINGHUYSEN and the Honorable GEORGE M. WALTHAUSER, who greeted Abbot Kojis during his visit to the House of Representatives to have the Slovak nation included in Public Law 86-90 and thus make this 21st anniversary of Slovak Independence Day as the most outstanding event in the present plight of the Slovak nation for its freedom and recognition, and, above all, the God-given right of independence.

The Slovak state was created from American ideals. It was a democratic state, on the basis of equal rights to all people.

Inasmuch as the Slovak nation is at present under Communist domination, American Slovaks as the descendants of that noble nation with a rich cultural history of over 11 centuries, have assumed the responsibility to speak and act for it in the free world.

Slovaks will never give up their right for an independent state and March 14 will always remain a most solemn and memorable day in their history.

Resolution of the Franklin County Medical Society

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the Franklin County Medical Society in Massachusetts concerning health legislation:

Whereas the current session of Congress will see renewed and crucial drives for the passage of the Forand bill (H.R. 4700) or similar health legislation the result of which will bring another large segment of our population under centralized bureaucratic control; and

Whereas such legislation seriously undermines the responsibility and integrity of the individuals; and

Whereas such legislation will have an unpredictable financial impact on the social security program, bring about increasing Government intervention in the lives of the people, and in itself is a political approach to a nonpolitical problem; and

Whereas the State of Massachusetts has in operation an adequate medical care plan for public assistance; be it

Resolved, That the Franklin District Medical Society unanimously reaffirms its belief in the democratic ideal of the value and the future of the individual, and its support of voluntary insurance systems; and be it further

Resolved, That the Franklin District Medical Society will study and support, where merited, local and individualized health programs designed to lighten the financial load on the older members of our population, a load mostly unforeseen a generation ago before the rises in costs of services and medicines.

The Dangerous and Unjustifiable Common-Situs Picketing Bills H.R. 9070, H.R. 9100, H.R. 9089, H.R. 9123, H.R. 9140, H.R. 9175, H.R. 9373, and All Other Identical or Similar Bills Now Pending Bring to Life Again and Would Make Legal Secondary Boycotts

EXTENSION OF REMARKS
OF
HON. GRAHAM A. BARDEN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. BARDEN. Mr. Speaker, the evils inherent in H.R. 9070, H.R. 9100, and all of the other pending so-called common-situs picketing bills, have been so smoothly glossed over and their true implications and objectives so effectively concealed that I, as chairman of the Committee on Education and Labor, feel it vitally essential that an accurate analysis and discussion of the so-called common-situs picketing bills, H.R. 9070, H.R. 9100, and other pending bills of exactly the same or similar language, is timely and necessary.

You may have been told or you may have heard that all H.R. 9070 or H.R. 9100 and these other pending common-situs picketing bills do is to guarantee the right of a union to engage in a primary strike at the site of a construction project. You may have been told or you may have heard that the Supreme Court decision in the Denver Building Trades case makes it illegal for a union to engage in a primary strike at the site of a construction project and that the enactment of H.R. 9070, or H.R. 9100 or one of the other pending common-situs bills, is necessary to overrule that decision.

Neither of these assertions is correct. Primary strikes are not prohibited in the construction industry under existing law. Perhaps I should explain here that a primary strike is one in which a union strikes the particular employer with whom it has a labor dispute. Nor did the Supreme Court in the Denver Building Trades case hold that primary strikes are illegal in the construction industry. What the Supreme Court did hold was that when the building trades unions picketed contractors and subcontractors on the construction site, other than the particular subcontractor with whom they had the dispute, in order to cause the other contractors and subcontractors to cease doing business with that subcontractor, they thereby engaged in secondary boycott activity in violation of section 8(b)(4) of the Taft-Hartley Act.

What then is the purpose of H.R. 9070 and H.R. 9100 and the other so-called common-situs picketing bills. The purpose is to legalize secondary boycotts at the site of building construction projects by permitting a union which has a labor dispute with one building contractor to strike and picket all other contractors and subcontractors merely because they happen to be working on the same building project and without regard for the fact that neither they nor their employees are involved in such labor dispute.

Under section 8(b)(4)(B) of the Taft-Hartley Act, the harassment of contractors and subcontractors on a construction project by a labor union with whom they have no dispute, in order to force them to cease doing business with a particular contractor or subcontractor with whom the union does have a dispute, is as the Supreme Court held in the Denver Building Trades case, unlawful secondary boycott pressure against neutral employers and their employees.

A basic purpose of section 8(b)(4)(B) is to protect neutral employers and their employees from harassment by a union, with whom they have no dispute, and whose object in such harassment is to force or require such neutral employers and their employees to cease handling, transporting, or otherwise dealing in the products of and to cease doing business with another employer with whom the union does have a dispute. Nothing in section 8(b)(4)(B) restricts the right of a union to engage in a primary strike against the particular employer with whom its dispute exists. In fact, a proviso attached to section 8(b)(4)(B) specifically states that "nothing contained in this clause (B) shall be construed to make unlawful, where not otherwise unlawful, any primary strike or primary picketing."

The enactment of H.R. 9070 or H.R. 9100 or any one of the other common-situs bills would mean that the protections from union harassment in connection with labor disputes in which they were not involved, which are contained in section 8(b)(4)(B) of the Taft-Hartley Act, would no longer be available to neutral employers and their employees on a construction project. The enactment of any one of these pending common-situs bills would mean that any union having a dispute with a particular contractor or subcontractor on a con-

struction project could legally and immediately proceed to strike and picket each and every contractor and subcontractor on that construction project even though no dispute existed between them and the picketing union. Needless to say the normal result to expect from such striking and picketing activity, would be the cessation of all construction activity on the construction project until such time as the striking union and the particular contractor or subcontractor with whom it had the dispute, reached a settlement of their differences.

These pending common situs picketing bills would legalize secondary boycott strike, picketing, and work stoppages "at the site of construction, alteration, painting, or repair of a building, structure or other work." These bills contain no definition of the terms, "construction" or "site" or any of the other terms which are used. Presumably Congress is expected to legislate in broad generalities and wait for the administrative agency and the courts to define and spell out whatever meanings they may see fit to apply to those general terms. A construction project at any particular construction site might involve construction, alteration, painting, repair or other work on a multiplicity of buildings and other facilities, for example, at an army base, or a missile launching site. A single building project might involve a geographic location encompassing 100,000 acres of land and a building program providing for the construction of innumerable buildings, towers, pipelines, powerlines and other facilities too numerous to mention. These structures and facilities might be separated from each other by distances measured in miles. The number of contractors, subcontractors and subsubcontractors might be as many as 50 or 100 or even more—the total employment might add up to thousands of employees.

The Landrum-Griffin Act already gives the building trades unions special privileges enjoyed by no other class of unions. For example, the building trades unions can enter into collective bargaining agreements with employers in the construction industry, which require that all employees must join the union within 7 days. In other industries employees cannot be required to join a union until 30 days have elapsed. This and other concessions made to the building trades unions in the Landrum-Griffin Act will, if any of the common situs bills is passed, have the inevitable result of bringing about the return of the closed shop in the construction industry. What is the need or the justification for this legislation? The construction industry industry is one of our most highly organized industries. Wages of our construction workers are among the highest in our entire industrial economy. Any construction trades union, anywhere, anytime can strike against the particular contractor or subcontractor with whom it has a disptue. That dispute can involve wages, hours, working conditions. That dispute can involve a real or an imagined grievance. Yes, the union can strike an employer with whom it has a dispute in support of a cause which is just or in support of a cause which is unjust. The scope of the union's freedom to strike against an employer with whom it has a dispute, whether that employer be in the construction business or some other industry, is broad indeed. Statistics show that in 1958, a total of 4,790,000 man days of labor were lost in the construction industry because of strikes and work stoppages.

If we enact H.R. 9070, or any one of the other pending common situs picketing bills, we will enlarge the broad scope of the legal power to strike which building trades unions, including the Teamsters Union of James Hoffa, now have to strike any building contractor with whom they have a dispute, by adding thereto a right to strike and harass all neutral contractors and subcontractors and their employees who happen to be working on the same building project as the contractor with whom the unions happen to have a dispute.

If this legislation is enacted any one of them may legally use the secondary boycott strike and picketing weapon to shut down any construction project in its entirety, including vital national defense projects, any time it suits their whim or fancy.

The Building Trades Unions contended in the Denver Building Trades case that all contractors on a construction project should be regarded as a single employer. They and other proponents of H.R. 9070, and H.R. 9100, and the other pending common situs picketing bills, attempt to support this contention by arguing that a building project is analogous to a factory with various categories of employees. This contention was refuted by the Supreme Court in its decision in the Denver Building Trades case, holding that the fact that the contractors and subcontractors were engaged on the same construction project, did not eliminate the status of each as an independent contractor or make the employees of one the employees of the other. The business relationship between independent contractors has been recognized for centuries and as the Supreme Court pointed out in its Denver Building Trades decision, is well established as a matter of law.

In many other respects the attempted analogy of a construction project to a factory operation fails to withstand close scrutiny. For example, unlike a construction project, a factory is under the ownership and control of a single employer. The employees in the various departments of the factory are all employees of the same employer and they work under a system of unified supervision and a common labor policy originating with and emanating from the office of their common employer. Most often if the factory is unionized, all of the production and maintenance employees, and not infrequently even the office employees, are all represented by a single industrial union. Thus the employees working in a factory for a single employer and represented in respect to their wages, hours, and working conditions by a single union, have a community of interest which does not exist between the highly skilled employees of one craft and the highly skilled employees of another craft each of which is represented by its particular craft union and employed by a separate employer in the construction industry.

Unlike the manufacturing industry which has become basically a mass production operation with employees of a particular factory operator generally represented by a single industrial type union, the construction industry has remained basically a craft operation where the employers as well as the employees continue to operate within the craft concept. This system of multiemployers—contractors and subcontractors—and multicraft unions has been perpetuated in the construction industry, largely and primarily because the building trades unions have so vigorously and effectively opposed and resisted all efforts to adopt the single employer type of operation which is common in the manufacturing industry. Yes, the building trades unions have always insisted upon and continue to insist upon and fight for the preservation of the multiemployer—contractors and subcontractors—type of operation which is traditional in the construction industry, and to insist, for example, that the electrical work be done by an electrical contractor and that the plumbing be done by a plumbing contractor. And the same is true with respect to other crafts. Each of the crafts has always guarded its jurisdiction over that work in the construction industry which requires its particular skills and craftsmanship. Each craft union has historically sought to preserve the identity and jurisdiction of its craft and any attempted infringement by one craft union upon the work jurisdiction of another has uniformly been met with vigorous resistance and many disputes between craft unions in the construction industry have involved such jurisdictional questions.

Indeed, it is only for the purpose of avoiding the legal restraints and prohibitions against engaging in secondary boycott strikes and secondary boycott picketing against neutral and innocent employers and their employees that the building trades unions want all contractors and subcontractors on a construction project to be considered as a single employer. For all other purposes they have always insisted and will undoubtedly continue to insist that the system of multiemployers—contractors and subcontractors—with each employer limited to the performance of that portion of the construction work which falls within the limits of his specialty, be continued and perpetuated in the construction industry.

It follows, therefore, that on a construction job each contractor, if he is unionized, deals exclusively with the craft union which has jurisdiction over the particular work which he has contracted to perform. No other contractor and no other craft union can exercise any control or influence with respect to the relationship and problems which exist between him and the craft union which zealously guards its position as the exclusive representative of his em-

ployees in regard to work jurisdiction, wages, hours, and other working conditions. That being the typical situation as it exists in the construction industry, there can be no justification for a craft union involved in a dispute with a particular contractor or subcontractor to picket and harass the other contractors and their employees who are members of and represented by other craft unions, in order to bring about a cessation of their operations and employment in respect to a dispute in which they are not involved and over which they have no control. The consequence of legalizing such harassment of neutral employers and employees would bring untold hardship upon such construction contractors and often upon the taxpayers because of the delays and increased costs which inevitably result from such shutdowns. Also the loss of employment which would ensue as a result of such tactics would impose a disastrous hardship in many situations upon the other craft employees who were not involved in the dispute.

The devastating effect which such secondary boycott harassment can have on our national defense effort is exemplified by two specific examples involving the use of such tactics at two of our Nation's most vital defense installations—Redstone Arsenal and Cape Canaveral. In 1958, the Electricians' Union had a dispute with a contractor who had a contract with the U.S. Army Corps of Engineers for the construction of substations and distribution power lines at Redstone Arsenal. On August 12, 1958, the Electricians' Union placed pickets at all of the gates leading into Redstone Arsenal and thereby brought about the cessation of construction operations of all of the other contractors and subcontractors engaged in construction at Redstone Arsenal. The Electricians' Union by the maintenance of these picket lines around the entire military base shut down the entire construction program of all of the other contractors and subcontractors for a period of 32 days even though none of the other contractors and subcontractors had any dispute with the Electricans' Union and even though they were in no way involved in the dispute between the Electricans' Union and the particular contractor with whom the Electricians have a dispute.

In 1956, the Plumbers' Union, which had a dispute with a subcontractor at Cape Canaveral, picketed the entire construction project and brought about a cessation of operations of all of the other contractors and subcontractors engaged in construction at Cape Canaveral and was able to keep the entire construction program shut down for a period of more than 2 weeks. The financial loss of one of the contractors on that project who was not involved in any dispute with the Plumbers' Union amounted to $100,000 as a result of the shutdown of his operations. Other innocent contractors and subcontractors on the job also suffered financial loss as a result of the shutdown of operations caused by the picketing of the Plumbers' Union. Several other incidents of this same type of illegal picketing have occurred at Redstone Arsenal and Cape Canaveral during the past 5 years. Needless to say, such tactics employed with respect to vital defense projects could, in the event of a national emergency, result not only in financial loss but also in endangering the very preservation of our country.

Another military installation that is of vital importance to our national defense effort is a missile launching base at Cheyenne, Wyo. Under construction at that project are nine separate missile launchers. These missile launchers are physically separated from each other by distances of 30 to 40 miles. The distance around this missile-launching base is 400 miles. The entire construction project has been let to one prime contractor and a group of subcontractors. This entire missile base construction program encompassing an area, the circumstance of which is 400 miles, constitutes a single construction project. The enactment of any of the pending common situs bills would permit any building trades union having a dispute with any subcontractor on that construction project to legally strike and picket the prime contractor and every other subcontractor on that entire project, and bring to a halt the construction work on all nine of the missile-launching bases.

Sponsors and proponents of H.R. 9070 and H.R. 9100 and the other common situs picketing bills which are pending, argue that the building trades' unions need the secondary boycott weapon which this legislation would provide so that they can protest the employment of nonunion contractors and nonunion employees who would undercut union scales of wages and union working standards. What these sponsors and proponents do not tell you is that this secondary boycott weapon has been used and would undoubtedly continue to be used to protest the employment of nonunion contractors and nonunion employees even though their wage scales and working standards equaled or exceeded those of the unions. Nor do the sponsors and proponents of this proposed legislation tell you that this secondary boycott weapon has been used and will certainly continue to be used with even greater frequency if legalized, on construction projects which are completely unionized—where every contractor and subcontractor has a contract with a building trades union and every employee is a union member. Innumerable examples could be cited with respect to completely unionized construction projects, where a dispute between a building trades union and a particular contractor or subcontractor, has resulted in such union striking and picketing all of the other contractors and subcontractors and thus causing the shutdown of the entire building project.

For example the painters union might have a contract with a small subcontractor employing six painters on a vast and completely unionized construction project covering an area of 100,000 acres and involving the construction of a multiplicity and wide variety of structures, facilities and equipment. A large number of other contractors and subcontractors and thousands of employees might also be engaged in work on the construction project—some of them working miles distant from the location where the small painting subcontractor was engaged in his functions. The dispute between the painters union and the painting subcontractor might involve a question of whether paint brushes or spray guns should be used.

If H.R. 9070 or H.R. 9100 or any one of the other pending common situs picketing bills is enacted into law, the Painters Union could legally strike and picket all of the contractors and subcontractors on that vast construction project and bring about a cessation of all construction activity.

A second example of a dispute arising on a completely unionized construction project could be one involving a refusal of the Sheetmetal Workers Union to install a certain metal product on the job because it had been fabricated at a factory that employed members of the United Steel Workers Union instead of members of the Sheetmetal Workers Union. The Metal Trades Union could contend that it was seeking to protect its own job standards and working conditions on the construction job and could legally strike and picket every contractor and subcontractor on the construction site, if any of the pending common situs bills is enacted into law.

It would be easy indeed to go on and cite a hundred examples of disputes which have arisen and could arise again on completely unionized construction projects. Such disputes could involve real or fancied grievances. The union involved in such a dispute might be 100 percent right or it might be 100 percent wrong. In either event the enactment of any of the pending common situs bills would legalize the use of the secondary boycott strike and picketing weapon by such union against every other contractractor and subcontractor working on the same construction project with the inevitable result of bringing all construction work to a standstill.

Construction is the largest industry in our Nation. The volume of construction put in place each year amounts to more than 15 percent of our gross national product. This industry accounts directly or indirectly for about 15 percent of this Nation's total employment. Construction is the laregst consumer of steel, cement, brick, stone, and gravel. In addition this industry is one of the largest users of wood, copper, aluminum, glass, and a great variety of other materials. The hauling of all these materials and fabricated products from their places of origin and or manufacture to the job sites makes the construction industry one of the largest users of transportation facilities—trucking, railroads, ships, and even airlines. Also the construction industry is one of the principal purchasers of machinery, equipment and tools—including hundreds of items varying widely as to size and cost. Seventy-three billions of dollars were expended for construction in 1959. It is estimated that construction

expenditures in 1960 will total or exceed $76 billion.

Mr. Speaker, I cite these facts so that the Members of Congress may have before them a clearer picture of what the construction industry involves and what goes into its operations and thus be able to understand more readily how closely the economic welfare of a great number of our industries and indeed the well-being of our entire national economy are interwoven with and dependent upon our construction industry.

It has been accurately stated that the role of the construction industry is to provide the physical facilities for all of man's activities—the homes where people live; the offices, factories and stores where they work; the schools their children attend; the churches where they worship; the hospitals which administer to them when they are ill; the highways, railroads, waterways, and airports necessary to their travel and transportation; the dams which control floods, aid navigation, produce hydroelectric power, and provide irrigation where needed; and the construction of all facilities and projects necesary to our national defense, including missile-launching bases, atomic and hydrogen bomb facilities, bomber bases, hangar accommodations, and airstrips. For all these and many other products and facilities esential to our national welfare and to the survival of our Nation and the free world we are dependent upon our construction industry.

Mr. Speaker, I cannot believe that the Members of this Congress will vote to enact into law H.R. 9070 or H.R. 9100, or any of the other pending common situs picketing bills. The enactment of such legislation would legalize the use of the vicious and dangerous secondary boycott strike weapon by the leaders of each of the building trades unions of which there are approximately 20. These international unions are among the oldest and most powerful unions in our country. Included among their number are the Teamsters Union and the International Union of Operating Engineers. The corruption discovered by the McClellan Committee investigations with rerespect to these two unions and some of their officials shocked the American people.

I think you should know that there are literally hundreds of thousands of Teamsters Union members working in the construction industry and it is the Teamsters who transport the construction materials to and on the construction job site. Yes, the Teamsters Union is very much in and very much a vital part of the construction industry's operations.

I cannot believe that this Congress will vote to enact H.R. 9070 or H.R. 9100 or any of the other pending common situs picketing bills which would legalize the use of another devastating weapon in the arsenal of Mr. Hoffa and the Teamsters Union—the most powerful union in this country. No, I cannot believe that this Congress could so lightly regard its sacred trust on behalf of the American people that it would enact legislation to legalize the use of the dangerous and unjustifiable secondary boycott strike and picketing weapon by Mr. Hoffa and the other leaders of the Teamsters Union, or by any other union leaders, and thereby bestow upon them the legal power to bring chaos to our Nation's largest industry, shackle our efforts to construct vitally needed facilities for our national defense, and imperil the very safety of our Nation.

The following is a partial list of the unions that would be in a position to shut down construction by taking advantage of the "common situs" provisions of H.R. 9070 and the other pending "common situs" picketing bills:

International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America.

International Association of Heat and Frost Insulators and Asbestos Workers.

International Brotherhood of Boilermakers, Iron Ship Builders, Blacksmiths, Forgers and Helpers.

Bricklayers', Masons' and Plasterers' International Union of America.

United Brotherhood of Carpenters and Joiners of America.

International Brotherhood of Electrical Workers.

International Union of Elevator Constructors.

International Union of Operating Engineers.

The Granite Cutters' International Association of America.

International Hod Carriers', Building and Common Laborers' Union of America.

International Association of Bridge, Structural and Ornamental Iron Workers.

The Wood, Wire and Metal Lathers' International Union.

International Association of Marble, Slate and Stone Polishers, Rubbers and Sawyers, Tile and Marble Setters' Helpers and Terrazzo Helpers.

Brotherhood of Painters, Decorators and Paperhangers of America.

Operative Plasterers' and Cement Masons' International Association of the United States and Canada.

United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada.

United Slate, Tile and Composition Roofers', Damp and Waterproof Workers' Association.

Sheet Metal Workers' International Association.

Journeymen Stone Cutters' Association of North America.

Unions that might be in a position to shut down construction by taking advantage of the "common situs" provisions of H.R. 9070 and the other "common situs" picketing bills:

Aluminum Workers' International Union (AFL–CIO).

Building Service Employees' International Union (AFL–CIO).

International Union, United Plant Guard Workers of America (independent).

District 50, United Mine Workers of America.

United Construction Workers, United Mine Workers of America.

United Marine Workers, United Marine Workers of America.

Industrial Union of Marine and Shipbuilding Workers of America (AFL–CIO).

International Union of Electrical Radio and Machine Workers (AFL–CIO).

A Salute to the Courier-Journal of Louisville, Ky.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. NATCHER. Mr. Speaker, beginning under the inspired guidance of Henry Watterson and continuing through the present able leadership of Barry Bingham, Mark Ethridge, and Russell Briney, editor in chief, publisher, and editor, respectively, the Louisville Courier-Journal has achieved an enviable reputation throughout the country. That the Courier-Journal has made its impact on the general public as well as fellow journalists is evidenced by its having been named on every survey as among 10 great U.S. newspapers. Once again the Courier-Journal has been honored by placing 6th in a list of 15 in a poll of the Nation's newspaper editors conducted by Scholastic magazines.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article entitled "Courier-Journal in the Top Half of the 15 Best U.S. Newspapers" which appeared in the April 4 issue.

The article is as follows:

COURIER-JOURNAL IN THE TOP HALF OF THE 15 BEST U.S. NEWSPAPERS

NEW YORK, N.Y., April 3.—What are the 15 daily newspapers in the United States "most superior for news coverage, integrity, and public service?"

A poll of the Nation's newspaper editors conducted by scholastic magazines selected the following, in order of preference:

1. The New York Times.
2. The Christian Science Monitor.
3. The Milwaukee Journal.
4. The St. Louis Post-Dispatch.
5. Washington Post and Times Herald.
6. The Courier-Journal.
7. The Wall Street Journal.
8. Atlanta Constitution.
9. Chicago Tribune.
10. Des Moines Register.
11. The Kansas City Star and Times.
12. The Baltimore Sun.
13. The Miami Herald.
14. Chicago Daily News.
15. Los Angeles Times.

The poll was conducted in connection with a special issue on "How To Read Newspapers," published annually by Practical English, one of the scholastic magazines for high school students.

The poll was taken in two parts, the magazine publishers said. First, a list of all newspapers in cities with 200,000 population or more was sent to all editors of daily newspapers in the United States. Editors were asked to check the 12 newspapers that, in their opinion, were "most superior for news coverage, integrity, and public service." Room was allowed for write-in votes.

A "runoff ballot" was then drawn up, including newspapers that polled at least 12 votes. Write-in candidates with two or more votes were also included. More than 335 editors voted in the final runoff ballot.

The results of the runoff showed such a close vote that 15 newspapers were chosen instead of 12.

Forty-four Undergraduates of Groton School Visit Washington

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. AUCHINCLOSS. Mr. Speaker, on Sunday, March 20, 44 undergraduates of Groton School, Groton, Mass., accompanied by two of their masters, came to Washington at my invitation and I arranged for them to visit various departments of Government during the following 2 days, Monday and Tuesday. The object of their visit was to learn something about their Government in operation at firsthand.

Monday morning, March 21, they visited the White House and afterward went to the State Department where they listened to a discussion of State Department activities by the Secretary of State and others. J. Edgar Hoover greeted them at the Federal Bureau of Investigation and at noon they arrived at the House of Representatives where they witnessed from the gallery the activities of the session. On that afternoon they went to the Department of Health, Education, and Welfare and Secretary Arthur S. Flemming talked to them about the work of his Department. On leaving HEW they went to the Smithsonian Institution and Dr. Leonard Carmichael, the Secretary, explained the work that was done there and they took a tour of the buildings. That evening at dinner at the Capitol Hill Club, they listened to remarks on politics by the Honorable JOSEPH W. MARTIN, JR.

On Tuesday morning, March 22, they met with the Honorable Robert B. Anderson, Secretary of the Treasury, at the Treasury Department, and he explained to them something about the work that is done there. Later they visited the Department of Labor and listened to talks about the Department activities given by those in the high echelon in that Department. At 12:30 they had luncheon in the Speaker's dining room and listened to a very inspirational address by the Speaker of the House, the Honorable SAM RAYBURN. He was followed by a talk on Foreign Affairs by Congressman WALTER JUDD. After lunch they went to visit the National Gallery of Art where they were met by Mr. John Walker, the Director, and were taken on a tour of the gallery.

These young men were very much impressed by the work being done by their Government and I am pleased to append letters I have received from them, which explain themselves:

MARCH 23, 1960.

DEAR MR. AUCHINCLOSS: I can't tell you what a grand time I had here in Washington. I tried to count the number of things you did for me and the rest of my fellow "Grotties." It was a real sacrifice on your part and I'm gratefully indebted to you. To me the most interesting thing I saw was the 2d session of Congress; but the highlight of my whole visit seems to have been the dinner at the Speaker's dining room. I was impressed by the two speeches, and above all, by your tactful and friendly hospitality. Thanks an awful lot, Mr. AUCHINCLOSS, I had a wonderful time.

Best regards and with great respect,

L. KIM BIGHAM.

SALEM, CONN.

MARCH 24, 1960.

DEAR MR. AUCHINCLOSS: It is really impossible for me to thank you enough for providing us with such a very wonderful trip. Groton is uniquely lucky to have a graduate such as yourself who very generously provides its boys with such a thrilling supplement to their education.

The trip was especially interesting for me because I think that I would like to make the service of my country in the Foreign Service and maybe even someday in elected office if I am lucky. It is for this reason that I am greatly indebted to you for giving me the opportunity to meet great men like Joe Martin, Sam Rayburn, Mr. Anderson, Mr. Flemming, Walter Judd, and yourself. To meet, listen to, and talk with these men was an inspiring and humbling experience. Meeting these men made me realize how honorable a profession politics is and how necessary a one, too. Meeting these men also made me realize how hard a boy is going to have to work to half fill their shoes and, in these troubled times, how necessary it is for him to completely fill their shoes if the country is to go on being as great as it is today.

Again, thank you very much for a wonderful experience.

Very respectfully and sincerely,

CHARLES MAGOWAN.

THURSDAY, MARCH 24, 1960.

DEAR MR. AUCHINCLOSS: It is my great pleasure and honor to thank you for the wonderful trip you gave us to Washington. Living in Baltimore has afforded me with the opportunity to see Washington often. Yet I can honestly say that I have never had a trip or tour of Washington the like of yours.

Again it is my pleasure to repeat the fact that I am a Democrat and have rather strong feelings on the subject of party allegiance. I was quite impressed by our Republican speakers but have to admit that the high point of the trip was when the Speaker gave us a short talk. The second high point was Mr. JUDD's speech which was certainly a masterpiece of thought.

I do hope in the years to come that I will be able to stop into your office when I am touring the Capitol. Of course this reflects the idea that you will be reelected. I certainly would vote for you.

Again many thinks for all your trouble. It was well appreciated by all.

Sincerely yours,

GILL COCHRAN.

THURSDAY.

DEAR MR. AUCHINCLOSS: I just wanted to drop this note to again thank you for everything you have done to make this Washington trip possible for us. The trip just couldn't have been more of a success. But I still am amazed at the time and effort you must have spent arranging all those appointments.

Personally I was entirely impressed by the entire 2 days. Aside from the fact that I have lived in Washington for 10 years, I found out that I still had a lot to learn about this city. I think it tremendously important that more young people should be exposed to the internal structure of the Government. We should see how it operates and functions. After all, it is our Government, and if it is our Government, we should know what is going on behind those tremendous walls. We are obligated to know. Fortunately, I am lucky enough to have been included on such a trip and I only hope the other boys from Groton enjoyed it as much as I did.

Sincerely,

MICHAEL A. SARGENT.

MARCH 24, 1960.

DEAR MR. AUCHINCLOSS: I really can't thank you enough for the marvelous time that you gave me in Washington these past few days. It was my first trip to the city and it certainly will be my most memorable thanks to you. I hope I can partially realize the great amount of time and trouble that must have gone into this trip and I am fully appreciative of those things which I am aware of—namely, the pains to have arranged such a full and interesting schedule for us with your Washington colleagues and such things as renting us the bus and giving all 46 odd of us those two delicious meals. I might add that I thought those meals were probably the most informative of the whole trip for while the appointments dealt with the immensely interesting specific parts of the Government, such as finance and the Department of Health, Education, and Welfare, Messrs. RAYBURN, MARTIN, and JUDD (not to mention yourself), all gave very interesting aspects of the Nation as a whole and foreign affairs which I thought was great.

I also believe that as a result of this trip, I am beginning to understand how the Government of our country operates, something which previously I could not claim. All in all, I thank you once more for one of the most thrilling trips of my life. I really learned a lot and had a whale of a time doing it.

Sincerely yours,

JONATHAN BANGS.

THURSDAY, MARCH 24, 1960.

DEAR MR. AUCHINCLOSS: This is just a short note to thank you for all the trouble and expense you went to to show us Washington and the Government. Words are really not enough to show you how much I appreciate what you did for us. I can truthfully say that I have never been on a trip during which I had so much fun while learning so much. Also, I couldn't really say that I dislike steak or chicken too much.

Thanking you for everything.

Yours,

JOHN DUNDAS.

MARCH 25, 1960.

DEAR MR. AUCHINCLOSS: I don't know how to begin to thank you for all you did for us this week. A trip like that transforms names in a newspaper into people. You really get a feel for how the Government operates and what it's doing. It's also very amazing how simple big things like foreign policy and international finance become when you have the experts tell you about them.

I hope to go to Harvard by the Holloway plan of Naval ROTC. That might very well lead to a Government career. Who knows?

For now, all I can say is, thank you.

HERB MOTLEY.

DEAR MR. AUCHINCLOSS: I really can't thank you enough for the great time you gave us down in the Capitol. The whole thing was so much different from going on a sightseeing tour, because there you never see any of the big names in the city.

When I took a taxi out to Georgetown on Tuesday night, I sat in the car with the Representative from Tennessee. I think his name was REECE. He was really very nice because he came from Massachusetts as do I or he had gone up there a lot and we had a nice chat.

Thank you again for all the work you obviously put into the trip. It was really terrific fun.

Sincerely,

GARDNER JACKSON.

FRIDAY.

DEAR MR. AUCHINCLOSS: A thank you note seems totally inadequate to thank you for such an interesting and thoroughly enjoyable trip. Now that I'm back at home and have had a chance to look at the events of the 2 days in retrospect, I am surer than ever that it was an invaluable experience, that I will never forget. Although hardly an expert, I feel that through listening to all the learned men I met that I have a general idea of how this great country of ours operates. I know that I can't begin to thank you, but I assure you that I greatly appreciate all the arrangements and difficulties you must have gone through to have planned such an impressive itinerary. Many thanks for making my first trip to Washington such a success.

Very sincerely,

BOBBY DEVENS.

DEAR MR. AUCHINCLOSS: I am writing to thank you for the trip which you organized for us. I have never had such an enlightening 2 days in my life. The most enjoyable times were the two dinners, because of your stories and the speech which Mr. JUDD gave at the luncheon which I can remember as though I had just heard it. I now feel much more in contact with problems that the Government has to deal with, and have much less criticism of what is being done. I also have much more confidence in the Government after having met and listened to people like you and Mr. JUDD, not to mention any of the others.

Those 2 days were about the most valuable 2 I have ever had, and I can't thank you enough.

Respectfully yours,

PATRICK HARE.

DEAR SIR: I would like to heartily thank you for the wonderful time I had on the trip. It was much better to see the Government in action and not just the city of Washington in action.

Thanks again,

F. C. GRANT III.

DEAR MR. AUCHINCLOSS: Thank you very much for arranging the wonderful trip to Washington for all of us from Groton, and for everything you did for us while we were there. All the people we met were very interesting and I particularly enjoyed talking to you and Mr. MARTIN at the dinner on Monday night.

You did an awful lot for all of us and I certainly appreciate it.

Sincerely,

BRUCE EMORY.

DEAR MR. AUCHINLOSS: I can't express my appreciation for the trip you arranged in Washington. I am very thankful I didn't pass it up. Probably never again will I get such a good opportunity to see the "inside" of Washington which you gave me on the trip. It was especially valuable to be able to listen to such men as Congressman Judd and Speaker Rayburn, because I have been taking a history tutorial with Mr. Congleton on government and American foreign policy. I thought the highlights of the trip were the dinner and luncheon which you provided for us. Seldom is one exposed to as many good speakers in such a short time. It is with great gratitude that I express my thanks to you.

Sincerely yours,

PARKIE KEYES.

MARCH 26, 1960.

DEAR SIR: I will always feel indebted to you for your time and effort spent in making our trip such an enjoyable one. Without doubt, I learned more about our Government in these 2 days, than in any course on the subject in school.

I have for some time been very interested in the running of the Government. Without wanting to impose on you, I would be very thankful to you if you could give me some idea as to the possibility of getting a summer job when I go to college next year in some way connected with politics. Maybe you would tell me whom I could write for such information.

Thank you again.

Sincerely,

PAUL OFFNER.

DEAR MR. AUCHINCLOSS: I don't know how I can thank you enough for the terrific tour of Washington. All I can say is that ever since my mother took my two older sisters down in 1950 I have begged every year to be given a trip to Washington. I never dreamed I would get such a terrific trip in the end.

I am taking my second year of American history at Groton this year and plan to major in it at college. This trip did more than anything else to stimulate my interest in the subject and when I resume my studies this April I'm quite sure this trip will throw new light on many things.

I hope you are successful in the coming election as you certainly deserve to be. My grandmother, Eleanor Whitney, comes from Rumson and I'm sure you can count on votes from her family. I only wish we could vote—you would receive a certain bloc of 42 right away.

Many thanks for the wonderful trip and all the trouble you took to give us an outstanding time. The pictures arrived safely and will be exhibited to all friends, relatives, etc.

Yours sincerely,

WHITNEY LLOYD.

DEAR MR. AUCHINCLOSS: After noting the volume of mail that comes across your desk, I will try to make this relatively short and to the point.

Thank you very much for planning and hosting the terrific Groton trip to Washington. Meeting people who are expert in their fields and seeing the structural formation of our great Capital added up to an enlightening and provocative experience, which I shall always fondly remember.

The two meals (complete with great after-dinner speakers including yourself) were superb—food and thought mixed in a most gratifying manner for mind and stomach.

I left Washington realizing that an America with the will can face her problems squarely now and in the future, and will succeed in solving those problems.

Sincerely,

GEOFFREY GUND.

DEAR MR. AUCHINCLOSS: My trip to Washington with the boys will stay long in my mind as one of the very worthwhile events of my life, and I cannot thank you enough for having made it possible. It is one thing to visit the great city and view the architecture and treasure houses—anyone can do that at their leisure—but it is something else again to come face to face with the men and women who are shaping the Nation's way of life. Most Americans have no more than an occasional opportunity to meet, whether formally or informally, with the people who make up the national political scene, and are apt to get a distorted view of the type of person a politician really is. To my mind, it was quite inspirational to move from one department of government to another and meet person after person of high caliber, and the integrity and air of devotion that you and your colleagues evinced was most heartwarming. It it in this area that you have done such a great service to us at Groton. It is easy enough to expose young people to a worthwhile experience, easy to show them the books and the documents and the works of art, but it is a much more difficult thing to show them what inspires men to do great deeds and to catch them up in the same spirit. I am sure that you and Mr. Martin and Mr. Rayburn and Mr. Judd and Mr. Flemming and Mr. Anderson have left a mark, a touch of inspiration, on us that is very deep and may take some of us very far, and for this there are no thanks great enough.

Very sincerely,

CHARLES RIMMER.

DEAR MR. AUCHINCLOSS: Thank you very much for those wonderful experiences you made possible for us in Washington from March 21 to the 22d. Those memorable times I shared with my fellow Grotonians will be some of the proudest in my life. As a Malayan, I have come to a newer understanding about this country. When I return to my native land, I shall share this closer understanding and those unique experiences with my fellow Malayans.

Thank you very much again and I look forward to the opportunity of meeting you in the times to come.

Yours respectfully,

DAVID T. S. TONG.

DEAR SIR: I'm afraid that none of us who went on the Washington trip will ever be able to thank you enough or appreciate what you have done for us. The physical aspects of the trip that you permitted us to put you to—renting a bus for transportation for us for 2 days, and two most excellent and delicious meals—were impressive in themselves, but what was really more awesome and inspiring than those were mere material realities were the people and interviews you had arranged for us. Imagine. The chance to see and meet four Cabinet members and department heads, as well as two of the most important and influential persons in U.S. politics today, plus most informative and outstanding talks and interviews or briefings by such well-informed and astute men as WALTER JUDD, the department heads themselves, or if they were not available, as were the cases of the Departments of Labor and State, equally competent officials, would have been well nigh impossible to match on your own or through many other channels. One cannot overestimate the value of such talks by such men as Anderson or Flemming, or the impressions we derived from them. Of equal interest were the tour and meetings with the heads of the Smithsonian, the National Galleries, and the Federal Bureau of Investigation.

From a personal viewpoint, however, the trip was most interesting and, strangely enough, reassuring. I guess since I have been brought up in an era of materialism, payola, the strain of cold war threats, and H-bomb fears, and a world where cheating on your income tax or rigging a quiz show, do not seem to be such heinous crimes, and this coupled with a marked ignorance and a conditioned youthful cynicism about my Government did not lead me to know what to expect from it. Having returned from Washington, I now feel that I know a little bit more about my Government and how it works, and I am assured of its competence and knowledge in external and internal affairs. Furthermore, I feel now, on the basis of such men as RAYBURN'S, JUDD'S (and yours) patriotism, coupled with their personal acuteness and knowledge, that the Government is "in the right hands," regardless of whether they are Democratic or Republican, for one of the things that left a deep impression on me that you emphasized was the camaraderie that existed between the two parties and the fact that they were working for the same common goal, although they might have slightly different ideas of how to obtain that goal.

One of the things that Groton has done for me was to stress the importance of a strong and liberal foreign policy, and I was very interested and reassured to find that the State Department and men like JUDD were well aware of this, and were carrying out their views.

Again, I don't think we can ever thank you enough for the trip as a whole, or for what you might have done for us individually.

Respectfully,

F. S. CHEEVER, Jr.

DEAR UNCLE JIM: I don't know how I could possibly thank you enough for providing such a wonderful opportunity for myself and all of us to learn as much as we all did about our Government.

I thoroughly enjoyed the whole trip, and found Representative Judd, Representative Martin, and Secretary Flemming were especially good, in that order. I am sure that I learned more from those three men and from what I saw on the tour than I could ever learn from books.

Again let me say thank you for all you did for me and the others, for I certainly did enjoy every moment of it.

Yours truly,

GORDON ROBBINS.

DEAR MR. AUCHINCLOSS: We all had a great time in Washington, thanks to you. In the past I have been too lazy to look at the newspapers. Now I read them. I have a much better picture of the work which operates this country. I am getting some ideas of the work involved in campaigning, too, since my father is helping a Mr. Pope run for the House.

Thank you for such a nice trip and particularly for the pictures.

Respectfully yours,

TONY HYDE.

DEAR GRANDFATHER: I can't thank you enough for the trip around Washington, which you arranged. It is a terrific and invaluable experience for one to see exactly how our Government functions. I had been lucky enough to be a page in the House as you will remember, but even there I didn't get a complete scope of our Government with all its bureaus and departments. On a trip like this last one a person finds out just what dedicated and responsible men run our Government. All of us on the trip got a taste of Washington and her men and it was a new taste to all of us. We are all greatly indebted to you.

I remember that you were worried that the trip might not be a success. I must admit that prior to getting down to Washington, I had my doubts. The reason for these doubts was that the school was excited about the trip and looked forward to it. The boys had great expectations because the trip which you had arranged 2 years ago had been such a great success. I would say, however, that the trip lived up to and surpassed all hopes that the boys and the masters had. It couldnt' have been better.

I don't think there has ever been a boy as proud as I was during that trip. The boys were impressed with you, and were drawn to you and your humor and love of your country. I, in short, was proud that I should be related to you.

Everything around here is fine. Mother, Lee, Gail, and Parker send you all their love.

Once again I thank you.

Respectfully,

DAVID.

DEAR MR. AUCHINCLOSS: I wanted to add my thanks to Tony for the wonderful time you gave him and his Groton schoolmates in Washington. It was a splendid thing to do—they have come away with a vivid picture of our Government which will lend meaning to their reading of news, to their courses in history and Government, and to their own future role as citizens.

Tony has had an opportunity, since his Washington trip, to observe the grassroots aspect of the political picture, as we have been helping Fred Pope in his effort to have a primary in our town of Weston—he seeks the Representative nomination to Congress from Connecticut's Fourth District.

Thank you again for your kindness and generosity.

Cordially yours,

Mrs. ALBERT F. HYDE.

DEAR MR. AUCHINCLOSS: I want to say thank you so much for the truly great trip you arranged for me and my classmates in Washington. Those 2 days were about the most interesting that I have ever spent. I was also greatly impressed by the people that spoke to us. They all had something interesting to offer and they delivered their information so well. It's reassuring to know that the country is run by people like them, so thank you so much again.

Ever your cousin,

BILL SLOAN.

DEAR MR. AUCHINCLOSS: Thank you for giving us such a good time on the Washington trip. All of us enjoyed it to the full. I had realized that politics was intricate, but I hadn't known that it could be so intriguing. Visits to the various departments were especially enlightening. I thought that Secretary Anderson was the most interesting department head and JOE MARTIN seemed to be a real character. However, I thought that Senator JUDD gave a really brilliant speech—one of the very best that I've ever heard.

Thanks again for such an enjoyable and educational trip.

Sincerely yours,

JEREMY KELLER.

DEAR MR. AUCHINCLOSS: Thank you very much for your kindness to us during our visit to Washington. It was a warm and fascinating experience, and I am very grateful to you and the other gentlemen who made it so interesting. Your hospitality was almost sufficient to change a southerner into a Republican. Thank you very much again.

Sincerely yours,

GRAY TEMPLE, Jr.

DEAR MR. AUCHINCLOSS: This letter is to thank you for all you did for us on the Washington trip—the bus, the meals, the hotel reservations, and especially the Congressmen and Cabinet members you arranged for us to meet with and speak to—Martin, Rayburn, Judd, Flemming, and Anderson. I was very impressed with them, and also with what I could see of the civil rights debate in the House and Senate, which seemed to come right out of "advice and consent."

I feel that I really have a better understanding of how our Government works, how it really is our Government, and the privileges and responsibilities of being a part of it. I would appreciate it if you could send me some literature on job opportunities in Government, especially the Foreign Service.

Sincerely,

BILL PEDERSEN.

DEAR MR. AUCHINCLOSS: Somehow it always seems hard to express any kind of gratitude and thanks, and the more words one uses to try to express sincere appreciation, the less sincere the words must seem to be. So maybe the best way to thank you would just be to say thank you very much for a very wonderful 3 days in which you probably had to put up with all sorts of inconveniences. The chance to see the Government in a way that only you could make possible comes to a person like myself only once in a lifetime and I'm really grateful for that chance. The opportunity to stay in your home was something that I didn't deserve, but it was wonderful. Everything about it was the best.

Dave and I, thanks to you, flew up to New York last night, and strange as it may seem, made it in one piece. He made it to his grandmother's birthday just in time. I took your advice and went up to New Haven this morning to see Yale. Thanks again, sir, for everything; the bed, the advice, and the chance to see the Government. I hope someday to be lucky enough to see you.

Yours truly,

EMLEN HALL.

DEAR MR. AUCHINCLOSS: I want to thank you very much for the wonderful time you gave me in Washington. It was really terrific. I would never have been able to see so many important people and will probably not be able to in the future if I try to go on my own.

I stayed down in Washington a few extra days with a friend and was able to see a few extra things which we did not have time to see with the group, such as the Medical Museum and the Washington Monument. The whole trip was very thrilling.

I can't thank you enough.

Very truly yours,

JAMES BORDLEY.

DEAR MR. AUCHINCLOSS: Thank you very much for a wonderful time and a great experience. I had never been to Washington and hardly knew a thing about our Goverenment. I thought the Treasury and the Department of Labor were the most interesting. Jerry, the busdriver, told us that Ripley said, "If you spent 1 minute on every object in the Smithsonian Institution you'd spend a lifetime." Next year I hope to go down again and stay with friends and see more. Everyone had a great time and I learned a lot about our Government. I hope it'll help me in U.S. history during the rest of the year. We'll all cast our votes for your reelection.

Most sincerely,

RICHARD C. PARKE.

DEAR CONGRESSMAN AUCHINCLOSS: I want to thank you for all the hospitality which you showed our class and the sixth form while we were in Washington. The trip was not only enjoyable but was also educational. Although I had of course read, both at school and elsewhere, about the functioning of our Government, it was quite different to actually see it in operation.

It was especially interesting to me to watch the two Houses in session and to see some of the civil rights debate. I also enjoyed the speeches which you arranged for us, particularly the one by Representative RAYBURN (even if he is a Democrat.)

Thank you again for all your trouble, dinners, speakers, and appointments.

Sincerely,

BOB SPEARMAN.

DEAR JIM: My grandson, Bill Pedersen (Groton 5th Form) has just returned radiant over the grand time you gave him and all the other Groton boys. His enthusiasm was most unusual. I thought I would write you a line just to tell you that once in a while you are appreciated at your real value. Don't bother to answer this but remember you will always be welcome at our spare room (with private bath) at the above address on any trip to New York.

Affectionately,

HOWLAND AUCHINCLOSS.

Earl Hogan: A Hard-Working Congressman

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BARR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. BARR. Mr. Speaker, today I am submitting an editorial from the Lawrenceburg (Ind.) Press, which describes the activity of my colleague, the Honorable EARL HOGAN of the Ninth District of Indiana, in the location of U.S. Super Highway No. 64.

This editorial points out the fact that the Ninth District of Indiana is represented by a hard-working and dedicated Congressman, who is going to do all that he can to advance the best interests of his congressional district in our State of Indiana.

The editorial follows:

A FEDERAL SUPERHIGHWAY HERE?

Congressman HOGAN appeared before the Bureau of Public Roads hearing in Washington March 24 in support of relocating proposed U.S. Superhighway 64 substantially along the route of U.S. Highway 50 as it was originally planned. He described as a political expedient the proposal that it be shifted to enter Indiana between Princeton and Evansville, 30 miles south of the original plan, and across the Ohio River into Louisville at New Albany to tie up with such a road coming from the east and passing south of Cincinnati.

Other road and bridge elements of this area have assumed that the hearings being held and to be held are formalities only and that the Federal bureau has already determined on the southern route. To this date the Congressman appears to be the only outspoken proponent in favor of approximating the route across Indiana roughly to this area. His reasons are given in the following words:

"The matter of national defense must remain a determining factor in the location of the highway. The Crane Naval Ammunition Depot (between Bedford and Bicknell) is unquestioningly of vital importance to the defense of our country as is the availability of fast exit road to the residents of the 9th district in the event of an enemy attack. I cannot, at this point, even entertain the idea which has been propounded that U.S. 50 will be developed in the event that Interstate Highway 64 is relocated to the south. The plan of an outgoing Governor cannot be accepted as fact when it will be up to a new administration to carry out the plans projected during his fading months in office.

"Already the State has included in its current program involving right-of-way acquisition two projects involving $274,500 in interstate funds. Whether a revision of projects will allow justification of the spending of these moneys or not, I charge the very expenditure is proof of the honest intent insofar as the northern placement of this highway is concerned. I have been in Washington for less than 2 years but already I have learned how easy it is for conversation to carry six digit figures without the blink of the eye. Upwards of $275,000 still is a lot of money to me, a Hoosier, however, and I want to assure you and the other officials of the Bureau of Public Roads that the Congress will eye, with a great deal of interest, just what happens, budgetwise to these funds.

"It is my understanding that both Federal-aid interstate funds and Federal-aid primary funds are participating in the Illinois development of the highway between Vincennes and Olney (U.S. 50 route) in the sum of $1,534,149. This money was spent, undoubtedly, in good faith in connection with the interstate highway planned program. What has changed in the geographical picture of the defense potential or the economic situation that would justify a shift in the location of this highway No. 64? Believe me, the population of the communities I represent will total an equal to the city population of Evansville; 9th district residents have the same need for this fine highway outlet for their products; an equal need for a fast and direct means of exodus in the event of enemy attack and—a safe, rapid, means of transporting the defense weapons from Crane.

"Moreover, this area has too long been denied the benefits of the tax payments by its residents. For too long, 9th district residents have been paying Federal taxes with meager return. The comparative economic benefit to be derived from the northern routing of highway 64 is overwhelming. The people of this area need the highway, deserve the highway, and I hope you will see fit to allow them the privilege of having the highway."

Post Office Department, a Public Service

EXTENSION OF REMARKS
OF
HON. THOMAS F. JOHNSON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. JOHNSON of Maryland. Mr. Speaker, under permission to extend remarks in the RECORD, I include a very timely editorial, which appeared recently in the Baltimore News-Post.

There has been much discussion in regards to President Eisenhower's special message to Congress urging another postal rate increase. The point of view advanced by the Baltimore News-Post certainly merits the attention of the public.

POST OFFICE IS NOT A BUSINESS

President Eisenhower's special message to Congress urging another postal rate increase presents one of those seemingly plausible arguments which is easily demolished by facts. Let's consider the facts.

In essence the President says the Post Office is losing a lot of money. Therefore, mail rates should be raised to wipe out the loss, or at least come close.

This position, which apparently came to the President special delivery from Postmaster General Summerfield, is based on a fallacy.

It is the error of assuming the Post Office is a business. In reality, in historical precedent, and in everyday fact, it is a public service. It cannot possibly be conducted as both.

It is true it costs taxpayers money to run the Post Office Department. It also costs taxpayers money to run the White House, the Commerce Department, the Federal judiciary system, the FBI—almost every Federal activity.

The costs of such public services are taken for granted. But the costs of the postal service are labeled "deficit" and become issue.

Why? The answer is that the Post Office takes in a great deal of money, about $2½ billion a year. No other Government department produces anywhere near as much revenue. But because the postal establishment costs more to operate than it takes in, and because a law requires annual reports comparing receipts with costs, the Post Office is singled out and charged with operating at a deficit.

Postal rates actually are a form of taxes. The Post Office does not keep the money it gets for selling stamps, but turns it into the Treasury. Thus in urging a postal rate increase, the administration is seeking an indirect tax increase.

Finally, the theory that the Post Office is a business doesn't make sense. Would a business charge the same fee to deliver a message across the street as it does to handle a letter from Florida to Alaska? Would a business operate a branch office in every hamlet in the Nation, most of them losing money because of slight patronage? Would a business take on sideline jobs without remuneration, like selling duck stamps or registering aliens?

The Post Office is an essential public service, worth what it costs to operate.

Connally Reservation Upheld

EXTENSION OF REMARKS
OF
HON. ELMER J. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. HOFFMAN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Chicago Daily Calumet of Friday, April 1, 1960, evidencing the results of the poll of attorneys conducted by Representative EDWARD J. DERWINSKI, Fourth Congressional District of Illinois.

The replies stanchly support retention of the reservation as an instrument to enable our Government to maintain jurisdiction of our affairs with respect to the World Court.

The editorial follows:

CONNALLY RULE UPHELD

The hundred of readers of the Chicago Daily Calumet who wrote to their Congressmen to oppose the repeal of the Connally reservation which would deprive the United States of sovereignty in the World Court will be happy to know that their efforts were not in vain.

According to the latest information from Washington, the Connally reservation has not been repealed and will not be in danger of being eliminated for this session of Congress. The issue, created by Senator HUBERT HUMPHREY of Minnesota, is being allowed to die quietly.

The Connally reservation, it will be remembered, is a proviso in the 1945 Congressional resolution on the rights of the World Court which stipulates that the World Court may have jurisdiction over internal affairs of the United States only "as determined by the United States."

Senator HUMPHREY would repeal this vital clause, giving the Communist-dominated World Court the right to meddle in our internal affairs. The shocking aspect of this obvious betrayal of our Nation's sovereignty is that none of the Communist countries has indicated the slightest intention of doing likewise. They have, in fact, refused to do so.

A poll of attorneys in the Fourth Congressional District conducted by Representative

EDWARD J. DERWINSKI (Fourth) showed that 83 percent of them are stanchly against repeal of the Connally reservation. The East Side Lions and other local groups formally went on record against the repeal.

Their efforts, combined with those of thousands of other indignant Americans across the country, paid off. It does pay to write your Congressman. In this one instance it prevented a disgusting sellout of our country.

Washington, Lincoln, and Edison

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. OSMERS. Mr. Speaker, one of New Jersey's most dedicated and patriotic citizens is George E. Stringfellow. Although he is a longtime resident of New Jersey, his family has deep roots in Virginia going back to colonial days.

Mr. Speaker, the finest historical traditions of Virginia—deep religious conviction, sterling character, flaming independence, sacrificial patriotism, and gracious hospitality—constitute the heredity and form the background of the formative years of George Edward Stringfellow, who was born in Reva, Culpeper County, Va., son of James and Elizabeth F. (Bowers) Stringfellow.

The first George Stringfellow to arrive in Virginia came from England in the year 1720. He brought with him the family coat of arms which his American descendants valued highly.

Five of George E. Stringfellow's early forebears preached the gospel as it was taught in the theological Seminaries of the Protestant Episcopal Church. The Reverend Horace Stringfellow, who left Virginia to cope with the evils of Washington, D.C., as rector of Trinity Church, was described by Daniel Webster as "God Almighty's prosecuting attorney." Others were farmers, merchants, lawyers, physicians, and educators. Like many other early and courageous pioneering families the Stringfellows fought in their country's wars—from the Revolutionary through World War II. Many participated in various ways in the war between the States; one being one of General Lee's most daring and dependable scouts, another being an educator during the days when Virginia was known as "Military District No. 1".

Robert Stringfellow's Retreat house, near Racoon Ford on the Rapidan River in Culpeper County, Va., was, until it was burned in 1864, a gracious center of Stringfellow hospitality. Another ancestoral estate on the Rapidan has been in the family since it was built in 1832 by Thornton Stringfellow.

George Stringfellow believes that the statement "Once a Virginian always a Virginian" is a true one, if not in geography, then certainly in terms of graciousness. To be his guest in New Jersey is to know Virginia hospitality at its best.

It was with this early background of historic patriotism and tradition that Stringfellow began his productive years in New Jersey and built a modern noteworthy American career.

His outstanding achievements in business, his constructive independence in the affairs of government, his enduring contributions to civic life and to charitable and educational organizations, and his daily devotion to our fraternal activities constitute a record which is eloquent in its demonstration of his unusual qualities of leadership.

These qualities were recognized by Thomas Elva Edison, the "wizard of Menlo Park," when he appointed George E. Stringfellow manager of his manufacturing firm's Washington office and 5 years later made him general manager of the corporation's largest business in West Orange, N.J. For more than a decade he was a daily business associate of Mr. Edison. He is now vice president of Thomas A. Edison Industries of the McGraw-Edison Co. and a director of a number of nationally known corporations.

Before coming to New Jersey George E. Stringfellow married Carrie M. Fearnow, a charming and vivacious young lady of Washington, D.C., who was born in Berkeley Springs, W. Va.

Mr. Speaker, Mr. Stringfellow is past president of the New Jersey Taxpayers Association and first president of the New Jersey division of the American Cancer Society; served two terms as president of the Kiwanis Club of New York City; served two terms as president of the Chamber of Commerce and Civics of the Oranges and Maplewood; served four terms as president of the board of managers of the New Jersey Home for Disabled Soldiers; represented Kiwanis International at the United Nations; served on the board of trustees of the Central Brick Presbyterian Church, East Orange, and Elberon Memorial Church, Elberon; and was former chairman of the finance committee of the Republican Party of New Jersey.

He is currently serving as a member of the board of directors of Indiana Technical College and holds membership in a number of professional organizations. He finds time for a heavy speaking schedule. His speeches are often editorialized, receive wide circulation and many have been printed in the CONGRESSIONAL RECORD.

George Stringfellow has been the recipient of honorary degrees from various colleges in recognition of his many accomplishments: Doctor of humanities, doctor of fine arts, doctor of laws.

He received the Citizen Award for outstanding achievement in industrial statesmanship from the New Jersey Society of Professional Engineers; was made an honorary member of the New Jersey Medical Society and was the recipient of the American Cancer Society award for his leadership and work in founding and supporting the New Jersey division of the American Cancer Society; and was cited by the brotherhood committee of Christians and Jews for bringing about a better understanding among the three religious sects.

During World War II he served as a member of several important committees of the War Production Board for which he received a Medal of Merit.

Mr. Stringfellow was recently elected to honorary membership in the national chapter of Sigma Mu Sigma, an organization dedicated to faith in the dignity of man and confidence in the integrity of youth.

In May 1958, he received the 1958 Academy of Medicine of New Jersey annual Citizens Award for rendering extraordinary service to the health and welfare of the public.

While residing in Washington, Mr. Stringfellow was raised a master mason in Hiram Lodge No. 10 F. and A.M. He was exalted in Washington Chapter No. 2, R.A.M. and served as excellent high priest. He was knighted in Washington Commandery No. 1, K.T. He became a noble of the A.A.O.N.M.S. in Almas Temple.

He served Salaam Temple as potentate in 1947 and was unanimously reelected in 1948, the first potentate of Salaam to succeed himself in 43 years. He also served as imperial potentate A.A.O.N.M.S. for 1958–59.

He is currently member of Hope Lodge No. 124, F. and A.M., East Orange, N.J.; the Ancient Accepted Scottish Rite in the Valley of Trenton, Trenton, N.J.; Crescent Temple, Trenton; Washington Commandery, No. 1, K.T.; St. Quentin Conclave No. 75, Red Cross of Constantine; Crescent Court No. 65, Royal Order of Jesters, and is an active member, International Supreme Council, Order of DeMolay.

Mr. Stringfellow was elected to the Imperial Divan in Chicago, Ill., in 1949. He is an honorary member of 148 temples.

Among the clubs in which he holds membership are the Railroad Club and Kiwanis Club of New York City, Advertising Club of New Jersey, Duquesne Club (Pittsburgh), Montclair Golf Club, Montclair, N.J.

I am indebted for much of this background material on Mr. Stringfellow to Dr. Edmund L. Tink. Dr. Tink is superintendent of schools in Kearny, N.J., an executive member of the commission on higher education and a trustee of Syracuse University. Dr. Tink was appointed by President Eisenhower to the International Organizations Employees Loyalty Board and still serves on that Board. He has been officially commended by the State Department for his activities in fighting communism.

On February 11, 1960, George E. Stringfellow made an address to the Kiwanis Club of Staten Island, N.Y., on "Washington, Lincoln, and Edison." As one who had a long and close association with Thomas Edison, his remarks about Edison are particularly interesting. I ask unanimous consent to have this fine address reprinted in the Appendix of the CONGRESSIONAL RECORD.

WASHINGTON, LINCOLN, AND EDISON

(By George E. Stringfellow)

Thank you fellow Kiwanians, for your invitation to address you on Edison's birthday. This is the third time you have asked me to speak to your club. I am complimented by your invitation for a repeat performance.

Each of the 12 months in our calendar year is important. However, I think that February is one of the most important in that Washington, Lincoln, and Edison were born in February.

It was in February that Washington said, "Labor to keep alive in your breast that little spark of celestial fire called conscience."

It was in February that Lincoln said, "Let us have faith that right makes might, and in that faith, let us dare to do our duty as we understand it."

I shall mention briefly the philosophy of Washington and Lincoln and will deal more extensively with Edison, with whom it was my privilege to have been a daily business associate during the last decade of his long and productive life.

GEORGE WASHINGTON

George Washington was born February 22, 1732—228 years ago. Washington looked after the welfare of our country as a father looks after his child. He fought for and helped make our country grow strong. He guided it when it was young and gave leadership in developing the greatest form of government, in the words of Gladstone, "Ever stricken off in a given time by the brain and purpose of man."

No man in the history of the world did more for his country than Washington did for ours. He and his associates gave us a system of government which provides investors, producers, and consumers with freedom of choice and freedom of opportunity. Nowhere in the world do men enjoy as much freedom and as high a living standard as we, thanks to Washington's courage and wisdom. Washington truly earned the imperishable title of "Father of His Country."

Our forefathers bequeathed to us a system in which the productive facilities of the Nation are owned by the people instead of the Government. Our benefactors gave us a system of government that recognizes the dignity of the individual and encourages high moral and ethical standards. They gave us a system of government born of the principle that all men have the right to pursue happiness and to enjoy the blessings of liberty.

Our forefathers gave us a system of government which provides everyone an opportunity to make the most of what he has and rewards him according to his ability. They did not subscribe to the philosophy that government owes everyone a living.

Our forefathers glorified the individual, not the state, as the Communists do. They worked like Trojans to build a strong America and they roared like lions to establish and maintain freedom. They had granite in their character and iron in their backbones. They kept government the servant of the people and so must we, if we are to remain free men, and thus be worthy of our great heritage.

ABRAHAM LINCOLN

Abraham Lincoln was born on February 12, 1809—151 years ago tomorrow. He was one of the world's truly great men. He will live always in the minds and hearts of people everywhere. In his memorable Gettysburg address and in other speeches and writings, Lincoln expressed his belief in the American people and in our system of government. He never lost touch with the people and millions knew him for what he was, "Honest Abe."

Lincoln held the Nation together in the trying sixties, and thus preserved the system of government which made it possible for Edison and others to contribute not only to the progress of our country, but to the betterment of the world.

THOMAS A. EDISON

Thomas A. Edison was born on February 11, 1847, and today we celebrate the 113th anniversary of that great event.

It is generally recognized that Edison was the world's greatest inventor. How, you may ask, did Edison, a poor boy, raise the money to build and equip his research laboratory, and staff it with capable assistants.

Edison raised the money by the sweat of his brow and the exercise of his fertile brain. Edison received no subsidy from his Government, as is all too often the case today.

Edison was known as the "Genius of Menlo Park." He was asked on one occasion to define "genius." He replied, "Genius is 95 percent perspiration and 5 percent inspiration."

One of Edison's first major inventions was the universal stock ticker, which he sold for $40,000. He used much of the proceeds from the sale to build, equip, and staff his laboratory.

Edison believed in and practiced the four basic principles of management: (1) Plan, (2) organize, (3) delegate, (4) supervise.

Edison's favorite invention, the phonograph, was patented February 19, 1877. It was the most original of his 1,100-odd inventions. Having conceived the idea of recording and reproducing sound, Edison sketched his idea on a scrap of yellow paper and handed it to John Kruesi, one of his assistants with instructions, "Kruesi, make this."

A few days later Kruesi handed the inventor a queer looking contraption. Edison wrapped a sheet of tin foil around the cylinder of the device and as he turned the crank that revolved the cylinder, he spoke these historic words, "Mary had a little lamb," into a brass horn attached to a recorder riding on the tinfoil. As Edison reversed the operation of the contraption, he heard those words repeated and thus was born sound recording and reproduction as we know it today.

Edison's most widely known and used invention is the incandescent lamp which illuminates the world. As you perhaps know, radio and television are predicated upon the principle of the incandescent lamp.

If Edison had lived under a Communist state, it would have been necessary for him to have gone to the "Bureau of New Ideas of the Division of Engineering of the Office of Social Improvement" to obtain essential commodities with which to experiment in his efforts to produce the electric light and his 1,100 other inventions. It would have been necessary for Edison to have revealed his educational qualifications to the Communist bureaucrat. Having none, Edison would doubtless have been denied the use of materials for his experiments and thus we would have been deprived of the electric light and the other great inventions which Edison's genius and industry produced which have enriched the world.

If Washington and his associates had not given us our system of government, if Lincoln had not held that Government together in its most trying period, it is safe to assume that Edison would not have made his great contribution to civilization.

Ours is a great system of government. It is our duty and our responsibility as citizens to keep it intact as it was passed on to us by our wise benefactors.

If we heed the advice of Washington and Lincoln in matters of government and if we emulate Edison's industry, integrity, and initiative, the future of America will be beyond man's comprehension.

"America," said Ralph Waldo Emerson, one of the wisest of Americans, "is another name for opportunity. Her whole history appears like a last effort of divine providence in behalf of the human race."

Problem of Humane Medical Attention for a Large Segment of our Population

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. HOLIFIELD. Mr. Speaker, few people are aware of the growing problem involved in the need for health protection for the aged and unemployed people of our Nation. The problem cannot be solved by propaganda, scare slogans, or indifference. We must face the problem and solve it on the basis of facts. We must explore our capabilities for solution, both from the standpoint of economics and political possibilities. We must, and I believe we can, solve this problem within the structure of our American way of life, as we have solved many of our great national social problems. Let us study this problem calmly and objectively in the light of present facts and our past history.

By 1980, according to estimates prepared by the Senate Subcommittee on Problems of the Aged and Aging, 26 million Americans will be over 65 years of age. Eighty-five percent of them will have incomes under $2,000 a year. What private insurance companies are going to insure them adequately at rates they can afford to pay? It is doubtful that any private company can pay for all the surgical and nursing and hospital care these elderly persons are indisputably going to need.

There are, of course, a great many companies in the United States selling health insurance of protective value, and some make a special point of catering to elderly folk; but no more than about one-third of the persons over 65 have hospital insurance, most of it with inadequate benefit coverage. Private insurance companies provide splendid protection for wage earners. But the cost of insurance inevitably goes up as the likelihood of illness increases with age, and sometimes is prohibitive for those who have retired. Most of the policies can be canceled on the basis of an age limitation or after paying a stipulated maximum level of benefits.

The one practical way to provide insurance against the health hazards of retirement years is to let people pay the premiums in the form of social security taxes while they are earning wages and are able to do so. This is precisely how they now provide retirement income for themselves under the social security program, and this kind of protection is made compulsory because the lack of it would have a disastrous social impact. Those who denounce this proposal as socialistic without proposing any workable alternative are foolishly doctrinaire. They might just as sensibly oppose as socialistic the Nation's public schools, fire departments, and parks because these represent communal efforts financed through taxation. One of the

fundamental purposes for which the U.S. Government was established was to promote the general welfare.

It is a fact of record that the American Medical Association has violently resisted our present social security system ever since its inception in 1937. Today it is supported by both political parties. Although it is far from perfect, it does form the basic hope for security in old age and retirement for more than 58 million working people. At the present time 13,750,000 people have qualified and are drawing social security benefits.

The average doctor—secure in his own relatively high income bracket—refuses to consider the plight of the 22 million people over the age of 65, whose income ranges from zero to $2,000 annually. These people are no longer able to work or cannot find employment. It is common knowledge that our large industries resist the employment of individuals beyond the age of 45 or 50 years.

Even though the aged husband or wife may have a modest retirement annuity totaling $1,500 or $2,000 annually they cannot afford adequate hospitalization, surgical and medical expenses which are involved in chronic illness or major sickness. Many of these people are not eligible for social security benefits of even a meager type. This group of people are completely dependent on public or private charity.

The doctors of America will not solve this problem through blind opposition to every attempt on the part of Congress to find a solution to this growing problem. The denunciation of every legislative approach in terms of socialized medicine will not stem the tide of humanitarian sympathy and social responsibility for the millions who are unable to pay the cost of decent treatment for their physical survival.

It might be wise for the members of the American Medical Association to take a leaf from past history and remember their fruitless tactics in opposition to social security. If they want to forestall the adoption of a system of universal socialized medicine in its worst and most inadequate form, they might well support a reasonable and constructive solution.

If there is a better solution than our present formula for providing retirement annuities under the social security system, let the American Medical Association members and doctors everywhere come forward with a better plan. Their suggestions to date have proven inadequate to meet the humane problems involved. Let me sound a note of solemn warning.

Under our system of Government you cannot ignore the just and humane needs of a large segment of our society for a long period of time. Our great system of mechanized industry has proven its ability to produce goods and services in such an abundance as to meet tremendous and abnormal needs in times of war. It must be called upon to produce the relatively smaller needs to conserve and preserve human values in times of peace.

Thomas H. MacDonald

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. FALLON. Mr. Speaker, transportation, the movement of people and goods, has always played a tremendously important part in human progress. The means of transport have helped to fashion kingdoms, and highroads have fostered freedom in many countries—including our own.

April 7, 1960, marks the third anniversary of the death of a great roadbuilder. Thomas H. MacDonald was almost unknown to the people of this country yet they are perhaps as much indebted to him as to any nationally known figure in our American history. For 34 years Thomas MacDonald headed the U.S. Bureau of Public Roads, which administers the program of Federal aid to the States for highway construction. His imaginative foresight and strong but selfless leadership are truly reflected in the vast highway transportation that today provides the sinews of our national economy, the arteries of our national defense.

When Federal aid for highways was initiated in 1916, we needed a man of rare ability and varied achievements to envisage and formulate our road patterns for the future. From all over the country recommendations pointed toward one man—Thomas MacDonald, then head of the Iowa State Highway Commission. He was appointed Chief of the Bureau of Public Roads in 1919. Serving consecutively under 7 Presidents and 17 Congresses, Mr. MacDonald epitomized the ideal public servant, forceful yet cooperative, visionary yet practical, nonpartisan and completely dedicated to a career of service which embraced the welfare of the whole people. With rare insight he proclaimed that improved highway transportation was not an end but a means, inseparably linked with our national economy, our social and cultural well-being—our very way of life.

When Thomas MacDonald began his long and unrivaled career, the plan of Federal-State cooperation was an untried venture, without form or precedent. A man of lesser wisdom might have sought to mold the new program directly, by fiat from Washington. But not Mr. MacDonald; with an unerring sense of the future he immediately turned to our State highway officials, acting through the American Association of State Highway Officials, in shaping and developing Federal-aid procedure.

At a time when the concept of a highway system was tenuous indeed, when local views were prevalent, Thomas MacDonald set us upon a course befitting the highway needs of a great nation. During his many years in office, he consistently pursued this broad pattern of cooperative effort and focused his extraordinary vision on the national implication of highway policies. His and our reward has been the unparalleled development of 3.5 million miles of interconnected roads and streets, spanning a continent.

Mr. MacDonald was a man who believed in group rather than individual development and decision, and while he set his goals high and urged others to go along, yet he recognized the will of the majority, the need for the realistic approach. Under his leadership the relations of the Bureau of Public Roads and the State highway departments came to be widely recognized as an outstanding example of harmonious, productive intergovernmental teamwork.

Reflecting Mr. MacDonald's role, highways and highway transportation have become so essential to our well-being that this service ranks with such fundamental undertakings as national defense, education, and the maintenance of law and order. Indeed, these basic functions are closely linked with highway transport.

When Mr. MacDonald took office in 1919, Federal-aid authorizations amounted to $50 million for the year. When he retired in 1953 the amount had increased tenfold, to $500 million. During his 34 years as head of the Bureau of Public Roads more than $6 billion of Federal aid for highways was authorized; matched 50–50 by the States, the $12 billion worth of highway networks which resulted represent one of the most valuable assets the Nation possesses.

It is a fitting tribute to Mr. MacDonald's high ability and integrity that not once, through changes of Government administration and subject to pressures from widely divergent interests, were Federal highway expenditures or the policies governing their use ever seriously questioned.

He was not an acclaimed public figure, nor did he wish to be. In his view the States were the prominent part of the cooperating team; the organization he headed more important than its individual members, including himself. But in the highway transport field, among legislators, officials and leaders in the industry his competence and vision commanded the utmost respect and admiration.

To Thomas MacDonald successful highway development depended as much upon research and planning as upon construction, and under his leadership the Bureau of Public Roads ranked high in every phase of research. He sought not only better ways of building roads, but the development of the most efficient and economical highway transportation for the use of the public as a whole. He recognized, too, the importance of driver behavior and vehicle performance in safe highway design.

Mr. MacDonald's role as the principal architect of our modern highway system is exemplified by the series of important Bureau reports prepared under his direction for Congress. The first of a major series, prepared in 1939, expounded and substantiated the need for mod-

ernization of the Federal-aid primary highway system, both rural and urban, for improved secondary and feeder roads, and for construction of a select system of interregional highways to meet both the requirements of national defense in time of war and the growing demands of peacetime traffic.

Thus Mr. MacDonald's vision and the sound logic of these reports gave rise to the National System of Interstate and Defense Highways authorized by the Congress in 1944. With the intervention of the war period and the difficulties of implementing and financing so bold a program, scheduled construction of the 41,000-mile Interstate System did not become a firm reality until 1956, after Mr. MacDonald had retired. But surely this system, the ultimate in highway transportation, is a monument to him above all men.

Thomas MacDonald was a strong advocate of highway improvement as a necessity in the solution of economic problems throughout the world, especially in underdeveloped countries. Under his direction, the Bureau of Public Roads supervised the joint work of the United States and the central American republics in the construction of the Inter-American Highway, now nearing completion.

He welcomed the opportunity granted his organization under various legislative authorizations to aid other countries, in Europe, Africa, and Asia, in repairing war-torn roads and especially in launching the development of highway systems suitable to their needs. With characteristic vision he strongly believed that our aid could best be utilized in helping these countries establish their own highway departments and in teaching their own people how to plan, build, and manage their highways.

Mr. MacDonald was keenly interested in sharing the knowledge and know-how of the United States with highway engineers and administrators of other countries. Through his efforts a host of such men, from college students to top officials, came to the United States to learn and exchange ideas. This fine precedent is being followed today.

Cooperation was a basic tenet of Mr. MacDonald's philosophy and this broad outlook embraced those concerned with all forms of transportation. He envisioned a new type of transportation research institute in which each field of transport would be represented, but in which the economic and social impact of transportation would be studied as a whole.

Over the years he discussed this concept with his old friends, Gibb Gilchrist and DeWitt Greer, of Texas, and they proposed to set up such a research organization and urged Mr. MacDonald to consider joining it as a keyman when he retired. In June 1950, the plan took form with establishment of the Texas Transportation Institute in the Texas A. & M. College system.

When Mr. MacDonald retired from his long public service career in 1953, he joined the institute staff with the title of "Distinguished Research Engineer." There, until his death on April 7, 1957, his ideas, knowledge, and influence provided brilliant guidance and inspiration to the institute staff.

Shortly after Mr. MacDonald's death, a group of his friends conceived the idea of memorializing this great man's accomplishments and continuing the work he had undertaken in his last years. With this aim in mind, they proposed to establish at the Texas Transportation Institute a Thomas H. MacDonald Chair of Transportation, endowed with gifts from his many friends and admirers and from the many segments of commerce and industry that have benefited from his great work and recognize the further gains that may follow from its continuation.

A campaign to raise funds for this purpose is underway. No greater or more appropriate memorial could be raised, nor one more to his own liking than this chair of transportation designed to carry forward Mr. MacDonald's philosophy and vision.

His dedicated career was ably summarized by a close friend and longtime associate who declared:

If ever a man deserved the name of prophet it was he. If ever a public servant could truly boast of an administration of the people's business virtually without flaw, it was he. If ever in any man there can be combined just that conjunction of the qualities of the able engineer, the perceptive political economist, the skilled diplomatist and the sure and faithful administrator that it takes to make a great highway engineer, it was in Thomas H. MacDonald that these qualities found their rarest blending.

Cranberry Growers Eulogize the Late Representative Russell V. Mack

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. WESTLAND. Mr. Speaker, the Washington State delegation attended the funeral April 2 of our late colleague, Russell Mack, at Aberdeen, Wash. All of us thought highly of him and have expressed our esteem, but there are also others who considered Russell Mack a selfless public servant.

Before I left Aberdeen to return to the Capital, I clipped a statement prepared by the Grayland Cranberry Association from the Aberdeen Daily World, which I believe indicates the affection the people of the Third Congressional District had for this fine man.

The statement follows:

CRANBERRYMEN EULOGIZE MACK

A statement eulogizing the late Representative Russell V. Mack was issued today by the Grayland Cranberry Association. The statement follows:

"The average U.S. citizen of this day and age realizes little of the selfless service rendered by some of our public servants until it is impressed on his mind by action such as Russell V. Mack's efforts on our behalf in our hour of need.

"For services rendered at the expense of a much-needed rest and holiday at home, Mr. Mack has established for all of us a new rule by which we shall henceforth measure the merits of all those who hold or aspire to hold public office.

"This may not be exactly the right thing to do, but that's life. A new standard has been set, not only for the growers and other citizens of his district, but has been impressed on the grateful thoughts of all cranberrymen of this country."

Action of Indiana Democrats Enables Hoosier State To Participate in Rural Library Program

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. BRADEMAS. Mr. Speaker, from April 3 to April 9 we are celebrating National Library Week in the United States. The celebration of National Library Week this year will have a special significance for the State of Indiana because of the laudable action of the House of Representatives on March 29 in passing an appropriations bill which contained the full authorization of $7.5 million for the rural library services program instead of the $7.3 million recommended in the President's budget.

The reason for the budget recommendation of $7.3 million rather than $7.5 million is that the State of Indiana, which normally allocated about $200,000 annually, has so far refused to participate in the rural library program.

GOVERNOR HANDLEY DENIES HOOSIER TAXPAYERS RIGHT TO USE OWN FUNDS

In fact, Mr. Speaker, Indiana is the only one of the 50 States and 3 Territories in the Nation which has, by its refusal to take part, denied to its people the benefits provided under the Library Services Act of 1956. The funds allotted to Indiana have been rejected by the Republican Governor of our State, Harold W. Handley, in pursuit of a policy which can only be characterized as obstinate and shortsighted.

Mr. Speaker, in view of the fact that we in Indiana pay taxes just as other American citizens do, Governor Handley's refusal to permit our State to receive funds under the library program can fairly be described as a willful giveaway of the hard-earned dollars of Hoosier taxpayers to the citizens of the other 49 States of the Union.

It is instructive to note that Governor Handley is most anxious that Indiana receive Federal aid for the construction of highways and harbors.

INDIANA DEMOCRATS UNITE TO URGE THAT HOOSIERS RECEIVE LIBRARY FUNDS

In March of this year I was pleased to join with six of my Democratic colleagues from Indiana in the House of Representatives and with our distinguished junior Senator, the Honorable R. VANCE HARTKE, as well as with all four of the

announced candidates for the Democratic nomination for Governor, State senator Nelson Grills, State auditor Albert Steinwedel, secretary of state John R. Walsh, and State senator Matthew E. Welsh, and with the speaker of the Indiana General Assembly, the Honorable Birch Bayh, Jr., to urge the House Appropriations Committee to approve the full appropriation of $7.5 million for the Library Services Act for fiscal year 1961 in order that Indiana might look forward to receiving her fair share of these funds for those Hoosiers who still need library services.

HOUSE APPROPRIATIONS COMMITTEE APPROVES FUNDS FOR INDIANA

Mr. Speaker, I was deeply gratified that the Appropriations Committee saw fit to agree to our request, and I should like to insert the following portion of the committee's report on the 1961 appropriations bill for the Departments of Labor, and Health, Education, and Welfare, and related agencies:

Grants for library services: The bill includes $7,500,000, an increase of $200,000 above the request, and an increase of $1,400,000 above the amount appropriated for 1960. The budget request was based on the assumption that the State of Indiana would not participate in the program. On the basis of the assurances of so many influential people, including several Members of Congress from Indiana, that the State will participate in the program next year, the committee has added funds to allow for full participation by all 50 States.

HANDLEY'S HOMETOWN PAPER CRITICIZES HIS ATTITUDE

Mr. Speaker, shortly after these distinguished Hoosiers urged Indiana's participation in the library program, there appeared in the La Porte Herald-Argus, a very fine newspaper published in Governor Handley's hometown, a splendid editorial dated March 5, 1960, and entitled, "Accepting U.S. Funds." This editorial called on Hoosiers who believe in a full chance for every fellow citizen for enlightenment as opposed to ignorance to rally behind U.S. Senator HARTKE and Congressman BRADEMAS in their effort to persuade the Handley administration to take a stand for acceptance of Federal aid for the State's rural library program. The editorial follows:

ACCEPTING U.S. FUNDS

Hoosiers who believe in a full chance for every fellow citizen for enlightenment as opposed to ignorance should rally behind U.S. Senator HARTKE and Congressman BRADEMAS in their effort to persuade the Handley administration to take a stand for acceptance of Federal aid for the State's rural library program.

Governor Handley has consistently refused to have anything to do with this aid program, one accepted by all other States in the Union. As of now this State could move to accept $200,000 which would provide a small beginning of extension of free library service by bookmobile to rural Indiana areas which now have none. Congressman BRADEMAS of the third district estimates there are 800,000 Hoosiers without library service and that a million others have inadequate service from libraries in the State.

Handley's argument from the time in 1957 when he first rejected this Federal assistance has been that he fears centralized government and the Washington bureaucracy. He has said time and time again that Indiana will make its own way, a declaration which becomes laughable when the Federal millions sent into Indiana for highways, education, farm price supports, veterans' assistance, urban renewal, lunches for schoolchildren, welfare service are tallied up. Indiana receives its millions just as do all other States.

When the values of library service to Hoosier young and old and of every condition of life are pondered, it is the ultimate in trivial thinking to block any source of support for expansion and improvement of that service. Indiana, which boasts sometimes of its educational progress, finds itself on the intellectual defensive when 800,000 of its people, in very small town and rural areas, have no library service accessible to them.

Those persons in power in State government should be pleased to accept the $200,000 the Federal Government has allocated to help Indiana bring the delights and stimulation of reading, so basic in a democracy, to more of its people. All other States jumped at the chance for assistance.

What Indiana needs even more is to help counties and local communities set up and support library service where none exists now and much better service in regions where libraries are still the poor relation of all the public services. Until we build more and better libraries we are only half-heartedly entering into the continuing, vital experiment of representative democracy.

LA PORTE HERALD-ARGUS SAYS "INDIANA LAGS BEHIND"

Mr. Speaker, the following editorial from the La Porte Herald-Argus of Thursday, March 24, 1960, entitled "Indiana Lags Behind," indicates the bewilderment of many Hoosiers at our Governor's continued refusal to accept Federal funds for our rural libraries:

INDIANA LAGS BEHIND

April 3–9 has been proclaimed as National Library Week in Indiana by Governor Handley but it is ironical that the Governor persists in his refusals to accept Federal grants for stimulating and strengthening rural library service in Indiana. This State continues to be only one of two refusing to take part in the Federal fund-matching program for expanded library service.

A map published in late 1958 by the Indiana State Library showed that 507 of 1,009 townships in the State had no local library service in the form of bookmobiles or town or village libraries. The State library now reports there has been no change in the map since it was published. By the library's estimate there are more than 800,000 Hoosiers, 20 percent of the population, with no library facilities.

During the past 3 years the Governor and his administration have refused more than $500,000 in Federal matching funds, earmarked for starting new library service or improving existing facilities. This year the refusal totaled $173,000. After next year the program runs out and Indiana will have pushed aside approximately $700,000 altogether.

Because the Governor declares he is acting "because there is a principle involved," the principle of opposition to Federal aid, Indiana finds itself in a curious position. It never shrinks from Federal aid for highways, or for school lunches, or welfare purposes. Apparently these do not involve "principle." But it does decline Federal funds for training practical nurses, or for participation in the White House Conference on Aging next January. We have the dubious distinction of being the only State declining funds for the Conference on Aging, and we are only one of four not sharing in Federal funds for aiding the permanently and totally disabled.

Rejection of Uncle Sam's funds, to which we all contribute in taxes, is very selective as practiced by the Governor. Some he favors without hesitation; others he declines because of opposition to the principle.

Purposes for which the Federal Government offer these funds, to be matched by State funds, are humanitarian and educational. It makes no sense to continue to accept the Federal distribution of its tax money for vast public improvements such as highways or flood control, matters which apparently carry the magic of vote catching, and to refuse small Federal aid designed primarily to stimulate the lifting and enriching of human life.

This State, like the others, should be ready to participate in programs which help make life better, whether instigated wholly or in part from Washington or from Indianapolis; it matters not. And after all we are paying Federal taxes—in these cases for the inhabitants of other States of the Union to use.

PUBLIC LIBRARIAN IN HANDLEY'S HOME TOWN SAYS HE'S WRONG

Mr. Speaker, not only does Governor Handley's hometown newspaper oppose his position on this issue. The librarian of the public library of La Porte, Ind., has expressed the same view in the following letter to me:

LA PORTE PUBLIC LIBRARY,
La Porte, Ind., March 7, 1960.

Representative JOHN BRADEMAS,
1329 House Office Building,
Washington, D.C.

DEAR MR. BRADEMAS: I was glad to get the copy of your March 3 news release, and your testimony on Indiana participating in the Library Services Act of 1956. It is nice to know that some Representative of Indiana is aware of the educational importance of libraries.

Governor Handley (even if he is from La Porte) has done Indiana no favor in refusing these funds. His statement that he knows of no prime need for additional library service in Indiana violates much testimony that has been presented to him. Certainly one of the elements that could improve Indiana education would be the establishment of adequate libraries for the many students who want to go to college. Thank you again for your efforts.

Very truly yours,
LA PORTE PUBLIC LIBRARY,
GEORGE A. CURTIS, *Librarian.*

INDIANA LIBRARY LEADERS URGE HOOSIER PARTICIPATION IN PROGRAM

I have received many other letters in support of the position that my colleagues and I have taken on the library program and I should like to include as an example the following letter to me from Mrs. Samuel Berg, president, Board of Public Libraries of Lake County, Ind., and past chairman, legislative committee, Indiana Library Association and Indiana Library Trustee Association:

AMERICAN ASSOCIATION
OF LIBRARY TRUSTEES,
Chicago, Ill., March 28, 1960.

The Honorable JOHN BRADEMAS,
The U.S. House of Representatives,
Washington, D.C.

DEAR MR. BRADEMAS: It was certainly encouraging and heartening to read about the position you took with regard to Indiana's nonparticipation in the Library Services Act, as per the enclosed clipping.

It is true that there is a great deal of anti-Federal aid sentiment in our State, particularly among school and library people. It does not however, preclude our accepting Federal funds for highways, welfare, sanitary districts, school lunch programs, etc., as you well know.

Governor Handley did permit the State department of public instruction to accept funds under the National Defense Education Act and my own community is participating in this. A large addition of science equipment and an expansion of the language arts program have been the result. Other things are planned for the coming school year.

That libraries are prohibited from accepting Federal aid funds is a gross inconsistency and discrimination.

Both Representative DENTON and my own Congressman, RAY MADDEN, have made significant statements about this sad state of affairs in the Indiana library program in the past. It is a real pleasure to welcome you to the ranks of "friends of Indiana libraries in Congress."

Good luck and best wishes.

Sincerely,

Mrs. SAMUEL BERG,
President, Board of Public Libraries of Lake County, Past Chairman, Legislative Committee, Indiana Library Association and Indiana Library Trustees Association.

AMERICAN LIBRARY ASSOCIATION LAUDS EFFORT

Finally, Mr. Speaker, I am very pleased to include in the RECORD the following letter to me from Miss Germaine Krettek, director of the Washington office of the American Library Association, concerning the support I was glad to be able to give to the participation of Indiana in the rural library program.

AMERICAN LIBRARY ASSOCIATION,
Washington, D.C. April 4, 1960.

The Honorable JOHN BRADEMAS,
House of Representatives,
Washington, D.C.

DEAR MR. BRADEMAS: For the American Library Association, may I express our appreciation for your splendid assistance in support of an appropriation of $7,500,000 for the Library Services Act for fiscal year 1961. We were delighted that you appeared in person before the Subcommittee on Appropriations for the Department of Health, Education, and Welfare and urged that the full amount of $7,500,000 authorized under the Library Services Act be appropriated. Your testimony concerning the importance of the rural library program and the expectation of Indiana's participation next year was certainly effective and undoubtedly influenced the decision of the subcommittee to recommend an increase of $200,000 over the $7,300,000 recommended in the President's budget.

At the time of floor action in the House on the Labor-HEW appropriation bill, we were also pleased that you spoke out in favor of the $7,500,000 figure for the Library Services Act and reiterated your firm belief that Indiana will come into the program in the near future. This conviction was appropriately backed up by your introduction of H.R. 11426, a bill to amend the Library Services Act in order to extend for 5 years the authorization for appropriations. The American Library Association will give you every possible assistance in achieving the prompt enactment of this legislation.

Thank you again for your fine support of the Library Services Act program which is doing so much to bring the educational and cultural benefits of public library service to millions of rural Americans.

Sincerely yours,

GERMAINE KRETTEK,
Director, ALA, Washington Office.

Broadcasting in the Public Interest

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. IRWIN. Mr. Speaker, on April 6 my distinguished colleague the Honorable EMANUEL CELLER said in some remarks in the RECORD that nine New York City broadcasting stations last year programed a total of 220,000 minutes of community service broadcasts.

I would like to introduce into the RECORD at this time a telegram I received from Mr. John Metts, vice president of the Connecticut-New York Broadcasters, Inc., describing the public service programing of station WICC in Bridgeport. Mr. Mett's telegram:

Noted CONGRESSIONAL RECORD remarks by New York Representative EMANUEL CELLER that nine New York broadcasting stations last year programed a total of 220,000 minutes of community service.

Would like to bring to your attention the fact that during the past year radio WICC's public service programing exceeded 92,500 minutes, or 17 percent of the station's total air time. This figure does not include religious or special programs in the public interest. From its Bridgeport transmitters station WICC serves Fairfield and New Haven Counties in Connecticut.

WICC applauds Congressman CELLER's position that unless the achievements of broadcasters, as well as their failures, are taken into account, there can be no effective solution to current problems that would be in the public interest.

Urge your support of moves to bring to light significant day-to-day contributions of broadcasters in Connecticut and elsewhere.

I am glad, Mr. Speaker, to get this telegram from Mr. Metts, and I certainly agree that the public should be told of broadcasting's achievements as well as the industry's failures and shortcomings.

Representative Emanuel Celler and the Washington Home Rule Committee Strongly Support Both National Suffrage and Home Rule

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, the Washington Post and Times Herald points out this morning something which is vital, I think, and this has to do with misleading the public by inaccurate headlines. The Washington Post editorial says:

Persons who were misled by a report yesterday afternoon into thinking that Chairman CELLER of the House Judiciary Committee had advised District residents to "skip" home rule may be interested in what Mr. CELLER actually said.

The Washington Post editorial then goes on to report what the distinguished gentleman from New York [Mr. CELLER], who heads the Committee on the Judiciary of the House of Representatives, actually said on the subject of national suffrage and home rule for the voteless citizens of the District of Columbia.

I think the position taken by Representative CELLER is sound and basic to the matter of giving the franchise to the nearly 1 million disenfranchised citizens of the Nation's Capital.

I note, too, that the Washington Home Rule Committee takes a similar position and is working for both national suffrage and home rule.

The basic interests of the citizens of the Nation's Capital would be best advanced if all the individuals and groups who love and revere the Nation's Capital with patriotic zeal and fervor as the greatest Capital City in the world would take a similarly broad-based view of the best way to achieve the franchise for its citizens.

I include the editorial from the Washington (D.C.) Post of April 7, 1960, and the text of the testimony of Philip B. Brown, chairman of the executive committee, Washington Home Rule Committee, before the House Judiciary Subcommittee, as follows:

NO "EITHER-OR"

Persons who were misled by a report yesterday afternoon into thinking that Chairman CELLER of the House Judiciary Committee had advised District residents to "skip" home rule may be interested in what Mr. CELLER actually said. In commenting upon his resolution for a constitutional amendment to grant national suffrage to Washington (which this newspaper strongly supports along with home rule), Mr. CELLER observed:

"I wish to emphasize that my resolution does not conflict with or have any bearing upon the question of home rule for the District of Columbia. This is not an "either-or" proposition. My amendment provides for a vote in Federal elections and representation in the House. While I have always favored home rule and I will continue to work for home rule, and I've signed the discharge petition for home rule, this bill is not a home rule bill nor is it a substitute for home rule."

That seems to us a clear statement of Mr. CELLER'S purpose, and not by the farthest stretch of the imagination an argument for dropping home rule.

STATEMENT OF PHILIP B. BROWN, CHAIRMAN, EXECUTIVE COMMITTEE, WASHINGTON HOME RULE COMMITTEE, BEFORE A SUBCOMMITTEE OF THE HOUSE JUDICIARY COMMITTEE ON HOUSE JOINT RESOLUTION 529, APRIL 7, 1960

Mr. Chairman and members of the committee, my name is Philip B. Brown. I am a member of the Board of Directors, and chairman of the executive committee, of the Washington home rule committee.

I appear here today to express the home rule committee's support of the efforts of the chairman and of this committee to extend to the people of the District of Columbia, in highly significant measure, voting rights which the words of the Constitution presently grant only to the people of the several States.

Today, the people in the District are denied the right to vote for candidates for any public office at any level of government.

The home rule committee is dedicated to obtaining the right to vote at both the national and the local level for the people of the District of Columbia.

Mr. Chairman, we are grateful for your strong and clear support of measures to grant us voting rights at both the national and the District of Columbia levels of government. We applaud the Chairman's view that this is not an either/or proposition, and that House Joint Resolution 529 is neither a home rule bill nor a substitute for a home rule bill.

The voting rights proposed in House Joint Resolution 529 are fundamental to American citizenship: The District deserves the right to vote for President and Vice President and to have its rightful share of voting representa-

tion in Congress. Naturally, people disagree as to what that share should be; but they do agree that our present situation of no suffrage is the least desirable alternative of all. Accordingly, Mr. Chairman, while the home rule committee would prefer that the District, without being made into a State, be given national voting representation in both the House and Senate, we acknowledge your experienced wisdom in determining what is, and what is not, politically feasible.

We must observe, however, that the resolution, if adopted in its present form as an amendment to the Constitution, in good faith calls for subsequent legislation giving voting powers to the District delegates. Otherwise, the resolution should be so amended before passage.

In conclusion, Mr. Chairman, I wish to express our deeply-felt convictions that your resolution and the Home Rule bill, while separate in form, are related parts of the same substantive goal of full suffrage for the people of the District and that all true friends of democracy throughout the United States will happily give their support to both measures.

Henry B. Roberts

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Thursday, April 7, 1960

Mr. ALLOTT. Mr. President, it is my sad duty to report to the Senate the death of Henry Buchtel Roberts, a journalist well known and respected by every Member of the Senate.

Henry Roberts was a rare figure in journalism. He was an acknowledged scientist of considerable merit in the fields of anthropology and archeology. His contributions to our fund of knowledge in these fields will serve for many year to help other scientists. He used his great reportorial ability and his acute sense of news values to write many penetrating and helpful stories on the activities of this body, and, indeed, on the whole area of government.

Henry Roberts will be sorely missed on Capitol Hill, Mr. President. He will be sorely missed in many other places.

Mr. President, I ask unanimous consent of the Senate that an obituary on Henry Buchtel Roberts, published in the Washington Post of Monday, April 4, 1960, be reprinted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

H. B. ROBERTS, WAS EDITOR AND SCIENTIST

Henry Buchtel Roberts, 58, archeologist, anthropologist and senior editorial consultant to Prentice-Hall, Inc., publishers, died of cancer yesterday at Trafalgar Hospital in New York City. He lived at 1 Browns Ct. SE.

Mr. Roberts, who joined Prentice-Hall as a staff editor in 1948, was its chief Washington correspondent before becoming en editorial consultant. He was a resident of the District for 25 years.

Born in Arizona, he graduated from Harvard's School of Archeology and served on the university's faculty as a fellow in anthropology. In the mid-1930's, he headed several archeological expeditions to Mexico under sponsorship of Harvard's Peabody Museum and the Carnegie Foundation.

In recent years he contributed frequently to many scientific journals. He was a veteran of World War II service with the Army in the Sicilian and Italian campaigns.

Mr. Roberts was a fellow of the American Association for the Advancement of Science. He was a member of Pi Gamma Mu, national science honor society, the Harvard Travellers Club and Phi Sigma Biological Society. He was active in the Washington chapter of the Harvard Alumni Association.

He is survived by a brother, Frank H. H. Roberts, Jr., director of the Bureau of American Ethnology at the Smithsonian Institution, of 3511 Leland Street, Chevy Chase.

The family requests that in lieu of flowers contributions be made to the American Cancer Society.

Affairs of Germany in Good Hands

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. CELLER. Mr. Speaker, the reassurances by Secretary of State Christian Herter in his speech before the National Association of Broadcasters in Chicago on April 4, 1960, against the possibility that the United States will capitulate before the menacing Soviet propaganda with respect to Germany, came at a timely moment for all of us.

Less than 1 month ago, the Federal German Chancellor accompanied by his Foreign Minister, Dr. Heinrich von Brentano, visited President Eisenhower to ask his support for a firm stand on the Berlin issue, especially in the forthcoming summit talks in Paris.

At a luncheon given in honor of the foreign minister by two of my distinguished colleagues, Senator STYLES BRIDGES of New Hampshire and Senator JACOB K. JAVITS of New York, Dr. Von Brentano declared that the German people are counting on America for leadership and strength in this showdown struggle against Soviet aggressive imperialism. He indicated that any sign of American weakness in these delicate negotiations with Khrushchev, would give aid and encouragement to the Communists. Under Secretary of State Dillon bespoke the important, nay, vital contribution made by Germany to the Western alliance, and also stated our position as being unyielding on Berlin.

I have great faith and confidence in Dr. Adenauer and Dr. Von Brentano. They have done wonderfully well in their management of German affairs in cooperation with Economic Minister Erhard and other members of the Adenauer Cabinet. Furthermore, the people of our Nation are fully behind the statement delivered by the representatives of our Department of State.

I regret that I was unavoidably absent from the luncheon that was tendered to Dr. Von Brentano by Members of the Senate. I would have congratulated him in person on the fine work that he is doing.

New England Council Testimony Relative to the Northeastern Water and Related Land Resources Compact

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement on H.R. 9999 and H.R. 10022 by Francis E. Robinson, manager, Natural Resources Department, New England Council, Boston, Mass., before House Committee on Public Works on March 30, 1960:

My name is Francis E. Robinson, manager of the Natural Resources Department of the New England Council, 1032 Statler Office Building, Boston, Mass.

I appear here today to record the support of the members of my organization for passage of H.R. 9999 and H.R. 10022 which would grant approval of the Congress to the Northeastern Water and Related Land Resources Compact.

The New England Council is a 35-year-old regional development organization. Among its 3,000 members are representatives from all of the six New England States and from all economic groups within those States.

The New England Council traditionally has favored interstate compacts as a means of meeting problems and accomplishing desirable projects which often involve several States in our region where the States are relatively small.

New England Council officers and staff members have been identified with many of the developments over the past several years which have led to adoption of this proposed compact by the four New England States which now seek your approval for its implementation.

We are familiar with the New England-New York Interagency Committee and with its development into a joint Federal-State committee, with the publication of its extensive report, and with creation of the Northeastern Resources Committee.

The New England Council cooperated with the Northeastern Resources Committee in the holding of a series of State conferences on natural resources at which several thousand New Englanders took the opportunity to hear about the region's resource problems and to express themselves regarding them.

We are aware, therefore, that the proposal you have before you is one which has been developed through wide public discussion and careful committee attention over a period of several years. We are confident that a substantial proportion of those New Englanders with an informed interest in natural resources favor the creation by interstate compact of a Northeastern Resources Commission.

The New England Council's position on the subject is contained in a resolution of approval proposed by the council's natural resources committee and adopted by the

NEC executive committee. The resolution is as follows:

"The New England Council reaffirms its traditional approval of Interstate compacts as a means of handling regional water-resource problems. The New England Council recognizes further that increasingly intense use of all natural resources requires coordinated regional planning as a means of effective resource management in the orderly growth of New England.

"Therefore, the New England Council favors establishment of a regional commission by interstate compact for coordination, planning, research, and education relative to natural resources development."

Bataan Day, 1960

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. MULTER. Mr. Speaker, 18 years ago the Philippines fell to the invading forces of Japan.

On April 9 we commemorate the fall of Bataan, in order to recall the gallantry of the Filipino and American troops during those early dark days of the war in the Pacific.

When the main Japanese invasion of the Philippines began on December 22, 1941, our defending forces were forced to withdraw to the mountainous Bataan Peninsula, across Manila Bay from the capital city. The retreat maneuver was executed with consummate skill but at a heavy cost in lives and an unavoidable loss of vital supplies.

By January 7, 1942, American and Filipino troops held well prepared positions on Bataan Peninsula, settling down—along with the forces on the nearby island bastion of Corregidor—to a long seige. This courageous act denied the enemy the use of Manila Bay for the duration of the battle. Japanese attacks on the embattled defenders were so thoroughly repulsed in January and early February that they ceased altogether until April.

Completely cut off from outside aid, the Bataan forces grew weak from hunger and poor diet. Thousands succumbed to diseases which shortages of medical supplies made impossible to control. Desperate efforts to send food, medicine, and ammunition to the beleagured men were thwarted by the Japanese.

In April the Japanese initiated a devastating attack upon the thin lines of the defenders. The lines crumbled and disintegrated in the face of overwhelming force. On April 9, 1942, the few surviving troops on Bataan surrendered. A month later Corregidor fell.

These events are still vivid memories for many Americans and Filipinos who grieve the loss of their loved ones and for the few survivors of those horrible days who are still with us. Today we memorialize the valor of the defenders of Bataan and Corregidor as a symbol of the fight for freedom and the defense of liberty which is never ending.

All Aboard the Gravy Train

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. HARRISON. Mr. Speaker, we do not hear private enterprise or individual initiative attacked on the floor of this House. On the contrary, we are accustomed here to stirring defense of these ideas. Repeatedly and earnestly, we pay tribute to their parts in the economic development of the United States and the greater well-being of its citizens.

On sober reflection, however, we cannot but admit in our hearts that these principles of personal freedom are receiving today more of a pro forma devotion than true observance. There seems to be an increasing emphasis on the receipt of maximum benefits, rights, and protection at minimum individual expenditure of effort, and with the least possible acceptance of individual responsibility.

More and more, the individual appears willing to pass his personal problems, be they economic or sociological, to an agency of government. The local community seems more willing to confess inadequacy in the face of local problems and to look to Washington for aid.

The inevitable result of a spread and intensification of what is essentially a defeatist philosophy is the welfare state.

It may be that our national character is in need of jacking-up, as Louis Spilman, editor and publisher of the Waynesboro (Va.) News-Virginian, suggests in the following perceptive editorial, which I include under leave to extend my remarks in the Appendix:

MAYBE IT IS LATER THAN WE THINK; HAS STATISM ALREADY ERODED FREEDOM?

(By Louis Spilman)

As the years move swiftly into oblivion the matters of personal freedom, individual initiative, private enterprise, thrift, personal dignity, and individual sovereignty are being submerged in a wild dash for security, statism, and welfare-itis. No one could possibly be more concerned with the rights, privileges, and welfare of the individual than I. But I also regard these rights, privileges, and welfare as obligations and responsibilities. The years have emphasized that we must produce to create wealth and that without wealth we cannot have all the wonderful things our Socialist-minded friends envision.

As it appears now the United States is headed toward an existence, in the not too distant future, as a welfare state. Private enterprise is being milked unmercifully of its resources in the form of taxes and some of these taxes are being employed to provide tax-free, governmental competition for the very industries providing the funds. Business cannot survive a sustained attack by those who would apply confiscatory tax rates on the one hand whilst on the other subsidizing tax-free competition.

Too many of our elected representatives are becoming more and more fearful of their political lives. They are being jockeyed into supporting schemes and programs that will eventually take care of everyone from cradle to the grave. We have become so accustomed to giveaway tax programs and deficit financing that few, if any of us, even take the trouble to protest any more. More likely than not we are striving strenuously to get our own share before the pipelines go dry.

Money is being spent by governments on all levels at such an accelerated pace that not even the men who presumably fashion our governmental budgets understand them any more. Instead of encouraging business and industry (source of most public funds) to expand through research and additional operating facilities, we jeopardize business initiative and frighten private enterprise into a shell. Business must realize a profit if it is to succeed. It must have funds for replacement, expansion, research, and growth. Profit, performance, and progress are inseparable.

Lives, fortunes, and honor were sacrificed on the common altar in the quest for freedom, liberty, and individual dignity that marked our cleavage from England in the late 18th century. Selfishness and security were secondary in the hearts of those noble patriots who spawned, with their own resources and blood, these United States of which we are so inordinately proud. Must we now see all that we've learned to hold dear die a slow death at the hands of statism or through fear of independence? We need to steel our souls against surrender to the "easy life"; we need to rededicate ourselves to personal freedom and sovereignty * * * to independence and the right to expand and grow. Without hatred or malice we must face with courage the responsibility of preserving a free world.

Vote as Americans

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 8, 1960

Mr. DERWINSKI. Mr. Speaker, the Chicago Daily Calumet on March 31, carried a most interesting and enlightening editorial, which I am including in the RECORD for the consideration of the Members of the House and Senate:

VOTE AS AMERICANS

Since the first immigrants stepped off a ship and onto Plymouth Rock, shrewd politicians have been trying to capitalize on the "foreign" vote in this country. In the generations of the Nation's greatest growth, thousands of newcomers flocked to this great land of opportunity.

Since these people were not only in a strange land but had to learn a new language, new customs, and a new way of life, they banded together for protection. While these settlements by national origin provided them with companionship among those with mutual backgrounds and mutual interests and afforded them protection, they also provided a fertile field for politicians.

Now, there is little doubt that these early settlers gained much through their political influence. In fact, many would still be held down today if they hadn't turned to politics to improve their lot.

And it would be erroneous to say that all politicians exploited the foreign born. The vast majority were doubtless sincere in their desire to help the new Americans and accomplished much.

However, there grew a minority who found in nationalistic politics an easy stepping-stone to well-paying political jobs. These callous individuals played national likes and hates for all they were worth and often created dissension if there were none available to suit their purposes.

Unfortunately, many of this type have filtered down to this day. By pretending to be

friends of a certain national group, they seek to make political capital.

In every political campaign you see examples. Many will vote for a candidate knowing nothing about him other than that fact that his name has the same national background as theirs.

In recent years, however, as many of the problems which national groups banded together to fight have disappeared and the foreign born have become Americanized, the influence of this type of politician has dwindled.

Today there are few groups—national and otherwise—that can be completely dominated by one party. And this is as it should be for there's both good and bad in both parties. All Americans, native and foreign born, are beginning to realize that what is good for one national group is good for another as we all live in harmony in this great melting pot that is America.

Our voting ballot knows no nationality other than American.

Too Smart

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. POWELL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Amsterdam News, of New York dated April 2, 1960:

TOO SMART

If there is anything which the white politician fears more than Negro unity it is Negro-Puerto Rican unity.

And now that these same politicians have unified the Negro in New York by persecuting their leaders on legal technicalities, they have suddenly become horrified that the newly united Negro will now join hands with the Puerto Rican.

And in their desperate effort to prevent this, these same politicians might do just what they did in the case of the Negro—they might hasten to bring about that unity.

That's exactly what they did in the case of the Negro. They persecuted Negro leadership in an effort to destroy it and they inadvertently did for Negroes what Negroes had not been able to do for themselves—they united them.

The unity was brought about mainly becaues of the dirty, low unfair tactics which these politicians were using in their attempt to kill off Negro leaders.

There is not a single Negro adult in New York who does not remember well the outrageous attempts to brand Ralph Bunche a Commie; to brand Mrs. Mary McLeod Bethune and former Judge Hugh Delaney the same way; the attempts to destroy James Johnson and Monroe Dowling of the Internal Revenue on legal technicalities; the sneaky way Commissioner Bob Mangum was rendered almost ineffective; the low blows at Judge Stoute; the unanswered questions in the Clem Ransom case.

The Negro people, who, incidentally are a very sophisticated people, sat by and watched all this underhanded dirty work in silence.

But suddenly they grew tired—and what is more important—they now have let the politicians know they are tired and displeased and that they are backing their leaders like other groups back theirs.

And now in their desperation the politicians are seeking, through racism, to set the Negro and Puerto Ricans in New York at each other's throat.

They are doing it in their club rooms, in the press and in the radio. Probably the most guilty are the daily newspapers and particularly those dailes which have a large circulation in Harlem.

These newspapers often claim in their editorial columns that they despise bigotry and that they do not want to see race set against race in New York City. As a matter of fact they have accused POWELL and his followers of racism.

But today we can't pick up a daily paper without reading some story which is slanted toward making Negroes and Puerto Ricans jump at each other's political throat.

This is a shame. It is a disgrace to the profession of journalism. And it plainly shows just what kind of daily papers we have in New York.

Lest We Forget

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the National Tribune, the Stars and Stripes on April 7, 1960:

LEST WE FORGET

"God of our fathers, known of old—
Lord of our far-flung battle line—
Beneath whose awful hand we hold
Dominion over palm and pine—
Lord God of Hosts, be with us yet,
Lest we forget, lest we forget."

So wrote Rudyard Kipling some threescore years ago. Undoubtedly he had in mind his own country and its forgetfulness toward those who had secured the "dominion over palm and pine" of which his empire boasted.

Looking back some 43 years in our country's history we might conclude that the British poet, knowing the forgetfulness of a nation and its people for past service by its young men of all eras, might have been foretelling the fate that would befall the young men of the United States who marched proudly off to battle when our country declared war against the Central Powers on April 6, 1917.

We wonder how many of the young leaders of the American Legion who have attained high office in that organization remember April 6, 1917.

We wonder—as a matter of fact we do not really wonder—how many of the leaders of AMVETS, the group representing the veterans of World War II and the Korean war remember that particular day. Very few in both groups we would venture to say.

On the other hand we do know of certain individuals who recall the day quite well, something less than 2 million of them today, but though their numbers decrease rapidly from day to day, those who are left cannot help but remember when their country called them to battle.

Yes, of those who are still alive after their service in the First World War we are inclined to think that, mulling over the verse quoted here from Kipling's Recessional they might shake their heads sadly, realizing that a country and its people do not forget with the passage of time.

We recall it quite vividly, that day of April 6, 1917. It was a Sunday in Washington, D.C., a quiet Sunday for at that time the Nation's Capital was a quiet city. We were attending a movie picturing Hun atrocities. The particular picture had not been flashed on the screen fortuitously. It had been scheduled some weeks ahead.

After the movie ended we went out on the streets only to find crowds of people milling about, grabbing up the extras which the newsboys were selling as fast as possible—extras which announced our entrance into World War I. We learned later that this scene was repeated all over the country.

War of any kind was far from the minds of the youth of the Nation on that fateful Sunday. In our own way, we of the day were living out our lives peacefully and happily—an old-fashioned way as compared with present-day standards, even the standards of 1941 when we found ourselves engaged in a Second World War.

The young generation of 1917 had managed to survive a panic in 1907 and had grown to manhood convinced that all was well with the world. But when war was declared in 1917 they had little hesitation in answering their country's call, many of them not waiting for the draft.

Those who volunteered and those who responded to the draft acquitted themselves nobly in battle and received the country's acclaim for their heroic deeds.

There were many who reached France early in the summer of 1917. Their knowledge of what was going on at home was derived from letters and an occasional hometown paper.

What impressed those early arrivals and those who followed them into battle was the enthusiasm with which the young servicemen were greeted as they passed from town to town en route to training camp.

From what could be learned, they had the backing of the entire Nation and were assured that nothing would be too good for them on their return. Prayers were offered in the churches and the synagogues for their safekeeping and return and the man overseas felt that the battle was worth fighting if only because of the support they were receiving at home.

In the minds of those abroad and at home in uniform it must be recalled that there was no thought of future reward for service. They felt they were but doing their duty and that was satisfaction enough.

One benefit was granted them—Government life insurance—and most of them took advantage of it. True, most of them allowed their Government insurance to lapse on their return. That was but natural.

Those who still remained overseas after the Armistice on November 11, 1918, were reading glowing accounts in the home papers and in the Stars and Stripes of the AEF, of the reception accorded the returning heroes. They swelled with pride knowing that their country had not forgotten them.

We recall a group which returned to the United States in the middle of May 1919. Their voyage home was uneventful. They disembarked somewhere in Brooklyn and were transferred to ferryboats which were to take them to a rail center from which they would be shipped to various camps for discharge.

Naturally, they looked about for that heroes' welcome they had read about. True, there was a handful of Red Corss workers who distributed hot chocolate and a couple of chocolate bars for the train ride to camp.

These returning veterans were a bit disappointed but they took it in their stride and went about the business of making a living. However, recalling their own experience after their return they saw to it that the young men who followed them into another war in 1941 and later in 1950, were taken care of by beneficial legislation which has worked not

only for the benefit of these younger groups but for the Nation itself.

Those men of 1917–18 did not forget what war meant but it is said to relate that the further from World War I the country moves just the more does it forget the debt of gratitude it owes to the men of World War I who now may be seeking aid, when the advancing years press upon them, from the country they had served.

It might be well for all the people of the United States from the highest to the lowest to ponder over the words of the Recessional and realize perhaps that they too, have forgotten those who fought for them in World War I and with this realization see to it now that their debt of gratitude is properly paid without more delay.

Sir Oliver Franks, the Treasury, and Our Gold Reserve Position

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1960

Mr. PORTER. Mr. Speaker, under unanimous consent previously granted, I am including hereunder my letter of February 23, 1960, to the Secretary of the Treasury and the reply on his behalf from Alfred H. von Klemperer, Assistant to the Secretary.

FEBRUARY 23, 1960.

Hon. ROBERT B. ANDERSON,
Secretary of the Treasury,
Washington, D.C.

DEAR MR. SECRETARY: Enclosed is an insertion I made in the RECORD recently of certain portions of a report written by Sir Oliver Franks for Lloyds of London. I call your attention to his remarks as set forth on page A1247 with particular reference to his suggestion that the $12 billion of gold which is at present "locked up as backing for Federal Reserve notes and deposits" be set free for effective use. I'd very much appreciate having your comments on his suggestion and on his reasons for our going ahead along these lines.

It does seem to me incongruous to have gold backing our Federal Reserve notes in any proportion at all since the holder of such note is not at all entitled to gold under any circumstances, whereas we have no gold reserve in connection with our foreign obligations but we do have to pay them in gold. I should be interested in your comments on this situation and upon any plans you might have for changing it.

With every good wish.
Sincerely,

CHARLES O. PORTER,
Member of Congress.

OFFICE OF THE SECRETARY
OF THE TREASURY,
Washington, March 10, 1960.

Hon. CHARLES O. PORTER,
House of Representatives,
House Office Building,
Washington, D.C.

DEAR MR. PORTER: The U.S. gold reserve position and our balance of international payments situation, discussed by Sir Oliver Franks in his annual report of Lloyds Bank, Ltd., which you forwarded for our examination on February 23, 1960, are of continuing interest to this Department, and we are glad to have an opportunity to present our views to you.

Sir Oliver proposes that the $12 billion gold at present serving as backing for Federal Reserve note and deposit liabilities should be set free for "effective use." What he seems to be suggesting is that the United States does not have gold stocks, in excess of statutory gold reserve requirements, adequate for international settlements. As we have indicated in previous correspondence, foreign holders do not undertake to exchange all of their dollar balances into gold since a large portion is essential for ordinary working balances and other purposes. Moreover, as Secretary Anderson indicated on January 20, 1960, to the House Committee on Appropriations, no run on our gold stocks need be feared so long as the rest of the world retains confidence in the United States. We have such confidence and we can maintain that confidence, he pointed out, if the U.S. economy, both Government and private, pursues budgetary, fiscal and cost-wage policies that are reasonable, policies which will demonstrate that we are going to maintain the purchasing power of our currency. The Secretary also expressed the hope that we will always remain on the international gold standard, the present world system of payments and reserves, and no change is contemplated.

It is also important that our balance of payments position show a satisfactory trend in order to justify confidence. Among the measures which the United States has taken in connection with our present balance-of-payments position and its impact on gold movements are the following: It is urging other governments to eliminate quotas which discriminate against U.S. exports. With regard to direct loan funds appropriated for foreign economic development projects, it is placing primary emphasis on the financing of goods and services of U.S. origin. It is also encouraging other industrialized countries to emprove and increase their financing of development in the less developed areas of the world. In this connection, you may be interested in the enclosed copy of my recent address, "The U.S. Balance of Payments in a Changing World Economy."

Let me point out that at the January 20, 1960, hearings before the House Committee on Appropriations, the Secretary also discussed in some detail the subject of gold and our balance-of-payments position. References appear on page II of the index, following page 135.

The increased resources of the International Monetary Fund will undoubtedly provide the additional equity to finance international trade, which Sir Oliver intimates should be provided by the United States through the mechanism of eliminating our monetary gold reserve requirement. You will recall that last June the Congress amended the Bretton Woods Agreements Act so as to permit an increase in the U.S. quota in the International Monetary Fund, and, under the terms of the resolutions of the Board of Governors of the Fund, this increase in our quota, as well as the quotas of other countries, became effective in September. In the Treasury's view, the increase in the Fund's resources provided for expanding world trade in the foreseeable future, and will enable the Fund to deal with the problems of temporary imbalance in international accounts which are likely to arise. Moreover, the exchange reserves of other industrial countries have increased considerably, and the adoption of nonresident convertibility by these countries will make the Fund's holdings of their currencies more available for use of operations.

It is always a pleasure to have an opportunity to be of assistance to you. Please do not hesitate to call on me should you wish to explore other aspects of these important subjects.

Sincerely yours,

ALFRED H. VON KLEMPERER,
Assistant to the Secretary.

A Hot Issue: Medical Care for Aged

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Greensboro Daily News, published in my congressional district, which deals with a subject now before the country:

[From the Greensboro Daily News, Apr. 6, 1960]

A HOT ISSUE: MEDICAL CARE FOR AGED

An idea whose time has come is sitting on the doorstep of the American Medical Association and the Eisenhower administration.

That idea is governmental health insurance for the aged. It may be repugnant to the AMA whose members see it as an entering wedge for socialized medicine. It may strike President Eisenhower, a man who has never had to pay his own medical bills, as too much governmental control.

But the idea remains on the doorstep. And for good reasons:

Item: A major insurance company's statistics show that in a recent year 500,000 families in the United States had medical bills larger than their total incomes for that year.

Item: Old people spend nearly twice as much on medical care as the general population; during a 5-year period health expenses in general increased 42 percent while those of the aged went up 74 percent.

Item: In 15 years the over-65 age group will increase from the current 16 million to 22 million; currently, one out of every three persons between the ages of 60 and 64 has a parent or close relative in his eighties or older; their medical care is a serious drain on income.

These are straws in the wind. They explain why Congressmen are being "snowed under" by mail supporting the Forand bill, which calls for free medical care for persons covered by social security.

The Forand bill is pie-in-the-sky legislation. It would cost the Government up to $2 billion during its first year of operation (with financing provided by an increase in social security payments). There would immediately be a shortage of hospitals, doctors, and nurses to take care of millions of aged who would take advantage of the new insurance. The AMA argues that the Government would eventually set the rates of compensation for hospitals, nursing homes, dentists, and physicians.

But all these arguments to the contrary notwithstanding, support for the Forand bill, or something like it, grows. The need is urgent. Millions of old people are unable to take care of their medical needs; their number grows as medicine increases the lifespan.

If the American Medical Association opposes the Forand bill, it had best, like RICHARD NIXON, scurry around for something less stringent as a substitute. Mr. NIXON cooperated with Secretary of Health, Education, and Welfare Arthur Flemming on a plan combining Federal and State aid to assist private insurance programs. But President Eisenhower opposed that.

Now health insurance is picking up steam as an election year issue. It will not go away, because millions of aged are unable to pay for their medical care.

Obscene Literature

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. CRAMER. Mr. Speaker, some progress has been made in the all-out clashing struggle against the nationwide peddlers of filth, but the battle is far from over. Lewd material is still being sent into millions of American homes despite all that local law enforcement agencies, the Post Office Department, and the Department of Justice have been able to do. This business of trafficking lewd material is estimated as being in excess of a half billion dollars annually.

Today I have introduced a bill, H.R. 11590, which deals specifically with section 1461 of title 18 of the United States Code. That section provides a criminal penalty for use of the mails to sell and distribute obscene literature and medicines and devices designed to prevent conception or produce abortion. So far as it goes, the present statute is entirely commendable. However, the paragraph pertaining to obscene literature has proved to be entirely inadequate. Accordingly, while my bill would retain and preserve the other paragraphs of section 1461, it would drastically amend and greatly strengthen the obscene literature paragraph. In so doing, it treats the problem in four separate parts:

First. The first part concerns the mailing of obscene literature to school children and other children under the age of 19 years.

Second. The second part concerns all persons other than such children.

Third. The third part concerns those who use the mails for transporting obscene literature to middlemen or retailers for further circulation or disposition.

Fourth. The fourth part applies to those who receive the literature from the mails for such future circulation or distribution.

While my bill effectively covers every link in the filthy chain of depraved smut merchants who employ the U.S. mails as the vehicle for their despicable trade, it also maintains the "continuing offense" concept whereby violators can be prosecuted either, first, in the judicial district in which the obscene literature was deposited in the mails, second, in any judicial district through which the mails passed, or, third, in the judicial district where the literature was delivered. This is the concept which Congress originally wrote into section 3237 of title 18, but which the 1958 Supreme Court decision, in the case of United States against Ross, repealed. The concept was revived and refortified in the last Congress, with the enactment of legislation similar to my bill, H.R. 11185, which became Public Law 85–796.

One of the most important features of my bill is its more comprehensive and more specific definition of obscene matter. It includes not only literature, but any article, matter, thing, device, or substance of any kind which would suggest, induce, arouse, incite, or cause, directly or indirectly, first, lewd, libidinous, lustful, indecent, obscene, immoral, or depraved thoughts, desires, or acts; second, the use of such things for any illegal purposes or in any illegal manner, or third, cause a corruptive, depraved, or immoral effect.

The argument might be espoused that this definition is too broad and overly restrictive and might outlaw the use of the mails for the transportation of certain legitimate medicines and devices. However, my bill contains a saving clause which exempts such mailing for bona fide medical, educational, and research purposes.

There is also the argument that there is no statutory test to apply to the interpretation of the definition of obscenity. However, my bill does contain such a test, one which grew up with the formulation of common law and case law, viz, the so-called "reasonable man" test. There can be no conviction and no penalty under this bill unless the literature or device in question is obscene "in the opinion of the normal, reasonable and prudent individual."

There are those who would contend that this legislation would make the Government an arbitrary censor and would violate the freedom of the press and speech clause of the Constitution. Such an argument is entirely without foundation. With respect to censorship, the Supreme Court has frequently interpreted the first amendment, and Mr. Justice Murphy in 1942 said, Chaplinsky against New Hampshire:

> There are certain well-defined * * * classes of speech, the prevention and punishment of which have never been thought to raise any constitutional problem. These include the lewd and obscene * * * which by their very utterance inflict injury or tend to incite an immediate breach of the peace.

This, of course, applies with equal force to the publication of obscene ideas and speech or pictures.

My bill provides a penalty of $5,000 or 5 years' imprisonment, or both, for the first offense and $10,000 or 5 years, or both, for each subsequent offense under this new subsection. The records of the Post Office Department disclose repeated convictions of the same violators operating under assumed names, aliases or different trade names. These indecent people follow the practice of incorporating their "businesses" under the laws of their State of domicile. As soon as the corporation is convicted, they simply dissolve the corporation and form a new one. The penalty provisions of my bill would constitute a substantial deterrent and a just punishment.

I have praise only for the postal authorities and the enforcement officers of the Justice Department—they have done a good job with the tools they have. However, they need more tools and better tools. I sincerely believe those tools have been forged in my bill—possibly they need more polishing and sharpening, but it is up to the Congress to finish the task, and, I urgently feel, should proceed to do so immediately. We have here something of paramount national interest. Every year, a horde of criminals, using the mails as a vehicle of extortion, fleece thousands of our people of millions of dollars with a variety of fraudulent schemes which defy the ingenuity of the honest man. We cannot afford it, and as a moral matter we cannot tolerate it. We must stop the flow of obscenity.

Resolution

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Woman's Auxiliary of the Michigan State Medical Society at its midyear board meeting. This resolution is being inserted in the CONGRESSIONAL RECORD at the request of Mrs. Walter Hammond, State chairman of legislation of the Woman's Auxiliary of the Michigan State Medical Society.

The resolution follows:

RESOLUTION

Whereas social security cash benefits now go to 13.7 million;

Whereas private pension plans, increasing savings, and liquid assets are all combining to improve the economic resources and the purchasing power of the group over 65 years of age;

Whereas many positive-action programs, including improved nursing homes, home-care services, and homemaker services are being advanced;

Whereas the boards of the American Medical Association and the American Hosptial Association recently adopted a resolution dedicating their full resources to accelerate the development of adequately financed health care programs for needy persons, especially the aged needy;

Whereas any plan which benefits a selected group, social security beneficiaries, to the exclusion of other equally or more needy citizens, at the expense of the taxpayer is discriminatory;

Whereas medical care programs for indigent citizens, especially those over 65 years, are improving;

Whereas proof of need dose not require Federal action, nor does Federal action promise to resolve the problem;

Whereas need cannot be proven until the findings of the White House Conference on Aging in 1951 are known and studied; and

Whereas adoption of a plan for Federal control and payment of medical care for our citizens would hinder the progress of medical science, kill voluntary health insurance, and force our really ill citizens to compete for hospital space against malingerers: Therefore be it

Resolved by the Woman's Auxiliary to the Michigan State Medical Society on this 10th day of March 1960, That the Forand bill must be labeled (1) unwise, (2) discriminatory, (3) burdensome, and (4) failing its stated purpose; and be it further

Resolved, That the Woman's Auxiliary to the Michigan State Medical Society is unalterably opposed to any legislation which makes a governmental body responsible for the medical needs or expenses of U.S. citizens or any subdivision of its citizens.

Planning for the Future of the Aged

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, it is most heartening that more Americans now recognize the need to permit individuals regardless of age, to make their own choice about work and leisure. Many of us have long since observed that it would be a far different Congress if Congressmen were forced to retire at age 65. Erwin D. Canham, president of the U.S. Chamber of Commerce and editor of the Christian Science Monitor, has written very perceptively about this problem. He recognizes the need for preretirement training and for part-time employment for those who wish it. Above all, he challenges the Congress not to deprive the elderly of freedom of choice. I am hopeful that the Ways and Means Committee will report legislation that will encourage the part-time employment of older persons and permit gradual retirement in a way which the present arbitrary work test does not do.

Mr. Canham notes that this is a challenge to the individual and to employers as well as to the community and the Congress. This is the eighth in a series written for Ray Henry which appeared in more than a hundred papers throughout the country. I commend it to the attention of the Members:

PLANNING FOR THE FUTURE OF THE AGED

(By Erwin D. Canham, president, Chamber of Commerce of the United States, editor, Christian Science Monitor)

Few persons probably realize how much our aged population will increase in the next 10 years. By 1970 there will be 20 million persons aged 65 or over in this country, as compared with 16 million in 1960.

Of these 20 million, about 13 million are today aged 55 to 64. The vast majority of these 13 million are now working or are the wives of working men.

With so many approaching retirement, the decade ahead is one of both challenge and opportunity.

There is a challenge to each individual to exercise initiative, ingenuity and imagination in continuing on the job, if he needs to or prefers to do so.

Similarly, there is a challenge to employers to lend their support to the fullest extent possible in providing satisfactory placement of older persons in suitable self-sustaining employment.

And, there is good reason for believing that a very substantial number of these persons will continue working beyond the age of 65.

There is a challenge to workers and business to explore and develop sound, constructive preretirement training and planning, so that individuals can better adjust and reap the rewards of a more satisfying life of retirement.

Businessmen are giving more attention to the adjustment process in preparing for a life less strenuous, less exacting, but with opportunity for individual satisfaction. Part-time jobs may provide a suitable transition for many.

The individual business concern has responsibilities to its owners, to its consumers, and to its employees.

Extension of fringe benefit programs will be undertaken in the light of these responsibilities and of what is most likely to promote the continued success and well-being of that business enterprise. No one could safely predict what and how much business as a whole will do in the fringe benefit area in the next decade.

Of profound concern, especially to older people and to those retiring in the 1960's, is the threat of inflation.

Nothing can be so discouraging—destructive of human dignity, well-being and happiness of our older people—defenseless against the erosive effect of inflation on their relatively fixed incomes and lifetime savings. A sound curbing of those forces which would result in rising prices is a challenge to all.

There is a challenge to every community to supply adequate public facilities for health, recreation and education for their older people, as it now does for the younger segments of the population.

We must recognize that each community has a responsibility for providing such services for older people, as well as for younger groups of its citizens.

The Federal Government has a responsibility for maintaining the social security program primarily for older people as a floor of protection against want.

But there is a challenge to Congress not to allow its various studies of the status of the aged to develop into programs which will deprive the individual in his later years—or at any time in life—of his freedom of choice. We must now halt those forces now on the march which would destroy man's capacity to make decisions for himself.

The decade of the 1960's will challenge all of us not to succumb to the blandishments of social planners, and thereby deprive the individual of his will to do for himself, of his human rights and freedoms which, we believe, are God given.

Freedom To Travel

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BARR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1960

Mr. BARR. Mr. Speaker, today I am submitting an editorial from the Indianapolis Star on freedom to travel. I recommend it to the attention of the Members of this Congress. Eighteen Members voted against the passport bill last year, and I was one of them. Mr. Speaker, I do not intend to vote for legislation that will tend to make our country a police state.

LEAVE THE FENCE DOWN

Critics of the right of free travel report that 1,150 individuals, whose passports normally would have been held up because of Communist affiliations, have received passports since the Supreme Court decision upsetting the State Department's power to deny passports arbitrarily. Many of these doubtless have gone out to spread anti-American propaganda abroad.

But which is worse—to have a thousand malcontents shooting off their mouths abroad or to have them sitting at home and writing to friends abroad that America is keeping them behind their own iron curtain for fear of their criticism?

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1960

Mr. REES of Kansas. Mr. Speaker, on February 24, 1960, the National Association of Broadcasters and the Electronics Industries Association in cooperation with the Veterans of Foreign Wars conducted its 13th Annual Voice of Democracy Contest. Fifty-one young spokesmen for democracy from 50 States and the District of Columbia took part in this contest. An awards luncheon was given in honor of these winners at the Statler Hotel in Washington, D.C.

Mike Armstrong from Pittsburgh, Kans., was the Kansas representative on this occasion. His speech is entitled "I Speak for Democracy." It is included herewith. I think Members of Congress and others who read the RECORD will find it interesting as well as inspiring.

The fourth-of-July orator, the civic club speaker, and the political campaigner all speak for democracy. They paint with glowing words a rosy picture of today's great American democracy. They speak of the wise Washington, Jefferson, and Franklin; the martyr Patrick Henry; and the patriotic Sons of Liberty. The people swell with pride when they once again hear of the grassroots resourcefulness and courage which built this America, the greatest Nation in all history.

I, too, speak for democracy. I do not speak to uphold or defend, for democracy needs no defense. I speak instead as a spokesman for democracy saying what it should have, but has not, said to the world and to itself, including not only the various media of communicating ideas but that which speaks lounder than words—action.

Years ago a symbol of freedom was erected in New York harbor. The inscription on this statue reads in part:

"Give me your tired, your poor,
Your huddled masses yearning to be free."

With this statement American democracy voiced once again its long existant invitation to the poor and oppressed people of the world to come and share in our fortune. America needed these people and they needed America. The golden door was open wide for the mutual benefit of all.

Today this door is still open, but only a crack. America no longer needs the added numbers these masses can provide. But, democracy, these people still need our support and we need theirs. Shall we now not only slam the door but refuse to look out the window. The American people think and talk on this question but neither we or the people of the world can afford the luxury of time spent in such a manner.

Democracy, you should say, "Listen people of the world. I offer you a higher standard of living, escape from the shackles of tradition which have held you for ages, a stable political foundation, and an economic system where none now exists.

"I can give you the money to build roads, dams to produce electricity, the machinery for which this power may be used, equipment to mine wealth from the earth, equipment for the irrigation of farmland and the claiming of new land, and the many and varied improvements offered by modern America. I can also give you the knowledge

to continue these projects and eventually to improve yourselves.

"But it was only by sweat and toil that American democracy advanced itself to its present position in the world and by the same token I can provide the ways and means but only you can provide the will to better yourself."

Although democracy can provide others with the things they need, we must beware. For as we are not alone on the plateau of political power, neither may we sit complacent on our mountain of money. Where we once sat unchallenged, we now must play a game of economic king on the mountain. Instead of pushing us off our mountain, other forces have set about to build a higher mountain all their own over the horizon where we cannot see. Meanwhile, in the United States there is only talk of recession, depression, strike, unemployment, and the shorter work week. The Dow-Jones average makes the bull market of the twenties look meager in comparison, but inflation is still higher. But the American people still ask for higher wages, increased Government benefits, but with lower taxes. And away we go on another loop of the spiraling cost of living. Our standard of living is higher than ever, but so is our price standard. It's high enough now that many of the customers of the world can barely peer over the counter to look while other markets are selling from the floor. Karl Marx predicted our downfall when we got so rich, and our prices so high, that no one was left to buy our products. This leads us once again to the barefoot balance of world power.

America is the showplace of democracy and we must be the showmen. P. T. Barnum said that there is a sucker born every minute, but today's world birth rate produces them much faster than that. For these people we must first put on a show, the greatest show on earth. We must show them what we already know, that we are the most advanced people on earth. Next we must give them the things I have offered in our name. It is only in this way that we can keep the peoples of the world from being subjected to lies and false promises and bring them into the world of democracy.

It would seem that we are the suckers, but such is not the case. These gifts would actually be a capitalistic investment in the future of the world. These people have much to offer in repayment. In the underdeveloped countries of the world lies the future market for our goods.

These words I speak are in the finest of the American democratic tradition. What I offer is not a bribe or a gift in sympathy, but an investment for our mutual benefit.

These words I speak for democracy.

Fair Trade Fight

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Wall Street Journal—New York City—of March 28, 1960, entitled "Fair Trade Fight":

FAIR TRADE FIGHT—RECENT COURT DECISIONS AGAIN THREATEN PRICE-FIX STRUCTURE, U.S. LAWYERS SAY

(By Lyle W. Denniston)

WASHINGTON.—The fair trade fortress, where retail price fixing lives legally immune to Federal trustbusting, seems to be crumbling under new court attacks—even as its defenders try to rebuild the ramparts.

This is one of the great sieges of U.S. legal history, already extending for more than 2 decades, and not even a Philadelphia lawyer would dare to predict with certainty the ultimate victor. But it is plain to the eye that warriors whose battle dress is the black judicial robe are opening new cracks in the fortress walls.

An opinion handed down from a State or Federal bench is not, of course, so blunt an instrument as a battering ram—its impact may not be completely visible at first glance.

A few days ago, for instance, New Jersey's supreme court held that Eli Lilly & Co., the pharmaceutical manufacturer, must register with State officials if it wishes to rely on State courts to help it police retail prices of its products. Superficially this is not too important a matter; it simply requires fair trade manufacturers to shuffle a few papers to New Jersey's secretary of state.

But here's the twist, according to lawyers who have watched this case at close range: Once a company has registered, it has accepted business citizenship in the State—and State taxes may hit it hard. The conclusion: Many a company may be unwilling to pay this price for the privilege of enforcing fair trade in New Jersey.

Like many attacks in the State courts, this opens only a chink in the fortress walls. But highly placed Government attorneys here say they spy a gapping hole, opened by a verdict of the U.S. Supreme Court about a month ago.

The damage inflicted to fair trade by this case, rather similarly, was not immediately and unmistakably apparent. On its face, it had nothing whatever to do with fair trade, because it involved the price-policing activities of another drug maker, Parke Davis & Co., solely in Virginia and the District of Columbia—neither of which had fair trade laws when the case got started in 1956. (Since then Virginia has passed one.)

LAWYERS' MORAL

But the Federal legal men are convinced that the kind of activity which Parke Davis was accused is equally illicit in any fair-trade State. What the drug maker engaged in, according to the court record, was arranging for wholesalers to cut off sales of products to price-cutting retailers, and visiting the chief price-cutters to warn them their supplies would be cut off if they persisted in undercutting suggested retail prices. This sort of thing, said the justices, creates an illegal combine.

The moral that Government lawyers draw for manufacturers operating in fair-trade States is this: It's still quite legal for a factory sales chief to write price floors into agreements with retailers. And it's still legal for him to refuse to sell directly to a retailer who violates them. But the refusal must be an absolutely unilateral act. If he organizes action by wholesalers, or even so much as goes around to have a chat with a retailer about the consequences of price cutting, he has very likely stepped beyond the law. If that is the case, it's questionable what a sales cut-off could accomplish beyond the loss of an outlet for the producer's ware.

In practical effect, then, the reasoning goes, fair traders are left with but one perfectly legal enforcement tactic. That's a lawsuit by the manufacturer seeking a court order to force a merchant to abide by price minimums. But plugging price-cutting holes in this way can be a tedious and expensive business, experience has shown. General Electric, which gave up on fair trading 2 years ago, had hired 45 law firms to take 3,050 cases to court in 33 States.

And the courts, in the opinion of fair traders, are frequently found to be hostile. An official of Sunbeam Corp., for example, on one occasion complained that State judges allow price-cutting merchants to raise all manner of "pettifogging" procedural barriers to such suits.

Most importantly, many State courts insist that a manufacturer show proof that he has tried diligently to gain price compliance before coming to court. And under the Parke Davis doctrine, any company which sets about building a pattern of price enforcement effort sufficient to impress the State judge may be running the hazard of violating Federal antitrust law.

Government lawyers have no doubt all this adds up to a major breach in fair trade defenses. They expect that many a fair trading manufacturer will quietly and gradually give up real attempts to enforce retail price fixing and perhaps be happy to have a good excuse for doing so. According to this theory, it is the retail pressure groups, not the manufacturers, who are the true believers in price fixing.

Fair trade apostles, naturally, do not altogether agree with this strategic estimate of the situation. The National Association of Retail Druggists, for instance, stoutly insists that the Parke-Davis case "is completely unrelated to either State or Federal fair trade legislation." But other lobbyists for legalized price fixing are making the grudging admission the ruling may have at least a psychological impact on fair traders. And experts within at least one pressure group concede that any manufacturer would now be well-advised to observe the literal limits of State fair trade laws to avoid wandering into the range of Federal trustbusters.

STORMY HISTORY

It may take years, and no doubt further court tests, to determine beyond question the impact of the Supreme Court's Parke-Davis ruling. This is simply the latest important chapter in fair trade's prolonged history of frustration in the courts.

The U.S. Supreme Court dealt what looked like a knockout blow in 1951, when it held that price-fixing contracts were binding only upon retailers who signed them, not upon nonsigners. Congress reacted a year later by saying, in the McGuire Act, that they are indeed binding upon all.

Since then, however, State courts have scuttled in whole or in their most vital part 16 of the 45 States' fair trade laws. These laws were found totally invalid in two States. Tribunals in 14 others all but crippled their acts by throwing out the nonsigner clauses.

A damaging court ruling came in a U.S. Court of Appeals in 1957—a decision the U.S. Supreme Court refused to disturb. It gave a discount house permission to ship its goods from a non-fair trade State into a fair trade State and sell them there at less than suggested prices.

The string of legal reserves, triggering decisions by such companies as General Electric, Sunbeam, and W. A. Sheaffer Pen Co. to quit fair trading, convinced price maintainers that only Congress could help them rebuild their legal fortress.

So far, they have been able to persuade the House Commerce Committee that fair trade should be made a national policy. But until they persuade the House Rules Com-

mittee, too, their bill can't get to the House floor for debate. The Rules Committee doesn't seem ready to oblige as yet.

The bill would make it a Federal crime for a merchant to sell below a minimum fixed by a manufacturer on his products.

NO PROSPECT OF TRUCE

One of the more persistent bands of lobbyists, frankly conceding fair trade's tarnished image, doesn't want Congress to vote it back into respectability under that name. But they have hardly given up the cause. They want a quality stabilization bill which would lead somewhat circuitously, but its backers hope more agreeably, to the same object: Resale price maintenance.

Here's how it would work: Congress would specify that the owner of a brand name or trademark continues to own that symbol even after the item bearing it is sold. With the ownership right would go the right to set a price; this would be a specific price, not just a minimum as in the usual fair trade case. Any seller who strayed from the price—up or down—could be cut off. The same fate would befall a merchant who used the brand name product only as bait to get customers into his store.

Whatever the form, if Congress should approve resale price maintenance as a Federal policy, legalized price fixers would have new mortar to patch up their crumbling bastion. But even then, the repairs might not be lasting. Justice Department lawyers regard a national fair trade bill as one of doubtful constitutionality.

Thus, fair trade's fortress seems ill-prepared to withstand further assault, and there's no prospect of a truce.

Where Are the Republicans?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. MULTER. Mr. Speaker, I comment to the attention of our colleagues the following articles on the subject of home rule for the District of Columbia.

The first is an editorial which appeared in the Washington Post of March 7, 1960:

WHERE ARE THE REPUBLICANS?

However one looks at it, a large majority of the Republicans in the House of Representatives have fallen on their faces, so far as carrying out their party's pledge of suffrage for the District of Columbia is concerned. In line with that pledge, the President sent to Congress a bill that has widespread bipartisan support. Likewise it has the endorsement of Vice President NIXON and former President Hoover. But a majority of the Republicans in the House seems to be in league with the reactionary Democratic leaders of the House District Committee who are trying to sabotage the bill.

By contrast, the Democrats of the northern and western States have lined up in large majorities for the petition designed to discharge the District Committee from further consideration of the bill. Here is an interesting spectacle. Traditionally the Republicans claim to be the party of civil rights. They assert a profound interest in the right to vote. Yet in this matter of restoring suffrage to the disfranchised citizens of the Nation's Capital most of the GOP members of the House are letting the Democrats claim all the credit for supporting the President's bill.

If anyone thinks this is a harsh conclusion, let him call the roll of home-rule petition signers. Of the Representatives from the New England States, 15 out of 19 Democrats have signed, but only 4 out of 9 Republicans. Of the Middle Atlantic Congressmen, all but 1 of the 40 Democrats have signed, but only 15 out of 47 Republicans. Other records are even worse. The East North Central States have 32 out of 43 Democratic Congressmen behind the petition, but only 6 of 44 Republicans; the South Atlantic States, 11 of 55 Democrats, but none of 5 Republicans; the Mountain States, 6 out of 11 Democrats, but only 1 out of 5 Republicans; the Pacific States, 19 out of 22 Democrats, but only 5 out of 21 Republicans.

Except for 10 Southern States that are not represented at all on the petition, the Democratic legislators have done very well. They have provided 140 of the 174 signatures noted in the most recent count. If the Republicans had done as well, the home-rule bill would soon be moving to a vote in the House.

It is true, of course, that many Republicans and some Democrats have followed a general practice of not signing discharge petitions. But this is one case in which such a petition is necessary to prevent a little reactionary clique from making a mockery of the legislative process. For more than a decade the House has been denied an opportunity to vote on this and similar bills, while the Senate has approved home rule for the District five times. Surely 10 years of obstruction ought to be enough to arouse the hackles of any legislator who has any regard for the basic right of self-government.

Every Member of the House whose name is not on the home-rule petition ought to be asking himself how his suport of the anti-suffrage, and antihome-rule clique will look back home. Can the Republicans who are holding aloof defend their failure to lift a finger in support of the President's effort to restore the ballot to 870,000 voteless citizens? This complete denial of suffrage to all the residents of the District is even more flagrant than denial of minority voting rights in the States, because in this instance Congress itself bears the whole responsibility.

There is still time to remedy this deficiency, but the time is growing short. If the Republican Members of the House are not themselves alert to the embarrassment they may face in November, Minority Leader HALLECK and Vice President NIXON could render a useful service by reminding them that the American people have a high regard for the right to vote.

The second article appeared in the New York Times of April 3, 1960:

NEW DRIVE SEEKS CAPITAL SUFFRAGE—HOME RULE BILL IS STALLED IN HOUSE—VOTING MAY BE A CAMPAIGN ISSUE

(By C. P. Trussell)

WASHINGTON, April 2.—This Capital is throbbing once again with a new drive to let its nearly 1 million residents vote, and the issue is moving into the national campaigns.

In recent years the fight has been confused by the fact that the population of Washington has become about 53 percent Negro. This factor is not brought up in official argument, but it seems to play an important role in the back of many minds.

Also in the background is the argument that citizens of the Nation's Capital have not been allowed to vote simply because of an omission in the drafting of the Constitution. It is argued that the Founding Fathers distinctly did not want to make Washingtonians voteless citizens.

NEW DRIVE UNDERWAY

The status of the new drive is as follows:

The Senate has approved a resolution calling for a constitutional amendment that would give suffrage to citizens of the National Capital.

Hearings on this proposal will be held next week by the House Judiciary Committee. The legislation would remedy the constitutional omission that provides that elections for Presidents, Vice Presidents, and Members of Congress be handled by the States. The District of Columbia is not a State or a part of one.

The constitutional amendment must be approved by a two-thirds vote of both Houses of Congress, and then be ratified by three-fourths of the States within 7 years.

Pending also is a home-rule bill that would give Washingtonians the right to vote for a Delegate to the House of Representatives, as Puerto Rico has, and for a city council.

PRESIDENTIAL APPOINTEES

The city managers now are presidential appointees. Congress is the city council, and when city matters go to the floors there appears to be a lack of congressional interest in them.

The home rule bill has been bottled up by the House District Committee. The southern element of this panel, opposing the legislation, has prevailed.

Representative ABRAHAM J. MULTER, Democrat, of Brooklyn, is trying to force the proposal to the floor by bypassing the committee. This is being done by a discharge petition, which must be signed by a majority of the House, or 219 Members.

The petition had 186 signers today, 33 short of the required number. This has led to charges by Representative MULTER and others that the Republicans, despite their platform pledges for Washington home rule, are slackers.

ANALYSIS BY COMMITTEE

The Washington Home Rule Committee, Inc., analyzed the petition signing, as of today, as follows:

While 147 Democrats seek a showdown, only 40 Republicans have signed the petition. The committee asserted that only a heavy pressure from the White House and the congressional leadership was lacking, perhaps unintentionally, to bar a real test.

The committee also noted that, excluding the southern and border State membership, about 80 percent of the Democrats were supporting the move to take the issue to the floor.

It said that Republicans joining this movement represented only about 26 percent of the GOP House membership.

The home rule committee estimated that, if the issue went to the House floor, at least 275 Members, 56 more than a majority, would approve the bill.

The committee added that the only thing that could break the logjam would be insistence by the White House, or by Vice President NIXON, or by the House Republican leadership, that a test be made.

The third article appeared in the Washington Post of March 30, 1960:

HOME RULE DRIVE NEEDS GOP HELP, LEADER SAYS

(By Morton Mintz)

The drive for District self-government appears almost certain to fail unless President Eisenhower, Vice President Richard M. Nixon or House Minority Leader Charles A. Halleck, Republican, of Indiana, exerts "leadership pressure" on Republican Congressmen.

That is the gist of a report made to the Washington Home Rule Committee yesterday by its legislative counsel, Walter Pozen.

Without "leadership pressure," there are "serious doubts" that the administration home-rule bill will be forced to the House floor where, Pozen asserted, it would be approved by at least 275 Members.

The bill is locked up in the southern-dominated House District Committee. A bi-

partisan group seeks to discharge the District Committee from further consideration of the measure.

To succeed, the group needs the signatures on a discharge petition of at least 219 of the 437 Members of the House. It now has 185. The belief is that fewer than two dozen GOP signatures would do the job—but that these will be forthcoming only under "leadership pressure."

The Democrats have supplied 145 signatures. Eighty percent of the Democrats from outside the South and the border States have enrolled: Only a handful of potentials remains.

The Republicans have supplied 40 signatures, 26 percent of their House membership of 152. Their theoretical reserve is thus 112. They contributed only 7 of the last 45 signatures.

Both the President and Vice President have long supported home rule, but neither has taken a public stand on the discharge petition. Former President Truman said recently that he would sign it if he were a Member of the House.

The 14 Republicans from NIXON's home State of California include only three signers.

HALLECK declined again yesterday to state his position on home rule. He has said that he personally would not sign any discharge petition but does not object to other Republicans signing.

One hundred percent enrollment has been achieved in Republican delegations from two States, compared with Democratic delegations from 19 States, Pozen's analysis shows. In addition, seven other Democratoc delegations have produced signatures from all but one member.

The administration home-rule bill provides for a 15-member elected legislative assembly with a presidentially appointed Governor.

Last year the Senate passed a bill providing for an elected mayor and a nine-member city council. Home-rule strategists hope the Senate would accept the administration's territorial bill, should the House pass it.

Alive at 65—Most Debated Topic Regarding Aged Is Forand Tax Legislation

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 8, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the March 31 edition of the La Grange Citizen, a community newspaper in my district, is, I believe, a most thought-provoking commentary on a subject of great concern to us all:

ALIVE AT 65—MOST DEBATED TOPIC REGARDING AGED IS FORAND TAX LEGISLATION

The most debated and most pertinent topic on older people is the Forand legislation which already has created considerable trouble for Congress, and which will be a hot subject for legislators to handle this election year.

In this column there have been presentations during recent weeks of both sides of this question which involves the basic consideration "Should old-age medication and hospitalization be tied in with social security?"

At this point there is doubt whether the Forand bill will be reported out of the House committee in its present form. There also is evidence that both the Senate and the House will have some form of old-age medication care legislation up for voting.

Vice President NIXON has been caught in a squeeze between President Eisenhower's statements opposing social security taxation for old-age medical care, and between the pressures being exerted by groups desiring to see the Forand bill adopted.

The forces behind the legislation that would increase social security taxes to provide for medical care and hospitalization of older persons are centered in the political action unit of the AFL–CIO. That group has been censured for alleged misrepresentations and distortions of the American Medical Association's stand against the Forand bill, or any similar legislation.

"The AMA will continue to oppose the Forand bill because it is a costly, irreversible program tailored to avoid the real program" is the official statement of Dr. Louis M. Orr, president of the AMA.

Another bit of legislation before Congress should be of interest to persons who have accepted the responsibility to finance the medical care of older dependents.

A Senate amendment to H.R. 9660 would allow the maximum $2,500 medical expense deduction for medical care of a taxpayer's dependent parent, without regard to the 3 percent limitation presently in force.

As many a taxpayer who is supporting a hospitalized parent will admit, present day costs of hospitalization can create a financial burden too great to carry without extreme sacrifice.

An allowable $2,500 deduction would do much toward easing the burden, and also would serve to encourage others to accept the obligation of caring for their parent.

Many major corporations are reviewing their stand on arbitrary retirement at 65 or similar age the "Industrial Relations News" reports that a survey of some 30 corporation personnel policies shows that over half of them have adopted changes in former rigid policies regarding retirement.

The survey reveals that about one-fourth of them now have flexible policies regarding ages for retirement, and that another fourth make exceptions to their age 65 retirement when such exceptions are advisable.

The Governor of Mississippi has assured the aged of his State:

"With the help of our medical, hospital and local government team, we shall care for our own. The aged who have no means with which to secure health care services will find a skilled helping hand extended to them." Decrying Federal "socialized medicine" he said.

"The scheme would be a beginning without an end of more federalism, more centralized control, less initiative by States and less exercise of local judgment."

Address at Byelorussian Independence Celebration

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. ANFUSO. Mr. Speaker, on March 25 of this year the people of Byelorussian origin observed the 42d anniversary of the proclamation of the independence of the Byelorussian Democratic Republic. That Republic was proclaimed in 1918, but about 3 years later the Communist rulers of Russia extended their domination over Byelorussia and its people have been suffering under the yoke of communism ever since.

The Byelorussian-American Association had a public celebration dedicated to the anniversary on Sunday, March 27, 1960, at the Biltmore Hotel in New York. The association's national headquarters are located in Brooklyn, N.Y., and its national president is Constant Mierlak. The Hoonrable Robert F. Wagner, mayor of New York City, sent his personal representative, Mr. John B. Byrne, to deliver a message on his behalf at the celebration.

Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD the address delivered by Mr. Byrne:

Mr. Chairman, Your Excellencies, distinguished guests, ladies and gentlemen, my official assignment this afternoon is to present on behalf of Mayor Robert F. Wagner his proclamation proclaiming Byelorussian Independence Day.

With your kind indulgence if I may be permitted to momentarily digress I would like to point out the fact that we in America are aware of the rich and expansive resources that nature has bestowed upon us. We are favored to enjoy the contributions of labor, art, literature, and culture that have been brought to us by the peoples who have come from every land on earth to find a sanctuary in the United States, and to make it their home. It is the springtime of the year now and soon it will be especially beautiful. The leaves will be green on the bough, the birds will sing with a clearer note, the days will be warmer, and nature's artistry will be born to bloom. But above all, far surpassing all, we are a free people.

Being a free people, we must also realize that every human eye that is brightened by a thing of beauty must just as assuredly grow dim with sorrow and weep for the enslaved and the oppressed, wherever they may be.

The history of Byelorussia teaches us that this land too, has been gifted by nature with many of the resources that are essential to the health and happiness and good life of mankind. A great portion of these resources make up the economy of the U.S.S.R. Byelorussia, a fair and fertile land. Its people have a literal and cultural heritage that reaches far back into the centuries. But it is not a free land.

Forty-two years ago, following valiant and relentless struggle for freedom, the Byelorussian people established a democratic Republic which was based on the principles of liberty and justice. They wrote a constitution which was for the common good, intended to insure the fundamental rights of all the citizens within the limits of order and morality. That constitution was abolished and destroyed. It was destroyed by coercion and treachery. By godless forces of faction and violence, and the people of Byelorussia today are deprived of their rights and made slaves.

The principle, then, underlying this movement, this afternoon, is a very simple one. It is the soul-searching cry of an enslaved people asking to tell their own story, in their own way. But the story of Byelorussia is not new. It is the spirit of test and endurance that has varied little down through many dark and bloody centuries. Time and again, the people fought and fell in appalling slaughter. Yes, they went down in defeat, but defeat never meant despair. Every new generation has renewed that fight for freedom. Today, more than ever, they are compelled to witness in agony, the tyranny and oppression of a Red imperialism. But as I said defeat never meant despair and every new generation has renewed the fight for

freedom. You of Byelorussian extraction are the inheritors of a gay bravery and a proud heritage.

May we not hope and pray this afternoon that this memorable anniversary shall be a most significant one. That the song of liberty that you sing shall re-echo around the world and that noble people of your courageous race in the homeland may have a good reason to feel confident and hopeful that the dawn of a new freedom is nigh. That they shall break the chains of slavery and that the cruel yoke of oppression may be lifted from their bowed and beaten backs. That they will be once more given their sacred privileges of right and justice to hold up their heads and walk in the light of liberty. To know that they not only command but get a full measure of respect for the dignity of man in a free and happy land that can take its rightful place in the parliament of the world.

Political Medicine

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Washington (D.C.) Post of April 7, 1960, entitled "Political Medicine":

POLITICAL MEDICINE

Senate Republican Leader DIRKSEN offered more epithets than ideas regarding medical care of the aged. He was vehement in denouncing labor leaders Walter Reuther and James Carey for their criticism of the administration and their support of the Forand bill; but he had nothing constructive to suggest instead. And Secretary Flemming was full of promises but barren of programs when he appeared on Wednesday before the Senate Subcommittee on Problems of the Aged and Aging; the administration, he said, is working on a plan which will have nothing to do with social security taxation but will function, instead, through the States and private health insurance systems. It is very difficult to see how private health insurance systems can possibly meet the whole need.

By 1980, according to estimates prepared by the Senate Subcommittee on Problems of the Aged and Aging, 26 million Americans will be over 65 years of age. Eighty-five percent of them will have incomes under $2,000 a year. What private insurance companies are going to insure them adequately at rates they can afford to pay? It is doubtful that any private company can pay for all the surgical and nursing and hospital care these elderly persons are indisputably going to need.

There are, of course, a great many companies in the United States selling health insurance of protective value, and some make a special point of catering to elderly folk; but no more than about one-third of the persons over 65 have hospital insurance, most of it with inadequate benefit coverage. Private insurance companies provide splendid protection for wage earners. But the cost of insurance inevitably goes up as the likelihood of illness increases with age, and sometimes is prohibitive for those who have retired.

The one practical way to provide insurance against the health hazards of retirement years is to let people pay the premiums in the form of social security taxes while they are earning wages and are able to do so. This is precisely how they now provide retirement income for themselves under the social security program; and this kind of protection is made compulsory because the lack of it would have a disastrous social impact. Those who denounce this proposal as "socialistic" without proposing any workable alternative are foolishly doctrinaire. They might just about as sensibly oppose as socialistic the Nation's public schools, fire departments, and parks because these represent communal efforts financed through taxation. One of the fundamental purposes for which the U.S. Government was established was "to promote the general welfare."

Honorary Doctor of Laws Degree Conferred Upon Senator Kenneth B. Keating

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. DORN of New York. Mr. Speaker, Long Island University, one of the most outstanding institutions of higher education in the United States, conferred an honorary doctor of laws degree upon Senator KENNETH B. KEATING, Republican of New York, on March 22 at its annual scholarship fund dinner at the Hotel Astor in New York City. Prof. Dennis Brown in reading the citation stated:

Mr. President, here is a public servant of the highest order; sagacious, judicious, courageous in his convictions; a legislator dedicated to the common weal; an articulate spokesman for his party, his State, his Nation. Native of Lima, in this Empire State, he received the A.B. degree from the University of Rochester at the age of 19, and taught high school Latin before entering Harvard to prepare for the profession of law. Possessed of the forensic gifts of a Cicero, his ability as a trial lawyer drew wide attention, and indeed his practice became a lucrative one. Yet, with characteristic conscientiousness, he relinquished an active participation in his law firm when the citizens of the 38th Congressional District first elected him their representative in 1946, and he devoted himself to his Washington duties with full vigor. He served consecutively in the House for six terms, and in 1959, invested with the purple-bordered toga of an eminence gained by diligence and skill, he took his place in the Senate of the United States. He has distinguished himself in public service as an ardent internationalist and a firm supporter of the United Nations, an advocate of liberalized immigration laws, and a militant defender of civil rights. In two World Wars he served with brilliance and valor, earning decorations from this Nation and from Great Britain as well, and now holds the rank of brigadier general. Mr. President, here is a gentleman, scholar, patriot; an American of genuine distinction who symoblizes the highest ideals of public service. He is commended to you most heartily for the degree of doctor of laws.

I congratulate the junior Senator from New York on his receipt of this well-merited honor, and join with numerous individuals and newspapers in commending the Senator for his excellent address at that time.

The text of the address by Senator KENNETH B. KEATING is as follows:

It can well be said that each of us is born with a fortune. The silver spoon of past learning is in the mouth of every infant. Millions of ancient and modern scholars and scientists are the fairy godfathers, and, let us be historically accurate, the fairy godmothers of every child who is born into the civilized society that we know. Poets have spoken of time as a thief—but, time is first of all a giver—it lumps the riches of the past before each of us and we literally come into the world with an inheritance of learning awaiting us—a treasure that is ours for the taking.

That inheritance is so often overlooked—or misconceived—because it is left lying around in books, or because it is so readily available from teachers who are the custodians of what is known and what is imperishable.

The flowering tree of American culture has its roots in faraway places, has been fed by faraway springs of thought and energy. Athens, Rome, Western Europe—yes, the East and Africa—civilizations some vanished, some flourishing—yet all form the seed of our culture, and the soil, the sun, and air that give it life.

Culture is the business of the university—its reason for being—and today I should like to speak with you about the true role of culture as opposed to a latter-day perversion of that role in certain areas of the world.

Traditionally, culture has been dedicated to the embellishment and ennobling of man's life on earth. It is a hunger satisfied, a thirst quenched, a wealth acquired. It has been self-fulfilling, as sufficient unto itself as a flower in bloom. It has been devoid of ulterior motives.

Today, a new and disturbing concept of the role of culture breaks sharply with the past. I refer to the first beginnings of a Soviet program that recognizes culture as a cold war weapon—an ideological missile if you will, that has the thrust of rubles and energies to get it aloft, and whose predetermined targets are the minds of men.

Many of you, no doubt, are aware of the project to which I refer. It is the planned establishment in Moscow of a special university for the training of African, Asian, and Latin American students. This university is scheduled to open its doors next month with an initial enrollment of 500 students. In the following years it is anticipated that that figure will rise to 4,000 students. Because the Russian language barrier will exist for these students, the new university provides a preparatory course of 1 to 3 years before students can start their 4 or 5 years of graduate studies.

According to Russian-source figures, the training of each individual student will cost the Government $10,000 a year. This amount includes transportation, tuition, and all incidental expenses. Thus, when the university is operating at expected capacity, it will involve an outlay of $40 million a year by the Soviet Government.

Now the genesis of this unique seat of learning—learning Communist style—is interesting. The project has not sprung full blown from Khrushchev's brow. Actually, its establishment is based upon what might be termed a pilot experiment. This experiment has been going on since 1947 in Czechoslovakia where the Communist Party has been conducting a school in Prague for young

African intellectuals. Apparently, the success of this school has been a determining factor in the Soviet decision to embark on a full-scale cultural campaign to educate those who will be among the leaders of tomorrow in Africa, Asia, and South America.

To put it into bold, realistic terms, the Communist Party is now engaged in a campaign to make culture a weapon. Figuratively, it is beating the pen into the sword. It is perverting the great historical role of text and teacher to create a culture responding to the Kremlin pattern of conquest rather than to the intellectual growth of the individual and his society.

The basic objective is clear. It is a bold aggressive move to win over the future technical intelligensia of countries now underdeveloped but on the verge of bursting into a tremendous and exciting and meaningful future. In its way, this is actually the rolling out onto the launching site of an ICBM whose guidance system aims at the world-to-be not the world-that-is—whose target is that often so vulnerable area—the area of the free world.

The Soviets display the ultrarefinement of their psychological warfare methods in so prosaic a field as transportation. According to an East German report, two of the new passenger ships built in Rostock for the U.S.S.R. have the assigned mission of carrying students back and forth between Africa and Indian Ocean countries and the Soviet Union. These trim, white one-class Soviet vessels are complete with libraries, educational movies and personnel versed in the languages of the foreign students.

Thus does communism build cradles for its ideologically newborn. Thus does it feed and clothe and educate those who will never be allowed to forget the name of their alma mater, nor their loyalty to it.

I spoke of the new perversion of culture. Perhaps my meaning is now clearer. Culture was meant to conquer ignorance—not territory. It was meant to ennoble man, not to enslave him.

There is a spirit of militancy in the Communist cold war approach which makes our own approach suffer seriously by comparison. Indeed, one is tempted to say that we of the West work at the extension and preservation of freedom on a 9-to-5 basis, while the Kremlin long ago instituted round-the-clock shifts.

The truth as we conceive it, as we expound it, and seek to extend it, is not, by its essence, militant. It does not have the arsenal of lies at its command. It cannot dress up in duplicity's many changes of wardrobe. But it cannot, it must not, stand idly by. It must learn a militancy of its own for self-protection. It must be taught to stand on its own two feet and counterpunch—or else it will continue to yield ground in this silent war for the minds and loyalties of men.

I do not underestimate the value of the manifold official and private programs intended to project a favorable image of America to the world. Today, as never before, we are extending the hand of friendship to foreign peoples—through our information programs, our cultural exchanges, and people-to-people effort.

It is my conviction, however, that a fresh, bolder, more imaginative restudy of this entire approach to the so-called sell America program is urgently needed. And parenthetically, I should begin by burying the slogan "Sell America." The values we stand for, the ideals that Americans have fought and died for, are not a commodity for sale. They are a spirit to share—an experience to communicate—a freedom to make known.

I spoke of the urgency of a new appraisal of our role as the leading nation in the battle for the dignity of man. And it is a battle, no matter how still the guns, how unfurled the flags. Time bombs are being set in men's minds. One day their detonations may affect the course of history. Conquest by culture is only one of the myriad manifestations of the Kremlin's night-and-day program—across the world—to woo and to win loyalties, to trickle its red coloring into new areas of the global map. When freedom is being shot at continually—without effective counterattack—freedom ends up by being killed.

There is irony in the fact that America was—how shall I say it?—a misunderstood and suspected stranger—to the peoples of Asia until President Eisenhower—by his one appearance there—revealed, almost startlingly, the true image of this Nation. Some Americans have innocently believed that we buy friendship by our foreign aid—that it is a form of international exchange—a gift for a friend, a friend for a gift. The truth of course, is that you don't buy friends in this world. You make friends. You make them by personal contacts, by a sympathy with needs and aspirations, by an identification with their problems and by the helping hand that aids them in solving those problems. And the fact that such contacts, such assistance are developed with the cold calculation of a battle plan, as in the case of the Kremlin, does not detract from the essential result. A nation's influence is felt when it consciously makes itself felt, be the result for good or evil.

There is no more pressing necessity in the America of today than for a national awareness of the tremendous import and urgency of the need to act dynamically and positively in resisting the cultural, social, and economic erosions of communism as they operate to reduce and stifle the areas of freedom in this world.

We cannot continue to maintain a frozen or semifrozen posture of defense in this field. We must meet the fire of dedication with some fire of our own. It is not enough to pay lip service to the cause of peace, nor to think of taxes as our first line of defense. American imagination, and energy, and inventiveness must be galvanized and brought into play. Individuals and groups must be challenged to commit themselves to the problem, to explore new techniques, create new ideas, to identify themselves personally with a cause that touches them personally. We have long since come out of the isolation booth of disinterest in the rest of the world. What we have failed to do is to realize the full implications of living in a world that is only as safe as we make it, only as free as we are vigilant to keep it free.

It is not enough to bury dead slogans like "Sell America." We must bring to life a new concept—a concept that is responsive to the imperative needs of the times. Let us change "Sell America" to "Project America." Project America and what it stands for in the basic human values that are the difference between man's dignity and man's degradation.

We are in a battle, not a salesman's competition. What we are defending is the truth that makes men free and keeps them free. That truth has been a punching bag for the protagonists of government by tyranny.

Our counter-blows—let us face it—have been feeble and ineffective. If the truth is to fight back, let us at least put boxing gloves on it. Let us plan its attack—let us train it to sharpness for the struggle—let us give it the strength to challenge and to prevail.

The hammers of history are beating out a new universe of man. We can—each of us—help guide those hammers, or we can stand by and see the globe shaped by other alien energies and philosophies—shaped into a world no free man could call home.

May I close with this thought. It has meaning, I feel in the light of what has been said. History has recorded for us the many ways in which human freedom has perished—gloriously, cravenly, forlornly—but the saddest, most ignominious death of all is when freedom dies in its sleep.

Calls It Craziest Tax Law in the Land

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1960

Mr. O'HARA of Illinois. Mr. Speaker, from a valued constituent, Fred E. Etten, residing at 7921 Ingleside Avenue, in the city of Chicago, I have received a clipping from the Chicago Daily News with an article by Columnist Inez Robb and a copy of Mr. Etten's letter of commendation to Miss Robb. I recommend them to the careful reading of my distinguished colleagues. They pinpoint a weakness in our tax structure that urgently requires our attention. The article by the widely read columnist, Inez Robb, follows:

CRAZIEST TAX LAW IN THE LAND

(By Inez Robb)

If a qualified jury were asked to choose the silliest law in the whole, jerry-built Federal tax structure, it would be hard put to select the really ultimate lulu.

However, I have a nomination: The majestic statute that now forbids anyone, between the ages of 65 and 72 and receiving social security, to earn in excess of $1,200 annually. Any senior citizen with the get-up-and-go to earn in excess of $1,200 is penalized by cuts in or loss of his social-security benefits.

Now Senator CLINTON P. ANDERSON, Democrat, from New Mexico, former Secretary of Agriculture, has introduced a bill that would permit willing and able elders to earn $2,000 annually before the penalties set in. Well, I respect the Senator for trying to up the ante, but I wish he had tried for a goal instead of a place kick.

It is not only silly, but cruel to restrict the earning power of any free American citizen who is willing to roll up his sleeves and pitch in.

It is a crazy infringement on the guaranteed liberties of the citizen to tell him what he can or can't earn, or how much he can work. Or to restrict him to a bare livelihood on the subsistence level that social security provides.

Social security is not a gift or a free-will offering of the Federal Government. Those who receive social security have, by law, contributed regularly to the fund, as have their employers. It represents part of the savings of the worker against old age and should be free of strings.

It is not only asinine but a waste of the Nation's skilled and experienced manpower to insist that the worker at age 65, who accepts social security, must for the next 7 years twiddle his thumbs. The Government graciously allows the oldster, after he reaches 72, to garner all the money he is capable of earning.

Such restrictions on an American's right to earn not only play ducks-and-drakes with his freedom, but there is a vicious inequity in the law. The Government is only interested in the earned income of oldsters between 65 and 72. The penalty is all on earned income; there is none on unearned income.

The basic law of our land provides for a redress of civilian grievances. This imbecilic penalty on grit and gumption bedded in the social security laws screams for redress.

Here is the letter written by my constituent to the columnist after he had read her article:

INEZ ROBB,
Chicago Daily News.

DEAR MISS ROBB: I am a regular reader of your column and generally enjoy your articles. Your recent one, however, "Craziest Tax Law in the Land" was a masterpiece. If I were vain and boasted the ability, I would say you took the words out of my mouth.

You may have had plenty of cases in mind to help form your opinion but may I add a case to further convince you how right you are.

My wife, at 66 years, a registered nurse for 43 years and in perfect physical condition, is compelled to curtail her work to 2 half days a week in order to receive her little social security award. With hospitals here crying for nurses, two merciful, willing and able hands are tied because of the crazy law which you have pointed out.

She does staff duty in one of Chicago's largest hospitals whose nursing school is her alma mater. She could just as well be working 3 full days a week but why when the Government virtually confiscates her wages?

Gratefully yours,

FRED E. ETTEN.

One Round Won

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the March 31 edition of Chicago's American, in my opinion, is an interesting and enlightening commentary on a subject of great interest to the Members of Congress. For this reason, I am including it in the RECORD for the Members' consideration:

ONE ROUND WON

For this session, at least, the effort to destroy the Connally reservations to the World Court treaty has been abandoned in the Senate, thus preserving this country's right to keep the International Court at The Hague from meddling in the domestic affairs of the United States.

This is a victory for the realistic commonsense of ordinary Americans over the strange idea of the internationalists that winning the approval of foreign countries is more important than preserving American sovereignty.

The public, alerted by the newspapers, deluged the Senate with letters protesting against opening the way for the International Court to take jurisdiction over disputes involving the internal affairs of the United States.

And it is the public's opposition, as expressed in those letters, that has persuaded Senate leaders to abandon the effort to repeal the Connally reservations this year.

The Connally amendment limits the World Court's jurisdiction by reserving to this country the right to decide when a dispute involves its domestic affairs and therefore is not subject to adjudication by the International Court.

Internationalists of both parties had proposed that the Senate, at this session, repeal the Connally amendment.

The repeal plan was favored by President Eisenhower, Vice President NIXON, Senator HUBERT HUMPHREY, Democrat, of Minnesota, sponsor of the repeal resolution, Senator J. W. FULBRIGHT, Democrat, of Arkansas, chairman of the Senate Foreign Relations Committee, and others, including many leaders in the American Bar Association.

The internationalists argued that the World Court could not take complete control over international disputes as long as the United States and other nations following this country's example, could prevent it from interfering in their domestic concerns.

But after the public's letters had been pouring in for some weeks, the worried backers of the repeal resolution conducted an informal poll of Senators, and this revealed that the move to cancel the Connally reservation could not come anywhere near getting 67 votes—the two-thirds majority needed to amend a treaty. So the Foreign Relations Committee, headed by Senator FULBRIGHT, reluctantly decided to postpone consideration of the repeal resolution indefinitely.

Nevertheless, people who oppose letting the World Court decide for itself how far it shall thrust itself into the business of the State, National, and local governments of the United States, will have to keep on fighting. The next effort to knock down the Connally reservation probably will be made at the national conventions of the Republican and Democratic Parties. The internationalists probably will urge that the two parties write recommendations for the repeal of the Connally amendment into their platforms.

So, Americans who don't want to see the U.S. Constitution undermined by decisions of a World Court, which has only one American judge as against two Communist judges and some Socialists, should go on writing letters demanding that the Connally reservation be kept in force. This time they should write to the chairman and members of the party national committees and to candidates for office.

Address by Irving Maness

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following address delivered by Irving Maness, counsel to Subcommittee No. 2 of the House Small Business Committee, before the 25th annual convention of the Movers' and Warehousemen's Association of America in Miami, Fla., on March 5, 1960:

ADDRESS BY IRVING MANESS, COUNSEL, SUBCOMMITTEE NO. 2, SMALL BUSINESS COMMITTEE OF HOUSE OF REPRESENTATIVES

Mr. Chairman, officials of Movers' and Warehousemen's Association, ladies and gentlemen, I am extremely grateful to your chairman this morning for his most considerate introduction. I am particularly happy with his pronunciation of my name. Unfortunately, my name has been pronounced and mispronounced many times but I am very thankful to your chairman for his correct pronunciation. I do not hesitate to state, however, that had I been addressing another type of movers' meeting sponsored by another group that my name would have been mispronounced and I would have been introduced as the "Mr. Menace."

As has been indicated, I was not scheduled to address this meeting—I am, in effect, a substitute. I would like to tell you a story to illustrate my interest in the independent, small businessman:

A man walked into the spring training camp of a major league ball team leading a horse. "I want you to give my horse a tryout," he said to the manager. The manager was about to have him thrown out of the park, but the man's insistence that his horse could play baseball finally persuaded the manager to give him a chance.

He sent the horse to the outfield and began hitting flies to him. The horse caught all of them in his mouth and snapped the ball back with a whip of his neck. "Can he hit?" asked the manager. "Try him," said the horse's owner. A bat was placed in the horse's mouth and he stepped to the plate. He hit every ball that was pitched to him. The manager was ecstatic. "He's great," he said, "we'll use him in the opening game."

The bases were loaded when the horse came to bat in the opening game. He smashed the first pitch to left centerfield but he did not move toward first base. "Run," cried the manager. "Run, you fool." "Why doesn't he run?" he shouted to the horse's owner. "That's his trouble," the owner replied. "He can't run. If he could run, he'd be at Hialeah."

I want to say right here that I will do better than the horse. You may rest assured that I will not only hit the ball for the independent small businessman but most assuredly I will run with it, too.

I would like to clarify something for you folks, something which confuses not only laymen but also Congressmen. There is a Small Business Administration, which was established by Congress, in the executive branch of the Government to aid and assist small business. There are in the legislative branch, Small Business Committees in both the Senate and the House of Representatives whose purpose it is to study and investigate the problems of small business and also to aid and assist whenever they can.

I am now celebrating my fifth anniversary as Counsel to the Small Business Committee of the House of Representatives and have devoted the major portion of these 5 years to Government procurement. I might state that during this 5-year period, I have had many, many small business people come to my office seeking information on how to become big business. Interestingly enough, I have also had big business coming to my desk and inquiring how it can get the benefits of small business provided by law.

Some day, I hope and pray, the Congress of the United States will establish a Big Business Committee and that I will be employed as counsel. I assure you that it will be a cinch of a job—then there will be no problems and I can take life easy. The converse of this, unfortunately, is not true. The job at times is frustratingly difficult but, let me assure you, we are doing everything we possibly can to aid and assist small business.

This morning I do not intend to address you nor lecture to you. It is not proper to speak to you or at you. I do, however, want to speak with you. Particularly to discuss your problems as they pertain to Government procurement. Your problem is a problem in Government procurement.

Your president, in opening the convention, stated that the organization was confronted with three basic problems: tariff, the treasury, and equitable distribution. I will not discuss tariff. I will not discuss your treasury. I am well aware of budgets, appropriations, and money difficulties in running organizations such as yours. However, I will speak with you about your procurement problem—equitable distribution.

Six months ago, I first learned about your fight. I have lived with it ever since. At this point, I wish to state that no one person can take the credit for whatever little success we have had to date but let us bear in mind that the success we have had is only temporary, is only one of the battles in an overall war. But I want to state here categorically that without the aid of your officials, you members of the Movers' and Warehousemen's Association, and the particularly wonderful assistance from your executive secretary, Carroll Genovese, the little temporary success we have attained could not and would not have been accomplished. This fight has just started.

This brings to mind a story told around political circles about an important Senator:

"An important Senator took the unpopular side on a bill pending before the Senate and made an eloquent, impassioned speech against it. The next day when the vote was taken, he voted for the bill. "What happened, Henry?" asked a surprised colleague. "Did you see the light?" The Senator smiled. "It was not that I saw the light," he said, "I felt the heat."

This story illustrates, I think, the most important job you have before you—you must keep on the job every minute to be sure that those responsible for new directives and regulations in your industry feel the "heat" of justice and truth.

One thing I want to make very clear at this point: Small business does not ask for special favors. You folks don't ask for special favors. The Small Business Committee does not ask for special favors for small business. All we ask for, all we wish to gain, is a fair and equitable opportunity to compete for Government procurement.

I must admit that I am a neophyte in your industry but I am not a neophyte in the battle for procurement, nor am I a neophyte in battles for equality of treatment. Let me assure you our opponents will know our organization and that we are in this fight and we will guarantee equality to big and to small business. We will guarantee an equal opportunity to compete.

Quite a bit has been said at this convention and at numerous meetings that I have attended heretofore in connection with your industry's problems. General Morris, in his address, spoke about the number of suspensions given by the Department of Defense in connection with quality of service. He gave the figures of 492 suspensions and 54 letters of warning. Unfortunately there was no breakdown of these figures so that we do not know which suspensions were for small business and which were for large business. Let me assure you that big business is in this group.

In closing, let me say that I congratulate the officials of your organization, and particularly your executive secretary, Carroll Genovese, for your aid and assistance in fighting this battle for small business.

Let me assure you that the members of the House Small Business Committee, under the chairmanship of the Honorable WRIGHT PATMAN, of Texas, and particularly the Subcommittee on Government Procurement under the chairmanship of the Honorable ABRAHAM J. MULTER, of Brooklyn, N.Y., are always ready and willing to aid and assist small business in their just cause and fight for equitable opportunity to participate in Government procurement.

Thank you again.

Sixty Years Under the Sea: Electric Boat's Role in the History of the Submarine Service

EXTENSION OF REMARKS
OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. BOWLES. Mr. Speaker, yesterday's announcement that the administration has finally agreed to speed up our Polaris submarine program is good news indeed, especially to those of us who have been urging such a speedup for so long.

Sixty years ago next Monday, on April 11, 1900, the U.S. Navy purchased the world's first practical submarine, the *Holland*.

Last December, the *George Washington*, the first Polaris submarine, was commissioned. Both of these historic craft were built by the world's pioneer builder of submarine craft, the Electric Boat Division of the General Dynamics Corp., of Groton, Conn.

Appropriately, the latest issue of Navy magazine carries an excellent and informative article which traces the history of the U.S. Navy's Submarine Service, in which Electric Boat has played such a major role.

Under leave to extend my remarks, I call the article, "Sixty Years Under the Sea," to the attention of my colleagues. The article follows:

SIXTY YEARS UNDER THE SEA—U.S. NAVY'S SUBMARINE SERVICE

(No one knows exactly how many leagues under the sea the Navy has logged since the inception of its submarine service 60 years ago. But through tragedy and conquest it pales the legends of any Jules Verne and the submarine service gives promise of accomplishing epochal feats undreamed of by its pioneer developers. In fact, the nuclear-powered "electric boat" and its combination with the Polaris missile suggest it may well be the balance of power in future warfare.)

On April 11, 1900, the U.S. Navy purchased a 54-foot "steel submarine torpedo boat" for $150,000 to establish a submarine force.

Since then, the submarine has been an integral part of the fleet and today, propelled by nuclear power and armed with ballistic missiles that can be fired from submerged positions, the submarine has become one of the Nation's prime deterrent forces.

Both the Holland and the George Washington were built by General Dynamics Corporation's Electric Boat Division, the Nation's pioneer submarine shipyard.

(Historically, another name of a submarine pioneer was invading the scene. It was that of Simon Lake who subsequently sold the Navy his craft.)

The story of U.S. submarines began in the village of Liscannor, County Clare, Ireland, where a young schoolteacher named John Philip Holland spent most of his spare time sketching plans for a submersible vessel.

In 1872, Holland emmigrated to the United States and began teaching in Paterson, N.J. He also began building submarines, financing them through savings from his salary and personally testing them in the Passaic River.

Between 1872 and 1895, Holland built a variety of submarines with varying degrees of success. One of his major problems was underwater propulsion, since he was forced to use an air-consuming, highly dangerous gasoline engine.

In 1895, he began work on a craft named the *Holland* in which he solved the propulsion problem by employing electric storage batteries for submerged operation. The *Holland* was 54 feet long, displaced 75 tons and was armed with one torpedo tube and a pnuematic dynamite gun.

After a series of exhaustive tests which lasted more than 2 years, the Navy purchased the *Holland* and ordered six more like it.

At the time the United States entered World War I the Navy had a fleet of 59 submarines, most of them representing improved designs. In 1912 it had acquired the USS *Skipjack*, first of the "E" class submarines and first to use diesel engines for surface propulsion.

The diesel, inherently safer than the gasoline engine, gave the submarine greater cruising range and the *Skipjack* became the first U.S. submarine to cross the Atlantic.

An accelerated building program during World War I brought forth the "O" and "S" class submarines which were slated to be the workhorses of the undersea fleet for nearly a quarter of a century. Their durability was attested by the fact that during World War II 10 "S" boats sank a total of 14 Japanese naval and merchant vessels.

In the years following World War I, the United States, adhering to the Naval Limitation Treaty, restricted its submarine building program and new vessels were largely of the "S" class. However, durable though they be, technological advances were making them obsolete.

On November 21, 1933, an entirely new type submarine was launched by Electric Boat at Groton, Conn. Named *Cuttlefish*, it was the forerunner of the fleet type of World War II fame. Larger than the "S" class, it had two distinctly new features—a partial double hull and was partially welded (rather than completely riveted)—both of which enabled the submarine to dive deeper than its predecessors. A deck gun and 10 torpedo tubes made *Cuttlefish* at formidable fighting ship.

Following the *Cuttlefish* came *Shark*, the first all-welded submersible and the development of the fleet-type submarine had begun.

By World War II all vessels were fairly standard, averaging 310 feet in length and displacing about 1,500 tons. They were armed with either one or two 3-inch deck guns and had 10 torpedo tubes, 6 in the bow and 4 in the stern.

In the early days after Pearl Harbor the submarine became the Nation's primary sea weapon. The undersea Navy began offensive operations against the Japanese immediately after war was declared and by V–J Day had sunk more enemy shipping than the combined efforts of the surface fleet and the Air Force. Comprising 1.6 percent of the Navy's wartime personnel, submariners accounted for 55 percent of all enemy shipping destroyed.

Following the war, extensive modifications were made in submarines. In an effort to increase underwater speed, superstructures and conning towers had been streamlined; deck guns and other protuberances which created underwater drag had been eliminated; the snorkel had been introduced; and high alloy steels allowed the vessels to operate at greater depths.

Yet, dispite technological advances and design improvements of a half century, the submarine was basically the same craft developed by John P. Holland—a surface ship that could operate underwater for a limited period of time. For example: at a speed of between 1 and 2 knots, an absolute minimum, a sub could remain submerged for a maximum of about 48 hours. At its top

underwater speed of about 8 knots, a submarine could operate submerged for no more than 1 hour.

Power limitations had long concerned submarine designers. In fact, John P. Holland had written in 1900: "Larger (more than 200 feet long) boats will never be feasible, unless we discover some better system of storing electricity than exists today—a contingency which is exceedingly doubtful."

Nuclear power was the long-awaited propulsion source for the submarine. It was to turn the submersible surface ship into a true submarine, capable of almost indefinite operation and no longer bound to the earth's atmosphere.

The first nuclear-powered submarine, *Nautilus* far exceeded the hopes of her most optimistic supporters. During her first 2 years of operation, *Nautilus* steamed over 62,000 miles without refueling and established new speed and endurance records. On a second core *Nautilus* went even further, pointing the way toward the Navy and Atomic Energy Commission goal of a nuclear core which would last at least the same duration as World War II.

Nautilus vividly demonstrated the new versatility of submarines in August 1958, when the submarine traveled from the Pacific to the Atlantic via the North Pole during a 4-day, 1,830-mile voyage.

Other nuclear submarines—*Seawolf*, *Skate* and *Sargo*—pioneered new areas of submarine operation. *Seawolf* remained submerged for 60 days completely independent of the earth's atmosphere, proving that extended submerged patrols are feasible from both mechanical and human standpoints.

Skate made two trips under the arctic ice, one during the northern summer and the second during its winter. On the first trip *Skate* surfaced nine times in lake-like openings in the ice. On the second it surfaced by pushing its way through the ice and on March 17, 1959, surfaced at the geographic North Pole.

More recently, the *Sargo* spent 31 days under the arctic ice on an exploratory mission, and duplicated the *Skate's* feat of surfacing at the Pole.

These achievements proved that the Arctic Ocean is not only accessible to nuclear submarines but is actually an operational area, open to nuclear submarines regardless of the season.

Nuclear power enabled a second revolutionary development to take place, this one in the field of design. Naval architects had long known that a shark-shaped hull was ideally suited for subsurface operations. Holland, in fact, had designed his submarines along this line. However, power limitations made the surface craft design (sharp bow, superstructure deck and conning tower) the most practical for the prenuclear era.

With the new power source at their disposal, designers developed a radically new type of submarine, the first of which was the U.S.S. *Skipjack*, built by General Dynamics and commissioned April 15, 1959. A shark-shaped hull, completely free of protruberances, a sail with diving planes mounted on it, and a single screw propeller made *Skipjack* the world's fastest and most maneuverable submarine. It's speed is highly classified with the Navy admitting only to "in excess of 20 knots," but *Skipjack* and others of the same class are altering previous concepts in underseas warfare.

A third advancement came with the Fleet Ballistic Missile submarine, a nuclear-powered submarine armed with the Polaris intermediate range ballistic missile. These submarines can launch missiles with nuclear warheads from beneath the surface, and because of their mobility are virtually immune from retaliation.

The first Polaris-firing nuclear submarine, the U.S.S. *George Washington*, was launched June 9, 1959, by General Dynamics and commissioned the following December 30, marking an unprecedented building record for the atomic era.

A second such vessel, the *Patrick Henry*, recently completed initial builder's sea trials and is being readied for commissioning. Seven other Polaris submarines are under construction, including four of an entirely new design.

Our Irrevocable Position

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include, in part, an article by Dr. Emilio Nunez Portuondo, former president of the Security Council of the United Nations, and an intelligent, loyal friend of the United States of America.

The article by this distinguished statesman and diplomat was recently brought to my attention by my distinguished friend, the Reverend Father Joseph F. Thorning, Ph. D., D.D., associate editor of World Affairs and famed specialist on inter-American history and culture.

It is Dr. Thorning's belief, based upon exhaustive research, that Soviet China is more intimately involved in the Cuban regime than is the Kremlin itself.

The Red Chinese pattern of domination, he points out, is prominent in the so-called agrarian reform and in the gradual enslavement of the Cuban press.

At any rate, the facts about the Castro regime should be brought to the attention of the public. Moreover, the State Department has a responsibility to take effective action to uphold freedom and decency and to protect the legitimate rights and interests of this Nation in Cuba and elsewhere.

It can be generally agreed, I earnestly submit, that if, as believed and asserted by many responsible leaders and observers, the present Cuban Government is sympathetic with the general aims of the World Marxist Communist movement, that fact must be viewed with utmost concern and gravity by the Government of the United States.

Can we and our Latin-American friends remain unconcerned while such a government, not only gains a foothold but actively pursues Communist objectives in Latin America?

The American people want an affirmative policy and decisive action on this question. We can no longer afford to defer action, and the first step would be the convening of the American States. Such a convocation could well point the way, by cooperative measures, to find adequate solutions to safeguard freedom and democracy in this hemisphere.

Economic measures of swift and compelling effectiveness are also available to us and we should have long since already determined how and when to employ them.

The solution of this question can no longer be deferred without serious consequences to our Nation and this continent.

The article follows:

OUR IRREVOCABLE POSITION

With apologies for trying the patience of our readers, we must persist in depicting the picture of Cuban tragedy to the world, especially to the countries of the Americas, and the United States in particular.

The island is a powder keg capable of producing a conflagration of startling proportions unless drastic and energetic action is taken immediately.

We have explained our personal position in previous editions of this newsletter. We cannot be accused of a single violent crime. Not even the most fanatical partisan of Castro can accuse us of having enriched ourselves at the expense of the National Treasury. And we do not oppose the Castro regime because we have been victims of confiscation representing significant losses.

We oppose Castro because we consider it our duty to Cuba and to our people who deserve a better fate. We shall never accept the unfortunate island's conversion into the branch office of the Soviet Union and the People's Republic of China.

We are convinced that you have a situation in Cuba in which the Cubans themselves, acting alone without outside help will never be able to liberate themselves. History does not reveal a single case showing that this is possible. Only the contrary is in evidence.

We appeal for support from all men of good will who stand against international communism. We shall continue to do so since such is our duty, and we shall not slacken our efforts as long as we are physically able—opinions to the contrary do not matter. Whenever moral support has been offered in bad faith and does not tend to liberate Cuba from international communism, we shall consider ourselves free of any compromise. Above all, it is the fate of Cuba that concerns us.

We have said that what is dealt with here is the most important problem of all America, especially the United States, the spearhead of democracy and the anti-Communist movement of Latin America and the rest of the world as well.

We have never advocated a return to the past for Cuba, not only because of its impossibility, but because Cuba will not benefit from such a move.

We are aware that a social revolution has been going on in Cuba, which the Communists have directed for their own evil purposes, but which nevertheless, as sometime occurs in such cases, has produced certain reforms that previous governments should have proclaimed years ago.

We are firmly convinced that a movement against Castro is destined to fail if it does not count on the great masses of people within its ranks. The popular forces in Cuba are not and never have been Communists. The people live under a regime of terror and are subjected to a terrible onslaught of propaganda directed by Red specialists, all of which stands in the way of a calm analysis of the serious Cuban problem.

We are surprised at opinions expressed by Cubans to the effect that nothing has happened in our country during the last year. To think that a movement can be set up for the benefit of only one class seems to us to be an error. Much less can we accept the thesis that a class can direct national destinies which in the past has demonstrated that because of its nearsightedness

and selfishness it was unable to prevent certain happenings.

We maintain that the Cuban problem consists of the fact that a total Communist regime has been established in the island, a regime that stands unconditionally at the service of Moscow and Peiping.

A totalitarian police state does not respect any of the fundamental human rights; this occurs in all Communist countries.

A Communist regime in Cuba constitutes a threat to the security of the other American countries, mainly the United States. Everyone must take action against this dangerous situation and if they do not, they will have to answer to their respective peoples.

The Cubans will have to practice democracy sincerely, pursuant to the century in which we live. The people must be the true sovereign, and national majorities and also foreign elements should have the opportunity of profiting from our natural resources by the sweat of their brow, as is the custom in all civilized countries.

The American Coal Industry Through the National Coal Policy Conference, Inc., Urges Secretary of the Interior Fred A. Seaton To Resist the Growing Demands of Importers of Foreign Residual Oil for an Increase in Quotas

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. VAN ZANDT. Mr. Speaker, Mr. Joseph E. Moody, president of the National Coal Policy Conference, in the role as spokesman for American coal producers, the United Mine Workers of America, coal-carrying railroads, and allied industries dependent upon coal, revealed grave concern over the efforts being made to cripple the President's petroleum import control program by increasing quotas on foreign residual oil being imported to the United States. Mr. Moody urged Secretary of the Interior Fred A. Seaton in a letter dated April 5 to resist the clamor for an increase in the flood of foreign residual oil which has proved to be economic poison to the coal, railroad, and allied industries.

I wish to incorporate in my remarks the following news release giving the highlights of Mr. Moody's letter to Secretary Seaton together with a copy of the letter urging firm action in rejecting requests that foreign residual oil imports be increased:

DOMESTIC COAL INDUSTRY DEMANDS RESIDUAL IMPORT QUOTA BE REDUCED—ASSAILS FOREIGN OIL COMPANIES' ATTEMPTS TO WRECK PRESIDENT'S CONTROL PROGRAM, CREATING ARTIFICIAL SHORTAGE BY PRICE-CUT MARKETING METHODS

WASHINGTON, April 5.—The American domestic coal industry today called on Secretary of Interior Fred A. Seaton to hold firm against the growing demands of foreign oil importers to increase quotas of imported residual, and urged, instead, that allocations for the third quarter of this year be sharply reduced.

Joseph E. Moody, president of the National Coal Policy Conference, the spokesman for U.S. coal producers, the United Mine Workers of America, leading coal-carrying railroads and industries closely associated with coal, said in a statement that current pressure against the President's petroleum import control program is a serious threat to all domestic fuels industries and thus to the national security, which it was created to safeguard.

"We have just learned that a powerful contingent of lawyers and other representatives of major international oil companies met today with officials of the Department of Interior and demanded in the strongest terms that present quotas for residual oil be ignored and new allocations granted for the remainder of the first two quarters of this year," Mr. Moody declared. "These demands are being made despite the fact that the heavy burn season is now ending, and that any spot shortages of residual that may exist have been artificially created by frantic marketing activities to dispose of residual to new users, in many cases at prices well below the posted prices and established at levels to undercut coal. Besides, all information we have is that east coast and gulf stocks of residual are at safe levels to meet any demands that may develop in the foreseeable future."

"As Mr. Elmer Bennett, Under Secretary of the Interior Department, pointed out in a recent letter to the president of Standard Oil Co. of New Jersey, the major importing companies have a responsibility equal to that of the Government in connection with the import control program, as with other national security programs. He noted that most importers have fully met this responsibility.

"We cannot believe," Mr. Moody asserted, "that the millions of American citizens dependent on the domestic coal and other domestic fuels industries for their livelihood are to be penalized by letting those few major foreign oil importers who may not have met those responsibilities destroy the President's import allocation program."

Earlier today Mr. Moody had written Secretary Seaton urging that third-quarter quotas for residual imports be reduced to the 1957 level, the base year originally contemplated in the President's proclamation.

"Since the heavy burn season is now ending for this year, demand will be considerably less for the next several months, even despite the new consumption recently stimulated by the price-cutting marketing activities of certain importers," the coal spokesman's letter declared. "Therefore, we urge that the next quotas be set for a 3-month period beginning July 1, and be based on a 1957 level (daily), seasonally adjusted to allow for the normally low consumption during the summer."

He pointed out that such a stand by the Department of the Interior would "serve to convince these few large international oil companies that they must meet their responsibilities to the Nation and to national security.

"It would likewise be of tremendous encouragement to the millions of American citizens dependent on the domestic fuels industries and to those seriously concerned with a self-sufficiency of dependable fuel within our borders to meet any demands of national emergency," he asserted.

Mr. Moody's letter to Secretary Seaton follows:

NATIONAL COAL POLICY CONFERENCE, INC.,
Washington, D.C., April 5, 1960.

Hon. FRED A. SEATON,
Secretary, Department of the Interior,
Washington, D.C.

DEAR MR. SECRETARY: We continue to hear disturbing rumors, perhaps inspired by international oil importing interests, that there may be an increase in residual oil import quotas for the remainder of the present 6-month quota period. We want again to call your attention to the serious effect such action would have on the 2 million American people in this country who are dependent on the domestic coal industry.

We find it hard to believe that our Government could seriously consider an increase in quotas, which are already 26 percent higher than the level of 1957 established in the President's proclamation of mandatory controls last year, merely to meet a situation brought about by the frantic sales efforts of three or four giant international oil companies seeking to extend their markets.

It is obvious that a few large international companies, who have imprudently exhausted much of their half year's quotas while creating an artificial demand through sales well below listed prices, are using this rigged situation to claim that shortages will soon deprive many users of essential fuels, and are thus putting tremendous pressure on your department further to increase allocations between now and June 30.

We do not refer to the many companies who, as Mr. Bennett pointed out in his recent letter to the president of Standard Oil Co. (New Jersey) have "fully met" a "responsibility equal to that of the Government in connection with this [program], as with other national security programs." Instead, the present situation has been created by a few companies which have expended a large percentage of their quotas in the first 3 months, and are now exerting pressures for an allotment increase which would virtually wreck the import-control program and would be disastrous to the domestic coal and domestic oil industries.

We trust that imperative considerations of the welfare of millions of Americans, as well as of national security, will prevail and that these attacks on the President's mandatory control program will be unsuccessful.

Indeed, we believe the facts prove that, instead of increasing import quotas, the amount of residual oil now being permitted to be imported into this country should be materially reduced.

When the President was forced to impose mandatory quotas on petroleum and petroleum products in March of 1959, following unsuccessful attempts to limit imports voluntarily, his proclamation provided that the imports of residual fuel oil should not exceed the level of imports of that product into districts I–IV during the calendar year 1957 (or 343,445 barrels per day). The mandatory program was extended to residual oil because of a finding by the President that unrestricted imports posed a threat to the national security.

Twice since then the Department of Interior, by administrative decision as permitted in a revision of the President's proclamation, has increased quotas above the 1957 level so that present quotas permit the import of 425,000 barrels daily. On an annual basis, this is the equivalent of 38 million tons of coal, compared to 30 million tons lost to imported residual oil in 1957.

The loss of this tonnage is a severe economic blow to the domestic coal industry. Recent press stories have pointed to the pitiful plight of thousands of unemployed coal miners in this country, and any further inroads on coal's markets by cheap imported residual could only add to their suffering. Also, it should be realized that the effect of this unemployment spreads widely throughout the communities and areas in which it exists—to merchants, school and tax districts, transportation agencies, service establishments and all who depend secondarily on a healthy coal industry for their prosperity.

Mr. George H. Love, chairman of the National Coal Policy Conference and chairman of the board of Consolidation Coal Co.,

Pittsburgh, recently told the annual dinner of the conference that residual imported at a level higher than that for 1957 would "tend to put the coal industry and railroads on a standby basis, and on such a basis there is no way to maintain either of them."

"Certainly the threat of war prevents us from letting our country become dependent on these importations, but even without war, governments and circumstances can change and foreign oil sources be cut off," he pointed out.

In view of all these facts, we think that the Oil Import Administration and the Department of the Interior should give serious consideration to an immediate reduction on quotas to no more than the 1957 levels originally contemplated in the President's proclamation.

Since the heavy burn season is now ending for this year, demand will be considerably less for the next several months, even despite the new consumption recently stimulated by the price-cutting marketing activities of certain importers. Therefore, we urge that the next quotas be set for a 3-month period beginning July 1, and be based on a 1957 level (daily) seasonally adjusted downward to allow for the normally low consumption during the summer. If this resulted in any legitimate shortage of stocks by fall, ample time would remain to rebuild them for heavy winter demand beginning in October.

Meantime, however, such a firm stand by the Department of Interior would serve to convince these few large international oil companies that they must meet their responsibilities to the Nation and to national security.

It would likewise be of tremendous encouragement to the millions of American citizens dependent on the domestic fuels industries and to all those seriously concerned with a self-sufficiency of dependable fuel within our borders to meet any demands of national emergency.

Sincerely yours,

JOSEPH E. MOODY,
President.

Copco Code of Business Ethics

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. PORTER. Mr. Speaker, the president of the California-Oregon Power Co. established a code of ethics, applicable to business dealings and personal relationships among the members of the Copco organization, in 1941.

It has been my experience that the Copco people, both executives and employees, take this code seriously. It has significance for citizens throughout any community.

Under unanimous consent previously granted I am including the text of this "Code of Business Ethics":

CODE OF BUSINESS ETHICS

Deal honestly, fairly, and lawfully with all concerned. Make your business and personal conduct above reproach.

Your business will be most profitable if you charge the lowest possible rates and develop the largest volume of service.

Try to set a high standard. Keep the cards on the table. We want no secret deals, no favoritism, no corruption. Sooner or later the people will understand. This course may cause you harder work for a time, but eventually it will make it easier.

Never forget that your company is a public servant that wants no dollar it does not fairly earn.

Take the people into your confidence. Give them the facts.

Treat your customers as human beings, realizing that mutual good faith and tolerance form the basis of successful commerce between man and man.

Participate in the public and semi-public welfare activities of your city.

Maintain the old-fashioned virtues. They will always win in the long run. We are back of you to the last dollar as long as you do your honest best, but we will not forgive any act that is not clean and honorable.

Governor Ribicoff's Plea for Action on the Stalled Highway Program

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. BOWLES. Mr. Speaker, the able and distinguished Governor of Connecticut, the Honorable Abraham A. Ribicoff, is well known to many of my colleagues by virtue of his service here as the Representative of the First Congressional District of Connecticut in the 81st and 82d Congresses.

One of Abe Ribicoff's outstanding contributions as Governor has been the dramatic and forceful way in which he has reduced the accident record on Connecticut's highways. As chairman of the Committee on Roads and Highway Safety of the National Governors' Conference, Governor Ribicoff recently delivered a memorable address at the Highway Day observance luncheon in Wilmington, Delaware. I call to the earnest attention of my colleagues the Governor's sober and thoughtful presentation of the dilemma of the States in the current debate over the Federal Interstate and Defense Highway program. Governor Ribicoff's address follows:

ADDRESS BY GOV. ABRAHAM RIBICOFF AT THE HIGHWAY DAY OBSERVANCE LUNCHEON, WILMINGTON, DEL., APRIL 4, 1960

It may seem strange to some that a Democratic Governor should be speaking to you today at the invitation of a Republican Governor.

There is a simple explanation for it.

Any Governor who is at all sensitive to his public responsibilities, and this goes also for officeholders on all levels of government, is continuously aware of the fact that there are many issues and problems affecting his State and its people which transcend politics.

To bring to such problems a narrow partisan view is to court a great harm. It delays or makes impossible solutions required by the public interest.

One such problem is the uncertainty which has arisen over the future of the Federal interstate and defense highway program authorized by Congress in the Federal Aid Highway Act of 1956.

Both Governor Boggs and I have become deeply involved in this question, he as chairman of the National Governors' Conference and I as chairman of the Governors' Conference Committee on Roads and Highway Safety, an appointment I owe to him.

Creation of the committee last August at the annual meeting of the Governors' Conference reflected the mounting concern among all of us, regardless of party and geography, over a grave threat to the interstate highway program which had developed.

The Governors voiced their collective concern by listing the problem of financing the program as one for which "an effective solution must be found."

It is one to which all of us must address our best effort cooperatively and responsibly if we are to avoid serious consequences to our national economy, severe setbacks in the highway building and financing programs of our States, and impairment of Federal-State relations.

The specific problem can be simply stated.

Congress, recognizing the necessity and wisdom of developing a nationwide network of highways, took a long step toward financing such a program by providing in the Federal Aid Highway Act of 1956 for the creation of a highway trust fund into which would be deposited certain highway user taxes to pay for these roads.

It has developed, however, that tax money being paid into the highway trust fund will fall far short of the $37 billion now estimated will be needed in Federal funds to build by 1972, the present target date, the 41,000 miles of interstate highways authorized by Congress.

This gap poses an extremely difficult and complicated problem. It has created fiscal differences between the President and Congress which have served to slow down the highway program.

The Governors' conference committee on roads and highway safety feels strongly that construction of the entire 41,000 miles of interstate highways must be pushed to completion on schedule. It agrees with the Governors' conference that differences over financing the program "must be resolved to prevent the stifling of commerce, to promote highway safety and to protect the national security."

How do matters stand today? What specifically are the difficulties facing our States? What must we do responsibly and constructively to remove these difficulties and to wipe out the uncertainty over the future of the highway program?

Relying on the Highway Act of 1956 as well as the Highway Act of 1958 which fixed the current annual rates of authorized appropriations, States throughout the Nation mobilized their fiscal, engineering, planning, and construction resources to tackle this big and important program and push it to completion.

State highway departments expanded their staffs and stepped up their planning, engineering, and land acquisition activities. Construction forces were recruited. Commitments were made for equipment and materials. States adjusted their fiscal operations.

In short, the States accepted in good faith the program and the commitments and obligations that went with it, fully expecting at the same time an equal show of good faith from the Federal Government.

The many years of planning and study which gave birth to the concept of an integrated nationwide highway construction program, first written into legislation by Congress in 1944; the increase in the Federal Government's share of building these roads from the original 50 percent to the present 90 percent; the creation of the highway trust fund—all these can be accepted not only as evidence that the program was conceived in good faith but as evidence also of how vital the Federal Government considers the program.

But as it frequently happens with undertakings of such magnitude and importance, unforeseen complications requiring adjustments have developed in the program from time to time.

Currently, as I have already indicated, the complication which imperils the interstate highway program is rooted in the question of money. Long-range studies of this question are now being made. From them are expected to come among other things, a revised and detailed estimate of the cost of completing the 41,000 miles of interstate highways; a fuller understanding of the many direct and indirect benefits which such a program will bring to everyone, users as well as nonusers of highways; and an evaluation of the present method of sharing the cost of the program.

The Governors recognize the desirability and wisdom of such a study. We can understand the necessity for careful examination of problems as they arise and for adjustments which may be required. We are confident of the ultimate success of the program.

But they consider unfortunate any action—or lack of action—which serves to slow down the program.

Reports on the studies to which I have just referred are not due until 1961. There is an immediate problem confronting the States, however, which cannot wait on 1961 for ultimate long range answers. It is the problem of keeping the program moving reasonably on schedule during the fiscal years of 1961 and 1962. To do so, it is imperative that the present Congress enact legislation providing sufficient funds to equal the rate of spending authorized in the 1958 Federal Aid Highway Act.

This act authorized $2.5 billions for fiscal 1961 and $2.2 billions for fiscal 1962, a total of $4.7 billions. Cutbacks made by Congress and by the executive branch have reduced the 1961 figure to $1.8 billions. Of the $2.2 billions authorized for 1962, an estimated $2 billions will be apportioned.

The effect of these cutbacks totaling $900 million has been to shake the confidence of the Governors in the whole concept of Federal-State relations; raise questions as to how far the States dare go in the future in making long-range plans and commitments when pegged to Federal legislation which says one thing today and another thing tomorrow; and create doubts as to the time when we can fully enjoy the maximum benefits from these highways.

In all, the situation which has developed from these cutbacks and other restrictive acts which I shall not recite today is truly an unhappy one. It is particularly so because of the impasse which has developed between the executive and the legislative branches as to how the Highway Trust Fund should be replenished, so that we may put an end to cutbacks, contract controls, and other devices and get these urgently needed highways built as planned and on time.

Briefly, the White House has taken the position that if more money is to be made available for the program, it must come from higher taxes—a-half-cent-a-gallon increase in the gasoline tax on top of the 1-cent increase made last summer.

Congress has made it quite plain that it will not accept a further tax increase. It thus becomes apparent that the highest statesmanship will be needed to bring them together in good will and mutual respect for an earnest effort to work out a practical and effective solution.

The Governor's conference committee on roads and highway safety is convinced that such a solution, consistent with sound budgetary policies and fair tax policies, is not only possible but that the interest of the Nation and the States demands it.

Spurred by this conviction and recognizing that the Governors, both as responsible citizens and as spokesmen for their States, are duty bound to help in every way possible, the committee has engaged in a series of conferences with White House spokesmen, congressional leaders and others in an effort to establish the basis for a reasonable reconciliation of the differences between the President and Congress.

We have been cordially received in Washington. We have been given courteous and respectful hearings. We have made specific proposals for raising the money needed to restore the 1961 and 1962 apportionments to the levels authorized by Congress in 1958.

All of this, let me stress again, the Governors have done without regards to politics or geography because there are no Republican, no Democratic highways whether they cut through dense urban areas to save them from traffic strangulation, open up wide rural areas to speed farm produce to our markets, or link our States into a tighter union for purposes of national security and defense.

Yet, as of this very moment, we have been unable to thaw the frozen position of either the White House or Congress.

What, specifically, have the Governors suggested as a possible solution? Generally, we have proposed this plan to both White House representatives and congressional leaders:

1. The Federal Government plans to deposit into the highway trust fund beginning with the 1962 fiscal year 50 percent of the automobile and parts excise tax, all of which now goes into the general fund. We propose that this 50 percent amounting to $815 million be deposited in the highway trust fund starting with the 1961 fiscal year instead. It should be pointed out that the cutbacks were made with the explanation that the fiscal situation dictated a policy of retrenchment. With a $4 billion dollar surplus now a possibility for the 1961 budget, it would seem only fair that since the highway program suffered when the fiscal picture looked bleak, it should share in the benefits of a brighter fiscal picture.

2. That return of $359 million which was advanced by the Treasury to the Highway Trust Fund be deferred. The administration has set June 30 of this year as the due date. We propose repayment in two installments—part in fiscal 1961 and the balance in fiscal 1962.

3. That the present extra 1-cent a gallon gasoline tax be continued through the 1932 fiscal year rather than expire on June 30, 1961.

The net revenue from these combined proposals would total roughly $1 billion for the fiscal years 1961 and 1962. We see it as a practical and constructive way of solving the immediate problem—a solution which would honor the Federal Government's commitment to the States and which, at the same time, permit the States to proceed expeditiously and in an orderly fashion with the program as contemplated under the Federal Aid Highways Acts.

The Governors have offered this program not in a spirit of finality. It is offered rather in the earnest hope that it will serve as a basis for joint White House-Congress discussions leading to a reasonable compromise.

I have discussed the Interstate Highways in some detail because none of us, as good citizens, can in good conscience allow this program to be crippled by indifference, inaction, or stalemate either in Washington, in our States, in our cities and towns or among our citizens.

The reasons for this are many. Most of them you know, so that they need not be listed here. I feel, however, that because of my chairmanship of a Governors conference committee which is concerned not only with highways but with highway safety as well, I should underscore one benefit equally offered to all of us, whatever our politics, wherever we live—the opportunity to save lives.

The 41,000 miles of highways have been designed to connect more than 90 percent of all our cities with populations of more than 50,000. It is estimated that these highways will handle more than 20 percent of the Nation's traffic.

The importance of all this when translated into terms of highway safety stands out in bold relief when we look at the estimated number of lives that these highways are expected to save.

The figure is more than 3,500 annually—nearly 10 percent of the traffic death rate for 1959.

I can make no stronger plea that the program be stripped of its uncertainties, its delays, its cutbacks, its contract controls than to recite this one figure.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

Wisconsin Babysitter To Receive Young American Bravery Award

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. WILEY. Mr. President, as we know, the White House Conference on Children and Youth had just completed its meetings here in Washington.

During the Conference, constructive efforts were made to resolve a wide variety of problems involved in improving opportunity for individual growth, as well as strengthening the fiber of the youth of America.

Currently, too, there are a number of proposals pending before Congress which would deal with the negative side of the question—that is, how to cope with the ever-growing problem of juvenile delinquency.

All too often, unfortunately, the so-called delinquent children—out of step with society in conduct—get the headlines for their antics and misdeeds.

By contrast, the activities of the majority of aspiring, dedicated, talented, creative youth—as they constructively strive to prepare themselves for a responsible adult life—go by with little or no notice, to say nothing of fanfare.

For this reason, I always welcome the opportunity to pay tribute to outstanding individuals who, by their acts, as responsible young people in the community, demonstrate the best qualities of youth.

By meritorious deeds, they often demonstrate a great source of responsibility and duty, concern for their fellow men—accompanied by the willingness to give of themselves, sometimes to sacrifice themselves—in circumstances of stress and crisis.

Today I refer specifically to Miss Sharon Lois Boero, of Independence, Wis., who was recently selected to receive the Young American Bravery Award.

As we recall, Congress established the Young American Medals for Bravery and Young American Medal for Service to provide recognition of boys and girls who performed outstanding acts of bravery or service.

Recently Sharon Boero, acting as a babysitter for a family in Independence, Wis., risked her life to rescue children from a fire-engulfed apartment.

In recognition of this outstanding act of bravery, former Governor Thomson, recommended Sharon for the Young American Medals Awards.

Recently, Attorney General Rogers paid just recognition of her act of heroism by selecting her for the award to be presented at some later date.

Reflecting upon the greatness innate in our youth—needing encouragement to come to the surface not only in times of stress, but in regular daily life—I ask unanimous consent to have an article from the Wisconsin State Journal, as well as excerpts of a statement from the Department of Justice on the award program, printed in the Appendix of the RECORD.

There being no objection, the article and excerpts were ordered to be printed in the RECORD, as follows:

[From the Wisconsin State Journal, Apr. 4, 1960]

WISCONSIN BABYSITTER TO RECEIVE YOUNG AMERICAN BRAVERY AWARD

WASHINGTON.—A Wisconsin babysitter and a Connecticut lifeguard have been chosen to receive the Young American Medals for Bravery for 1958.

Attorney General William P. Rogers announced Sunday that Sharon Lois Boero, 18, of Independence, Wis., and Neil Lorenson, Jr., 15, of Waterbury, Conn., will receive the medals awarded annually since 1950.

RESCUES GIRL

Sharon was selected "because of her bravery and the disregard of her own safety in rescuing three children from a burning building and assisting in the rescue of a fourth," the Justice Department announcement said.

Lorenson won his medal for the rescue of a girl who had been swept out to sea by a riptide in high surf off fog-enshrouded Fenway Beach at Weekapaug, R.I., August 14, 1958.

The youngsters, chosen by a committee which included FBI Director J. Edgar Hoover, get an all expenses paid trip to Washington to receive their medals from President Eisenhower. A date for the ceremony has not yet been set.

Congress established the Young American Medal for Bravery and Young American Medal for Service to provide recognition for boys and girls who perform outstanding acts of bravery or service each year. There were no recommendations for the service award for 1959.

Sharon is the daughter of Louis and Margaret Scott Boero. Her father was killed while serving with the Navy in the Pacific during World War II. She was recommended for the bravery medal by former Wisconsin Gov. Vernon W. Thomson for her rescue of the four children of Mr. and Mrs. Robert Everson the night of February 8, 1958.

While sleeping on a davenport ,she was awakened by smoke and found the area of the apartment where the children were sleeping engulfed in flames. Calmly, she took Ellen, 3, in her arms and Peggy, 8, by the hand and led them out of the building. She reentered the blazing building, suffering burns on both her hands and face, to rescue the other two children.

KEEPS HER AFLOAT

Neil was assisting the regular lifeguard at Fenway Beach when he performed his spectacular rescue.

Neil kept Catherine Buchanan, 10, of Ontario, Canada, afloat in the heavy seas for nearly 30 minutes while tides pushed them away from shore before lifeguards could tow them to safety.

Attorney General William P. Rogers announced today that Young American Medals for Bravery for 1958 would be awarded to Sharon Lois Boero, a Wisconsin high school girl, and Neil Walter Lorenson, Jr., a young lifeguard whose home is in Connecticut but whose act of heroism was performed at a beach in Rhode Island.

Miss Boero was selected for an award because of her bravery and disregard of her own safety in rescuing three children from a burning building and assisting in the rescue of a fourth. She was the children's babysitter.

Attorney General Rogers said that he had approved the awards upon the recommendation of the Young American Medals Committee of the Department of Justice. The members of this committee are J. Edgar Hoover, Director of the Federal Bureau of Investigation, Solicitor General J. Lee Rankin, and Luther A. Huston, Director of Public Information.

Congress established the Young American Medal for Bravery and Young American Medal for Service in 1950 to provide recognition for boys and girls who, prior to their 19th birthday, perform outstanding acts of bravery or service during each calendar year. The law permits but does not require the bestowing of two medals annually in each category. Nominations for the awards are submitted by the Governors of the States and territorities and the Commissioners of the District of Columbia. Including the 1958 awards, 12 medals for bravery and 4 for service have been bestowed since the program was set up.

The Young American Medals Committee did not recommend a service medal award for 1958.

Sharon Boero was babysitting with the four children of Mr. and Mrs. Robert Everson, a storekeeper of Independence, Wis., on the night of February 8, 1958. Sharon's young half sister was also in her care. Mr. and Mrs. Everson were away. The Eversons lived in an apartment behind the store.

Sharon, sleeping on a davenport, was awakened by smoke and found that the area of the apartment where the children were sleeping was engulfed in flames. She seized the telephone to call for help but the wires had been destroyed by the fire. Calmly, she awakened the children and was successful in removing them to a hall while she searched for blankets to protect them from subzero weather outside.

Sharon took 3-year-old Ellen Everson in her arms and 8-year-old Peggy by the hand. She told 5-year-old Virginia and 7-year-old Ronald Everson, and 9-year-old Marie Arneson, her half sister, to follow her down the blazing stairs. On reaching the outside with Ellen and Peggy, Sharon found that the other three had not followed her instructions. Without a thought for her own safety she reentered the blazing building, found Virginia and carried her to safety. Again she tried to return to the building but the door had slammed shut and she was unable to open it. She was burned on her hands and face while trying. Ronald, whose father said he was a heavy sleeper, had gone back to bed instead of following Sharon but she obtained help from a neighbor who brought a ladder, climbed up and rescued the boy through a bedroom window. Marie, instead of following Sharon down the steps, broke a window in the smoke-filled room, climbed out on the

roof of a porch and slid to safety down a drainpipe.

Sharon Boero was born May 29, 1942, at Kenosha, Wis., the daughter of Louis and Margaret Scott Boero. Her father was killed in the Pacific theater of operations while sarving in the U.S. Navy in World War II. Sharon lived with her mother and grandmother at Chippewa Falls, Wis., for a time and at the time of her act of heroism was living on a farm near Independence with her mother and stepfather Ernest Jacobson. She is attending high school at Independence and her teachers say that her act of saving these children was an example of outstanding characteristics she has exhibited in other fields of activity.

Sharon's nomination for the Bravery Medal was submitted by Vernon W. Thompson, then Governor of Wisconsin.

Address of Former Governor McKeldin at Purdue University Mock Political Convention

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, April 8, 1960

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech made by the Honorable Theodore R. McKeldin, former Governor of the State of Maryland, at the Purdue University Mock Political Convention, held in Lafayette, Ind., on Thursday, March 24, 1960.

I also ask unanimous consent to have printed in the Appendix of the RECORD along with Governor McKeldin's speech a list of those advisers and officials who played a part in this very interesting and successful convention.

There being no objection, the address and list were ordered to be printed in the RECORD, as follows:

ADDRESS OF THEODORE R. MCKELDIN, GOVERNOR OF MARYLAND, 1951–59, PURDUE UNIVERSITY MOCK POLITICAL CONVENTION, WEST LAFAYETTE, IND., MARCH 24, 1960

The Purduvian Party, which I represent today, enjoys a distinct advantage over all other parties in that it has no historical entanglements, no prior commitments to restrict its course of action. It is, as lawyers might say, protected by the Statute of Mortmain—no "dead hand" lies upon it to hold it back from adopting any policy that is clearly to the interest of the United States, even though it may offend some minor interest, or some regional, or sectarian, or racial prejudice.

The program that I offer, then, should be taken as adapted strictly to the Purduvian Party. Most of it, as I believe, would be a good program for any other party, but I am not prepared to urge it upon any other because it takes no account of the political expediencies by which other parties are hampered and harassed. We here proceed uncommited, not entangled; which is a privilege not enjoyed by the others.

Nevertheless, even we are restricted to some extent by the very fact that we are an American party, operating under the American political system. Our program, therefore, must take account of the basic factors governing all political activity in this Republic. Most of these are spelled out for us in the Constitution of the United States, and I need spend no time on them; but there are some that are not written in any law, constitutional or statute, and these are not always understood. Yet because they are embedded in public opinion they are enforced more rigidly than any article of the Constitution or any statute enacted by Congress. If you are unscrupulous and ingenious enough you can evade or avoid almost any written law; but whatever is supported by a powerful public opinion you cannot escape. Respect for public opinion is a condition of survival.

An American political party may make a mistake in policy and, though defeated, yet survive.

A party may make a mistake in a man and, though punished for supporting a crook or a fool, yet survive.

But if a party makes a mistake in its judgment of the time it is on the road to destruction and, unless it corrects the error quickly, soon the place that knew it shall know it no more forever.

What I mean is this: If you merely shift the zero on the calendar and instead of reading today's date as 1960, you read it as 1906, you are politically ruined.

But that, you may say, is arrant nonsense. Nobody makes a mistake like that, and it is silly to consider it.

Are you sure? Maybe nobody does make the mistake in dating letters and writing checks, but you may take my word for it that there are thousands of men who do exactly that when it is a matter of adjusting their political ideas. Perhaps few go back as far as 1906, but some go back to 1926, many to 1936, and so many are still living in 1946 that they constitute the most serious threat to intelligent government today.

When a political party is dominated by men whose minds are as much as 14 years behind the times, that party is on the way to join the Federalists, the Whigs, the Know-Nothings, the Anti-Masons, the Constitutional Unionists, and all the other parties buried in the cemetery of dead ideas.

The Purduvian Party, therefore, must first of all realize that this is 1960 and its program must deal with the problems of this year. It cannot gain the respect of the voters by proclaiming eternal opposition to Mussolini and Hitler, much less Kaiser Wilhelm and Jess Davis and King Geore III. It cannot arouse enthusiasm by favoring digging the Panama Canal, or votes for women, or the Payne-Aldrich tariff. It must talk of those things that interest the people here and now, or they will simply; become bored; and there is nothing deader than a political party that becomes a bore.

Unquestionably, the central political problem of today, the central question around which all others are in orbit, so to speak, is the question of national survival. This is more than curious, it is wholly unfamiliar for not since Cornwallis surrendered in 1781 have the American people cherished serious doubts of their survival. But they are worried about it in 1960.

There are two ways of looking at this question, depending on how you understand the word "survival." Literally, surviving means simply living through a crisis, but it seems to me that every American worthy of the name ought to have a broader conception than that. National survival means not only that the people shall continue to live, but that the Nation shall continue to exist, much as it has existed in the past.

The difference is important, because some measures that might enable the people to continue to live would mean the extinction of the Nation. For instance, we could easily remove all danger of the butchery of our people by surrendering to the Communists and submitting to their tyranny. But who wants to live on such terms?

We can achieve a pretty fair chance of survival by arming to the teeth, shutting off nearly all outside contacts, and becoming a garrison state, something like ancient Sparta. But that would not be the United States as we have known it. It would be an entirely different country, and while the people might continue to live, the Nation would not survive.

But if we discard both these ideas as too monstrous to be considered, all that is left is a very complicated policy about which nobody can be certain. It means taking a calculated risk, and relying on expedients that have not been tried before, and therefore may or may not work. Of course, men whose ideas all go back to 1906 or 1946 are against doing anything of the kind. If a policy was not tested and accepted by grandfather, they are against it. Yet it must be done, if the Nation 20 years hence is to be anything like our country as we know it now.

For imperial communism is not a figment of the imagination, it is a fact. In the beginning most Americans, including some of the wisest, believed it was a sort of mental aberration that would soon disappear; but 43 years have passed and it is still with us. Apparently we are going to have to live with the thing for a long time to come; and we can't live with it in the same way that we lived with the old German, and Austrian and Turkish empires, for it is not the same kind of thing.

A party that doesn't recognize this is a party that simply is not living in 1960. It is like the horse in the famous old story. It was a handsome horse, fine head, glossy coat, long flowing mane and tail—in fact, perfect in every feature. The only trouble with it was that the horse was dead.

I submit that a political party that has no idea of how to get along in the world today except the way that we got along before the Communist power appeared is like that horse. It may be handsome in every respect, but it is dead, even if it won'e lie down. Let that never be said of the Purduvian Party.

Obviously, we must look to our military defenses; and if we are attacked, we must be ready and able to defeat the attacker. Obviously, adequate defense will require a great many men and a great deal of money. But the idea of being prepared to repel an attack was old when Hammurabi raised the great walls of Babylon more than 4,000 years ago.

The Purduvian Party realizes the need of strong national defense and it favors the expenditure of whatever sums may be needed to provide that defense. Nor are we disposed to haggle over details. When we are asked, How much can we afford to spend on defense? Our answer is, as much as is necessary.

But we propose to go further. There are two methods of national defense. One is to build up our military power. The other is to reduce the threat. Our policy is to build up the power, but without relaxing for a single minute the effort to find ways of reducing the threat. To that end, we will explore any avenue, we will listen to anybody, we will consider any proposal. We will reject nothing simply because it is new or simply because it is suggested by someone whom we dislike. We will not be scared off by names, nor trapped by catchwords. Whatever is reasonable and right shall have a place in our program, regardless of its novelty or its origin.

We are aware, too, that our point of view is not necessarily the only valid one. We propose to avoid carefully the intellectual arrogance that assumes that our way is always the best way, not only for ourselves but for all other men. We are not going to brand as a traitor every man who suggests that there are some things that we might do better. The Declaration of Independence

acknowledges that in 1776 we held "a decent respect to the opinions of mankind." We are going to maintain that respect.

With this in view we favor constant examination of any domestic policies that incur criticism at home or abroad. The mere fact that they are criticized does not prove that they are wrong; but it does indicate that we should examine them carefully and in a reasonable spirit, not defend them blindly simply because they are ours and may have served well in the past.

In such matters as race prejudice, freedom of speech, economic opportunity, and fair dealing in politics, in commerce, and in society, we realize that it is necessary to avoid, as the Apostle said, even the appearance of evil. To do that, we favor reasonable alterations even of our domestic institutions.

In short, we oppose every form of aggressive imperialism, even in the intellectual realm. Indeed, we oppose it most of all in the intellectual realm, for we have no fear that the American people will tolerate imperialism in the political and geographical worlds. But there are those among us who, professing to abhor military aggression, yet consider it patriotic to exhibit a ruthless and domineering spirit in our relations with the outside world. This the Purduvian Party opposes and deplores.

And yet, in summoning all Americans to join in the work of solving modern problems by modern methods, discarding the obsolete however valuable it may have been in the past, and not shrinking from the new because it is untried, we are in fact adhering to an idea that is as old as the Republic. It was George Washington who said, "Let us raise a standard to which the wise and honest can repair." To raise such a standard is the purpose of our party; and under it we intend to heed the admonition of Lincoln, "to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

ONE THOUSAND NINE HUNDRED AND SIXTY PURDUVIAN PARTY MOCK POLITICAL CONVENTION, PURDUE UNIVERSITY, WEST LAFAYETTE, IND., MARCH 24, 25, 26, 1960

Fredrick L. Hovde, president of the university; Donald R. Mallett, executive dean; Dr. Ken Kofmehl, adviser; John R. Kleber, national chairman; David S. Brandt, national treasurer; Julie Post, national secretary; Roi E. Baugher II, permanent chairman; Harry Sharp, parliamentarian; Kathryn Elder, credentials committee; Adam Fisher, public relations committee; Jane Anne Chapman, public relations committee; Timothy Wittlinger, actual convention committee; Syd Steele, rallies and parades committee; Carol Lynn Mrva, State delegation committee; Charles Riepe, platform committee; Caroline Sumerford, platform committee; David Ransburg, keynote speaker committee; Margo Pautler, historian; Sally Runk, reading clerk; Bill Leber, tally clerk; Judy von Rosen, exponent coverage.

Announcement of Rollcall Votes

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1960

Mr. REUSS. Mr. Speaker, if I had been present and voting on House rollcall votes 5, 7, 11, 13, 17, 18, and 38, during the months of February and March 1960, I would have voted "yea" in each instance.

Senator Dirksen Legislative Man of the Year

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. MICHEL. Mr. Speaker, there appeared in yesterday's Evening Star an excellent column by the eminent writer, William S. White. This editorial, recognizing the leadership of Senator DIRKSEN, is a fitting tribute to the excellent record the Illinois Senator has made as Republican leader.

It is my privilege to represent the 18th Congressional District of Illinois which Senator DIRKSEN served so well from 1933 to 1949 when he retired from the House and subsequently defeated, in the Senate race, Scott Lucas, who was then the Democrat majority leader. I am sure I can speak for the people of the Senator's home district and wish him continued success in executing so effectively the heavy burdens and responsibilities of his present office.

Mr. Speaker, I want to include at this point Mr. White's article which points out so well that Senator DIRKSEN has met the test and is, even now, considered a better floor leader than was Taft or Knowland.

[From the Evening Star, Apr. 6, 1960]

A RECOGNITION OF SENATOR DIRKSEN—REPUBLICANS' "LEGISLATIVE MAN OF YEAR" LAUDED FOR RECORD AS MINORITY LEADER

(By William S. White)

If there were any real justice in politics—as, of course, there isn't—the Republicans would now be designating Senator EVERETT M. DIRKSEN and their Legislative Man of the Year.

He has now entered the last lap of his first session as the GOP Senate leader. Simple fairness compels this report, from a correspondent who once had no difficulty in restraining his admiration. This Senator is doing a good job, a responsible job, for his party and even for his country.

Senator DIRKSEN is actually a better floor leader than was either of his far more famous immediate predecessors, Senators Robert A. Taft and William F. Knowland.

Old cliches die hard, perhaps because a cliche usually becomes one only because it is based on truth. Senator DIRKSEN was long seen by most Washington observers as a man of few fixed convictions and many thousands of purplish words—an overripe Shakespearean actor tossing his graying locks and skipping nimbly about among the issues.

As a Member of the House of Representatives from Illinois, he had been an isolationist and then an internationalist and then an isolationist again through eight terms in Congress. When, in 1951, he came to the Senate this was the blunt but wide estimate: His promotion could be described as the Senate's loss and the House's gain.

Even in a body, the Senate, which relishes a good deal of what is called corn, EVERETT MCKINLEY DIRKSEN was considered to be quite too abundantly blessed with that commodity. On nearly any insider's list of those new Senators who were not going far, the name of EVERETT MCKINLEY DIRKSEN, of Illinois would surely have led most, if not all, the rest.

Thus when last January the Senate Republicans set out to make Senator DIRKSEN their new leader there was much shaking of heads. Both Senators Taft and Knowland, whatever might have been said about them otherwise, had been leaders of extraordinary strength of character. It was suggested, not too delicately, that this quality—strength of character—was notably absent in Senator DIRKSEN.

But what has since happened? The DIRKSEN who had so long been thought so weak began repeatedly to show undeniable strength, both in his convictions and his work. Soon the Senate, at least, was aware that the new GOP spokesman was an able tactician than either Senator Taft or Senator Knowland. Moreover, once he had given his word, he stood with it as bravely as either of them ever did.

The plain truth today may seem surprising. Senator DIRKSEN has behaved with efficiency, with courage, with honor, with faithfulness to his partisan obligations but with a higher faithfulness to the interests of the United States of America.

The latest of many instances was in the Senate's civil rights fight. The Senator stood for a reasonable bill. Stoically he resisted all pressure from other Republicans for a punitive measure for which the South, of course, would have blamed the Democrats. He was unwilling to play that kind of politics with that kind of an issue—an issue involving the unity of the United States in a world of peril.

Were his detractors ever right in the past? Having been one of them, this columnist cannot with good taste attempt an answer.

But one thing is sure. Either they were wrong all along; or EVERETT MCKINLEY DIRKSEN is another living illustration of one of the saving things about the American political system. This is that men thrown into positions of high responsibilities have a remarkably capacity to grow up to those responsibilities and ably to discharge them in the showdown.

Such a man is EVERETT MCKINLEY DIRKSEN. And while the Republican Party may hardly pause this year to salute him, he has this anyhow: The awareness of the earned respect of one of the most acute judges of men in this world—the collective membership of the U.S. Senate.

New York State Cancer Education Month

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. KEATING. Mr. President, the New York State Department of Health has just inaugurated a vigorous campaign to educate the people of my State on the major symptoms of cancer and on the treatment of this deadly and dreaded disease. Governor Rockefeller has appropriately designated April as "Cancer Education Month."

The New York State Department of Health is presently circulating pamphlets designed to educate the people of my State on this very vital and important subject of significance to all persons of all ages.

I commend Governor Rockefeller and the department of health for this very excellent and worthwhile project, which I hope will be imitated by other States.

I ask unanimous consent that a press release outlining the aims and purposes

of New York's "Cancer Education Month" and in which the several danger signals of cancer are described, be printed in the Appendix of the RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

ALBANY, April 7.—"Cancer can be cured if found and treated in its early stages," Dr. Herman E. Hilleboe, State health commissioner, said today.

Dr. Hilleboe, in expressing appreciation of Governor Rockefeller's designation of April as "Cancer Education Month," said that of all the scientifically proved facts about cancer, probably the most important is that the disease can be cured if treated early enough. He added, however, that salves, ointments, lotions, or patent medicines cannot cure cancer. "Only a physician can cure cancer by surgery, radiation, or chemotherapy," he said.

The State health commissioner said there are three important steps persons can take in controlling cancer. The first is to learn the early danger signals. The second is to see a physician immediately if you notice any of the danger signals, and the third is to have periodic physical examinations.

The danger signals are: Unusual bleeding or discharge; a lump or thickening in the breast or elsewhere; a sore that does not heal; change in bowel or bladder habits; hoarseness or cough; indigestion or difficulty in swallowing; change in a wart or mole.

"These three steps are of major importance in cancer control because they are ways of detecting cancer in its early stages when it can be cured," Dr. Hilleboe added.

Several pamphlets dealing with cancer are available from the State health department. Included are "Yes, Children Get Cancer, Too," "The Truth About Cancer," which describes the various types of cancer; and "A Monthly Check," which stresses the importance of breast self-examination for women and shows the correct procedure for breast self-examination.

Not the Grandest Hour

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. ERVIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Not the Grandest Hour," which appeared in the Richmond News-Leader of March 5, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOT THE GRANDEST HOUR

"Mr. ERVIN. Mr. President, will the Chair inquire of the able and distinguished Senator from Alabama if he will yield to the Senator from North Carolina so that the Senator from North Carolina may propound to him another interrogatory?

"The PRESIDING OFFICER. Will the Senator yield for that purpose?

"Mr. HILL. The Senator from Alabama is delighted to yield to the distinguished Senator from North Carolina for a question.

"Mr. ERVIN. I should like to ask the able and distinguished Senator from Alabama if he agrees with the Senator from North Carolina that this is not the Senate's grandest hour?

"Mr. HILL. The Senator from Alabama has been in the Senate approximately 22 years. The Senator from Alabama thinks he has some knowledge of the long history of the Senate. The Senator from Alabama would certainly agree that this hour is far, far from being the Senate's grandest hour."

The elaborate filigrees of SAM ERVIN's inquiry were intended only to provide a touch of humor during the tedium of Wednesday's all-night session, but there was a sad truth in this 4 o'clock in the morning conversation. This is not the Senate's grandest hour. On the contrary, these round-the-clock sessions exhibit to the world a lunatic unreality. Here is the free world's greatest deliberative body, with a third of its Members sprawled on cots in the cloakrooms, some of its most able spokesmen droning on methodically to an almost empty Chamber, and the legislative process reduced to the level of a 7-day bicycle race or a marathon dance.

What accounts for this madness? The answer lies in politics, and in politics alone. The necessity for the pending legislation counts for nothing at all. If the embattled southerners have accomplished one thing in a week of debate, they have accomplished this: They have shown beyond the shadow of a doubt that abundant laws are on the Federal statute books now to protect every citizen's right to vote and to punish those who would deprive him of it. In the process, they have exposed the liberals' hypocritical demands as no more than the shabby oratory of a presidential year.

Abolitionist editors in the North, so choked with emotion they have lost their usual sense of balance, owe it to themselves to examine these laws. If they will descend from their pulpits, they will find awaiting their inspection, for example, title 18, section 242. It provides a fine of $1,000 and a year in prison for any person who under color of any law, statute, ordinance, regulation, or custom willfully deprives another of any right secured by the Constitution by reason of his race or color.

Title 18, section 594 goes directly to voting rights; it provides the same punishment for any person who intimidates, threatens, or coerces another for the purpose of interfering with the right of such other person to vote.

There also are civil remedies: title 42, section 1983, provides for damage suits in U.S. district court against any person who deprives another of his constitutional rights.

These laws exist now. They have existed for the past 90 years. They were supplemented in 1957 by still another law dealing with the same subjects. What possible public good could be served by piling on still more laws, extreme in their provisions, punitive in their spirit?

No public good can be served by the hundred-odd civil rights amendments now heaped on the clerk's desk. Only public harm can result from them, in further inflaming racial and sectional problems that need most desperately to be left alone for a while to heal.

Hon. Paul Brown

SPEECH
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1960

Mr. SPENCE. Mr. Speaker, I regret that because I was called home on March 30 I was unable to be present when my good friend, Hon. PAUL BROWN, was the recipient of many deserved eulogies on his birthday. I now want to add my small tribute of affection and esteem. PAUL BROWN has served on the Banking and Currency Committee with me for 25 years and for the last 15 years has sat next to me as the senior Democratic member. During that time I have been deeply impressed with his fine character, his genial friendly nature, and his devotion to duty. The committee has always been anxious for his counsel and advice because of his good judgment and sincerity. I know the Members join with me in expressing the wish that PAUL BROWN may have many years of service to his district, his State, and the Nation. His constituents have always held him in deep affection and I am sure they wish him to represent them as long as he desires.

I hope he may have health and happiness and a just reward for all his faithful service.

Mistaken Internationalism of United States

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Constantine Brown entitled "Mistaken Internationalism of United States," which appeared in the Washington Evening Star, Saturday, April 2, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISTAKEN INTERNATIONALISM OF UNITED STATES—EUROPEANS VIEW POLICY AS ANEMIC AND PLAYING INTO HANDS OF SOVIET

(By Constantine Brown)

PARIS.—"Since the death of Mr. Dulles your foreign policy makers require large quantities of liver and vitamin pills; to say the least, your foreign policy is anemic." These were the words of a distinguished French authority on diplomatic subjects who has an important post in the French Parliament.

This man is not a policymaker, since in France there is only one policymaker—General de Gaulle. But he is close to the general, and his point of view is frequently found in most West European newspapers with the exception of England. While our allies never liked John Foster Dulles, they respected his rigidity in dealing with the Kremlin.

In commenting on this phase of the late Secretary's character, my French friend pointed out that despite what we often described as brinkmanship, there has never been, to the knowledge of the continental European allies, a real risk of the Soviet Union or Red China retaliating because of those policies. Quite the contrary, according to reports from Moscow to Paris, the Russians were actually worried whenever Mr. Dulles spoke bluntly.

Since last spring our policy has changed radically and just at the time when our European allies have reached their peak in economic recovery and military posture. Germany has overcome the internal difficul-

ties which had caused her to be slow in creating her army of 50,000 for the NATO alliance; Italy has completed her quota of 12 ground divisions and has greatly improved her air and naval strength component, and France, while still heavily engaged in Algeria, is now working with nuclear power and missiles. All are taking no chance of Soviet attack.

But our allies, whom we built up at a terrific expense, have gained the well-founded impression that the United States has suddenly become anxious to meet more than halfway the Soviet demands for coexistence. A few years ago this Washington move would have been welcomed in continental Europe. But the Europeans have had a change of heart and our new policy is being received with amazement and has produced visible frustrations. And it would seem from the actions of our policymakers in Washington that they have not recognized this change in our allies' attitude.

In the last 2 years Western Europe has become nationalistic, while Washington, in the last 10 months or so, has veered toward internationalism or one worldism more than ever before.

I shall try to give a résumé of the frank thoughts expressed on that subject by my French friend and others I have contacted in other countries. It is doubtful if the State Department or CIA representatives have been given as clear a picture of the sentiments which prevail among our allies in Europe. Here is the résumé.

"Nationalism and internationalism do not go together. In the past we deplored your nationalism represented by isolationism because it permitted the totalitarian aggressors to launch two costly wars. But today we are equally concerned over your moving to extreme internationalism as represented by the idea of 'one world,' united and equal. It is a splendid idea which might come to fruition some time in the 22d or 23d century, or even later. But it is absolutely unrealistic in this century.

"You are once more an isolated island. While your statesmen and newspapers decry nationalism and see in internationalism the one and only cure for present world ailments, every other country in the world is becoming increasingly nationalistic. This does not only apply to the free world but also to that representing international communism. There is no fiercer national pride than in the Soviet Union and Communist China, where the foreigner is actually despised.

"In the free countries, nationalism has existed from time immemorial and has often been the cause of conflicts. There is no possibility of eradicating this deeply embedded feeling by a fiat from Washington. Your policymakers have been accustomed since the end of the war to giving orders to Europe. You imagine now that you can tell us to be internationalistic and we will do it instantly. This is no longer the case. Thanks to your assistance, we have completely recovered, economically and spiritually. It may be that spiritually we are even several jumps ahead of you.

"We don't want war any more than you do. But neither do we relish the idea of surrendering to the Soviet Union because you have figured out that you have no chance against them. We know the Russians, their qualities and their failings. And we are no longer scared or worried. Neither do they want a nuclear war, but so long as your political men and publicity media show themselves terrified over the possibility of such a tragedy, the Russians will have the advantage of it and push you into a corner. No American who comes to Europe will detect any kind of fear or concern over the military menace of the Soviet Union.

"In fact, your internationalism plays into the Soviet hands in a manner undreamed of by the Kremlin. For instance, you are pushing for the complete independence of the Black Belt in Africa in the expectation that in this manner you will keep those young nations out of Communist domination. How mistaken can you be? These totally backward countries, completely unprepared for independence, are falling into the Communist lap like rotten fruit. You are the most vociferous, though unwitting, advocates of handing over the whole of the African Continent to your most deadly enemy. But you don't realize it.

"Your fantastically rapid growth from a colony to the most powerful state the world has known since the days of Roman empires has made you impatient. You have embraced internationlism with the same fervor you once embraced isolationism. But this time you are likely to cause yourself and your frends even more injury than before."

Canada: Our Unknown Neighbor

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. McCARTHY. Mr. President, Mr. Carl Rowan, the well-known feature writer of the Minneapolis Morning Tribune, has written a series of articles called "Canada: Our Unknown Neighbor." Mr. Rowan reports widespread discontent with the United States-Canadian military relationship. The Canadian resentment is not so much with the technical decisions as the manner in which the decisions are reached. This has resulted, he reports, in many Canadians believing that their nation is being treated as a satellite instead of a free and independent ally. I ask unanimous consent to have two of Mr. Rowan's articles—Minneapolis Morning Tribune, April 1 and 2, 1960—printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Minneapolis Tribune, Apr. 1, 1960]

CANADA: OUR UNKNOWN NEIGHBOR—BATTLE OVER BOMARC HIGHLIGHTS "U.S. SATELLITE" THEME

(By Carl T. Rowan)

At 11 a.m. last Friday George Pearkes, Canada's Minister of Defense, stepped before the House of Commons to face what many in the galleries must have considered "the same old weary questions":

How long will Canada rely on a flop, the Bomarc missile, for the nation's defense?

How long will Canada be a U.S. satellite in the cold war?

Last Friday, however, the opposition was armed with a rumor that in a closed session the day before the Appropriations Committee of the U.S. House of Representatives had decided to reduce to "funeral expenses" funds for the Bomarc.

Just as he had for months during Canada's agonizing debate over military policy, George Pearkes stuck by the Bomarc. He brushed aside rumors the United States was about to ditch the missile with an assertion he had been "continually consulted" by Pentagon officials and that he was "fully informed."

Seven hours later George Pearkes called a press conference to announce that U.S. Congressmen had cut next year's appropriations for the Bomarc from $421 million to $50 million.

The United States now was going to spend a mere 40 percent of what Canada was shelling out for two Bomarc bases.

Pearkes insisted, nevertheless, that Canada would rely on the Bomarc as the keystone of the nation's defense.

In Commons, the Liberals and Socialists hammered hard at Pearkes, accusing the Government of "fabulous waste" on the Bomarc and of being "in the hip pocket of the United States."

"We are called a partner, but we are not a partner," said Hazen Argue, leader of the Cooperative Commonwealth Federation (Socialist). "We are not a partner in policy. We are not a partner in basic discussions; we are merely the errand boy for the United States in this defense program."

In the press and across the Nation, the angry rumblings of disenchantment over the United States-Canadian military partnership roared toward another crescendo.

Editorial writers breathed fire as they asserted that the United States had given Canada another slap in the face.

The Toronto Globe and Mail drew two conclusions from Pearkes' performance: that Canada's Defense Minister "was kept in ignorance until the last possible moment" and that "the United States still intends to deliver to Canada a weapon which it regards as too inefficient to be used in its own defense."

"UNITED STATES CONSULT US?" HUMBUG

The Winnipeg Free Press said the Pentagon had dealt "a cruel blow to Mr. Pearkes and to the Diefenbaker government."

As for Pearkes' claim he has been "continually consulted," the Free Press cracked there was "about as much consultation as there is between a tail and a dog."

The ironic coincidence is that the day of the Bomarc announcement, Canada's big weekend newspapers carried huge spreads on a book which urges Canada to discontinue all military alliances with the United States and the West and issue a "declaration of neutralism."

In "Peacemaker or Powder-Monkey," author James M. Minifie argues that the United States has lost world leadership because McCarthyism alienated too many people and because the Russians beat (the late Secretary of State) John Foster Dulles at his game of "massive retaliation."

"Minifie firmly believes that Canada must not continue to be the 'powder monkey' of a powerful country in which the dominating political forces are mercantilism, militarism, and nationalism, and where these noxious forces are the more difficult to control because of a traditional inclination toward violent solutions," said reviewer John Gellner in the Toronto Telegram.

The startling thing is not that Minifie (a former Canadian by way of England who now lives in Washington, where he is a political commentator for the Canadian Broadcasting Corp.) was suggesting neutrality, but that thousands of Canadians were of a mood to listen.

"Mr. Minifie shows the Canadian-American alliance at its worst," wrote B. T. Richardson, editor of the Telegram. "But no one can doubt that Canadian public opinion is much readier for his criticism of that alliance than it was 5 years ago.

"Ten years ago, the idea of neutrality was unthinkable in Canada. Today, the Canadian position in the world is undergoing intensive rethinking. Mr. Minifie has furnished a new focus of controversy that will greatly stimulate the process."

CANADA DEFENSE REVIEW AGONIZING

This is a painful process for Canada, caught geographically between the United States and Russia.

Ideologically committed to the United States, Canada, nevertheless, is filled with

much intellectual doubt as to the wisdom of U.S. policies.

It already has spent so many precious dollars for defense that it is like a poker player who has lost heavily and feels he must go on playing "catchup." So dependent on, so tied to, the United States economically and militarily is Canada that it is not sure it can "break away" even if it wanted to.

A further disturbing aspect of the whole business, as many Canadians see it, is that most Americans are totally unaware this "agonizing reappraisal" is taking place.

Should Americans be?

The answer depends to a great degree on how important Americans think Canada is to the defense of the continent of the United States.

Are those radar warning lines on Canadian soil (the DEW line, the Pinetree line and the mid-Canada line), for which we spent close to $3 billion and Canada more than $300 million, important to our security?

Or, as many Canadians now believe, has Russia's intercontinental ballistic missile rendered them obsolete?

SERIOUS DIFFERENCES BEGAN 2 YEARS AGO

Is it or is it not indispensable to our survival to have bases and bomber squadrons at the northern frontier of Canada; to have Canada in the North Atlantic Treaty Organization (NATO), to have Canada as a partner in North American air defense (NORAD)?

If these things are still crucial to defense, there is a disturbing sense of urgency about recent developments in the Canadian attitude.

Even if our missiles strength is such that we could forget Canada as a military ally, Americans would still wonder by what sequence of events our age-old ally could now view the Pentagon with such harshness, could entertain thoughts of neutrality.

The one feeling that seems to have permeated every level of Canadian society is that, largely because of what Canadians call Washington bungling, Canada has spent millions it could not afford and still has nothing in the way of military security.

Serious differences with Washington began a couple of years ago when Prime Minister John Diefenbaker finally agreed to junk Canada's Avro Arrow jet, at a loss of $400 million to the national budget and an immeasurable amount to the national ego.

Fighter interceptors are obsolete, insisted the Pentagon; we'll stop the manned bombers with a surface-to-air missile called the Bomarc.

After seven launching attempts, the Bomarc was still landlocked when Pearkes faced Commons last week. Canadians reacted with befuddlement, fear, anger, sarcasm, and suggestions Canada wash her hands of the whole defense mess and let the big powers wrangle.

CANADA RESENTS SHABBY TREATMENT

After the Bomarc's sixth fizzle, the Toronto Star said: "Whether or not the Bomarc ever performs, it will never defend one Canadian household. In event of war, any or every Canadian city could be atomized by hydrogen bombs, against which there is no defense."

Now the fear of being caught defenseless seems far less painful to Canadians than the "hurt feelings" inflicted by Washington.

"The relationship between Canada and the United States is of great interest abroad," reasoned the Toronto Globe and Mail. "While Canada, a relatively weak country, remains a free and independent ally of her mighty neighbor, an ally treated with dignity and respect, Canada presents convincing evidence of U.S. integrity * * *

"But if the United States shows any inclination to treat Canada as a satellite, U.S. integrity will soon be doubted.

"There is no doubt that Canada has been treated shabbily in the matter of the Bomarc. This fact must be drawn to U.S. attention in no uncertain manner."

CANADA: OUR UNKNOWN NEIGHBOR—CANADA TOYS WITH NEUTRAL ROLE IT KNOWS IT WON'T ASSUME

(By Carl T. Rowan)

It would be easy for Americans to dismiss Canada's grumblings over defense policies as just so much "blowing off steam."

The assumption here, as in much of Canada, is that our neighbors have no choice but to follow our lead.

But complaints of "shabby treatment" by the Pentagon, the increasing suggestions that Canada become "neutral," point up at least three questions that Americans cannot very wisely ignore.

The first is whether the impossible could happen, leaving Canadian expenditures, manpower and real estate no longer available for a continental defense scheme.

The second is whether Washington officials are giving proper thought to a course of conduct that will permit less powerful nations to be our partners while maintaining their integrity and self-respect.

The third is whether awesome developments in weaponry have made the arms race seem so utterly futile that no little nation will be happy tied to the military policy of one of the great powers.

Could the impossible happen—could Canada go neutral?

The history of U.S.-Canadian relations suggests that mere discussion of neutrality in Canada is ridiculous.

When Japan attacked Pearl Harbor, Canada declared war faster than the United States did.

Conversely, some 16,000 Yanks couldn't wait for the United States to enter the war against Germany, so they joined Canadian forces.

The concept of North America as one unit in any moment of international stress long has been taken for granted.

The United States and Canada probably would fight for each other tomorrow at the drop of a hostile firecracker, but influential, thoughtful Canadians warn that present rumblings of dissatisfaction ought not to be dismissed flippantly.

"A wave of pacifism is sweeping Canada," a Toronto editor told me.

There have been demonstrations with pacifistic overtones, but most Canadians deny that pacifism is a proper description of their attitude.

"We can't take a neutral stand. That would be idiotic from every military, political, and economic standpoint," says Ross Munro, publisher of the Winnipeg Tribune.

"Canadians have no sense of pacifism about defense. It is a sense of realism—perhaps fatalism."

This sense of fatalism seems to arise not only from the feeling that Canada is hopelessly tied to U.S. policies, but from a growing belief that there no longer is any real security for mankind in any military program.

CANADA MUST RELY ON UNITED STATES IN DEFENSE

"It is accepted that Canadian and U.S. defense must be integrated, if only because one cannot be endangered without the other being endangered," said the Toronto Globe and Mail.

"It is accepted that Canada, with a small population in a vast country, cannot possibly afford adequate defense for herself, and must rely heavily on the United States."

Thus the great bulk of Canadians agree that they cannot quarrel on technical grounds with U.S. decisions that Canada's Arrow jet or the United States ill-fated Bomarc missile have become obsolete.

Canadians do object to the fact that they are "treated as the kite's tail" when such decisions are made, and that Pentagon officials show little awareness of the fact that $400 million wasted on the Arrow is a big chunk out of Canada's economy, and not just a drop in the bucket as it would be in the States.

So part of the Canadians' disenchantment results from the feeling that they have been forced to spend far too much in reaction to the fear generated primarily by Russia and the United States, both Canada's next-door neighbors.

Canada has spent some $20 billion on defense since World War II, or about 16 times as much as the federal government has devoted to education.

Canada's intellectuals now argue that all they have for this money are some radar lines and electronic equipment that the guided missile has rendered obsolete, and a worldwide reputation as a flunky of the United States.

CANADIANS HOPE TO AID DISARMAMENT

This worry about Canada's international reputation is a powerful one, and a far more important factor in United States-Canadian relations than many Americans realize.

In negotiations over Korea and Indochina, and during United Nations efforts to resolve the Middle East and Hungarian crises, Canada achieved great prestige.

Canadians have expected to enhance that prestige by helping to show the big powers the way to disarmament.

That is why thousands of Canadians reacted with hostility to President Eisenhower's announcement a few weeks ago that the United States wanted to share nuclear arms with certain trusted allies.

Canadians felt that to take these arms would plunge their country into the nuclear race and diminish its role as a spokesman for disarmament.

Canadians also feared that nuclear weapons based on Canadian soil might be used without approval by Canada—just as the Bomarc cutback and other military decisions apparently were made without consultation with Canada.

In reviewing a new book suggesting that Canada break off all military alliances with the United States, J. B. McGeachy said in Toronto's powerful Financial Post that Canadians may not think of themselves as flunkies of the Pentagon, but "it is difficult or impossible for Latin Americans, East Europeans, and others to see Canada as anything but a satellite (with about as little independent judgment as, say, Bulgaria) when part of the Canadian forces is under direct U.S. command."

NEW NATIONS TRUST CANADA—SO FAR

This raises the question of whether the United States handicaps democracy in many parts of the world when it takes actions that make Canada look like the tail of the dog.

Canada, because of its size, is one of the few Western democracies that still maintains the trust and respect of diplomats and leaders in the emerging nations of Asia and Africa. But Canadians know that this trust and respect will quickly vanish if Canada comes to be regarded as a mere echo of the State Department or the Pentagon.

The strain between Canada and the United States is intensified by the feeling that Canada goes on spending 30 percent of her money for an obsolete military installation that would mean nothing in the event of all-out war only because she already is past the point of no return, and because the possibility of U.S. economic sanctions and other pressures force Canada to dance to the American tune.

Some Canadian intellectuals admit that part of the difficulty may result from the fact that Canadians today are bowing reverently to that old god, national sovereignty.

These intellectuals say Canada has devoted a huge chunk of its wealth to defense, not so much out of a fear of Russia as the fear of United States encroachment.

To kick U.S. military men off Canadian soil altogether is as of now unthinkable. To allow U.S. military installations in Canada without maintaining at least a pretense of Canadian control would be viewed by Canadians as a gross violation of Canada's sovereignty.

DEFENSE INTEGRATION STILL RAISES QUESTIONS

Canadians know that the man who pays the bills usually makes the decisions—so Canadians continue to pay for defense in the hope that the canceled checks will be accepted by the world as evidence of Canada's independence.

Nevertheless, says the Winnipeg Tribune, Canada really has "abdicated the main responsibility of defense of Canada to the United States."

However, perplexed and weary of debate Canadians get, in the past they always have wound up where Prime Minister Diefenbaker put them a year ago. Assuring the House of Commons that defense integration with the United States would strengthen, not weaken, Canadian sovereignty, he said:

"It will assure the freedom we inherited. It is the course of national survival, and any other suggestion is nonsense."

Diefenbaker may be absolutely correct. But the current mood of Canada suggests that there's going to be a lot more nonsense discussed in the months ahead.

The Good Country Editor on Federal Aid to Education; H. M. Baggarly Writes the Facts

---

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, April 8, 1960

Mr. YARBOROUGH. Mr. President, all of us have seen many shocking examples of how certain selfish individuals and groups oppose expenditures for education.

And those who oppose fuller educational opportunities for our youth throw up emotional harrangues against Federal funds for education by darkly predicting "Federal control of schools." They assert that education should be spported only by funds raised at the local level. After they pressure defeat of Federal aid to education plans, they turn around and defeat or block moves at the county or State level to raise additional funds for education.

This is a matter which is seldom fully analyzed by the news media. For this reason, I was delighted to find that H. M. Baggarly, the "Country Editor" of the Tulia (Tex.) Herald, has devoted a recent column to this subject. By his incisive reporting and lucid writing in this column, Mr. Baggarly gives an excellent example of why his newspaper has gained national recognition and why he has won national awards for editorial writing.

I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from the column, "The Country Editor" from the Thursday, March 31, 1960, Tulia Herald of Tulia Tex.

There being no objection the excerpts were ordered to be printed in the RECORD, as follows:

THE COUNTRY EDITOR

(By H. M. Baggarly)

Opponents of Federal aid to education have advanced many arguments as well as strawmen in recent years. One well-known argument is "Texans are able to take care of their school needs without any help from Washington."

We are not necessarily a proponent of Federal aid to education, but we are certainly an opponent of deceitful and hypocritical arguments. For instance, those making the most noise about the evils of Federal aid which, they say, means "Federal control" are the same ones who are just as opposed to local aid to education.

We have no quarrel with those who are satisfied for Texas public schools to remain 38th in quality among the 50 States. We have no quarrel with those who are satisfied for Texas not to have a single first-class university. Accrediting agencies say that Texas best universities are no better than second rate. This is due to their inability to pay enough to attract first-class professors. It's a person's prerogative if he wants to live in a mansion, drive a Cadillac, then send his children to a school system ranking 38th in the Nation and later to a second-rate university. But let him be honest enough to say that he thinks good schools cost too much money, that mediocre teachers are good enough. Let him refrain from chanting the hypocritical lie, "We are able to finance our schools without any help from Washington."

This is not to imply that Texas doesn't have some good teachers. She does, both in her public schools and colleges. There are dedicated people in every profession who are willing to do what they like even though the pay is small. But there aren't enough to staff all our schools and colleges. There are too many people with master degrees and years of experience mercenary enough to expect as much as some high school graduates are able to make 3 months following their high school graduation. We know a 1959 high school graduate working in a newspaper shop who is making $200 a year more than some Ph. D.'s now teaching at Texas Tech.

The ability of Tulia public schools to get and keep good teachers is declining every year. Even now, the school is unable to exercise much choice in the employment of teachers. The time is not far distant when high school students will be told, "Sorry, we aren't offering mathematics this year—we don't have anyone to teach it." People just aren't going to teach mathematics, or anything else, when industry will pay them a higher beginning salary than they can make teaching after 25 years' experience.

Of course, it is quite unpopular to cite the facts of life. It invites brickbats and unkind words from the nonthinkers and the ostriches who will term you a "spender," among other things. Then too, many like to evade the real issue by injecting side issues. The daily papers dodge the issue by telling the public that the schools are ineffective, that Johnny can't read, that he can't write, that children spend their days in school studying frill subjects.

What the dailies don't tell us, among other things, is that in 1906 approximately 16 percent as many students graduated from high school as there were children 17 years of age. In 1956, there were 60 percent as many students graduated from high school as there were children 17 years of age. To be fair, comparison of the graduate of 1906 should be made with the top 10 percent of 1956, and such a comparison places the graduate of today head and shoulders above his compeer of yesteryear.

What the dailies don't remind us is that in the main, most all our amazing scientific developments since World War II have come from comparatively young men—men who have been educated in what the dailies term "ineffective" schools of the past 2 or 3 decades.

If the public can be sold the proposition that public education is ineffective and a waste of money, then it will be much easier to keep Texas in 38th place and with no first-class universities.

If we can't afford to raise our schools at least up to where we are barely in the top 50 percent, which would mean that we were midway up the scale, if we can't afford even one first-class college or university in the entire State, then let's admit it and reconcile ourselves to mediocrity. Perhaps those financially able can send their children to New Mexico or Oklahoma where the systems rank higher than Texas. But please, let's quit this insincere criticism made against Federal aid and those who advocate at least minimum standards of education for all American children, those who live in poor States as well as those who live in the more prosperous States. Let's not plead for the privilege of providing extra money locally when we have no intention of raising it locally.

Average age of Texas public school teachers is 45. Tulia has a number past 60. Most of these are professional teachers who are holdovers from the 1930's when many college students prepared for the teaching profession.

In other words, we are coasting today on a supply created back in the 1930's. What are we going to do when in another 5 or 10 years most of these teachers will have retired? The number of young teachers entering the profession is far below the demand—and even today this handful of young teachers is leaving Texas for other States where salaries are higher. Even Lubbock public schools are unable to stop, the exodus of Tech graduates who are going to New Mexico.

Take a look at Tulia's better teachers. Why are they here? In most instances it is not because they have been attracted here. Some are married teachers who are here only because their husbands live here. Some are teachers who are nearing retirement and don't want to make a change even for greater pay.

Where will Tulia schools find a replacement for Mildred Hulsey when she retires? What is it going to mean to the high school English department if and when it has new teachers every year? And, according to the law of averages, we all know that for every good teacher there will be three or more not so good. A good, permanent high school English teacher cannot be kept in Tulia for what Tulia can pay. We have been fortunate to have Miss Hulsey for many years because this is her home and she has been fortunate enough to have outside income.

Where will a replacement be found for Grace Scott? Oh, we probably can find some kind of a librarian—but her regular duties are a small part of her worth to the school. She, like Miss Hulsey, has strings here and is not looking for a better paying job. But we know of no one else with strings here who will be available to take her place.

Wait and see what Superintendent Swinburn's successor will have to be paid. We'll guarantee it will be several thousand dollars a year more than he is paid—if a competent man is employed. Swinburn has had offers much more lucrative than this one, some in schools the size of Tulia which pay much better, some in much larger systems. But again, Tulia is his home. He owns property here. He plans to live here after his

retirement. That is why Tulia schools have been able to keep him here.

What we have said for Hulsey, Scott and Swinburn could be said about other faculty members.

Washington and Lee Mock Convention

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. JACKSON. Mr. President, the Washington and Lee University Mock Convention every 4 years has become known throughout our Nation as one of the outstanding practical experiments in politics for students. In 12 previous mock conventions, Washington and Lee students have successfully predicted the presidential nominee 7 times. The Washington and Lee mock conventions have attracted some of our Nation's outstanding leaders as guest speakers. This year, for its May 3 mock convention, Washington and Lee is to be honored by the presence of our Democratic Party's beloved Harry Truman. The Washington and Lee newspaper, the Ring-tum Phi, has editorialized on the acceptance of Mr. Truman to keynote the mock convention. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN AUSPICIOUS BEGINNING

The formal acceptance today by former President Harry Truman to keynote Washington and Lee's mock convention bears a twofold significance.

In addition to boosting immeasurably the prestige and significance of the event this year, Mr. Truman's appearance places upon the student leaders of the convention a deeper obligation to make certain that this year's convention can live up to the expectations which this Nation's leaders have placed in it.

Prominent guests are no strangers to the Washington and Lee convention. The appearance 4 years ago of the late Alben Barkley, and the acceptance this year by Harry Truman, however, have boosted the convention to an all-time peak of importance on the national scene.

The next few weeks will be crucial ones in the planning stage for the convention, and it is imperative that every member of the student body realize and fulfill his assigned task. State chairmen have been working for months in the planning stage. Now the execution stage must be considered.

In all probability, Mr. Truman will not be the only celebrity to appear at the convention. Miss America, Lynda Lee Meade, has confirmed her acceptance, and State chairmen from practically every part of the country are negotiating to invite prominent persons from their respective States.

To the leaders of this year's mock convention, we offer a large measure of praise for getting the convention off to what must be its most auspicious beginning in the 52-year history of the event.

To Mr. Truman we extend the heartiest of welcomes on behalf of the student body and university community and hope that his visit will be an enjoyable and worthwhile experience.

And to the student body in general, we charge that each member become aware of his acute significance in this venture and make certain that he is contributing his share to the functioning of the convention.

Mr. Truman's appearance here does not insure a successful convention, it demands it.

Students of Texas' Largest University, the University of Texas, Endorse Cold War Veterans Education Bill

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. YARBOROUGH. Mr. President, students of the University of Texas, which has an enrollment of over 18,000 students recently passed a resolution urging the Congress to pass the so-called cold war veterans education bill.

This proposal, S. 1138, which we in the Senate passed last year, is still under study by the House Veterans' Affairs Committee.

It is gratifying to me, and I am sure it is to all of us who worked for passage of this bill in the Senate, to know that hundreds of thousands of students across the Nation recognize the equity in and need for passage of this bill.

In its resolution of March 24, 1960, the student assembly of the University of Texas, recognizes that the bill is "a sound self-liquidating investment for such training will so greatly raise veterans' earning power that their increased income taxes will more than pay the costs of the program in a few years."

I ask unanimous consent to have the resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A RESOLUTION PRESENTED IN THE STUDENT ASSEMBLY OF THE UNIVERSITY OF TEXAS

Whereas during the 1st session of the 86th Congress, Senator RALPH YARBOROUGH, of Texas, introduced a bill (S. 1138), cosponsored by 25 other Senators, which called for the extension of educational benefits to veterans who serve in the Armed Forces between January 31, 1955, and July 1, 1963; and

Whereas this bill, which is referred to as the Veterans Readjustment Act of 1959, passed the Senate on July 21, 1959, by a vote of 57 to 31 and is now in the Committee on Veterans' Affairs of the House of Representatives; and

Whereas this act provides that veterans who served in the Armed Forces between January 31, 1955, and July 1, 1963, receive payment of educational benefits for a time that is 1½ times the duration of military service; and

Whereas it will be a sound self-liquidating investment for such training will so greatly raise veterans' earning power that their increased income taxes will more than pay the costs of the program within a few years. This is based upon actual proof from the Bureau of the Census, which shows that the training received by veterans under the World War II and Korean conflict bills is paying the Government more than a billion dollars a year more in taxes than we would collect without that training, and those bills will pay themselves out about 1967; and

Whereas it is an act of justice because only 45 percent of our young men serve military duty under the present operation of the draft law, and this law intends to help that 45 percent gain back some lost time, and their educational opportunity, that without this bill is lost forever: Now, therefore, be it

Resolved by the Student Assembly of the University of Texas, That the president of the students' association shall send letters to the Texas Senators and Representatives in the Congress encouraging them to give Senator YARBOROUGH's bill their active support.

Respectfully submitted.

DAVID KENDRICK,
Assemblyman, Arts and Sciences.

Resolution 6–60, being adopted by the student assembly on March 24, 1960, is hereby certified as expressing the will of said assembly.

FRANK C. COOKSEY,
President, Students' Association.

The ROTC

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, it gives me much pleasure to present for the consideration of the Members of Congress a resolution adopted by the national security committee of the Veterans of Foreign Wars. This resolution expresses the interest of the VFW in supporting our ROTC program generally, and especially at land-grant colleges and universities.

Our Reserve is extremely important to the proper defense of our country and should not be abandoned but should be expanded more and more. The ROTC program furnishes well trained, oriented, young men to serve on active duty in the military for a number of years and then continue Reserve duty in their local communities. It is essential that we have this high type of Reserve officer in order to maintain the alert, efficient defense posture needed today.

The resolution follows:

VFW NATIONAL SECURITY COMMITTEE ENDORSING ROTC TRAINING IN AMERICAN COLLEGES AND UNIVERSITIES

Whereas, approximately 100,000 young men receive basic military training annually in ROTC units in U.S. colleges and universities; and

Whereas, the armer services depend upon ROTC graduates for a substantial number of their commissioned personnel; and

Whereas the Veterans of Foreign Wars of the United States has consistently recommended some system of national security training to enable American youth to adequately participate in the defense of our Nation; and

Whereas there are 94 land-grant educational institutions which owe their existence,

in large part, to the Federal Government; and

Whereas physical training, discipline and the obligations of citizenship are as much a part of education as many other subjects: Now, therefore, be it

Resolved, by the national security committee of the Veterans of Foreign Wars of the United States (meeting in Washington, D.C., February 7, 1960), That American colleges and universities be encouraged to inaugurate or expand ROTC programs and that where such programs ar already in operation every qualified male student attending such colleges or universities be required to participate in ROTC basic training as one of the requirements for obtaining a degree.

Disclaimer Affidavit Provision of National Defense Education Act

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, April 8, 1960

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD some of the statements by student bodies and organizations which have come to me over these past weeks in regard to the disclaimer affidavit provision of the National Defense Education Act.

There being no objection, the resolutions and statements were ordered to be printed in the RECORD, as follows:

TRENTON STATE COLLEGE, TRENTON, N.J., DISAPPROVAL OF LOYALTY OATHS AND DISCLAIMER AFFIDAVITS

Whereas the National Defense Education Act, passed by Congress in 1958, although recognized as a step forward in the Federal Government's financial support for higher education, requires a student or faculty applicant for a scholarship loan to sign both a loyalty oath—"I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and laws of the United States against all its enemies, foreign and domestic," and an affidavit 1001(F) to the effect that "he does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods."

Whereas Trenton State College has hitherto participated in the said program: The Student Executive Board, realizing:

1. That loyalty is based upon ideas and cannot be legislated or created by slogans;

2. That, historically, loyalty oaths and disclaimer affidavits have been a source of much abuse (e.g., 17th century English test oaths);

3. That loyalty oaths are objects of disapproval for:

(a) They do not serve their purpose. No subversive bent upon destroying the Government would have any qualms about signing a loyalty oath. On the other hand, loyal Americans who refuse to sign because of principle are singled out by the oaths and may be subject to undue suspicion.

(b) They offer subtle threat to academic freedom, for:

(1) There is danger that they will serve as a "first step" toward more restrictive legislation;

(2) There is danger that their meaning may be expanded through interpretation (e.g., the word "defend" in section 1001(F) of the NDEA);

(3) The requirement of signing a loyalty oath implies that a college student and/or faculty member is disloyal until he makes a positive statement expressing his loyalty. This requirement does not indicate a belief in the basic loyalty of American college students and faculty.

(4) A student's or faculty member's refusal to sign because of principle unfortunately results in suspicion of disloyalty;

(c) They are discriminatory:

(1) Insofar as they single out from the field of education college students and faculty members to sign loyalty oaths to receive Federal aid, whereas other recipients, such as farmers, do not have to sign such oaths.

(2) Insofar as the above legislation singles out members from the lower economic groups from which will be drawn the applicants for the loan.

(3) In view of the unfortunate situation that is created when financial pressure compels faculty members and students to sign the loyalty oath and the disclaimed affidavit in order to receive Federal aid and thereby violating basic principles which in turn may cast these students and faculty members into disfavor.

4. That disclaimer affidavits are even more so objects of disapproval, for:

(a) In the case of NDEA the affidavit's effect is to proscribe certain beliefs. But it is nearly impossible to ascertain accurately what an individual's beliefs are. Such a provision cannot be justly executed.

(b) In the case of the NDEA, the affidavit is terminologically unclear (e.g., the words "believe in," "supports," and "illegal methods"). This leaves a wide area for interpretation and the danger of a resultant expansion of the meaning of the act. It also leaves a student and faculty member in the position of not knowing whether, in believing in and in supporting a certain organization and in receiving money under the provisions of the NDEA, he is committing a crime under this act.

Resolves to call upon the Congress of the United States to delete section 1001(F) from the National Defense Education Act; and

Mandates the executive committee of the student executive board to communicate this resolution to the Members of the United States Congress and such other personalities as may be deemed fit.

SIMMONS COLLEGE,
STUDENT GOVERNMENT ASSOCIATION,
Boston, Mass., March 11, 1960.

Senator JOHN F. KENNEDY,
U.S. Senate,
Washington, D.C.

DEAR MR. KENNEDY: The following resolution was passed by the Student Government Council of Simmons College after consultation with the student body:

"The majority of the student body of Simmons College disapproves of the loyalty oath and disclaimer affidavit (sec. 1001(f)) in the National Defense Education Act of 1958. This majority feels that the loyalty oath implies by its inclusion in the National Defense Education Act, that students are more susceptible to anti-American indoctrination than other groups benefited by Federal funds. As for the disclaimer affidavit, the student body feels that this is a curtailment of individual freedom of belief and a restriction of academic exploration of thoughts and ideas.

"The majority of the student body of Simmons College urges that the loyalty oath and disclaimer affidavit requirements in the National Defense Education Act of 1958 be repealed."

We hope this resolution will be considered in any action taken on this matter.

Sincerely yours,

BARBARA SAFIER,
President, Student Government Association.

THE STUDENT COUNCIL,
RUTGERS UNIVERSITY,
New Brunswick, N.J., February 9, 1959.

DEAR SIR: Please be informed that on January 26, 1959, the student council of Rutgers University passed a resolution calling for the repeal of section 1001(f) of the National Defense Education Act, which specifies that Federal funds be granted to individuals only at such time as the individual executes and files an affidavit that he does not believe in or belong to an organization that believes in or teaches the overthrow of the U.S. Government by force or violence. The section also requires that the individual subscribe to an oath stating his allegiance to the United States, its Constitution, and laws.

The council concurs with the U.S. National Students Association which bases its opposition to the section on the grounds that the section is "procedurally ineffective and administratively cumbersome," subjecting institutions of higher education to "a very real Federal control," that it is furthermore terminologically unclear, and raises questions on "constitutionality and freedom of inquiry in the statements requiring denial of belief."

It is the hope of the student body of Rutgers that you will exert every possible influence to expidite the repeal of this unjustifiable and humiliating section of the National Defense Education Act.

Respectfully yours,

SHERIDAN D. BLAU,
Secretary, Rutgers Student Council.

WISCONSIN STUDENT ASSOCIATION,
UNIVERSITY OF WISCONSIN,
Madison, Wis., February 9, 1960.

PROTEST AGAINST NATIONAL DEFENSE EDUCATION ACT

Whereas the NDEA provides badly needed funds through loans and fellowships for university and college students in the United States; and

Whereas in order for a student to qualify for a loan or fellowship under the NDEA a student must:

1. Swear allegiance to the United States; and

2. (Sec. 1001(f)) affirm that he "does not believe in, and is not a member of an organization that believes in or teaches the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods"; and

Whereas these provisions:

1. Require an additional statement of loyalty from students and educators not required of other citizens and groups receiving Federal funds.

2. Require loyalty oaths for university and college money while the universities and colleges have no part in determining whether it wishes to have them apply to its funds; and

Whereas section 1001(f) is an ineffectual method of prohibiting subversive persons from obtaining these loans and fellowships, but rather achieves the opposite effect of preventing some particularly conscientious students from accepting funds under these conditions;

Be it enacted that the WSA protest these loyalty oath requirements by:

1. Having the president of WSA notify each of Wisconsin's Congressmen of student senate's action and urge them to vote for the repeal of those provisions.

2. Urging each of the student senators to write to their Congressmen urging his support in repealing these provisions.

3. Mandating the president of WSA to establish a committee of four from the student body to organize a letter writing campaign by the Wisconsin student body to their respective Congressmen urging them to vote for the repeal of these provisions.

4. Mandating the president of WSA to contact other student governments in the United States requesting the establishment of similar campaigns on their respective camp uses.

DISCLAIMER AFFIDAVIT

Fact: The National Defense Education Act of 1958 making loan funds available to college students requires the students participating to sign a disclaimer affidavit and loyalty oath as follows:

Title X, section 1001(f):

"No part of any funds appropriated or otherwise made available for expenditures under authority of this act shall be used to make payments or loans to any individual unless such individual (1) has executed and filed with the Commissioner an affidavit that he does not believe in, and is not a member of and does not support any organization that believes in or teaches the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods, and (2) has taken and subscribed to an oath or affirmation in the following form: 'I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and laws of the United States of America against all its enemies, foreign and domestic.'"

Principle: The board of control, speaking as the duly elected representative of the students of the University of Washington, states its belief in the following principles:

(1) That loyalty is based upon ideas and cannot be legislated, nor can it be coerced or compelled, and the only kind of loyalty in any thinking person is the kind that survives curiosity and withstands criticism and even doubt;

(2) That historically, disclaimer affidavits have been a source of much abuse (e.g., 17th century English test oaths); and

(3) That the requirement to sign both a loyalty oath and disclaimer affidavit is a contradiction of itself, for after one has signed the loyalty oath, the disclaimer provision then seems to say: "Even though you have just affirmed your allegiance to the Government and the Constitution, you are still not to be trusted." Implicit in signing the loyalty oath is the nonacceptance of any treasonous beliefs or actions.

(4) That this indicates a basic distrust in the American academic world, and as such is discriminatory by singling out college students or faculty members, and the participating institutions, to sign such an affidavit to receive Federal aid, whereas other recipients of Federal aid (e.g. farmers, social security participants, railroads, steamship lines, airlines, etc.) are not required to make such a declaration.

Declaration: The board of control, speaking as the duly elected representatives of the students of the University of Washington, expresses its opposition to the principle of a disclaimer affidavit provision as is included in the National Defense Education Act (1958).

JANUARY 29, 1960.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES,
Washington, D.C.

SIR: On January 21, 1960, the legislature of the Associated Students of Stanford University resolved to recommend to the Congress of the United States that the affidavit of the National Defense Education Act be removed in the current session. The resolution reads as follows:

"Whereas the Disclaimer Affidavit, section 1001(f), of the National Defense Education Act does not protect us from organizations seeking to overthrow our country; and

"Whereas the affidavit does discourage otherwise qualified students from taking advantage of the funds available, because of a feeling that the affidavit is singling them out to be worthy of suspicion, and thus that this same affidavit is an infringement on their personal freedom inconsistent with their personal beliefs: Therefore,

"*Resolved*, That the legislature of the Associated Students of Stanford University petitions the current session of Congress to remove the affidavit from the National Defense Education Act."

We hope that you will consider this as representative of a segment of today's American university students who are vitally interested in their country and its welfare.

Very truly yours,

RICHARD A. SUNDEEN, Jr.,
President, Associated Students of Stanford University, 1959–1960.

WILLARD SCOTT THOMPSON,
Chairman, Public and International Affairs Committee, Legislature, Associated Students, Stanford University.

UNIVERSITY OF MASSACHUSETTS,
STUDENT GOVERNMENT ASSOCIATION,
SENATE,
Amherst, Mass., January 8, 1960.

Hon. JOHN F. KENNEDY,
U.S. Senator,
Washington, D.C.

DEAR SENATOR KENNEDY: The following motion was passed by the student senate of the University of Massachusetts on December 16, 1959, by a vote of 21 to 8:

"Moved that the Student Senate of the University of Massachusetts, representing the undergraduate body of the university, express extreme opposition to the disclaimer affidavit required of aid applicants under the National Defense Education Act, and express approval of the bill presently pending before the Congress of the United States which would repeal this requirement. A copy of this bill to be sent to each Senator and Congressman in the Massachusetts delegation to the Congress of the United States, to the Speaker of the U.S. House of Representatives, and Vice President of the United States." Resolve.

Sincerely yours,

ROBERT ZELIS,
President of Student Senate.

Community Service Broadcasting

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. BUSH. Mr. President, I ask unanimous consent that a telegram I have received from John Metts, vice president of the Connecticut-New York Broadcasters, Inc., be printed in the Appendix of the RECORD. The telegram deals with the cooperative efforts of the members of this organization in connection with rendering community service under their licenses.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

FAIRFIELD, CONN., *April 7, 1960*

Senator BUSH,
Senate Office Building,
Washington, D.C.

Noted congressional remarks Wednesday by New York Representative EMANUEL CELLER that nine New York City broadcasting stations last year programed total of 220,000 minutes of community service. Would like to bring to your attention fact that during past year radio WICC's public service programing exceeded 92,500 minutes, or 17 percent of total air time. Figure does not include religious or special programs in the public interest. From Bridgport transmitters WICC serves Fairfield and New Haven Counties. WICC applauds Congressman CELLER'S position that unless achievements of broadcasters, as well as their failures, are taken into account, there can be no effective solution to current problems that would be in the public interest. We urge your support of moves to bring to light significant day-to-day contributions of broadcasters in Connecticut and elsewhere.

JOHN METTS,
Vice President, Connecticut-New York Broadcasters, Inc. (WICC).

Role of Enslaved Nations Under Communist Rule

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. LAUSCHE. Mr. President, I have read recently with much appreciation a memorandum prepared by Dr. Stephen Vytvytsky, President of the Ukrainian Government in Exile, which deals with the role and significance of the enslaved non-Russian peoples of the Soviet Union in the conflict between Communist imperialism and the nations of the free world.

This memorandum points out that the number of non-Russians in the U.S.S.R. is virtually equal to that of Russians, and that the great source of Soviet industrial strength lies in the natural resources and wealth of these enslaved nations.

It is my sincere belief that those who determine the foreign relations policies of the free world should give careful attention to the factors brought out in this memorandum.

Therefore, Mr. President, I ask unanimous consent that excerpts from this important appraisal of the role of the enslaved nations under Communist rule and domination be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS OF STATEMENT BY DR. STEPHEN VYTVYTSKY

1. We would like to point out the role and the significance of the enslaved non-Russian peoples of the Soviet Union in the conflict between Russian imperialism and the free world. The greatest weakness of the U.S.S.R. is the problem of the non-Russian peoples it has under its oppression. I would not contend that these peoples are the most important force in the great struggle with

Moscow, but I do say that in this struggle, these peoples are a codetermining factor.

It is fitting here to recall an official announcement made by Khrushchev to the effect that the internal crisis in the Communist Party of the Soviet Union which led to the degradation of Molotov, Malenkov, and Kaganovich was, among others, caused by the negative attitude of these former Communist bigwigs toward the widening of the autonomous right of the national republics. This same accusation was made at the 21st Party Congress last January against other members of the so-called antiparty group: Pervukhin and Saburoy, former Deputy Premiers. The New York Times reported on this on January 30, 1959 as follows:

"The Congress continued today with major speeches by Michael A. Suslov and Nuridin A. Mukhitdinov, Presidium members. According to summaries by Tass, the Soviet press agency, both spoke out and against 'the antiparty plotters' and Mr. Mukhitdinov, an Uzbek, raised a new charge against them. He said the group had demonstrated elements of chauvinism and mistrust in the ability of minority nationalities to handle their own governmental problems within the Soviet Union."

2. The number of non-Russians in the U.S.S.R. is virtually equal to that of Russians. On their native territory (particularly in Ukraine) there are to be found vast natural resources on which the economic power of the U.S.S.R. rests. The national republics strive for their independence and are in continual conflict with the regime. It is worth recalling that during the Second World War, whole divisions of Ukrainian soldiers surrendered to the Germans expecting that the invaders were bringing national liberation. Had it not been the antinational policy pursued by Hitler toward the occupied areas of Eastern Europe, and Ukraine was not the least of them, it is to be strongly doubted whether the Soviet Union would have defeated the Germans on its front. The former Secretary of State, John Foster Dulles, points this out in his book, "War or Peace."

The struggle of the enslaved nations is carried on primarily in the form of economic decentralization and broadening of the autonomous rights of the national republics. The seemingly more liberal politics pursued by Khrushchev and his group in relation to the non-Russian peoples, do not at all change their attitude toward the Communist regime. As proof of this, one can adduce the troubles in Georgia, Armenia, and Kiev in 1956.

Being the largest national republic, Ukraine stands in the forefront of this struggle. It aspires to the free development of its national culture and is opposed to the Communist policy of russification. Ukraine's writers, artists, musicians, are condemned to live under the reign of intellectual and physical terror. Those who oppose the regime in any way are subjected to the treatment recently accorded Boris Pasternak (and many were destroyed physically). Under the seemingly placid exterior, in Ukraine and other non-Russian republics is an undercurrent of revolutionary sentiment. The reports carried by the Associated Press on March 21, 1959 about explosions in Carptaho-Ukraine are symptomatic of this situation. American travelers returning from Kiev tell of being approached on the streets of that Ukrainian city by individual inhabitants who whispered to them furtively: "We are your friends" (New York Times, Feb. 28, 1959).

All of these enslaved peoples are the natural allies of the United States. They live within the U.S.S.R., they know its economic, social, cultural, and political structure well, and are familiar with all of the techniques of Soviet Government. This is a constant and permanent natural force which by its nature is a factor in the maneuvering between the West and the East.

At a time when the remnants of colonial imperialism are being eliminated in Africa and Asia, the peoples of Europe, too, will regain their freedom. It should be expected that the Russian people will not be opposed to this liberalization and that the feelings of national hatred which afflicts Russian imperialists is and will be alien to the majority of Russians whom opposition to this liberation would cost dearly.

3. Khrushchev frequently threatens war and rattles his nuclear weapons. The horror of mankind at the prospect of a nuclear war gives the Communists an opportunity to win the war without fighting, but in considering its war plannings the Soviet Union would have to take into calculation the attitudes of its civilians, particularly the enslaved peoples. It should be borne in mind that modern military technology more and more makes the frontline soldier free of the close supervision of his superiors and leaves him scope for independent action and initiative. The civilian population would aim in the first range to defend their settlements and their country.

A considerable weakness of the Communist regime is to be found in the perpetual state of revolution and crisis. The Communist regime is not one that bears the stamp of stability. Almost continually, some of the most important Kremlin personages are being degraded, denounced, imprisoned, executed * * * Beria, Malenkov, Molotov, Bulganin, Kaganovich, Pervoukin, Saburov, and yesterday's national hero, Zhukov. Two years ago Khrushchev tottered on the brink of political disaster; today he seems to be supreme ruler. This state of internal crisis can easily bring on internal upheavals in which the non-Russian peoples will play an important part.

5. Already Khrushchev is naming the day on which the capitalist world will collapse. Although ostensibly denouncing war, Moscow is waging war, which it calls peace. Communist parties in other countries are to provide future spies, fifth columnists, saboteurs, and partisans. Trade relations are designed to penetrate the economic life of Western countries. Cultural ties are merely another means to prepare the groundwork for Soviet propaganda. Except for some scientific achievements, there is under Soviet rule no culture originating from free thought and free sentiments. There is merely Communist creed enforced by terror for the use of creating a Communist man. It is the product of this type of culture that the Soviets hope to feed the rest of the world and so to make it susceptible to their doctrine. The Communist exhibitions do not depict the genuine reality which is characterized by misery and drabness.

In some official Western World declarations and in all the American press, the term "Russia" is used to designate the U.S.S.R., although this political formation does not exist. There is only the R.S.F.S.R. as one of the republics constituting the Soviet Union. In this way, the very existence of the non-Russian enslaved peoples in the U.S.S.R. is denied although this existence is recognized by Moscow itself.

The indiscriminate use of the term "Russia" instead of U.S.S.R. creates the impression that the U.S.S.R. is inhabited only by Russians. This aids the Communist russification drive. It does not make a good impression on the Ukrainians, Byelorussians, Armenians, and other peoples, each of whom has its own history, its own culture, and all of whom were overpowered and enslaved by the Russian tsars. These peoples created their own independent states after the First World War, they were invaded by Communist armies from the Russian north, they resisted this invasion, fighting for their independence. Thus communism came to them on the bayonets of an invading army.

The question should be asked: Is the creation of a single uniform type of Russian-Communist man bent on world conquest in the interests of the western states? The noble resolution of the U.S. Congress issued on June 22, 1959, strengthened the faith of the enslaved peoples of the U.S.S.R. in the principles of freedom and justice represented by the United States of America. Unfortunately the exact wording of this resolution was not transmitted by the Voice of America and Radio Liberation to the peoples behind the Iron Curtain.

7. In order to create effective plans for the defense, it is essential to state who is the real enemy. Communism is the creation of Russian imperialism. The national Russian attitude is permeated with a sense of mission, messianism to save mankind and at the same time, naturally, to dominate it. This is clearly and adequately shown by Russian history, Russian philosophy, Russian literature, and no less by the history of communism.

This is further shown in practice by Communist policies of compromise toward Yugoslavia, nationalistic Poland, and East Germany as well as by the political tactics used in relation to the Asian and African national movements.
